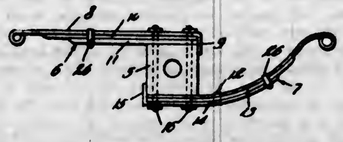
2. In an apparatus of the class described, the combination with a platform, of a conveyor on said platform contiguous to one edge, a mower conveyor extending over said first-mentioned conveyor, a brace hingedly connected to said mower conveyor and to said platform, and a spring connected at one end to said mower conveyor and at its other end to said brace for holding the mower conveyor in a set position with respect to the first-mentioned conveyor.

1,423,150. METHOD OF TREATING PULVERIZED FUEL. RALPH E. H. POMEROY, Canton, Ohio. Filed Dec. 14, 1921. Serial No. 522,360. 4 Claims. (Cl. 83—9.)

1. The method herein described of removing material from a pulveriser which consists in imparting a rotary tumbling movement to a loose mass composed of pieces of frangible material and balls of a more durable material causing streams or jets of air to traverse said mass in a direction opposed to the direction of movement of the mass and carry the reduced particles from between the elements composing the mass.

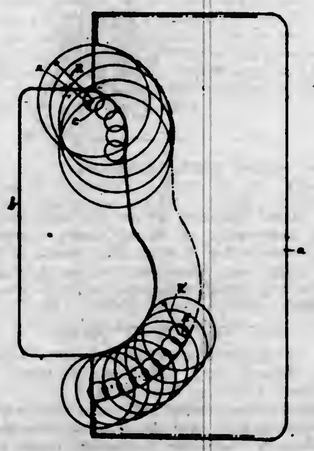
1,423,151. REMOVABLE HANDLE MECHANISM FOR BRUSHES OR BROOMS. WARREN PENDWICK and ERNEST PENDWICK, Lawrence, Mass. Filed Dec. 15, 1919. Serial No. 344,797. 4 Claims. (Cl. 300—1.)

1. Removable handle mechanism for brushes comprising a frame having a back adapted to fit upon the head of the brush and provided with upwardly extending parallel flanges, gripping means to engage an edge of a brush, a handle holder having a member fitting between said flanges and provided with means to receive a handle and means for clamping said frame and handle holder to said brush head.



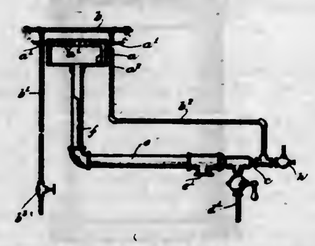
1,423,152. SPARKING PLUG FOR INTERNAL-COMBUSTION ENGINES. STEFANO REMUS, Genoa, Italy. Filed Oct. 2, 1920. Serial No. 414,814. 2 Claims. (Cl. 123—169.)

1. A spark plug comprising a body having a sleeve provided with means for mounting in the engine cylinder, an insulating part in said body, a rotatable rod passing through said insulating part and having means for connection with the current feeding conductor, an inwardly projecting flange on the end of said sleeve, the edge of this flange being spiral shaped, a radial point on said rod in register with said flange the edge and point forming



an adjustable sparking gap, a manipulating arm fixed to rotate with said rod, projections adapted to be engaged by said arm, means resiliently holding said arm engaged with said projections, and means for locking said arm and rod in adjusted position.

1,423,153. RUNNING GEAR. GEORGE R. RICHARDSON, Denbigh, N. Dak. Filed Aug. 10, 1921. Serial No. 491,253. 1 Claim. (Cl. 267—36.)



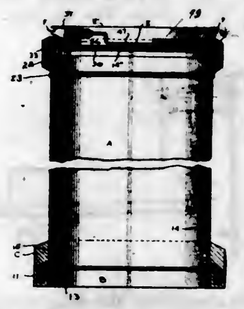
A spring vehicle comprising in combination with an axle housing, an upper spring section and a lower spring section, each of said spring sections including a plurality of leaves, one of the leaves of each section having a right angled extremity adapted to engage the axle housing, and means for securing the sections to the axle housing.

1,423,154. METHOD OF MANUFACTURING COUNTER PIECES TO GAUGES, FORMED BARS, PROFILE PIECES, AND THE LIKE. KARL ROSAK, Berlin, Germany. Filed Aug. 14, 1919. Serial No. 317,598. 1 Claim. (Cl. 90—13.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A method of manufacturing counter-pieces to gauges, former-bars, profile-pieces and the like consisting in an auxiliary-gauge being at first copied from a pattern-piece gauge or the like, the operative edge of which is uniformly removed from that of the pattern-piece a distance equal to the difference between the radii of the copying tool and the guide-finger, and from this auxiliary gauge the proper counter-piece being copied by means of a milling cutter and a guide-finger the diameters of which are chosen in such a way that the sum of the radii of the same equals the difference of the radii of the tool and the guide-finger employed for making the auxiliary gauge.

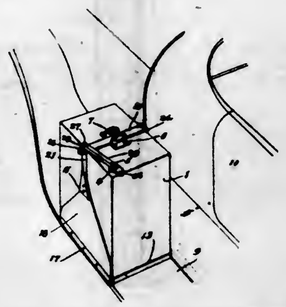
1,423,155. GASEOUS-FUEL BURNER. WILLIAM RUFF, New York, N. Y. Filed May 15, 1920. Serial No. 381,655. 6 Claims. (Cl. 158—99.)

1. A gaseous fuel burner embodying therein a burner having openings therein, a steam generator adjacent said burner openings, an injector nozzle, means connecting said generator with a source of water supply, an outlet pipe leading from said generator to said nozzle, a tube having an injector nozzle surrounding said first named nozzle and communicating with a source of gas supply, and a mixing tube surrounding said tube and having an air inlet opening, said mixing tube delivering the mixture to said burner.



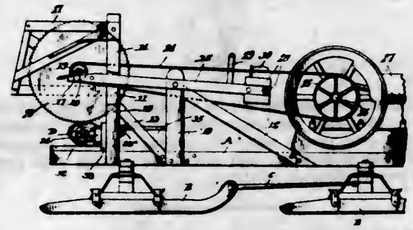
1,423,156. OUTGAUGE. EUGENE SCHMITT, Cincinnati, Ohio. Filed Apr. 1, 1920. Serial No. 370,518. 2 Claims. (Cl. 73—120.)

1. In an outgauge, the combination of a transparent tube having an opening in its lower portion and an opening in its upper portion, a support surrounding said tube and having viewing slots extending lengthwise of said tube at the respective sides of said support through which said tube is viewed, graduations at the respective sides of said respective slots, said suport provided with walls respectively directly in rear of said respective slots, and



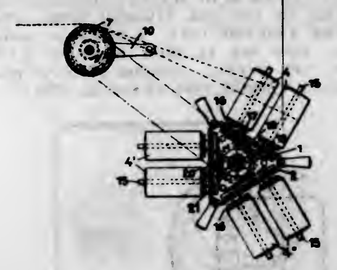
emphasising marks extending lengthwise on said respective walls in rear of said tube opposite said respective viewing slots, the liquid in said tube magnifying said respective emphasising marks.

1,423,157. CONTAINER WITH REMOVABLE LOCKING COVER. GOTTHILF H. SCHWAAZ, Newark, and MAX VINTSCHGER, Ridgewood, N. J., assignors to The Pole and Tube Works, Inc., Newark, N. J., a Corporation of New Jersey. Filed Jan. 8, 1919. Serial No. 270,185. 11 Claims. (Cl. 220—61.)



1. A container comprising a peripheral main-body portion or annular-shell having an annular outwardly extending enlarged end portion; an end-piece for the shell having a peripheral outwardly extending annular-flange fitting tightly in the end of the shell; and an annular end-ring exteriorly tightly concentrically superposed upon the end of the shell and swaged inward, upward and then annularly outward tightly upon the outwardly extending annular-flange of the end-piece and the outwardly concentrically mounted end portion of the shell, so as to enclose such shell end-portion and end-piece flange in a ring-formed annular-chamber lying wholly outward of the inner annular peripheral surface of the upper portion of the end-ring concentrically fitting upon the exterior of the main-body portion of the shell.

1,423,158. AUXILIARY GASOLINE TANK FOR AUTOMOBILES. DANIEL SEWELL, Edmonton, Alberta, Canada. Filed July 6, 1920. Serial No. 394,022. 6 Claims. (Cl. 224—29.)

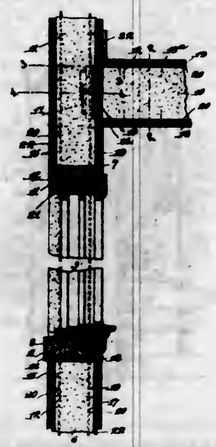


4. In a motor vehicle, the combination with a fixed support, of a substantially rectangular auxiliary gasoline tank mounted on the support and provided at one of its upper corners with a filling inlet and discharge outlet opening, a cap closing the opening and a normally locked but releasable holder receiving the tank and holding it normally against removal from the support and locking the filling cap closed, said filling cap having to be unlocked prior to releasing the tank.

1,423,159. WOOD SAW. WILLIAM SHEPHERDSON, New Liskeard, Ontario, Canada. Filed Feb. 24, 1919. Serial No. 278,885. 2 Claims. (Cl. 143—46.)

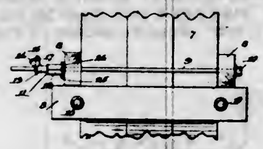
1. A saw comprising a pair of standards, a frame pivotally mounted to the standards, a saw on one end of the frame, belt means for rotating the saw, hand grips on the opposite ends of the frame to the saw, balance means attached to the frame adjacent to the hand grips, a pair of standards located on opposite sides of the belt adjacent to the saw, a U-shaped cap on one of said standards having arms designed to co-act with the frame, a pair of stop members on the base of the second of said standards, an adjacent bracket below the saw and a stop block on the bracket, as and for the purpose specified.

1,423,160. THREAD-CHANGING DEVICE IN EMBROIDERY MACHINES. GOTTWALT SIBBER, Plauen, Saxony. Filed Sept. 22, 1921. Serial No. 502,463. 9 Claims. (Cl. 242—18.)



1. In a thread changing device for embroidery machines, the combination of thread spools, carriers for said spools, means for driving said spools, a thread tensioning roller and means for jointly driving said spool-carriers and thread tensioning roller, substantially as described.

1,423,161. BUILDING CONSTRUCTION. JOHN T. SIMPSON, Newark, N. J. Filed Feb. 1, 1918. Serial No. 214,836. 6 Claims. (Cl. 12—1.)

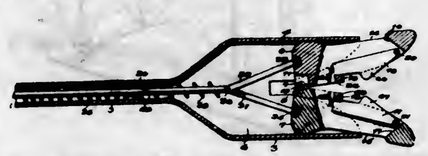


1. A structure comprising field cast reinforced concrete elements and shop cast reinforced concrete members united to form a monolithic framework, metal lathing, waterproof material between the lathing and framework, spacers disposed between said material and said lathing,

and connecting wires embedded in said framework, anchored to the reinforcements thereof, and extending

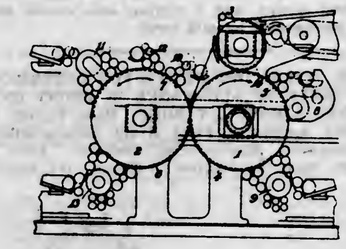
therefrom to extend through the lathing and material to securely anchor such lathing and spacers in position.

1,423,162. TIGHTENER. JOHN T. SIMPSON, Newark, N. J. Filed Apr. 1, 1920. Serial No. 370,448. 2 Claims. (Cl. 254—67.)



1. A device of the class described having an internally threaded tubular actuating member, an externally threaded tubular movable member adapted to receive a rod, an anchoring member on said movable member for anchoring said movable member in place on the rod, an enlargement on the end of said actuating member, a washer, and fingers on said washer for engaging said enlargement, said engagement permitting relative rotation of the washer and actuating member.

1,423,163. DEFORMED REENFORCING BAR. JOHN THOMAS SIMPSON, Newark, N. J. Filed Dec. 28, 1920. Serial No. 433,625. 6 Claims. (Cl. 72—111.)

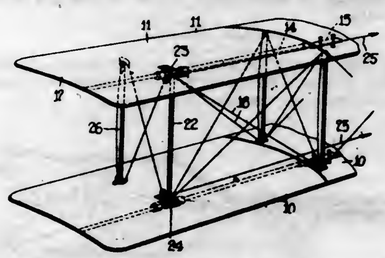


1. An article of the character described, comprising an elongated body, a plurality of protuberances on the body, each protuberance having at least three salients extending parallel to the plane of the surface of the body, one at least of said salients extending longitudinally in the plane of the axis of the body, and one at least of the reentrant angles of the protuberance having each of its sides at an acute angle to the longitudinal axis of the body.

1,423,164. TRACTOR HITCH. OLAF B. SKONNORD, Valley City, N. Dak. Filed Dec. 2, 1921. Serial No. 519,467. 6 Claims. (Cl. 280—33.15.)

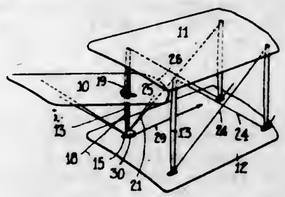
4. A device of the character described, comprising a casing adapted at one end for connection with a traction device and having a slot in its other end adapted to receive a coupling element, hingedly connected complementary carrying plates slidably disposed in said casing, spring controlled latching plates carried by said carrying plates for closing the slot when said carrying plates are in retracted positions in the casing, and means arranged between said carrying plates and the casing for resisting a force tending to move said carrying plates from retracted positions, said last named means being arranged to yield when subjected to an excessive load.

1,423,165. ROTARY LITHOGRAPHIC PRINTING MACHINE FOR DIRECT OR OFFSET PRINTING. CARL LOUIS STERN, London, England, assignor to Linotype and Machinery Limited, London, England. Filed Oct. 7, 1921. Serial No. 506,024. 5 Claims. (Cl. 101—137.)



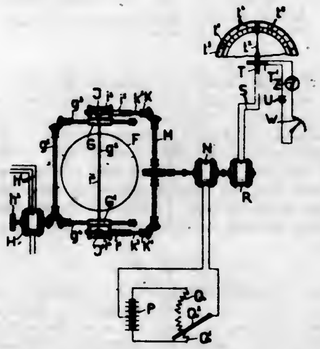
1. In a rotary lithographic printing machine, the combination with two plate cylinders both of the same diameter, an impression cylinder of half that diameter, two plate-carrying surfaces on each plate cylinder adapted to co-act directly with the corresponding plate-carrying surfaces of the other plate cylinder and mechanisms adapted to damp and ink with respectively different colours two plates on one of said cylinders, of mechanisms adapted to damp and ink a single plate on the other of said cylinders.

1,423,166. TRANSVERSE AXIS AILERON. JOHN P. TARBOX, Garden City, N. Y., assignor to Tarbox Safety Aircraft Company, a Corporation of Delaware. Filed June 20, 1918. Serial No. 240,981. 6 Claims. (Cl. 244—29.)



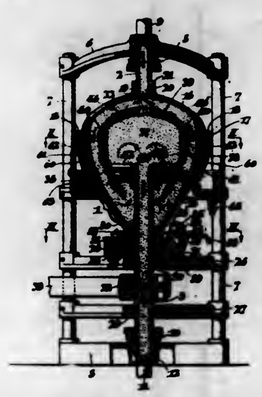
8. In a biplane, ailerons in lateral extension of each of the wings thereof, fixed interwing struts between the main supporting surfaces, aileron axis supporting members extending laterally from the main surfaces and rigidly connected therewith at points intermediate the front

and rear end struts, a vertical strut rigidly interconnecting the said axis supporting members, and cross wiring



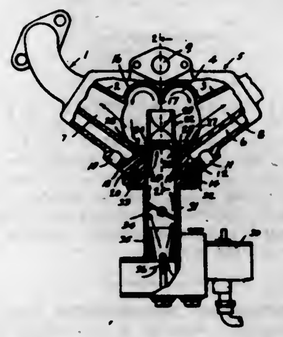
between the upper and lower ends of said interwing struts and the lower and upper ends of said axis connecting strut respectively.

1,423,167. VERTICAL-AXIS AILERON. JOHN P. TARBOX, Garden City, N. Y., assignor to Tarbox Safety Aircraft Company, a Corporation of Delaware. Filed June 20, 1918. Serial No. 240,983. 13 Claims. (Cl. 244—29.)



1. In an airplane, a vertically extending strut of streamlined section, and a vertical axis aileron having an axis streamlined by said strut.

1,423,168. TELESCOPE DEVICE FOR DETERMINING THE ANGLE OF ALLOWANCE IN FRONT ON ATTACKING A MOVING TARGET. HANS TECHEL, Kiel, Germany, assignor to Fried. Krupp Aktiengesellschaft Germaniawerft, Kiel-Gaarden, Germany. Filed Dec. 8, 1920. Serial No. 429,160. 6 Claims. (Cl. 235—61.)



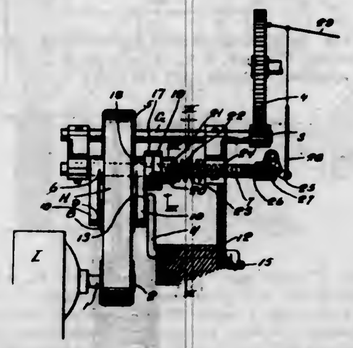
1. In a sighting telescope used against a moving target, a cross-hair mounted to be displaced transversely to the telescope axis; a driving member positively connected with said cross-hair, an indicator for reading the "corrected angle", and means transmitting the speed of the driving member to the indicator.

1,423,169. CENTRIFUGAL SEPARATOR OR AMALGAMATOR. RUSSELL THAYER, Philadelphia, Pa. Filed May 10, 1921. Serial No. 468,228. 13 Claims. (Cl. 83—67.)

1. An apparatus of the character described, comprising a closed, hollow, rotating shell through which value bearing pulp is passed under pressure, said shell having the form of a conoid affording an extended smooth interior surface over which mercury may spread itself as a thin film of varying thickness under action of centrifugal force due to rotation; and means for supporting said shell for rotation about its axis.

1,423,170. HOMOGENIZER. ERNEST M. WHITE, Los Angeles, Calif. Filed July 8, 1918, Serial No. 243,917. Renewed July 1, 1921. Serial No. 482,003. 5 Claims. (Cl. 48—180.)

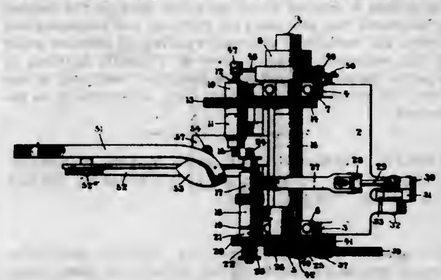
1. A homogeniser consisting of means forming a vortex chamber, the upper part of the chamber being an annular arch forming a central point, the chamber having a vertical intake passage, a mixing tube within the vortex chamber and discharging against said point, and a plurality of outlets, one of which discharges into the mixing tube.



1,423,171. TENT AND BED. FLETCHER AMES, Berkeley, Calif. Filed May 11, 1921. Serial No. 468,491. 2 Claims. (Cl. 5—5.)

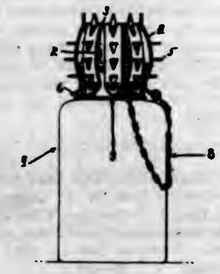
1. The combination with a cot, a set of upper and lower rigid arms having connection at each outer corner of the cot, one arm of each set being pivoted to the cot, each arm having a rigid ring at its outer end, tent posts passing entirely through the ring members of said sets of arms and engaging the ground at their lower ends and unconnected with the ring members, a foldable ridge pole connecting said posts, another set of upper and lower rigid arms having connection with each inner corner of the cot, the uppermost arm of each second set of arms being pivotally connected to the cot and having a ring member at its outer end, said last mentioned pivoted arms being formed upon a curve, and when extended, being directed upwardly and

outwardly with its ring member disposed in vertical alignment with the respective ring member of the respective lower arm, tent posts passing through the ring members of said second sets of arms and unconnected with the ring members and longer than the aforesaid tent posts and at their lower ends engaging the ground, a ridge pole connection between the longer posts, the pivoted arms and their ring members being sustained in extended positions by the posts, and a tent covering for the structure.



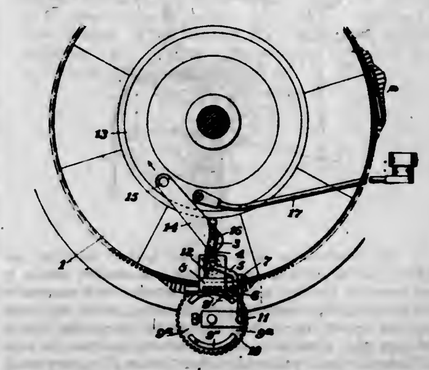
1,423,172. RATCHET CLUTCH FOR DRIVE MECHANISM. CHARLES W. ANDERSON, Brooklyn, N. Y. Filed May 28, 1919. Serial No. 300,303. 5 Claims. (Cl. 64—5.)

1. The combination with a drive pulley, a driven pulley, a slack belt extending between said pulleys, and a belt-tightener movable into and out of belt-tightening position, of means whereby to retain the belt-tightener in belt-tightening position, and said means comprising parts cooperative to retain the belt-tightener only at a degree of tightness which is less than its maximum tightness.



1,423,173. CAP-FEEDING DEVICE FOR THREADING MACHINES. GUSTAV FABIAN ANDERSON, Brooklyn, N. Y., assignor to Paragon Can & Cap Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 30, 1919. Serial No. 320,582. 3 Claims. (Cl. 153—72.)

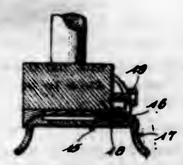
1. Apparatus of the character described comprising, a chute for the caps, threading means, a spring plunger carried by the chute for limiting the downward feed of the caps therein, an oscillating plate arranged to receive a cap from the chute and place it on the threading means, and a



cam carried by said plate and fitted to engage the said plunger for permitting the caps to be fed one at a time from the chute to said plate.

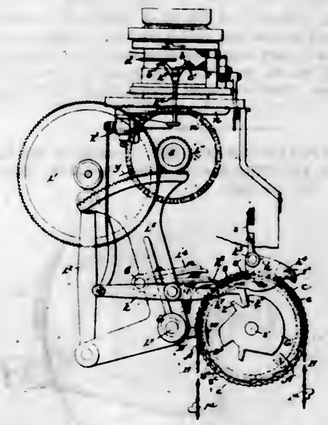
1,423,174. POISON-BOTTLE CAP. WILLIAM HENRY ARMSTRONG, New Orleans, La. Filed July 22, 1920. Serial No. 398,066. 8 Claims. (Cl. 215—9.)

1. The combination with a bottle having a closure means, of an indicator of the class described comprising bottle gripping means and an intermediate portion engaging with said closure means to determine the extension of the gripping means upon the bottle and preventing removal of said closure without displacement of the indicator.



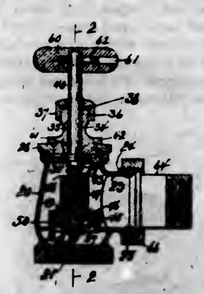
1,423,175. KNITTING MACHINE. HERBERT T. BALLARD, Norristown, Pa. Filed Jan. 22, 1920. Serial No. 353,195. 4 Claims. (Cl. 66—22.)

1. In combination, in a circular rib knitting machine, a dial wing cam and means for adjusting the same to make



a plurality of groups of courses, each made up of alternate sections of tuck and plain rib with the changes beginning on different wales on the successive courses, and for making groups of courses all of one stitch between the courses of alternate tuck and plain rib knitting, and beginning and ending the sections of alternate knitting on different wales in the successive group courses of alternate knitting to produce diamond shaped spots staggered vertically in one row from those of the adjacent rows, substantially as described.

1,423,176. DEMOUNTABLE RIM. WALTER E. BEEMAN, Laporte, Ind. Filed Dec. 29, 1921. Serial No. 525,552. 6 Claims. (Cl. 301—35.)

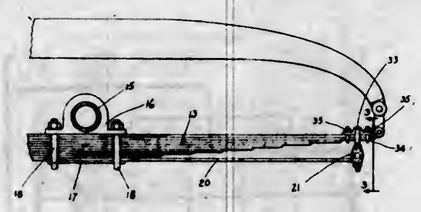


1. A demountable rim comprising an endless flanged section, a flanged self-contracting transversely split section telescoping within the first named section, the abutting ends of said split section being beveled and overlapping one another, and co-acting means between the endless section and one end of the split section for maintaining the ends in engagement with one another and for connecting the two sections together.

1,423,177. CIRCULAR STOCKING MACHINE. GEORGE P. BOSWORTH, Central Falls, R. I., assignor, by mesne assignments, to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed June 4, 1914, Serial No. 843,062. Renewed Dec. 19, 1917. Serial No. 207,982. 17 Claims. (Cl. 66—24.)

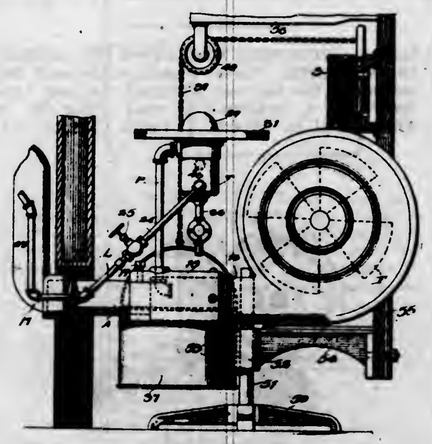
17. In combination, in a circular hosiery knitting machine, a needle cylinder, a knitting cam carrier, means to rotate and to oscillate said needle cylinder with respect to said knitting cam carrier in the knitting of the leg, heel, foot and toe of the stocking or hose, a narrowing pick, a widening pick, a pattern member, and connections for positively moving said widening picker from said pattern member to render said pick operative, said connections acting upon the reverse stroke of the needle cylinder.

1,423,178. VALVE. TOM BRADSON, Brooklyn, N. Y. Filed Feb. 25, 1919. Serial No. 279,122. 1 Claim. (Cl. 251—48.)



The combination of a valve casing having a valve seat with a port, a cup shaped bushing having a central opening and an interior and an outer thread, the latter thread in engagement with the upper end of the casing, a cap with a thread at its upper end and a thread at its lower end, the latter thread engaging the interior thread of said bushing, a cap nut for the thread at the upper end of the cap, a valve spindle extending through said cap and bushing and having a threaded portion at its lower end, said valve spindle having a disc flange and collar formed therewith, said disc flange held in place between said cap and bushing and said collar extending into the central opening of the bushing, a floating support having a pair of guide lugs and in threaded engagement with the threaded portion of the valve spindle and having a shoulder formed at its upper end, and a valve at its other end, the shoulder at the upper end of the support bearing against the lower face of said bushing when said support is in its uppermost position and an element coacting with the guide lugs of the support to maintain it in operative position, the said guide lugs separated from said element by clearance spaces.

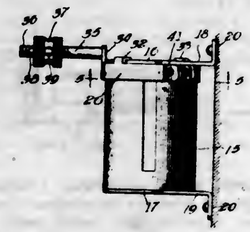
1,423,179. DEPTH GEAR FOR TORPEDOES. HUGH M. BRANHAM, Brooklyn, N. Y. Filed Mar. 25, 1921. Serial No. 455,539. 3 Claims. (Cl. 114—25.)



1. In a torpedo, in combination, a housing for the spring balance of the depth control mechanism, a spring within the housing, means for adjusting the tension of the spring and means interposed between the adjusting means and the housing for excluding the pressure of gases in the afterbody from the interior of said casing.

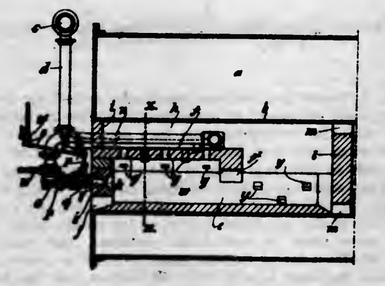
1,423,180. EQUALIZER FOR VEHICLE SUSPENSION. WILLIAM E. BRONEY, Jr., Noblesville, Ind. Filed Aug. 29, 1921. Serial No. 496,445. 4 Claims. (Cl. 267—48.)

2. In an equaliser spring construction for a vehicle suspension, the combination with a main spring, and an equaliser spring, of a spring-eye pin for supporting the end of said equaliser spring, of a socket for said pin, means for supporting said socket on said main spring, and means for adjusting said socket on said supporting means.



1,423,181. OIL-BURNING APPARATUS. ALBERT PRESTON BROOMELL, York, Pa.; Janet L. Broomell executrix of said Albert Preston Broomell, deceased. Filed Mar. 19, 1921. Serial No. 453,663. 6 Claims. (Cl. 158—36.)

1. An oil burning apparatus, comprising, a burner, means for supplying air under pressure to the burner, an oil reservoir connected to and disposed below the burner, means connecting the first means with the reservoir to cause said means to force the oil from the reservoir to said burner, a source of oil supply connected to the reservoir, a float operated control valve between the reservoir and the source of supply, and positive means acting to close said control valve, the last means being operable by the second means to allow of the opening of said control valve.

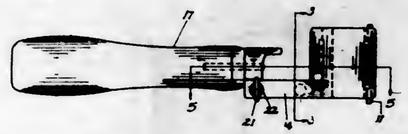


1,423,182. BRACKET FOR PRINTOMETERS. CARLTON E. BROWN, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 432,061. 9 Claims. (Cl. 284—1.5.)

1. In a printometer, a base, operating mechanism including a solenoid mounted on the base, a bell-shaped glass cover for engaging the base and enclosing the operating mechanism, one end of the solenoid lying substantially under the center of the bell-shaped cover, a post for holding the cover upon the base, and a separable clamp for clamping the end of the solenoid, said clamp

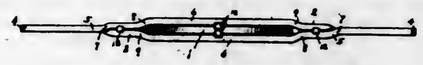
supporting the post, and having ears for aligning the clamp upon the end of the solenoid and having screws for closing the clamp.

1,423,183. APPARATUS FOR THE LIQUID-FUEL FIRING OF STEAM BOILERS. WILLIAM MURRAY BURDON, Bellshill, Scotland, assignor to Burdons Limited, Bellshill, Scotland. Filed Apr. 7, 1920. Serial No. 372,004. 5 Claims. (Cl. 158—4.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A steam boiler furnace adapted to be fired by liquid fuel having two chambers therein a heating chamber and a combustion chamber, a wall separating the chambers and having openings therethrough, a device for delivering liquid fuel in admixture with air into the combustion chamber, a main air supply pipe, and branch pipes passing into the heating chamber and then to the device.

1,423,184. LUMINOUS GUN SIGHT. JOHN S. BUTLER, U. S. Army, assignor to Newton D. Baker, Secretary of War, trustee. Filed Nov. 20, 1918. Serial No. 263,397. 2 Claims. (Cl. 33—52.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



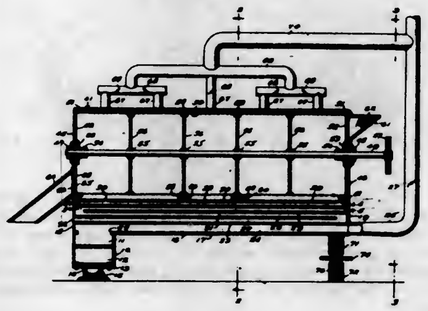
1. An attachment for a rear gun sight; said sight characterized by a leaf, a slide adjustable on said leaf, the slide including an apertured sighting bridge and an upper bridge, including side and upper bridge engaging members, spring means interposed between said members for forcing the same into engagement with the side and upper bridge members and sight aperture illuminating elements carried by said spring means.

1,423,185. AIR-BRAKE HANDLE. WILLIS E. CADY, Chicago, Ill. Filed Mar. 18, 1920, Serial No. 366,897. Renewed Apr. 13, 1922. Serial No. 552,380½. 3 Claims. (Cl. 74—33.)

1. An air brake handle comprising a socket bearing head formed from a plurality of sections pivotally connected together adjacent their outer ends; a handle rigidly fixed on the inner end of one of said sections; a set screw positioned through one of the said sections and engaging a bore provided in the other of the said sections for adjusting the relative position of said sections to each other; and a resilient member positioned in each of said sections for forcing one of said sections outwardly upon releasing said set screw, substantially as described.

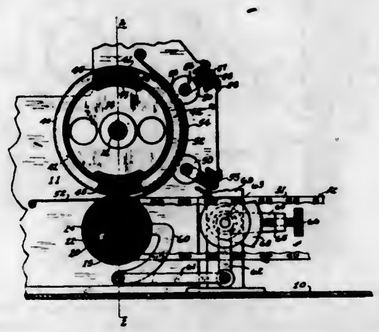
1,423,186. VEHICLE FENDER. HARRY CAPLAN, Detroit, Mich. Filed Oct. 22, 1921. Serial No. 509,643. 10 Claims. (Cl. 293—55.)

8. A fender for vehicles comprising a flat bar having two points of support at equal distances from its ends, the bar extending outwardly from such points of support and then being folded on itself at points equally distant from its ends so that said ends extend in the same plane and overlap, said folded portions being offset vertically in opposite directions to space them apart and the central portion of the bar being curved so its middle point is in the same plane as said folded portions, said ends and the middle point of the bar being notched to receive bolt shanks and also formed with depressions and the folded portions of the bar also being formed with depressions adjacent the other depressions, and bolts extending through said notches and having pins extending into said depressions to secure the several parts of the bar together.



1,423,187. AUTOMOBILE FENDER. HARRY CAPLAN, Detroit, Mich. Filed Oct. 22, 1921. Serial No. 509,644. 9 Claims. (Cl. 293—55.)

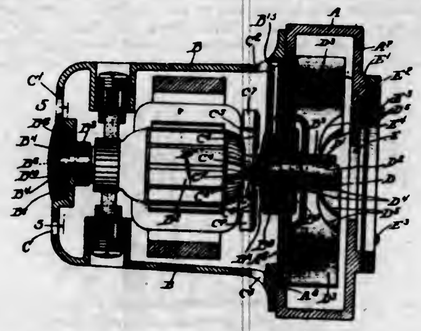
5. A fender consisting of a flat metal bar bent into the form of a flat loop and brackets to support the same, the ends of the bar meeting at the middle of one of the sides of the loop and being bent back on themselves, and a coupling device uniting the ends of the bar and the other flat side of the loop and embodying a bolt extending through holes in the ends of the bar, the brackets being attached to one of said flat sides at equal distances from the ends thereof.



1,423,188. DEHYDRATOR. WILLIAM O. CARDIN, Joplin, Mo., assignor to J. W. Freeman, Joplin, Mo. Filed Nov. 23, 1920, Serial No. 426,060. Renewed Dec. 21, 1921. Serial No. 523,881½. 7 Claims. (Cl. 34—5.)

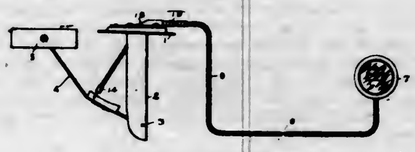
1. In a device of the character described, a heating unit, a heater casing, said heater casing comprising a flue communicating with said heating unit, a plurality of staggered baffle plates, a plate mounted above said baffle plates and provided with relatively large openings, and a distributing plate mounted above said last named plate

and provided with relatively small openings, said heater casing being provided with an air intake opening, a casing mounted above and communicating with said heater casing, and means carried within said last named casing for supporting the material to be dried.



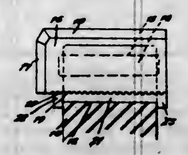
1,423,189. IMPRESSION MECHANISM FOR ADDRESSING MACHINES. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 29, 1920. Serial No. 420,415. 12 Claims. (Cl. 101—54.)

1. In a mechanism of the character described, the combination with an impression roller, of a coacting roller drum having on its surface a plurality of arcuate platen members, arcuate strips on the drum between said platen members, and feeding rollers bearing on the strips.



1,423,190. BLOWER. GEORGE CLEMENTS, Chicago, Ill., assignor to Clements Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed July 1, 1921. Serial No. 481,963. 6 Claims. (Cl. 230—11.)

1. A cleaner comprising a fan casing and a fan adapted to rotate therewithin, an air outlet therefor, a motor casing associated with said fan casing, an airtight partition therebetween, a rotor adapted to rotate within said motor casing, a rotor shaft projecting through the partition between the motor and the fan casing, the fan being mounted on the outer end of said shaft, an air inlet in the outer

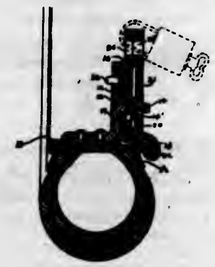


side of said fan casing opposite the end of shaft, a plurality of ventilating apertures adjacent either end of said motor casing.

1,423,191. FLUID GAUGE. JOHN G. COLLISON, JOHN W. WRIGHT, and HARRY M. FILBERT, Dayton, and WALTER FRANK, Miamisburg, Ohio, assignors to The Stemco Engineering Company, Dayton, Ohio, a Corporation of Ohio. Filed June 25, 1920. Serial No. 391,709. 7 Claims. (Cl. 73—82.)

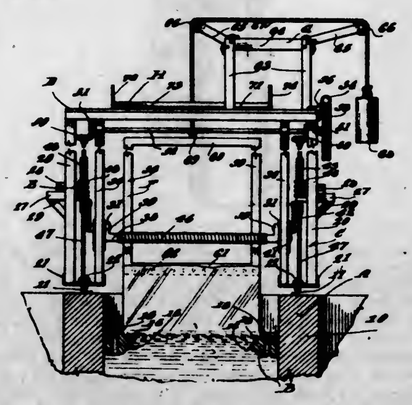
1. A fluid gauge wherein the rise and fall of a float within a tank is indicated at a distant point by the to and fro movement of an intermediate reciprocatory flexible member acting through a curvilinear path of travel under the influence of the float, characterized by a tubular guide for the reciprocatory member, a collar loosely surrounding the reciprocatory member bearing upon the end of the tubular guide, a cap enclosing the end of the tubular guide and said collar, and a body of packing material surrounding the reciprocatory member within the cap intermediate the head of the cap and said collar.

1,423,192. MILLING TOOL. CLINTON J. CONVERSE, Bridgeport, Conn. Filed Oct. 20, 1920. Serial No. 418,244. 7 Claims. (Cl. 29—105.)



1. A milling tool comprising a body, a tooth mounted rigidly and releasably in the body, and means having rigid connection with the body and so interlocked with the body to avoid movement thereof in the direction of the axis of the body, said means having interlocking detachable engagement with said tooth and adapted when detached from said tooth to permit the tooth to be moved approximately parallel with the axis of the body at the same time permitting of its interlocking engagement in various positions of axial adjustment.

1,423,193. CARBON BLACK AND METHOD OF PRODUCING SAME. AUGUSTUS STEIGER COOPER, Santa Barbara, Calif. Filed Jan. 19, 1922. Serial No. 530,376. 4 Claims. (Cl. 134—60.)



4. The method of producing carbon-black, consisting of grinding brown bitumen bearing sands, blowing the bitumen therefrom, and heating the finely comminuted bitumen thus obtained to form a carbon-black.

1,423,194. LOCKING DEVICE. CLAUDE M. CORBETT, Port Arthur, Tex. Filed Aug. 8, 1921. Serial No. 490,625. 2 Claims. (Cl. 70—122.)

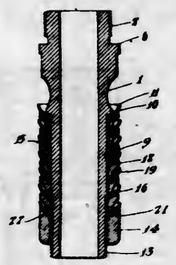
1. A device of the character described comprising a body having an opening therein for receiving the bolt of a tire carrier, a projection on the body for engaging a hole in the tire carrier, a hasp connected to the body, means in connection with said hasp for preventing the rotation of the nut on said bolt and means for locking the hasp in closed position.

1,423,195. SHEET-GLASS-DRAWING MACHINE. ORA M. COX, Manayka, and CONNIE C. ROSE, Clarksburg, W. Va. Filed Feb. 25, 1920. Serial No. 361,120. 18 Claims. (Cl. 40—17.)

10. In a sheet glass drawing machine, a frame, a pair of spaced guides located at the opposite sides of the frame, superposed blocks slidably mounted in the guides, worm wheels rotatably carried by the frame, rotatable vertical shafts arranged in the opposite sides of the frame, worms keyed to the shaft and meshing with the wheels, means for connecting the shafts together for synchronous movement, connecting rods operatively connected to the worm wheels and to the sliding blocks, inwardly extending rigid arms carried by the sliding blocks, movable arms carried by the sliding blocks, crank arms pivotally carried by the sliding block, and connected to the movable clamping arm,

and means operatively connecting the crank arms to the connecting rod.

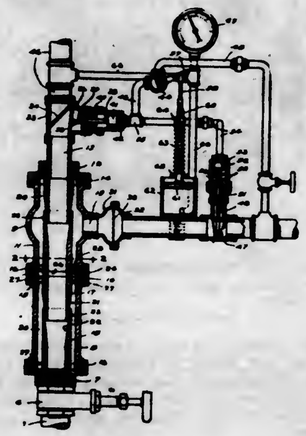
16. In a machine for drawing glass from molten glass container, a bait includnig a substantially rectangular open frame having side bars, and end bars, one of the end bars having a horizontal line of perforations therein.



18. In a sheet glass drawing machine, a substantially rectangular formation anchor including side walls and end walls, the end walls having the upper and lower faces thereof inclined inwardly in opposite directions, the said inclined faces being bevelled inwardly toward the central longitudinal axis of the block, the end walls having vertical openings extending therethrough in direct alignment with the longitudinal axis of the anchor.

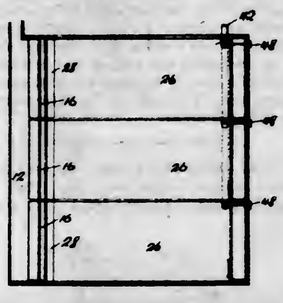
1,423,196. LUNETTE BRACKET. LOUIS B. CRAIG, Davenport, Iowa. Filed Nov. 3, 1920. Serial No. 421,608. 5 Claims. (Cl. 278—50.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

5. A lunette bracket, including a part adjustable to the center rail of a caisson, an offset depending from the bracket, said offset provided with a bore, a lunette having a shank formed to fit the bore and means for binding the shank in place.



1,423,197. PUMP PLUNGER. EDWARD COE CRITCHLOW, Orcutt, Calif. Filed July 11, 1921. Serial No. 483,695. 1 Claim. (Cl. 103—63.)

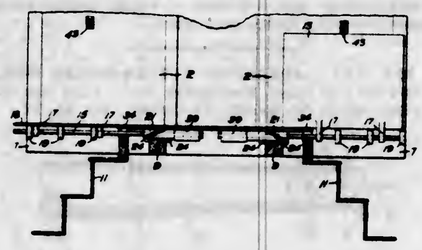
In a pump plunger, the combination of a tubular member, spring metal packing cups on the tubular member, the greatest diameter of said cups being only at their rims, said cups being concave interiorly and convex exteriorly, spacing rings between adjacent packing cups and of less diameter than said cups, said rings having internal beveled faces engaging the outer faces of the cups and said rings having portions of externally reduced diameter engaging the inner faces of the cups, there being only annular line contact between the inner faces of the cups and the outer faces of the rings and there being spaces between the cups and rings for the entrance of liquid to the cups, and means to hold the cups and rings in place.



1,423,198. VACUUM JET AND SYSTEM OF OPERATING THE SAME. THOMAS L. DAVENPORT, Everett, Wash. Filed Feb. 25, 1919, Serial No. 279,200. Renewed Mar. 31, 1921. Serial No. 457,491. 2 Claims. (Cl. 230—13.)

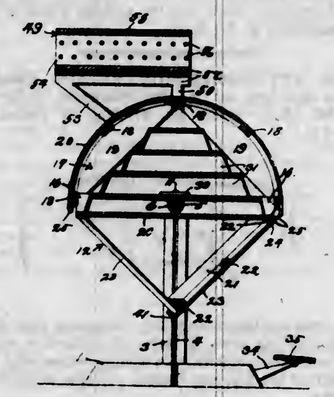
1. A vacuum jet of the class described, comprising an outer casing having a fluid inlet passageway and provided with a cylindrical passageway therethrough that is counterboard at each end to form a seat, a tubular member having an annular flange on one end adapted to fit within the seat in one end of said casing to center said tubular member within said casing the inner walls of the end of said tubular member opposite said flange being flared, another tubular member having an annular flange

on one end adapted to fit within the seat in the opposite end of said casing said other tubular member having a tapered end adapted to project within the flared end of said first named tubular member so that a narrow annular space is left therebetween, caps on the ends of said outer casing and adapted to engage with and hold said tubular members and inlet and outlet pipes connected with said caps.



1,423,199. FIBER SAVER. AUGUST DEŽELA, Vancouver Island, British Columbia, Canada. Filed Nov. 12, 1920. Serial No. 423,589. 3 Claims. (Cl. 92—28.)

1. A pulp saver comprising a tank having inlet means, a partition arranged within the tank and dividing the same into sediment and pulp receiving compartments, and a transversely inclined baffle arranged in said pulp collecting compartment adjacent said partition and adapted for directing the inflowing liquid downwardly.



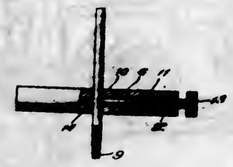
1,423,200. CAR DOOR. GEORGE DONAHUE, Hyde Park, Mass., assignor, by mesne assignments, to Frederick L. Emery, Lexington, Mass. Filed Sept. 13, 1910, Serial No. 581,851. Renewed Dec. 26, 1919. Serial No. 347,634. 16 Claims. (Cl. 105—433.)

1. The combination with a car platform, of steps leading therefrom, a swinging tread door for bridging a space above said steps between said car platform and a station platform, a horizontal hinge for said tread door,

and means outside of said space to shift said door to and from its active bridging position.

1,423,201. CARD AND SIGN OR POSTER PAINTER'S WORKBENCH. HERBERT R. ELLIS, Fredericksburg, Va. Filed Nov. 18, 1920. Serial No. 423,895. 12 Claims. (Cl. 45—129.)

1. A revolving sectional bench for use by artists, draftsmen, sign, show card and poster painters or the like, comprising drums, means for rotatably supporting the same, means for coupling the drums, and means for revolving the drums and holding the same against movement.



1,423,202. TIGHTENING DEVICE FOR ANTISKID CHAINS. PERRY E. FELLOWS, Rochester, N. Y. Filed July 25, 1921. Serial No. 487,204. 3 Claims. (Cl. 85—365.)

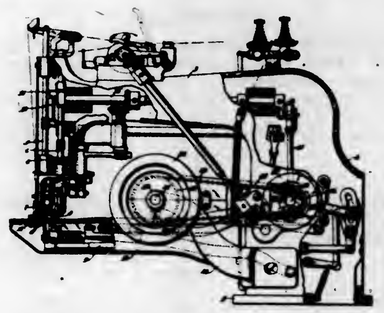
1. An adjusting device for antiskid tire chains comprising a body portion having a laterally arranged mem-

ber for the attachment of the cross chain and an adjustable member at each end adapted for connection with the adjacent end of the side chain.

1,423,203. FISH STRINGER. DAVID FISKE, Chicago, Ill. Filed Feb. 28, 1921. Serial No. 448,722. 1 Claim. (Cl. 224—7.)

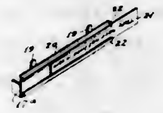
A fish stringer comprising a flexible string, a cross bar having a transverse opening extending therethrough, and a socket extending longitudinally of the bar and connecting with said transverse opening and a bolt threadedly engaging said longitudinal socket and adapted to impinge against said string to detachably secure the cross bar on the string, said flexible string capable of being moved in opposite directions through the transverse opening.

1,423,204. SPARK INTENSIFIER. MARSHALL J. FREEMAN, East Orange, N. J. Filed Sept. 9, 1920. Serial No. 409,159. 3 Claims. (Cl. 175—183.)



3. In a device of the character described, the combination with an insulating block, said block having an aperture near one end to admit the center stem of a spark plug, a nut on the stem for maintaining the block on the stem, a binding post mounted on the other end of the block, a plate secured upon one face of the block by said binding post, said plate including a portion held flat against the block, and a pair of like prongs joined to said plate, each prong rising from the block and extending forwardly along the block, the end of each prong being spaced above the block and above the nut which holds the device upon the center stem of the spark plug.

1,423,205. SEWING MACHINE. GEORGE S. GATCHELL, Roselle Park, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Nov. 21, 1918, Serial No. 263,453. 4 Claims. (Cl. 112—258.)

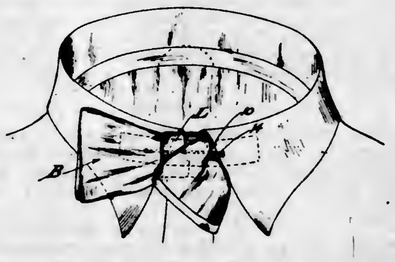


1. A sewing machine comprising a standard and a work-supporting arm extending therefrom, stitch-forming mechanism adjacent the free end of the arm, a main-shaft mounted in the standard, operative means connecting the stitch-forming mechanism and the shaft, a hand-

wheel mounted in advance of said standard and independently of the work-supporting arm, substantially

at the level of and adjacent the stitch-forming mechanism, and operative means connecting the hand-wheel and main-shaft.

1,423,206. PHONOGRAPH RECORD. JOHN H. GEDDES, Waterbury, Conn. Filed Aug. 15, 1921. Serial No. 492,446. 3 Claims. (Cl. 40—16.)

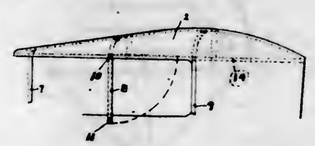


1. A cue clip for a phonograph record comprising a plate elongated in the direction of the circumference of the disc record bearing a cue and adapted to be placed against one side of the marginal smooth edge portion of a phonograph record, a base portion carrying said plate at its outer edge, and being of substantially the same length as the plate, said base portion adapted to extend across the edge of the record, and means carried by the base portion adapted to engage against the smooth edge portion of the record opposite to the plate for clamping the same in position.

1,423,207. JOURNAL PACKING. CHARLES A. GELIN, Chicago, Ill., assignor to W. Cary Lewis, Chicago, Ill. Filed May 10, 1920. Serial No. 380,191. 8 Claims. (Cl. 64—46.)

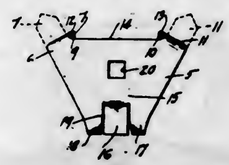
1. A packing of the kind described comprising wood excelsior treated so as to be free from grit and moisture.

1,423,208. TIE RETAINER. WILLIAM J. GETSINGER, Los Angeles, Calif. Filed Apr. 11, 1921. Serial No. 460,349. 3 Claims. (Cl. 24—49.)



1. A necktie retaining device comprising a strip of thin flexible material, a pair of short sections of wire having their inner ends secured to the central portion of said flexible strip of material, the outer end portions of said sections of wire being rebent to form hooks which extend through the said strip of flexible material and project inwardly toward each other.

1,423,209. ADVANCING CUTTER-BORING TOOL. EDWARD F.G. GIBBS, Washington, D. C. Filed Aug. 22, 1918. Serial No. 250,981. 7 Claims. (Cl. 29—96.)

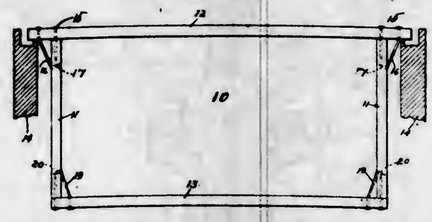


1. A counter-boring tool comprising a straight bar; the same having a cutter-holding aperture through its front end transversely disposed to its axis; a spring clamp integral with the said bar formed by a slit beginning on its surface to the rear of said aperture and running diagonally forward into it; a cutter fitted within the said aperture; and a pull-screw near the rear end of the said clamp which engages both clamp and bar, the head of which is counter sunken into the member which it enters; all substantially as set forth.

1,423,210. AUTOMOBILE SIDE CURTAIN. CHESTER H. GILLIG and LEO GILLIG, San Francisco, Calif. Filed Jan. 27, 1919. Serial No. 273,208. 3 Claims. (Cl. 296—140.)

1. A disappearing curtain for automobile tops comprising a top having bows, a series of guideways supported by the bows, the guideways extending rearwardly toward the center of the top, and flexible curtains slidable in the guideways.

1,423,211. WIRE-FENCE TIGHTENER. CHARLES GUSHWA, Elkhart, Ind. Filed Apr. 10, 1922. Serial No. 551,431. 3 Claims. (Cl. 24—71.1.)



1. A wire tightener consisting of a plate having an opening in its central portion for the reception of a tool, extensions carried by certain corners of said plate, said extensions being extended back upon the plate to provide hooks, and fingers projecting from the end portion of the plate remote from the hooks, said fingers coacting with each other to provide a recess.

1,423,212. COMB FRAME FOR BEEHIVES. DEAN S. HALL, Marshfield, Vt. Filed Feb. 23, 1921. Serial No. 447,144. 8 Claims. (Cl. 6—10.)

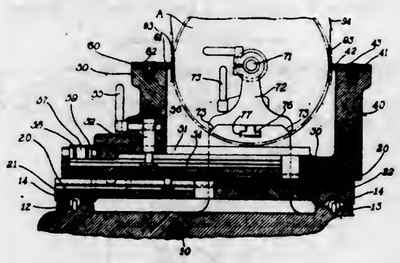
1. A comb frame including end bars and a top bar, the top bar extending beyond the end bars and being attached

thereto, the ends of the top bar being longitudinally slotted, and connecting means between the projecting ends of the top bar and the end bars comprising members having their upper ends extending through said slots and having heads on their upper ends greater in area than the width of the slots, the lower ends of said members extending into the end bars and resisting upward movement of the projecting ends of the cross bar.

2. A comb frame including end bars and a cross bar, fastening devices connecting the end bars to the cross bar, and means for preventing sagging of the cross bar comprising metallic members at each end of the cross bar extending through the cross bar in spaced relation to the end bars and angularly bent at their extremities and driven into the end bars, that portion of the member between its point of emergence from the cross bar and its point of entry into the end bar being angularly disposed with reference to the end bar.

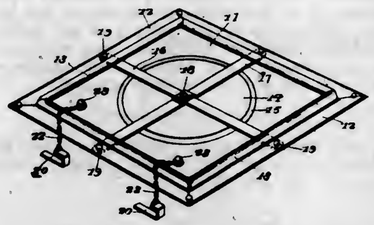
4. A comb frame having end bars and an upwardly curved cross bar.

7. A comb frame comprising end bars and a transverse bar, and means engaging the ends of the transverse bar and the end bars and drawing the transverse bar upward at its middle.



8. A comb frame comprising end bars, upper and lower transverse bars, and means connecting the end and transverse bars at the corners of said frame and holding said transverse bars in an upwardly bowed position.

1,423,213. OIL-WELL PACKER. CHARLES M. HEETER, Butler, Pa. Filed Sept. 26, 1918. Serial No. 255,764. 9 Claims. (Cl. 166—12.)



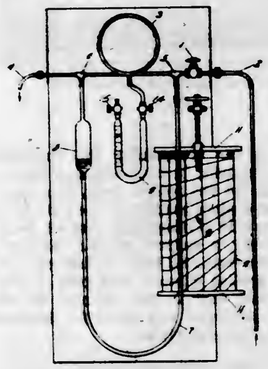
1. A well packer having an expansible packing member and a plurality of holding members below said packing member in different horizontal planes arranged to support the packing member, a tube carrying the packing member and holding members and means frangibly connected to said tube for moving both of said holding members to operative position before the packing member is expanded, substantially as described.

1,423,214. MEASURING MACHINE FOR GAUGES. REUBEN HILL, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 1, 1920. Serial No. 407,398. 15 Claims. (Cl. 33—199.)

7. A machine for determining the dimensions of a conical body comprising in combination, a base, a mounting on said base for the conical body, a carriage on said base movable in a plane parallel to the axis of said body, a plate fixed to said carriage and adapted to be applied adjacent said body, a support on said carriage movable toward and away from said body, a plate on said support adapted to be applied adjacent said body, a stop on the mounting for said conical body adapted to engage one of the faces of said body, and means for determining the relative position of said plates.

1,423,215. COVER FOR LAUNDRY TUBS. LEO HIRSCHBERG, Newark, N. J. Filed Nov. 8, 1920. Serial No. 422,556. 2 Claims. (Cl. 220—32.)

2. A cover for laundry tubs comprising a sheet metal plate having its marginal portions folded and extending at an angle from its under side and with the edges of the marginal portions in tubular form, and reinforcing bars extending transversely of the plate with their ends secured within the folded marginal portions of the cover.



1,423,216. SPINNING RING. CHARLES A. HOLT, Cambridge, Mass., assignor to Union Industrial Company, Boston, Mass., a Corporation of Maine. Filed June 8, 1921. Serial No. 476,069. 2 Claims. (Cl. 118—59.)

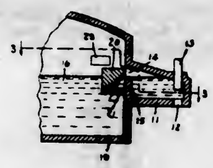
1. In a spinning ring, the combination with a casing comprising separable under and upper members, of a lining member of self-lubricating material confined within

said casing and provided with an annular traveller-receiving chamber, and an annular traveller in said chamber, said under member of the casing having separated portions projecting inwardly beyond the outer wall of said chamber to constitute a support for the traveller.

1,423,217. GAS METER. THEODORE HORTON, Albany, N. Y. Filed June 9, 1919. Serial No. 302,712. Renewed Dec. 21, 1921. Serial No. 524,013. 3 Claims. (Cl. 73—167.)

1. In a device for measuring the quantity of gases flowing, per unit of time, through a tube, a tube of uniform internal diameter; a differential manometer connected into said tube at two points distant from each other; a manometer connected into said tube midway between said points; and a chart mounted to cooperate with the measuring leg of said differential manometer, and having thereon indicia showing the quantity of gas discharged for different pressures, said chart being adjustable to bring its indications into harmony with the pressures as shown by the midway-connected gage.

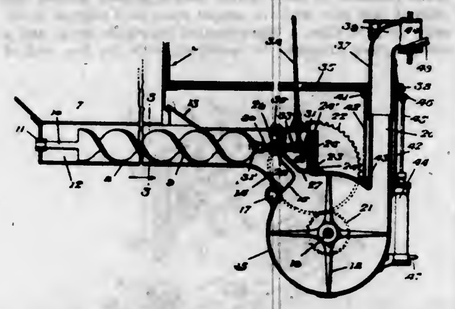
1,423,218. BELT BUCKLE. WILLIAM A. HURST, Battle Ground, Ind. Filed Aug. 8, 1921. Serial No. 490,670. 1 Claim. (Cl. 267—72.)



A belt buckle comprising a longitudinally flanged shell, a back plate having its ends turned inwardly toward the front of the shell, a longitudinal central bar disposed through the said inwardly turned ends and secured at its ends therein, a movable transverse plate between the inturned ends, the said bar being loosely engaged through said movable plate, a yoke having its arms slidable through one of said inturned ends and secured to and movable with the movable plate, springs on the arms of the yoke and the central bar between the movable plate and one of the inturned ends, and a yoke pivotally mounted in the flanges of the shell outwardly of other inturned end.

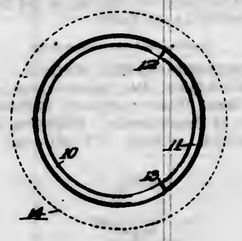
1,423,219. SPARK PLUG. DAVID M. HUTCHINSON, St. Louis, Mo. Filed Apr. 16, 1921. Serial No. 461,746. 3 Claims. (Cl. 123—169.)

1. In a spark plug a one piece insulator having concentric bores extending therethrough, and a shoulder adjacent the lower end thereof, a relatively long upper electrode having a head on its lower end, seated in one of said bores, and a relatively short lower electrode having a head formed on its upper end, seated in said bore and extending through the other bore, an insulating washer provided with an opening, positioned between said heads, a sleeve embracing said heads and said insulating washer for holding the two electrodes in assembled position before inserting in said bores.



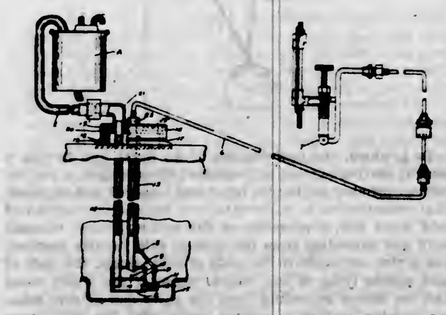
1,423,220. MEANS FOR CONTROLLING DISCHARGE FROM GLASS TANKS. EDWARD S. HUTTON, Lapel, Ind. Filed Nov. 10, 1919. Serial No. 336,835. 1 Claim. (Cl. 49—55.)

The combination of a glass tank, and a discharge spout, with a wall between the lower part of the spout and the glass tank and an opening above said wall for the flow of glass from the tank to the spout, a floating block inside the glass tank with a transversely disposed passageway in said block arranged so that when the block is in one position against said wall, the passageway will extend from the lower part of said block to a point higher than said wall and permit the flow of glass from the tank to the spout, and when the block is turned over will prevent such flow of glass.



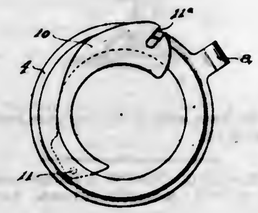
1,423,221. LOCOMOTIVE STOKER. CARL H. JEFFERS, Kent, Ohio. Filed June 7, 1920. Serial No. 387,035. 4 Claims. (Cl. 302—36.)

2. A stoker comprising a blower to be carried by a locomotive including a cylindrical casing having its axis disposed horizontally and a fan operating within said casing, said casing having an upwardly-extending outlet pipe and an upper inlet opening, a longitudinal coal trough for the delivery of coal from the tender having a downwardly-directed chute at its forward end entering said inlet of the blower casing, said casing and trough having a flexible connection for the relative movement thereof, an auger conveyer working within said trough for feeding



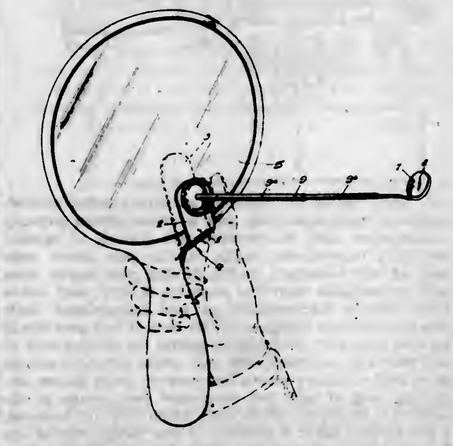
the coal to said chute, and operating means for said fan and auger having a flexible connection located between said casing and trough.

1,423,222. METHOD OF CUTTING OVER METAL RIMS. ALVIN L. JOHNSON, Worcester, Mass., assignor to Two Part Rim Co. Inc., a Corporation of Delaware. Filed May 17, 1920. Serial No. 382,137. 9 Claims. (Cl. 29—159.)



1. The method of cutting over a wheel rim for carrying a pneumatic tire which consists in cutting the rim into a plurality of separate sections and then securing metal thereto filling the space between said sections to compensate for the metal removed in cutting the rim apart.

1,423,223. DEPTH-INDICATING DEVICE. HORACE W. KING, Ann Arbor, Mich. Filed Aug. 27, 1920. Serial No. 406,338. 16 Claims. (Cl. 73—34.)

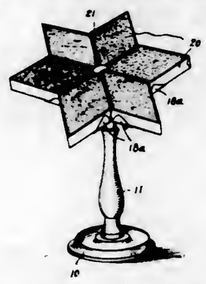


1. In a depth indicating device for liquids, the combination with a chamber communicating with a liquid at the full depth to be measured, of a second chamber below said first mentioned chamber and communicating therewith, means for introducing air into said second chamber, and a pressure gage communicating with said first mentioned chamber.

1,423,224. IRIS DIAPHRAGM. RUDOLPH KLEIN, Rochester, N. Y., assignor to Ilex Optical Company, Rochester, N. Y., a Corporation of New York. Filed June 30, 1920. Serial No. 393,068. 4 Claims. (Cl. 95—64.)

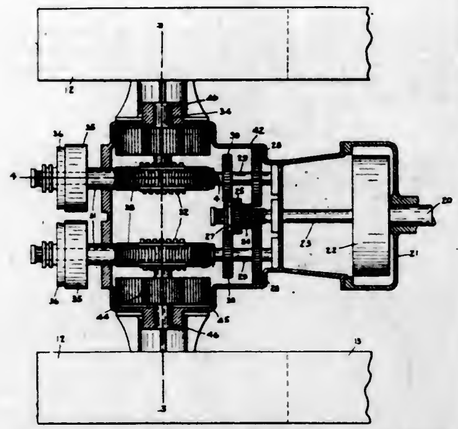
1. An iris diaphragm comprising two ring members, one of which is mounted to turn on the other, and blades pivotally connected to one of said ring members extending through the opening of the other ring member and pivotally connected to such other ring member.

1,423,225. DENTAL MIRROR. WILLIAM E. KNIGHT, Delaware, Ohio. Filed Sept. 26, 1921. Serial No. 503,330. 5 Claims. (Cl. 32—27.)



1. In a device of the class described, a base member, a stem extending therefrom, a supporting arm rotatably fitting the stem, a mirror supported by the arm, and operating means for rotating the arm.

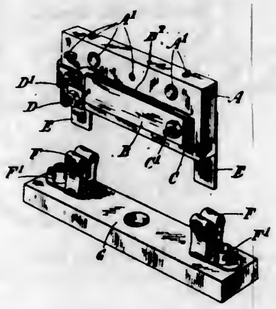
1,423,226. DISPLAY STAND. JOSEPH KUDNER, New York, N. Y. Filed Mar. 20, 1922. Serial No. 545,023. 4 Claims. (Cl. 211—24.)



1. The herein described display stand comprising a holder, a pin in the central portion of the holder and having a head spaced from the holder for engaging a series of

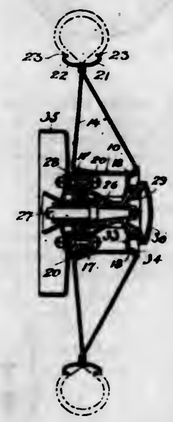
interchangeable trays, and means at the periphery of the holder to engage and embrace the outer portions of the

trays while the inner ends of the trays are located beneath the head of said pin.



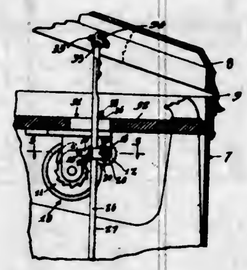
1,423,227. TRACTOR. JOHN W. LAMBERT, Anderson, Ind. Filed Apr. 19, 1919. Serial No. 291,291. 2 Claims. (Cl. 180—9.2.)

1. In a tractor the combination with parallel ground-engaging traction devices, and a motor driven primary transmission shaft intermediate said devices, of parallel secondary transmission shafts, similar gear means upon each of said secondary shafts, driving gear means upon said transmission shaft and rotatable thereby, said means being slidable longitudinally on said transmission shaft into simultaneous engagement with both of said gear means on said secondary transmission shafts for driving both of said shafts at variable speeds, gear means rotatably mounted on said secondary shafts, independent clutch means connecting each of said last mentioned gear means to the respective secondary shafts upon which they are mounted, a divided jack shaft, a plurality of gear means secured one to each section of said jack shaft and operatively associated with one of the second mentioned gear means upon said secondary transmission shafts, and independent transmission devices connecting the sections of said jack shaft one to each of said ground-engaging traction devices.



1,423,228. ELECTRIC-LAMP SWITCH. EDWARD CLAUDE LEACHMAN, London, England, assignor to Pearl Pictorial (Foreign & Colonial) Limited, London, England. Filed Mar. 7, 1919. Serial No. 281,174. 2 Claims. (Cl. 200—113.)

1. In a heat-operated intermittent contact maker for use with an insulating support having mounted thereon two contact clips situated with their line of engagement in a plane common to both, the combination with an insulating base, two electrically conducting blades situated in a plane common to both, which blades project beyond one edge of said base and are spaced apart and aligned to engage the said clips, a heat-operated bimetallic strip, and a contact-piece arranged to cooperate with the free end of

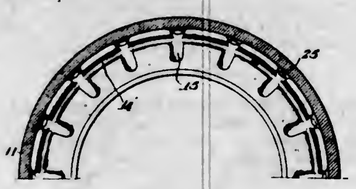


said strip, of means common to the other end of the strip and to one of said blades for connecting the same together electrically and also securing the same on said base, and means common to the said contact-piece and to the other of said blades for connecting the same together electrically and also securing the same on said base with the contact-piece mounted in operative relation to the free end of the strip, substantially as set forth.

1,423,229. PRESSED-STEEL WHEEL. JOSEPH LEDWINKA, Philadelphia, Pa., assignor, by mesne assignments, to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 21, 1917. Serial No. 150,084. 1 Claim. (Cl. 301—64.)

In a wheel, the combination of an inner hub having a central seating portion of polygonal cross-section, a central tubular member having its inner end enlarged and of polygonal cross-section to co-operate with the seating portion of said inner hub, a plurality of flat spokes formed integral with and extending from the ends of said tubular member, and a rim connected to the ends of said spokes, the ends of said spokes lying in the central plane of the wheel tread and the spokes extending from the outer end of said tubular member making a greater angle with the said plane than the spokes extending from the inner end of said member.

1,423,230. WINDING MECHANISM FOR SPRING MOTORS. OSWALD C. LEGER, Los Angeles, Calif. Filed Dec. 28, 1921. Serial No. 525,268. 2 Claims. (Cl. 185—39.)

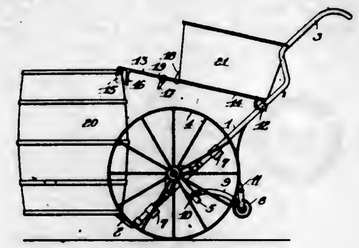


2. The combination with a phonograph having a spring motor and a lid, of a rack pivotally connected with the lid, means operated by endwise movement of the rack to wind the motor, and means mounted on the phonograph and engageable with the rack teeth to support the rack against the pressure of the lid.

1,423,231. METHOD OF PURIFYING CARBON. VICTOR LENHER, Madison, Wis., and FRANK M. DORSEY, Cleveland, Ohio; said Dorsey assignor of his right to General Electric Company, a Corporation of New York. Filed Sept. 18, 1920. Serial No. 411,258. 8 Claims. (Cl. 127—2.)

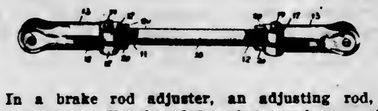
5. The method of purifying carbonized material which comprises subjecting the same to the action of a solvent comprising selenium oxychloride, washing the residue with carbon tetrachloride, and then evaporating the carbon tetrachloride remaining in the product.

1,423,232. TIRE. HERMAN LOEBL, Los Angeles, Calif., assignor to Compression Tube & Tire Co., Los Angeles, Calif., a Business Trust. Filed Sept. 2, 1919. Serial No. 321,253. 2 Claims. (Cl. 152—13.)



1. An inner tube formed of sufficiently thick rubber to prevent crumpling and of greater length about its periphery than the casing in which it is to be used, said greater length being taken up by a series of radial depressions; and of greater length on a radial plane than the inside of the casing in which it is to be used, said greater length on a radial plane being taken up by one or more circumferential corrugations; said radial depressions and circumferential corrugations being forced outwardly when the tire is inflated thus placing the rubber of the inner tube in compression in two directions at right angles to each other.

1,423,233. EXPLOSIVE MATERIAL. CHRISTEN JOHANNES STAUTSBOLL LUNDGAARD, Vejen, and KAJ TOBIAS HERBST, Braband, Denmark. Filed Sept. 14, 1921. Serial No. 500,663. 5 Claims. (Cl. 52—5.)



1. An explosive comprising a perchlorate of methyl-substituted ammonium compound.

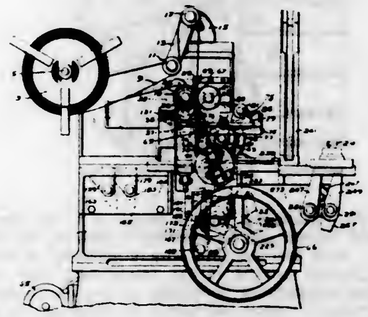
1,423,234. TRUCK. JOHN T. LYNCH, Rochester, N. Y. Filed July 24, 1920. Serial No. 398,794. 7 Claims. (Cl. 214—65.4.)

1. The combination with a frame of a heel piece at one end thereof and an operating handle at the other end, a hook arm provided with a plurality of prongs and pivotally secured to the frame, said hook being adapted to engage the upper edge of an object constituting the load between said prongs for retaining the same on the outer edge of the heel piece, and an upwardly extending prong adjustable along the hook arm to fit different sizes of loads which may be carried upon said arm between the operating handle and the last mentioned prong.

1,423,235. BRAKE-ROD ADJUSTER. ROBERT C. MCARTHUR, Sand Springs, Okla., assignor to Walter O. Fredrikson, A. Edward Krieger, and Robert C. McArthur, trustees, all of Salamanca, N. Y. Filed Apr. 13, 1921. Serial No. 461,156. 4 Claims. (Cl. 287—60.)

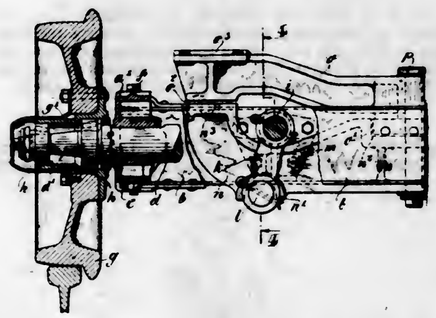
1. In a brake rod adjuster, an adjusting rod, and bored and internally threaded socket members receiving the ends of said rod, having split clamping portions, and having oil chambers into which the rod ends also extend and oil feed openings in connection with said chambers.

1,423,236. CHECK PROTECTOR. CHARLES C. MCCOMBS, Stephenville, Tex. Filed Nov. 19, 1921. Serial No. 516,378. 8 Claims. (Cl. 101—19.)



1. In a device of the class described, the combination of a split casing, numeral rings in said casing to one side of said split, and an inking pad in the other side of said casing to said split, whereby a check placed in the split of the casing can be operated upon to expose certain numerals upon the check when the pad is pressed toward the numerals.

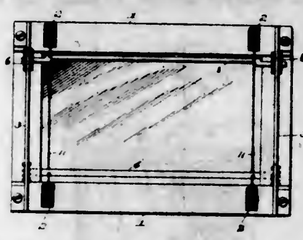
1,423,237. MACHINE FOR APPLYING HOODS TO ARTICLES. THEODORE G. MCGIRR, Springfield, Mass. Filed May 4, 1918, Serial No. 232,464. Renewed Nov. 28, 1921. Serial No. 518,479. 9 Claims. (Cl. 93—2.)



7. A machine of the character described, comprising, in combination, a step-by-step rotative folder having a recess therein, means to feed a wrapper strip toward said

folder, means for feeding the strip across said recess on rotation of the folder a step, means for thrusting an article to be wrapped against said wrapper strip and into said recess, thereby to fold the strip about an end and onto opposed sides of the article with a portion of the strip projecting from said recess, means to apply ad-

hesive to said projecting portion on rotation of the folder a further step, said portion being folded about the opposite end of the article on rotation of the folder a further step, and means for receiving the partially wrapped article from the folder and for folding the adhesive portion of the strip into engagement with another portion of the strip.



1,423,238. LEADING TRUCK FOR RAILWAY MOTOR CARS. ALFRED F. MASURY, New York, N. Y., and LYMAN C. JOSEPHS, Jr., Allentown, Pa., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 31, 1921. Serial No. 526,164. 5 Claims. (Cl. 105—190.)

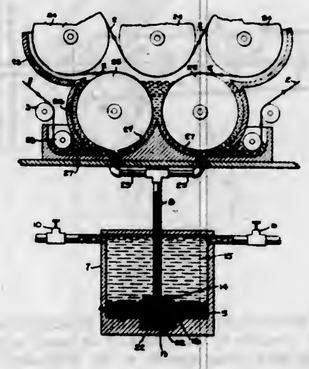
3. In a leading truck for self-propelled railway cars, swinging links mounted on the truck, a lower bolster mounted freely on the links to swing therewith, and an upper bolster mounted centrally of the lower bolster with capacity for swiveling movement with respect thereto and having seats thereon for the vehicle springs.

1,423,239. WINDOW CLEANER. ALBERTO MECONI, Munich, Germany, assignor to Tacope Meconi, Cumberland, Md. Filed July 1, 1921. Serial No. 481,816. 1 Claim. (Cl. 15—251.)

A window cleaner comprising pulley wheels mounted at the top and bottom of the window frame, substantially flat, rectangular guide members extending at right angles to the window frame on opposite sides thereof and provided with elongated openings, rollers positioned in said elongated openings, a rigid connection between the

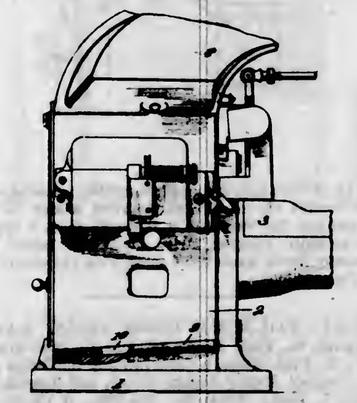
rollers on each side of the frame, cables joined to said rigid connections, and a wiper carried by one of said rigid connections.

1,423,240. AUTOMOBILE FRAME. ANTONIO MELIDONA, Niagara Falls, N. Y. Filed Nov. 20, 1920. Serial No. 425,455. 2 Claims. (Cl. 180—1.)



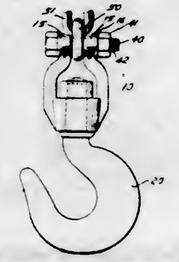
1. In a device for the purpose set forth, the combination with the frame and power plant of an automobile in which the drive shaft between the engine and differential is constructed of two sections, clutch means for connecting or disconnecting the sections, and said drive shaft projecting beyond the front of the frame, of fixed and loose pulleys on said projecting end of the shaft, shafts journaled in bearings along the sides of the frame having fixed and loose pulleys disposed opposite the first mentioned pulleys, belts trained around all of the pulleys, means for shifting the belts from the loose to the fixed pulleys, and screw jacks operated by the last mentioned shafts when the same are rotated.

1,423,241. STABLE APPLIANCE. ROBERT MINSHULL, Waterloo, Wis., assignor of one-half to Paul B. Goddard, Wilmette, Ill. Filed Aug. 16, 1919. Serial No. 317,965. 2 Claims. (Cl. 72—105.)



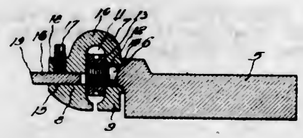
1. In a stable appliance, the combination with the portion of a concrete flooring, of a guideway therein, a channel member of inverted T-shape set in the flooring with its vertical portion in register with said guideway and its top edges spaced below the surface of the flooring, and a temporary strip adapted to be removably secured in the channel member and having its top projected beyond the top edges of the vertical portion of the channel member a distance substantially equal to that between the top edges of the vertical portion of said channel member and the surface of the flooring.

1,423,242. APPARATUS FOR MAINTAINING AND REMOVING LIQUID SEAL FOR VACUUM APPARATUS. OGDEN MINTON, Greenwich, Conn. Filed May 25, 1920. Serial No. 384,210. 2 Claims. (Cl. 34—48.)



2. The combination of a vacuum chamber, a sealing chamber connected with the vacuum chamber and with a reservoir, a reservoir connected with the sealing chamber, mercury and a nonmixing fluid contained in the reservoir, the mercury adapted to flow into the sealing chamber and become the seal for the vacuum chamber and means to increase or decrease the quantity of the other nonmixing fluid to force the mercury into the sealing chamber or withdraw it therefrom back into the reservoir, and a float in the reservoir adapted to prevent any of the nonmixing fluid getting into the sealing chamber.

1,423,243. SEWING-MACHINE FRAME. JAMES R. MOFFATT, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed June 17, 1920. Serial No. 389,643. 3 Claims. (Cl. 112—256.)

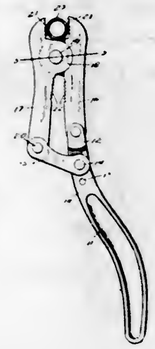


1. A frame for sewing machines including a standard, a work supporting arm projecting from said standard along which the material being stitched is moved, said standard having bearings, one of which projects from the standards, a shaft in said bearings, a drive wheel on the end of the shaft adjacent said projecting bearing, said standard having a trough projecting therefrom directly beneath the projecting bearing for the shaft, and an opening through said standard through which the oil draining into the trough is directed to the inside of the standard.

1,423,244. CHAIN SHACKLE AND METHOD OF MAKING THE SAME. EDWARD Y. MOORE, Cleveland, Ohio. Filed Dec. 20, 1920. Serial No. 431,880. 10 Claims. (Cl. 59—9.)

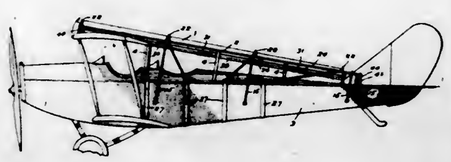
1. The method of making a chain shackle which consists in forming a member having an enlarged body portion with an aperture therein and having arms extending upwardly therefrom, inserting the shank of a load-supporting device in the aperture, upsetting a portion of the shank above the aperture, and thereafter bending the ends of the arm into close proximity with each other.

1,423,245. TOOL HOLDER. JOHN R. MOORE, Chicago, Ill. Filed Mar. 17, 1921. Serial No. 452,933. 14 Claims. (Cl. 29—96.)



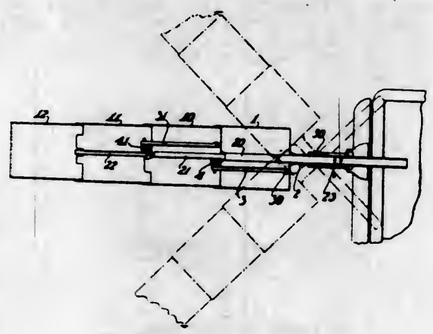
1. A tool-holder formed of sections by one of which the holder is adapted to be supported, the other of said sections being a spring section adapted to support the tool, said spring section being adjustable upon the other section about an axis extending lengthwise of the latter, and means located at one end only of said first-referred-to section for adjustably securing said spring section to be adjusted as stated to vary its inclination relative to the work.

1,423,246. INVISIBLE INK. CHARLES F. MORSE, Cleveland, Ohio, assignor to The Invisible Process Co., Cleveland, Ohio. Filed Nov. 14, 1921. Serial No. 515,000. 4 Claims. (Cl. 134—29.)



3. An invisible ink composed of an aqueous solution of basic ferric sulphate mixed with a quantity of phosphoric acid variable within the limits of twenty-five to seventy-five per cent of the quantity of ferric sulphate.

1,423,247. WRENCH. JOHN MUMFORD, Chillicothe, Ohio. Filed Oct. 6, 1919. Serial No. 328,697. 1 Claim. (Cl. 81—91.)



A wrench comprising a pair of substantially straight, elongated jaw members one of a greater length than the other, said jaw members having their opposed flat faces arranged substantially parallel one with respect to the other and formed with serrated gripping faces arranged in pairs, one pair of such faces being formed at the outer end of said jaw members and the other pair at a point intermediate the length of the latter, pivot connections between the parallel faces of said jaw members and between the pairs of said gripping faces, an operating handle pivotally connected to the lower end of the shorter of said jaw members, and a link pivotally connecting the lower end of the longer of said jaw members with said operating handle, the pivotal point of said link with said handle being disposed at a distance below the pivotal point of the latter with said shorter jaw member.

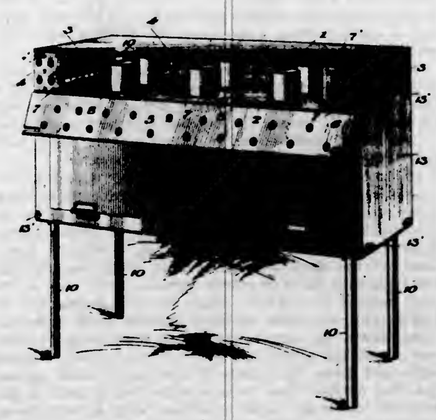
1,423,248. PARACHUTE. CHARLES L. NEWMAN, Berkeley, Calif. Filed June 11, 1921. Serial No. 476,738. 10 Claims. (Cl. 244—21.)

1. A parachute attachment for an aeroplane, comprising an outrigger secured to said aeroplane, a container for the parachute secured above the aeroplane, means for attaching the cords of the parachute to the body of the aeroplane and manually controlled spring means incorporated in the cords for opening the container and drawing the edge of the parachute toward the outlines of the outrigger before releasing the same.

1,423,249. AUTOMOBILE DIRECTION SIGNAL. TORGILS S. OPHEIM, Everett, Wash. Filed Sept. 8, 1921. Serial No. 499,318. 7 Claims. (Cl. 116—44.)

1. In a direction signal, a plurality of slidable sections, and means operable by movement of an inner section for moving the next outer section at an increased rate of speed.

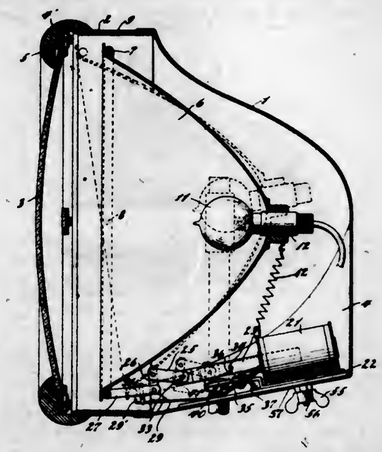
1,423,250. STRING HOLDING AND CUTTING ADJUSTMENT FOR RIVET-SETTING MACHINES. HAROLD PARKINSON, Wilmington, Del. Filed May 25, 1921. Serial No. 472,580. 2 Claims. (Cl. 93—91.)



1. In combination with a rivet setting machine a string guide located on one side of the rivet holder, to receive and position the string as it is drawn from a spool and an elastically gripping string guide and holder having outwardly flared guide arms located on the other side of the rivet holder.

1,423,251. MAIL BOX IN HOUSE WALLS. BERNARD T. PENNIG, St. Paul, Minn., assignor to Penn-Greg Mfg. Co., St. Paul, Minn., a Copartnership consisting of Joel E. Gregory, Esther Sophia Strand, and himself. Filed Feb. 7, 1920. Serial No. 356,820. 6 Claims. (Cl. 232—19.)

1. The combination with double walls, of a mail box mounted between said walls and covered thereby, and an anchoring bracket secured to the mail box and one of the walls on the inside thereof, one of said walls and the mail box having coincident inlet openings, and the other of said walls and mail box having coincident outlet openings.



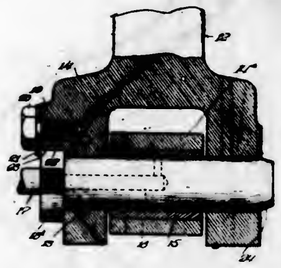
1,423,252. COLLAPSIBLE FIELD STOVE. ISAAC C. POPPER, New York, N. Y., assignor to Basic Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 24, 1918. Serial No. 251,329. 6 Claims. (Cl. 126—38.)

1. A collapsible field stove including top, bottom, perforated sides, ends and door, the top and bottom relatively close to each other, whereby a relatively low and flat stove portion is formed which is adapted to receive therein cans of solidified fuel whereby the flame therefrom is at the proper distance from the top, and legs extending loosely through the bottom and removably secured to the lower side of the top, and constituting the sole means of support for the stove.

1,423,253. HEADLIGHT. TRUMAN W. POST, New York, N. Y., assignor to Willys Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Jan. 15, 1917. Serial No. 142,344. 5 Claims. (Cl. 240—41.)

1. A headlight comprising a casing, a pivotally mounted reflector therein, operating mechanism for tilting said reflector, said operating mechanism being bodily movable in said casing to initially adjust the angular position of said reflector.

1,423,254. BARREL. JOHN R. RAIBLE, Cleveland, Ohio, assignor to The Greif Brothers Cooperage Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 17, 1919. Serial No. 283,026. 4 Claims. (Cl. 217—89.)

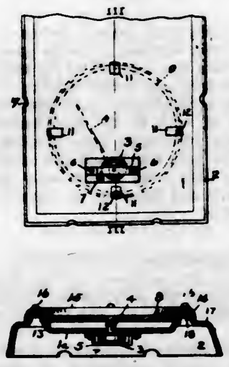


1. A barrel comprising staves, means encircling the staves to hold them together, an inside groove formed in the staves and adjacent each end of the barrel, a head at each end of the barrel and having its edge mounted in one of said grooves, a reinforcing head associated with the outside surface of each of the first named heads, the periphery of said reinforcing head abutting against the inner ends of the said staves and the outside surface of said reinforcing head lying substantially flush with the ends of the staves, and means for securing the reinforcing head to the staves.

1,423,255. LEAF-SPRING CONNECTION. JOSEPH J. RATH, Chicago, Ill., assignor to The Available Truck Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 29, 1920. Serial No. 413,477. 5 Claims. (Cl. 64—27.)

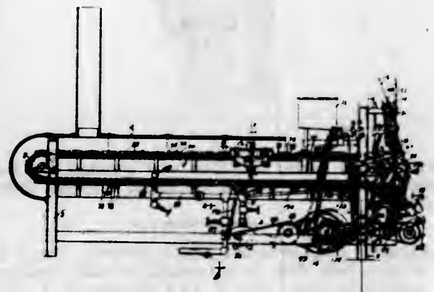
1. A spring connection construction comprising a yoke member, having aligned openings in its arms, a shackle-bolt extending through said openings, a leaf-spring having a portion surrounding said shackle-bolt between said arms, said shackle-bolt having a head engaging the outer

face of one of said arms to position it, said head having a flat edge, one arm on the yoke having an overhanging shoulder having a flattened portion for engaging said flat edge to prevent rotation of said shackle-bolt, a screw threaded into said overhanging shoulder portion and bearing on the head of the shackle-bolt to hold it in position,



said shackle-bolt having an oil passage leading from the headed end thereof to oil the spring connection, and an oil-cup secured to the head of said shackle-bolt in upright position, the engagement between said flat edge and said flattened shoulder portion serving to keep the oil-cup in upright position.

1,423,256. WATER PAINT. ARTHUR L. RICE, Adams, N. Y.; Caroline S. Rice executrix of said Arthur L. Rice, deceased. Filed Mar. 12, 1919. Serial No. 282,151. 5 Claims. (Cl. 134—50.)



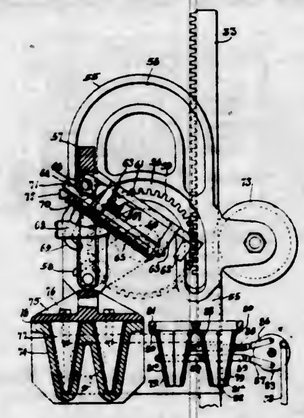
5. A process of making a waterproof water paint which consists of first making a dry powder containing casein and lime and capable when water is added thereto of use as a water paint, adding to the powder sufficient water to produce a heavy paste, stirring the paste until smooth and homogeneous, adding more water and stirring until the paste is thinned to the consistency of heavy cream, adding to four parts by volume of the mixture one part of a water-proofing liquid consisting of a solution of paraffine in a volatile solvent, and stirring the mixture of the paste and the waterproofing liquid until a semi-permanent homogeneous emulsion is formed.

1,423,257. THERMOMETER. ERNEST RICHARDSON, College Hill Borough, Pa. Filed July 12, 1921. Serial No. 484,041. 3 Claims. (Cl. 73—52.)

1. A thermometer comprising a sheet-metal frame with a marginal flange forming a hollow casing with the rear side open and having a round bearing-opening, a bracket lying on the inner face of the frame and wholly within the same and having a bearing-opening in alinement with the other bearing-opening, means adjacent to the opening in the bracket for securing the latter to the frame, a shaft mounted in the said openings, a pointer on the outer end of the shaft beyond the frame, there being temperature indicia on the outer face of the frame co-extensive with the range of the pointer, a thermostatic coil between the frame and the bracket, having one end fixed and the other end attached to the shaft, a cover glass for the pointer, means spacing the glass from the pointer and indicia, and a ring attached to the frame and securing the glass in fixed relation to the frame.

1,423,258. MACHINE FOR BAKING PASTRY PRODUCTS. WEBSTER M. ROBERTS and PARK D. ROBERTS, St. Joseph, Mo. Filed Oct. 29, 1917. Serial No. 199,149. 49 Claims. (Cl. 107—58.)

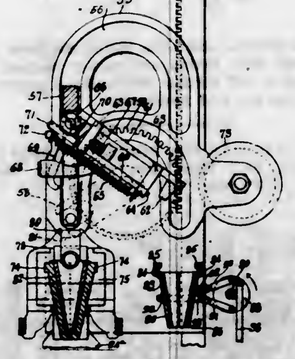
1. In a pastry making machine, the combination, with a mold, and a core therefor, of an ejector for the molded product, means for withdrawing said core from said mold, and a lever having connections to position said core withdrawing means and said ejector simultaneously.



23. In a pastry making machine, the combination, with a mold and a belt to which said mold is pivoted, of a track for tilting said mold, batter filling devices adjacent said track, and means for moving said belt constructed to stop said mold in batter filling position, said mold being tilted by said track in said filling position.

49. In a machine of the class described, a plurality of sets of separable mold sections having semi-mold cavities, those of one section adapted to register with those of the opposing section, cores therefor, means for sustaining the mold sections to be opened and closed by relative movement of the same bodily laterally while maintaining their opposing faces in planes parallel to the axes of the mold cavities as a whole, means for introducing and removing the cores from the mold cavities, a set of dummy cores, means for introducing said dummy cores into the cavities of the baked article after removal of the mold cores, and means for relatively moving the mold sections and the dummy cores whereby the baked articles are loosened from the mold sections, said articles being adapted to pass through between the mold sections when the sections are separated.

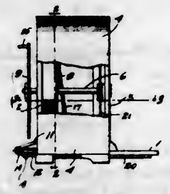
1,423,259. MACHINE FOR AND METHOD OF MAKING PASTRY CONES. WEBSTER M. ROBERTS and PARK D. ROBERTS, St. Joseph, Mo. Filed Feb. 7, 1921. Serial No. 443,062. 29 Claims. (Cl. 107—58.)



1. In a cone making machine, the combination, with a cone-forming unit comprising a solid mold with cavities and corresponding cores, of cone grippers comprising

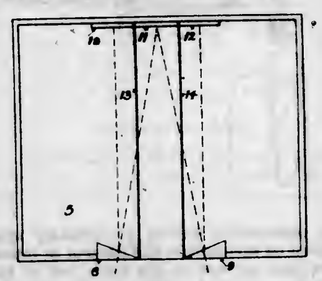
members adapted to receive the cores with their impaled cones, mechanism to withdraw the cores and impaled

cones from the mold, insert them into the grippers, and to return the cores to the mold, and other mechanism to cause the grippers to release the cones.



1,423,260. MACHINE FOR AND METHOD OF MAKING PASTRY CONES. WEBSTER M. ROBERTS and PARK D. ROBERTS, St. Joseph, Mo. Filed Feb. 7, 1921. Serial No. 443,063. 19 Claims. (Cl. 107—58.)

1. In a cone making machine, the combination, with a cone-forming unit comprising a separable mold with cavities and corresponding cores, of cone grippers comprising members adapted to receive the cores with their impaled cones, mechanism to open and close the mold and mechanism to withdraw the cores and impaled cones from the mold, insert them into the grippers and to return the cores to the mold, and other mechanism to cause the grippers to release the cones.

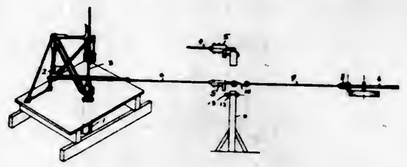


10. In a cone making machine, the combination, with a separable mold, mechanism to open and close the mold, and devices to hold it momentarily stationary while it is being opened and closed, of corresponding cores and core actuating mechanism comprising ways, a carriage adapted to travel therein, and a lifting frame mounted on the carriage, devices to cause the frame to engage with and disengage from the core bar, and operating devices to cause the carriage to travel in the ways.

1,428,261. ANIMAL TRAP. CLIFTON C. ROCKWELL, Tucson, Ariz. Filed Jan. 3, 1918, Serial No. 210,172. Renewed Dec. 11, 1920. Serial No. 430,044. 2 Claims. (Cl. 43—75.)

1. An animal trap of the character described comprising a base, a housing rising from the base and having an entrance opening, an armed striking member rotatably supported by the housing in position for movement of its arms across the entrance opening, a motor within the housing, connections between the motor and the striking member for rotation of the latter, a rotatable latch member mounted beneath the base and including arms equal in number to the arms of the striking member, a gear member connected with the striking member for rotation therewith and arranged to engage the latch member for rotation thereof, a depressible platform pivoted to the base and extending through the entrance opening, yieldable means for holding the platform normally against depression and a stop connected with the platform for movement therewith to lie in the path of movement of the arms of the latch member when the platform is in normal position and to lie out of the said path of movement when the platform is depressed.

1,423,262. CHANGING-VIEW DISPLAY APPARATUS. HENRY M. RUSSELL, Wheeling, W. Va. Filed May 12, 1921. Serial No. 468,956. 7 Claims. (Cl. 40—137.)

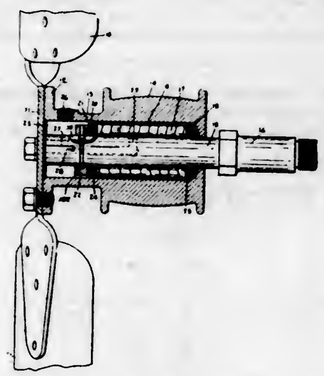


1. In a changing-view display apparatus, the combination of two views and a prism, all so located with respect to each other, that the apparent position of one of the said views, as observed through the prism, shall be the same as the actual position of the other of the said views, and screens to prevent the observation of one of the said views except through the said prism, and to prevent the observation of the other of the said views through the said prism.

1,423,263. CABLE CLAMP. DOUGLE M. SALTER and SOSTHENE ROBICHAUX, Saratoga, Tex. Filed Dec. 3, 1920, Serial No. 428,176. Renewed May 25, 1922. Serial No. 563,071. 1 Claim. (Cl. 24—135.)

A line clamp formed of two sections, means for clamping the same to a line, a lug carried by the clamp and

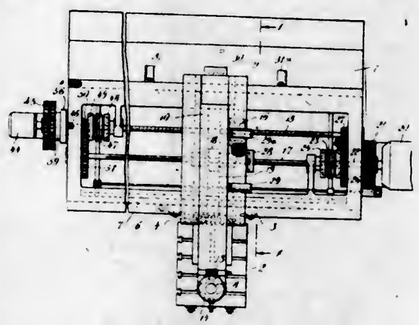
extending at right angles thereto and having a deep notch which forms said lug into spaced fingers provided



to receive an anchor between them and a clevis carried by the clamp provided for the attachment of a hook thereto.

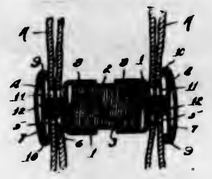
1,423,264. PYROTECHNIC COMPOSITION. WALTER T. SCHEELE, Hackensack, N. J., assignor to Government of the United States, represented by the Secretary of the Navy. Filed Dec. 9, 1919. Serial No. 343,573. 6 Claims. (Cl. 52—23.)

5. A composition of matter comprising hexamethylenetetramine and strontium nitrate in the form of a double salt with the addition of a finely powdered metal.



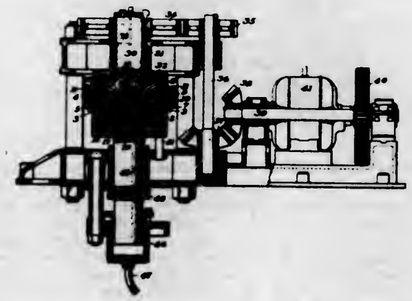
1,423,265. BEARING CONSTRUCTION FOR FANS. LOUIS SCHWITZER, Indianapolis, Ind., assignor to Automotive Parts Company, Indianapolis, Ind., a Corporation. Filed Aug. 11, 1919. Serial No. 316,855. 1 Claim. (Cl. 64—26.)

A fan construction having a stationary spindle, a hub mounted on said spindle and adapted to rotate thereon, a fan plate secured to the outer end of said hub, roller bearings mounted between said spindle and hub, an oil reservoir within said hub between the outer end of said bearings and the fan plate, end thrust bearings mounted at the outer end of said roller bearings, a longitudinally extending oil conduit passing through said spindle, a radially extending passage in said spindle communicating with said longitudinal passage and oil reservoir for maintaining the lubrication of said bearings, and a second oil passageway in said spindle communicating with said reservoir and end thrust bearings for maintaining their lubrication.



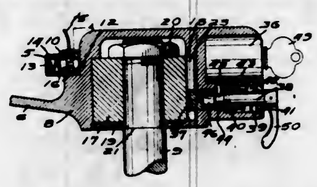
1,423,266. SHAPING MACHINE. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed May 22, 1919. Serial No. 298,924. 48 Claims. (Cl. 90—41.)

1. The combination of a work table, a tool holder, an electric motor for causing relative reciprocation of such members either longitudinally or transversely, and means including automatic means for controlling the operation of the motor for causing the reciprocating mo-



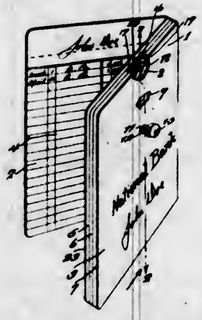
tion of the reciprocating member in either direction to be relatively slow and in the opposite direction to be relatively fast.

1,423,267. CUFF BUTTON. MALVERN W. SEVERANCE, Cleveland, Ohio. Filed Oct. 8, 1920. Serial No. 415,609. 4 Claims. (Cl. 24—102.)



1. A cuff button, comprising button members, said button members each having an annular channel for the reception of a cuff portion and resilient extensible connecting means for said members.

1,423,268. MACHINE FOR ROLLING. EDWIN E. SLICK, Pittsburgh, Pa. Filed Nov. 29, 1919. Serial No. 341,390. 7 Claims. (Cl. 80—16.)



7. In a rolling machine, a work-supporting member and a thrust member, connections arranged to impart relative rotation thereto around a stationary axis, an imperforate system of rolling elements between the members, a holding device for the system of rolling elements arranged to hold it in fixed relation to the center of rotation, means for forcing the members toward each other, and a stop arranged to limit said movement, substantially as described.

1,423,269. AUTOMOBILE LOCK. DAVID C. SMITH, Toledo, Ohio. Filed Sept. 8, 1921. Serial No. 499,160. 6 Claims. (Cl. 70—129.)

5. In a steering wheel and shaft locking means, a shell connected to the steering wheel and rotatable therewith, a bolt located in the shell for connecting the shell with the steering shaft, a key and a key controlled locking pin adapted to lock the bolt when withdrawn from its connecting position, and means for withdrawing the bolt from its connecting position independent of the operation of a key.

1,423,270. BANK BOOK AND SAVINGS BANK COMBINED. EDWARD D. SMITH, Erie, Pa. Filed Apr. 20, 1921. Serial No. 462,970. 4 Claims. (Cl. 229—8.5.)

1. A bank book and savings bank combined, comprising an account section and a savings bank section, the latter consisting of an intermediate part and inner and outer parts, having a circular opening, a revoluble disk mounted in said opening and provided with a plurality of coin receiving pockets, the edge of the intermediate part having a coin entrance opening, and a spring tensioned closure for said entrance opening, adapted to be moved to one side to permit the insertion of a coin into the pockets of the disk.

1,423,271. PIANO PLAYER. CHARLES H. SPENCER, Baltimore, Md., assignor to H. S. Dulaney, Baltimore, Md. Filed May 13, 1919. Serial No. 296,918. 8 Claims. (Cl. 84—50.)

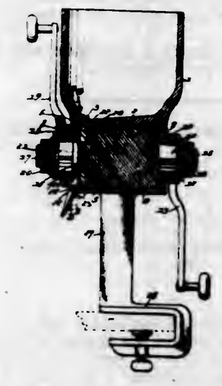
5. In a pneumatic piano player, a player unit comprising a bellows, air passages, valves controlling the passages, a diaphragm for operating said valves to connect the bellows to the ontside air and the vacuum alternately, the diaphragm having an air escape opening, means for closing said opening when pressure is applied to the diaphragm to operate the valves and connect the bellows to the vacuum and uncovering it when the pressure is removed.

8. A piano key having a pneumatic unit wholly embodied therein to move therewith.

1,423,272. FOLDABLE CARTON. ERICH STEUDEL, Chicago, Ill. Filed Aug. 2, 1919. Serial No. 314,862. 3 Claims. (Cl. 229—16.)

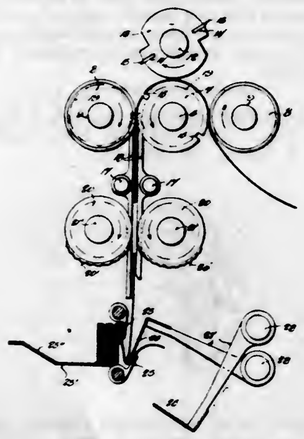
1. A foldable carton comprising a strip of flexible material transversely creased for bending along a plurality of lines adapted to form the corners of a carton having a desired plurality of sides; a plurality of slits in a plurality of said sides; and a securing tongue at one end of said strip adapted to be selectively engaged with said slits to form a carton of various desired sizes and shapes, substantially as described.

1,423,273. CHAIN LINK. ERICH W. O. STEUDEL, Chicago, Ill. Filed Mar. 8, 1920. Serial No. 364,282. 1 Claim. (Cl. 59—85.)



A detachable chain link formed of a single piece of wire bent into loop form, the ends of said link being correspondingly bent to form substantially circular eyes and converged inwardly toward each other to prevent lateral play of a related hook and brought together and formed into a hook having a curvature in substantial continuation of that of said eyes, to prevent accidental detachment of said link.

1,423,274. ELECTRIC SWITCH. CLARENCE C. STIRLING, Hartford, Conn. Filed Sept. 30, 1920. Serial No. 413,808. 9 Claims. (Cl. 200—67.)

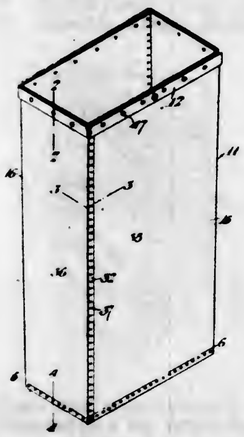


1. An electric switch comprising a switching member, an actuator, a rocking member, a spring actuated pin carried by the rocking member and co-operative with the switching member, the actuator having a part and also having means to cause said part to operate the rocking member successively in opposite directions on successive movements of the actuator, the rocking member on said successive movements of the actuator causing the pin to shift the switching member successively between "on" and "off" positions.

1,423,275. GRAIN-GRINDING MACHINE. JAMES K. STRACHAN, Windsor, Ontario, Canada. Filed Feb. 25, 1922. Serial No. 539,166. 5 Claims. (Cl. 83—8.)

1. In a grinding machine as set forth, the combination with a casing having a hopper thereabove, an opening communicating with the hopper and the casing, one end of the casing having a stationary grinding grid, a revoluble burr mounted in said casing and provided on one end with diametrically opposite pockets to register with the opening of communication, to carry the grain from the opening to and between the burr and the grid for grinding and crushing the same, and a grinding plate carried by and rotatable with the burr and operating on the exterior of the grid, and means for operating the burr.

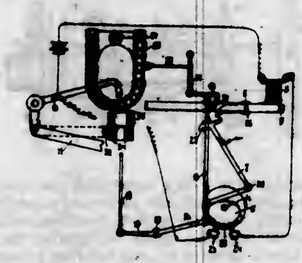
1,423,276. PAPER-FOLDING MACHINE. LOUIS A. STRAUBEL, Green Bay, Wis. Filed Apr. 9, 1921. Serial No. 460,066. 5 Claims. (Cl. 270—39.)



5. In a machine of the class described, the combination of means for partially cutting and feeding the work material, means for folding said work material into books of three or more leaves, and a pair of rollers driven at a greater speed than the feeding means for severing the cut portion of work material and delivering the same into the last fold of the preceding sheet.

1,423,277. PNEUMATIC TIRE. GEORGE E. STUART and CHARLES A. STUART, Oregon City, Oreg. Filed Jan. 7, 1920. Serial No. 349,931. 3 Claims. (Cl. 152—18.)

1. In a pneumatic tire, a series of cells having a vulcanizable envelope, a fibrous filling, and a puncture resisting strip arranged between the filling and envelope throughout a determinate area of such cell.

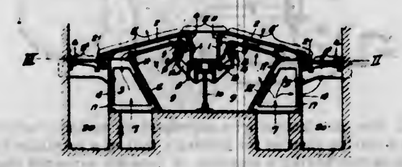


1,423,278. ICE CAN. HOWARD G. TALLERDAY, San Francisco, Calif., assignor to Western Pipe and Steel Company of California, a Corporation of California. Filed Apr. 28, 1921. Serial No. 465,321. 2 Claims. (Cl. 220—73.)

1. An ice can comprising a body portion; a reinforcing ring at the top; cut corners at the bottom of said body portion; channels formed by making a single bend inwardly and upwardly of the side plates between the cut corners; a bottom; a continuous flange of a single thickness on said bottom extending into said channels; reinforcing members having continuous corners in said channels between the flange of the bottom and the inside wall of the channel, the channel portion of the side plates, flange and reinforcing members being riveted together and treated with hot solder on the inside of the can along the joint between the sides of the can.

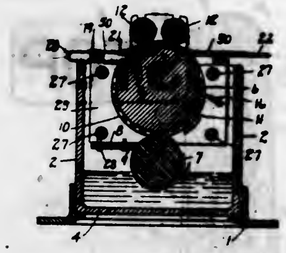
1,423,279. REPLENISHING MECHANISM FOR MULTI-COLOR LOOMS. HARRY TER KUILE, Enschede, Netherlands. Filed June 16, 1920. Serial No. 389,432. 2 Claims. (Cl. 139—65.)

1. Automatic cops substituting mechanism comprising a cops store mounted for movement, a movable cops ejecting element, an operating rod, means for moving the cops store including a member arranged for engagement with and disengagement from said operating rod, means operated by loom shaft for moving said operating rod, a member carried by said rod to engage and disengage said loom shaft operated means, an electro-magnet to move said engaging means to engaging position, circuit closing means including a member moved by said loom shaft, and means to normally hold said member of the cops store moving means out of engagement with the operating rod, a change box having an electric feeler, including a contact bow



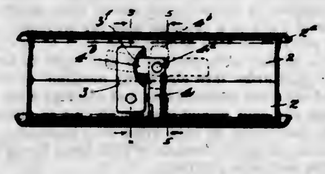
and a contact member for each of its compartments, and an electric circuit including the windings of said electro-magnet, said relatively fixed contacts, and a contact for successive engagement with the contact members of the change box.

1,423,280. KEY-CARRYING CHAIN. BENJAMIN URICH, Milwaukee, Wis. Filed Feb. 20, 1922. Serial No. 538,057. 3 Claims. (Cl. 70—99.)



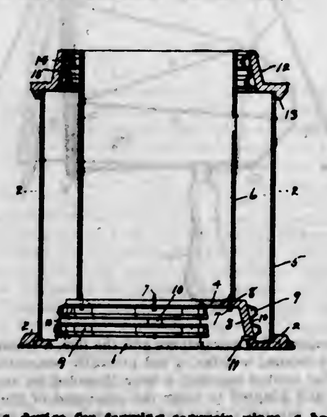
1. In a key carrying chain, a shell socketed at its ends, a chain the ends of which are adapted to engage the sockets of the shell, and means on the shell for dividing the chain into a plurality of key holding sections.

1,423,281. FURNACE. JOHN VAN BRUNT, New York, N. Y., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed June 22, 1918. Serial No. 241,333. 9 Claims. (Cl. 110—47.)



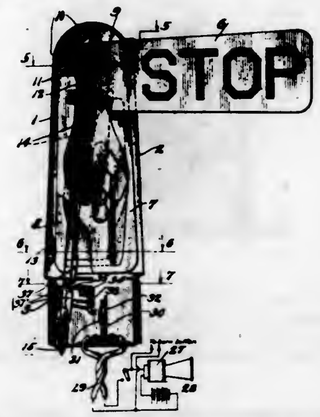
5. In a stoker furnace a combination of a retort, a series of tubular grate bars extending therefrom, said bars having tuyère openings at their retort ends, a chamber located below the central portions of said bars, and a duct adapted to supply air directly both to the ends of said tubular bars remote from said retort and to said chamber, so that air from said duct may pass directly to and through said bars and discharge through said tuyère openings and air from said duct may pass directly to said chamber and escape therefrom between said bars, said bars having air passages between them.

1,423,282. PASTING MACHINE. LOUIS J. VAN GUELPEN, Cincinnati, Ohio. Filed Mar. 17, 1919. Serial No. 283,223. Renewed Feb. 15, 1922. Serial No. 536,818. 7 Claims. (Cl. 91—50.)



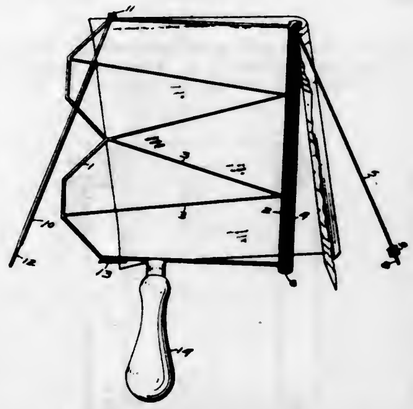
1. In a pasting machine of the character described, a paste feeding roll, a stripper therefor, a paste distributing roll, a stripper therefor, pressure rolls, and delivery fingers for receiving the material off of the paste distributing roll.

1,423,283. DEMOUNTABLE RIM. FRED H. VAN LOOZEN, Lakewood, Ohio. Filed Mar. 10, 1921. Serial No. 451,385. 4 Claims. (Cl. 301—35.)



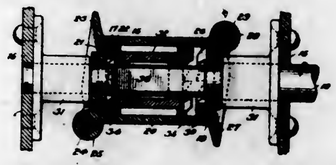
1. In a demountable rim, a pair of abutting circumferentially divided rim sections provided with subjacent spring coupling members, and lever members adapted in one position to hold said spring coupling members in locked position and in another position to engage and unlock the same.

1,423,284. FORM FOR CONCRETE PIPES. FREDERICK H. WEAVER, New York, N. Y. Filed July 12, 1921. Serial No. 484,037. 4 Claims. (Cl. 25—128.)



1. In a device for forming concrete pipes, a base, two split spring-rings fitted over said base and held thereon by friction.

1,423,285. VEHICLE SIGNAL. HARRY A. WHITMAN, Binghamton, N. Y., assignor to Selina J. Whitman, Binghamton, N. Y. Filed Apr. 1, 1920. Serial No. 370,443. 2 Claims. (Cl. 116—53.)

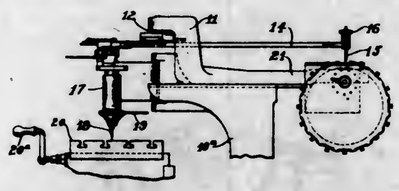


1. In a vehicle signal of the class described, the combination of a casing or housing made in sections, bolts extending transversely through said housing for holding said sections together, a plurality of signal arms mounted upon one of said bolts as a common axis for movement into signalling position, a stop shoulder on each of said arms arranged to engage with another of said bolts to limit movement of said arms into signalling position, spring means mounted upon the common axis and coacting with said stop shoulders and said second mentioned bolt to yieldingly oppose the movement of said arms into signalling position, and means connected to each of said arms for shifting the same into operative position.

1,423,286. PAPER HOLDER. SAMUEL WILLIAMS, Toledo, Ohio. Filed Dec. 12, 1921. Serial No. 521,593. 1 Claim. (Cl. 129—38.)

In a support for newspapers and the like, a frame having a slotted tubular member, a rod pivotally connected to one end of the slotted member, a burr threaded on one end of the rod and adapted to enter the other end of the tubular member, a pivoted slotted bar supported on the frame and extending on opposite sides of the frame, a catch for engaging the slotted bar for holding it in position.

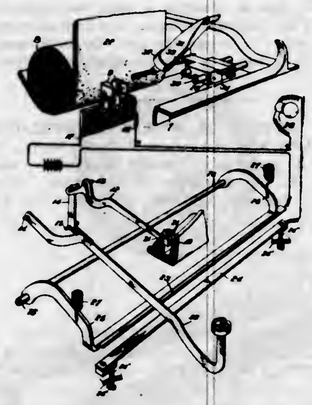
1,423,287. HOPPER-DOOR MECHANISM. CLARENCE H. WILLIAMSON, Bellwood, Pa. Filed May 13, 1920, Serial No. 381,028. Renewed Mar. 16, 1922. Serial No. 544,356. 11 Claims. (Cl. 105—300.)



1. The combination with a hopper door operating mechanism having releasing and take up devices connected thereto, of a winding drum for said devices comprising differentially movable sections, means for rotating the winding drum and means operated by said rotating means for disconnecting one of the differentially movable drum sections therefrom.

1,423,288. DENTAL FASTENING FOR REMOVABLE BRIDGES AND PARTIAL PLATES. WILLIAM L. WITHERS, Salt Lake City, Utah. Filed May 15, 1922. Serial No. 561,154. 3 Claims. (Cl. 32—12.)

1. In a dental fastening, in combination, a keeper and an anchor, said keeper having an opening therein and a slot down the side for receiving said anchor, the bottom of said keeper being round, the sides of said keeper being bent inward and then ontward, the bottom of said anchor being round and a loop formed therein, the sides of said anchor being bent inward and then outward to fit snugly within said keeper and to allow for a slight rocking movement.

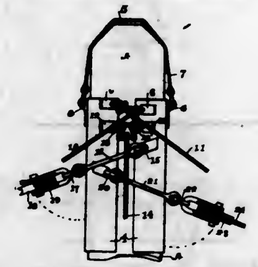


1,423,289. ENGRAVING MACHINE. GEORGE R. WORNER, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Aug. 31, 1920. Serial No. 407,087. 9 Claims. (Cl. 33—23.)

1. The combination with an engraving machine comprising a tracing element for guiding a tool, of a rotatable templet carrier having a plurality of templets arranged thereon in planes substantially parallel with its rotary axis and adapted to be brought by the rotation of the carrier selectively to position for cooperation with the tracing element.

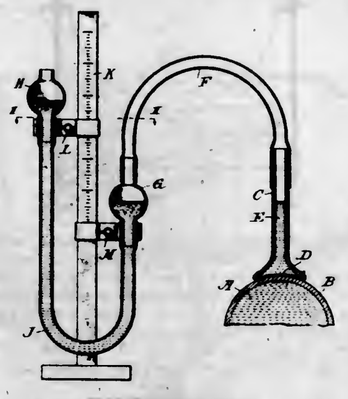
1,423,290. MATRIX-MAKING MACHINE. ISAIAH N. ZELLER, Chicago, Ill. Filed Mar. 7, 1919. Serial No. 281,253. 15 Claims. (Cl. 197—6.)

1. A matrix making machine comprising a platen, for the matrix blank, a pair of guides disposed in impression position with relation to the platen and projecting outwardly therefrom, an electric circuit including said guides, a plurality of pivoted type-bars, type blocks bearing type characters mounted on said bars and adapted to contact with said guides to close said circuit before the type character



engages the matrix blank, means for swinging said type-bars separately to slide between said guides, and a matrix blank on said platen.

1,423,291. PUMP AND PUMPING SYSTEM. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 16, 1915. Serial No. 50,941. 153 Claims. (Cl. 103—246.)

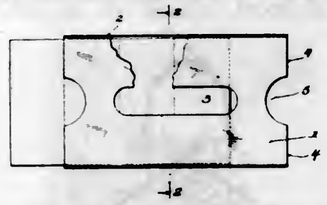


1. In a pump, the combination of a single chamber having inlet and outlet valves for the admission and expulsion of liquid, two ports, one for exhaust and one from a source of motive fluid, a mechanically connected valve structure for alternately closing one of said ports and opening the other, means moved by pressure of the motive fluid for opening the exhaust port and closing the compressed air port, and valve means lying within the chamber and controlled by the rise of liquid in said chamber for controlling the pressure operated means for closing the exhaust port and opening the port for motive fluid.

1,423,292. SPAR-TREE PROTECTOR AND FASTENING DEVICE FOR HIGH-LEAD BLOCKS. WILLIAM R. ALLEN and THOMAS K. MCREA, Glacier, Wash.; said McRea assignor to said Allen. Filed July 18, 1921. Serial No. 485,778. 4 Claims. (Cl. 254—139.)

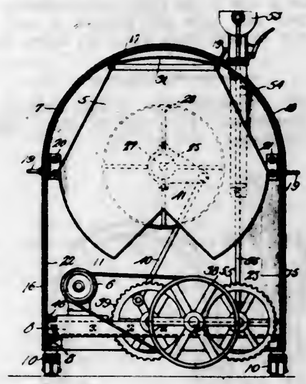
1. In combination, a spar tree, a pair of curved plates mounted on opposite sides of said tree and not entirely surrounding said tree, and a high-lead block fastened on one side of said tree to the plate on the opposite side of said tree from said block and adapted to bear on the plate adjacent to said block when not under operative strain.

1,423,293. TONOMETER. ALFRED AMSLER, Schaffhausen, Switzerland. Filed May 31, 1921. Serial No. 474,010. 2 Claims. (Cl. 73—44.)



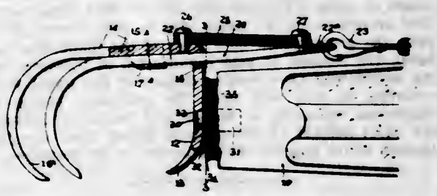
1. In a hydrostatic tonometer adapted to measure the constant internal pressure in vessels having flexible walls, such as the eyes, the combination of a tubular contact piece, a flexible diaphragm at one end thereof and a liquid in said tube the level of which is visible from the outside, means to apply a continuously variable and measureable fluid pressure over the liquid level in said contact piece until the pressures on both sides of the diaphragm are equal, the moment of said equalisation of pressures being ascertained by a sudden change of the liquid level occurring in said tube upon the previously bulged in diaphragm beginning to flatten, and means to indicate the exact amount of the pressure acting upon the diaphragm at the moment of equalization of the pressures.

1,423,294. CARD HOLDER. ADOLPH ANDERSON, West Allis, Wis. Filed May 23, 1921. Serial No. 472,006. 2 Claims. (Cl. 206—39.)



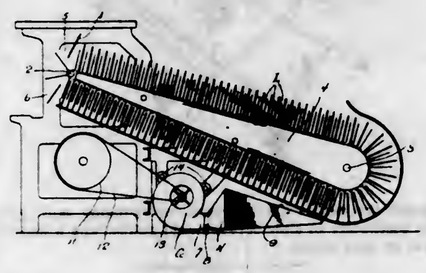
1. A card or ticket holder comprising a flattened tubular section open at its ends, the side walls of which

sections are centrally apertured and concave convex so as to form inner longitudinal gripping surfaces for the tickets or card, the longitudinal edges being folded to



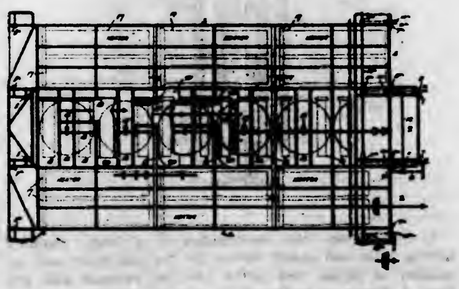
form loops, and the end edges of the jacket being formed with straight cutting surfaces intersected by central recesses.

1,423,295. WASHING MACHINE. ADOLPH F. ANDERSON, Chicago, Ill., assignor to Apex Appliance Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 7, 1919. Serial No. 336,362. 3 Claims. (Cl. 68—21.)



3. A washing machine having a housing with its longest axis in a vertical plane comprising two end walls each made from a single piece of sheet metal provided with an inwardly extending flange around three sides thereof, and a pair of fixed side walls and a slidable curved top wall held in position by the flanges of the end walls; a tub journaled in bearings supported on the end walls and means entirely within the housing to oscillate the tub.

1,423,296. ARTIFICIAL BODY MEMBER. ROBERT FRANCIS ARMSTRONG, Kansas City, Mo. Filed Oct. 29, 1921. Serial No. 511,295. 6 Claims. (Cl. 3—12.)

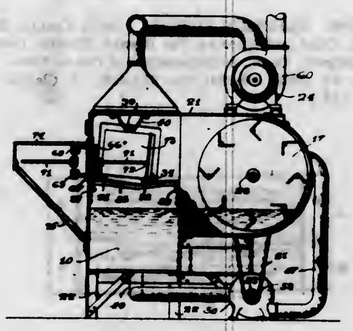


6. In combination, a socket having a threaded opening, an artificial body member and means for releasably and adjustably connecting the artificial body member to the socket including a threaded stud carried by the artificial body member and engaged in the threaded opening of the socket member, a washer arranged on the threaded stud adjacent the artificial body member and a disk of rubber interposed between the washer and the socket member and compressed when the stud is threaded into its opening whereby the disk is effective to urge the threads of the stud and of the threaded opening into locking engagement with each other to releasably lock the body member to any position to which it may be adjusted relative to the socket.

1,423,297. DRYING BLOWER FOR ENVELOPE-MAKING MACHINES. ADDISON E. AUGUSTINE, Hackensack, N. J., assignor to Chester Machine Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 24, 1920. Serial No. 360,967. 6 Claims. (Cl. 34—12.)

6. An air box for drying blowers comprising a box otherwise closed on all sides but having an air receiving opening in one wall and having a plurality of air discharge openings in another wall, the air discharge openings providing a greater area of discharge for the air nearest to said air receiving opening and relatively less area of discharge further from said air receiving opening, and said box being of a size greatest nearer said air receiving opening and being tapered to a smaller size further from said air receiving opening.

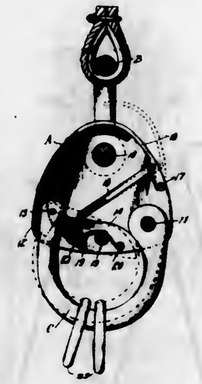
1,423,298. DRIER. ELWOOD B. AYRES and THOMAS H. RHOADS, Philadelphia, Pa., assignors to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 1, 1921. Serial No. 481,793. 4 Claims. (Cl. 34—12.)



2. The combination in a drier, of a casing enclosing three longitudinal chambers arranged side by side; a conveyer for carrying material to be dried in each chamber; a central row of circulating fans in the upper portion of the central drying chamber; a series of heating pipes in the upper portion of the drier; and means for driving the fans so that the air will circulate downwards in the central chamber and upwards in the side chambers.

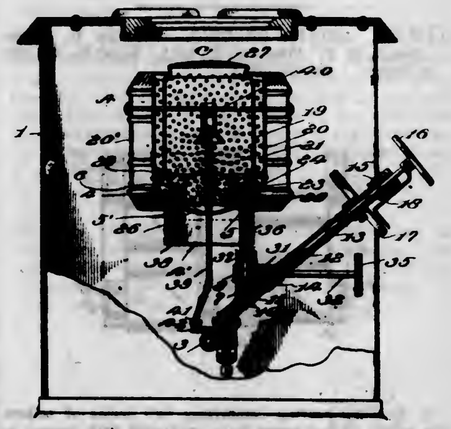
1,423,299. RESILIENT WHEEL. ASA F. BATCHELDER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 16, 1921. Serial No. 522,895. 4 Claims. (Cl. 74—29.)

1. A resilient wheel comprising an outer member in the form of a ring and having substantially radial slots in its inner periphery, an inner member cooperating with said outer member and having substantially radial slots in its outer periphery registering with said slots in the outer member, the inside diameter of the outer member and the outside diameter of the inner member being approximately equal, and leaf springs in said slots, said springs being placed in said slots under tension.



1,423,300. MACHINE FOR WASHING BOXES, CANS, AND OTHER ARTICLES. GEORGE S. BLAKESLEE, Chicago, Ill. Filed Feb. 23, 1917. Serial No. 150,474. 15 Claims. (Cl. 141—7.)

3. A washing machine of the character described comprising a housing substantially enclosing a cleansing compartment, means for supporting the articles to be cleansed in an inclined position as they pass through the cleansing compartment, a tank, a paddle wheel at one side of the cleansing compartment operating to throw water from said tank into and around the articles to be washed, and means at the opposite side of said housing from said paddle wheel for moving the articles through the cleansing compartment.

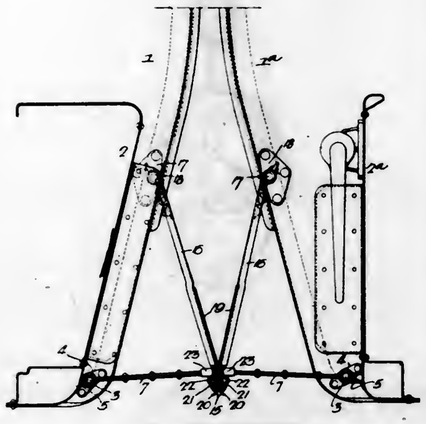


1,423,301. LOGGING HOOK. GOTTFRED BERGMAN, Portland, Oreg. Filed Aug. 5, 1920. Serial No. 401,844. 3 Claims. (Cl. 294—83.)

1. In a device of the character described, the combination of a housing, a hook mounted therein and pivoted at one end, a pivoted member adapted to engage both ends of the hook and to support the hook at its free end,

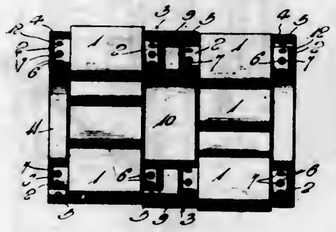
and means for operating said pivoted member, substantially as set forth.

1,423,302. WICKLESS OIL BURNER. ATWELL J. BLACKFORD, Cleveland, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Aug. 31, 1921. Serial No. 497,208. 15 Claims. (Cl. 158—86.)



1. A burner comprising a trough, a combustion section seated above the trough with its lower end around the upper end of the trough, and the combustion section vertically adjustable in relation to the trough without disturbing its operative position to the trough, for regulating the flame.

1,423,303. SAFETY GATE FOR CARS. JAMES A. BROOKS, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 3, 1921. Serial No. 519,730. 2 Claims. (Cl. 105—439.)



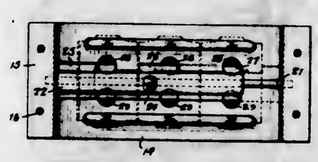
2. The combination in a safety gate for cars, of two cars; a post pivotally mounted on each car at one end

and near one side; a collapsible gate consisting of a series of bars pivotally connected to the upper end of the post; a plunger located within the post and to which the lower end of the gate is pivoted; a coiled spring

within the post bearing against the plunger so as to project the gate; an arm pivoted to the car platform some distance from the side, and an abutment bar attached to the arm and connected to the gate.

1,423,304. ROLLER BEARING. WILLIAM D. BURNS, Amenia, N. Y. Filed Apr. 25, 1921. Serial No. 464,093. 2 Claims. (Cl. 64—60.)

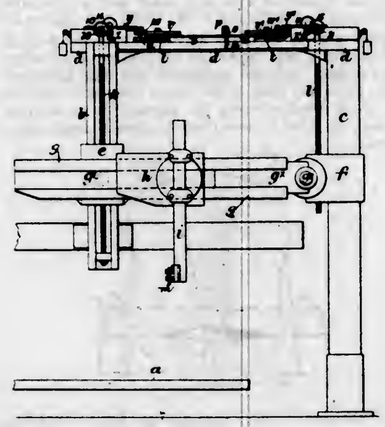
1. A roller bearing comprising two series of rollers, the rollers of one series being staggered with respect to those of the other, the ends of all rollers being reduced, a relatively wide track ring on which the inner reduced ends of the rollers are adapted to roll, and relatively narrow track rings upon which the outer reduced ends of said rollers travel, said roller ends and track rings having intermeshing gear faces.



1,423,305. LIQUID MEASURING AND DISPENSING APPARATUS. TIMOTHY F. CALLAHAN, Squantum, Mass. Filed Sept. 2, 1919. Serial No. 321,119. 2 Claims. (Cl. 265—27.)

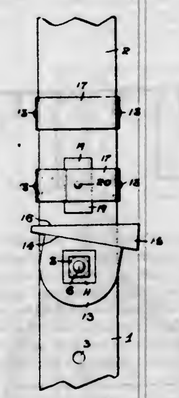
1. In liquid measuring and dispensing apparatus; a storage tank; a compressed air pipe leading to the top of the tank; a standard; a weighing mechanism supported by that standard; a graduated container carried by the weighing mechanism; a discharge pipe from the tank leading through an aperture in the top of the container to near the bottom thereof and discharging upward; all

combined to cause the liquid to rise to the container by air pressure and the liquid to be simultaneously measured by volume and weight.



1,423,306. ELECTRIC SWITCH. HOYT CATLIN, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 31, 1920. Serial No. 355,320. 3 Claims. (Cl. 200—18.)

1. A group of independent switch mechanisms, a common control lever to operate the same, said control lever being displaceable longitudinally with respect to the several switch mechanisms, and means fixedly associated with said lever for operating certain of said switches at will, singly or in groups, depending upon the longitudinal position of the lever.



1,423,307. MACHINE FOR PLANING OR MACHINING PROPELLER BLADES. GILBERT AUSTIN CLAVEY, Battersea Park, England. Filed Oct. 19, 1920. Serial No. 418,022. 8 Claims. (Cl. 90—31.)

1. An apparatus for machining propeller blades and like helical surfaces, comprising a power driven revoluble table, a tool radially reciprocable across said table, a tool feed mechanism adapted for feeding said tool perpendicularly to the table and in the direction of the pitch, and cam control mechanism operative upon said tool

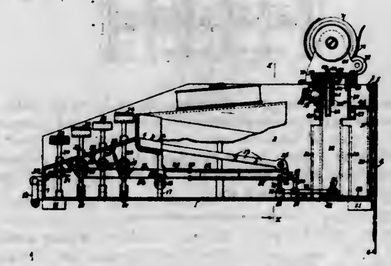
feed for changing said feed in accordance with the varying shape of the helical surface.

1,423,308. STAGING FOR BUILDINGS AND OTHER STRUCTURES. SAMUEL S. COLT, Orange, N. J. Filed Oct. 27, 1920. Serial No. 419,814. 4 Claims. (Cl. 248—21.)

1. In a staging or similar structure, a pair of retaining members having portions arranged side by side, a bolt connected with one of said members, a wedge-receiving element oscillatorily mounted upon said bolt, and a wedge disposed between said wedge-receiving element and the other retaining member for adjustment of said members.

1,423,309. ELECTRICAL CONDUIT SYSTEM. EGBERT H. CURTIS, Spring Valley, N. Y. Filed July 6, 1918. Serial No. 243,514. 3 Claims. (Cl. 247—27.)

1. An approximately T-shaped hollow body having horizontal tubular arms and a vertical tubular arm, an attaching element secured to the bottom of the hollow body for securing the same in place, in combination with a

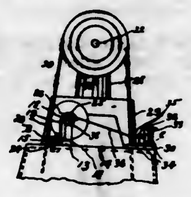


tube for detachable connection with the vertical tubular arm, and a level, element connected with the upper end of the tube and extending transversely thereof.

1,423,310. WINDOW-SASH FASTENER. ALONZO E. DAVIS, Ashtabula, Ohio. Filed Jan. 14, 1921. Serial No. 437,139. 7 Claims. (Cl. 292—228.)

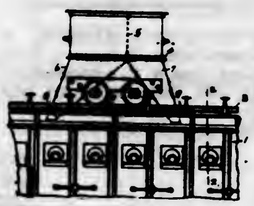
1. A window fastening having in combination a plate adapted to be secured to the top of the lower sash and having an opening in it, a pawl pivoted to the plate and adapted to engage a shoulder on the upper sash, a leaf spring extending through the opening of the plate and secured between it and the top of the sash, said spring extending upwardly and engaging the front of the pawl, and a lever member rigidly secured to the side of the pawl and extending laterally therefrom and then downwardly and terminating in a thumb piece lying adjacent to but above the top of the sash.

1,423,311. TYPEWRITING MACHINE. PHILIPPE DE CLAMECY, Boston, Mass., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Jan. 21, 1920. Serial No. 352,927. 13 Claims. (Cl. 197—186.)



1. In a typewriting machine, the combination of a carriage supporting frame, a carriage support mounted on said frame to turn around a center that extends fore and aft of the machine and also to slide on said frame, and a carriage mounted to travel on said support.

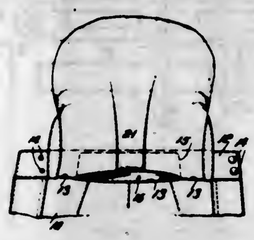
1,423,312. FLUID-FUEL BURNER. THOMAS STOKES DUNN, Brookline, Mass. Filed Jan. 16, 1920. Serial No. 361,828. 10 Claims. (Cl. 158—29.)



1. A hollow cylindrical fuel burner head having perforated side walls and a plurality of vanes adapted to distribute fuel substantially uniformly to the perforations.

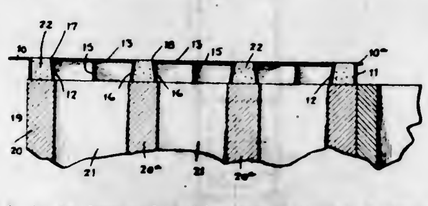
1,423,313. BOBBIN WINDER. PHILIP FAIRCLEUGH DOUGLAS, Minnedosa, Canada. Filed Feb. 16, 1921. Serial No. 445,529. 4 Claims. (Cl. 242—22.)

1. A device of the kind described comprising a suitably supported spindle adapted to receive a bobbin in intimate relation therewith, a member forming a hood over the bobbin, an opening in the face of the hood, means to feed thread to the bobbin through the opening in the hood, means to rotate the spindle from the sewing machine to fill the bobbin and a slit upwardly directed from the opening in the hood in which the thread jams to stop rotation of the spindle when the bobbin is full.



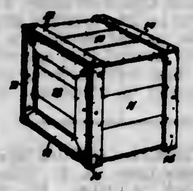
1,423,314. CHARGING CAR. FERDINAND FISCHITT, Cherryvale, Kans. Original application filed Jan. 26, 1921, Serial No. 440,761. Divided and this application filed July 12, 1921. Serial No. 484,158. 2 Claims. (Cl. 105—248.)

1. A furnace charging car including a suitable body, a transverse partition separating the body into end compartments, a pair of hoppers into which each compartment is formed, each hopper being extended downwardly forming a down spout and a gate controlling the discharge of material through each down spout.



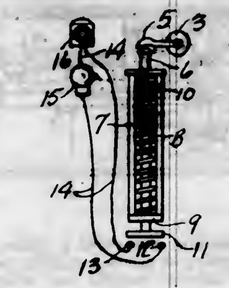
1,423,315. RAIN CAPE. LEOPOLD H. GEIS, Mount Arlington, N. J., assignor to New York Mackintosh Clothing Co., New York, N. Y., a Corporation of New York. Filed June 10, 1921. Serial No. 476,399. 6 Claims. (Cl. 2—60.)

1. A garment of the character described comprising a cape to be fastened around the neck of the wearer and a hood to be worn on the head and secured at its lower edge to the neck-portion of said cape, said garment at the back of the neck having a horizontally disposed open mouthed pocket extending inwardly and closed at its inner portion to protect the neck of the wearer, said pocket comprising an inner part secured to the upper edge of the cape and an outer part connected with said inner part and capable of being turned upwardly and to the outer free edge of which the lower edge of the hood at the back of the neck is secured, whereby said pocket is adapted to open upwardly when the head is thrust forwardly and thus afford an extension along the lines of the strain created by such movement of the head, whereby the garment is saved from injury and the hood is permitted to remain comfortably on the head.



6. A garment of the character described comprising a cape, a neck-band fastened thereto and to be secured around the neck of the wearer, and a hood fastened at its lower edges to the neck-band and cape at the lower edge of the neck-band and having at the lower portion of its back a vertical box-plait free to collapse inwardly on an upward strain on the hood and to expand laterally to meet variations of head conditions.

1,423,316. MORTAR SPREADER. JOHN GIOVAGNOLI, Flushing, N. Y., assignor of two-thirds to Roberts, Nash & Company, Inc., Flushing, N. Y., a Corporation of New York. Filed May 10, 1921. Serial No. 468,447. 2 Claims. (Cl. 72—128.)

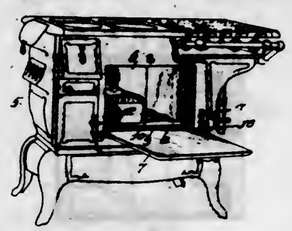


1. As an improved article of manufacture, a mortar spreader having longitudinal and transverse channels adapted to register with the walls of a hollow tile or the like, said spreader having a plane top surface, and having the lower edges of the channel walls also in a plane paralled with the top surface, the outer side walls of the spreader being left flat and unobstructed and projecting on all sides beyond the outer channel wall to form handles.

1,423,317. WOODEN SHIPPING CASE. ABRAHAM H. GODKEVITCH, New York, N. Y. Filed Nov. 15, 1921. Serial No. 515,221. 10 Claims. (Cl. 217—56.)

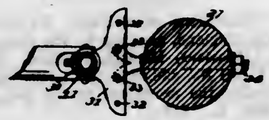
1. A shipping case having a fastening device including a member secured to and engaging a side and an end wall of the case at a corner, and a member secured to the third wall at said corner, and engaging with said first mentioned member to lock said third wall to both of the other two walls upon the closing of the case.

1,423,318. SIGNALING DEVICE FOR RAILROADS. OLIVER GREEN, Michigan City, Ind. Filed Feb. 27, 1922. Serial No. 539,406. 1 Claim. (Cl. 246—196.)



A signaling device for railway locomotives, comprising a casing outside the locomotive cab; a shaft journaled through the casing, the outer end having a depending contact arm and the inner end a depressor arm; a guide mounted inside the cab; a spring set contact pin slidingly mounted in the guide beneath the depressor arm; an insulated contact strip at the lower end of the contact pin; an electrical circuit embodying a bell and red light and two contacts adapted to be closed by the contact strip on the depression of the contact pin; and an adjustable arm mounted alongside the track and adapted to be impinged by the contact arm extended from the cab.

1,423,319. LAMP SHADE. MEYER GREITZER, New York, N. Y. Filed Aug. 31, 1921. Serial No. 497,082. 6 Claims. (Cl. 240—108.)



1. A lamp shade, comprising a spherical member adapted to be removably secured to a lamp and provided with an elongated opening, a light-directing member movable within said opening, and means for closing the portions of the opening not occupied by said movable member.

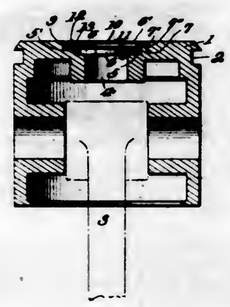
1,423,320. UTENSIL-HANDLING DEVICE FOR BAKE OVENS. RUPERT HAAS, St. Louis, Mo. Filed July 18, 1921. Serial No. 485,471. 4 Claims. (Cl. 126—337.)

1. A utensil handling device for bake ovens, comprising a plurality of rollers located in a bake oven, and a combined lever and crank arm mechanism for rotating said rollers in either direction.

1,423,321. GATE HINGE. HENRY T. HACKER, Lovell, Wyo. Filed July 29, 1920. Serial No. 399,963. 2 Claims. (Cl. 16—131.)

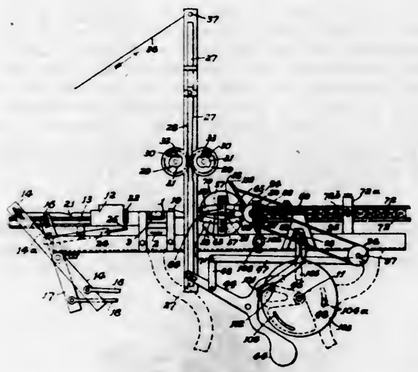
1. The combination with a gate and gate post, of means carried by the post adjacent the bottom thereof and having a pivotal connection with the gate adjacent the bottom and at that end adjacent the post, and a hinge connecting the gate with the post adjacent the top of the gate and comprising a duality of elements of which one is fixedly mounted in the post and the other pivotally connected with the gate and adjustable laterally of the fixed member to deflect the gate laterally at the top for the purpose specified.

1,423,322. CONDIMENT DISPENSER OR CONTAINER. CHARLES H. HANEKER, Philadelphia, Pa. Filed Mar 25, 1922. Serial No. 546,677. 3 Claims. (Cl. 65—57.)



1. A condiment dispenser comprising a casing having an open end, a cross bar carried at said open end, a cover, and a disc closing one end of said cover and having means to lock with said cross bar to secure the cover with respect thereto.

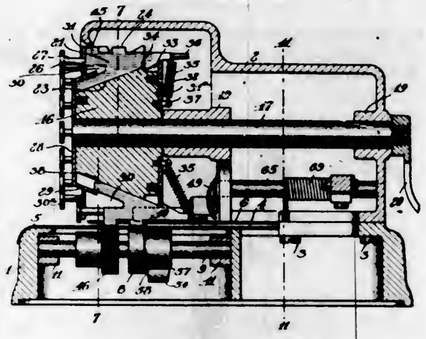
1,423,323. VALVE CONSTRUCTION. GEORGE EDGAR HAZARD, Rochester, N. Y., assignor to Kellogg Manufacturing Co., Rochester, N. Y. Filed Apr. 14, 1921. Serial No. 461,223. 9 Claims. (Cl. 251—127.)



6. An improved valve construction comprising a body provided with an opening, inner and outer flanges sur-

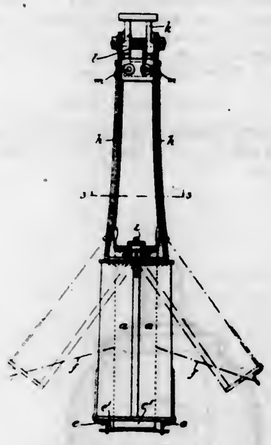
rounding the opening, a flat valve carried upon the inner flange and adapted to close the opening, and a valve retaining ring member greater in width than the outer

flange expanded between the outer flange and its surrounding wall and extending beyond the inner edge of the flange, for the purpose described.



1,423,324. WRAPPING MACHINE. FRANCIS HEATH, Huddersfield, England, assignor to The Heath Wrapper Company, Littlemoor, Mirfield, England. Filed Nov. 26, 1920. Serial No. 426,435. 12 Claims. (Cl. 93—2.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

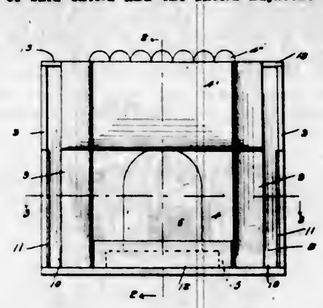
1. In a wrapping machine, a conveyer for the blanks, a guide arranged crosswise of the conveyer, a pusher slidable in the said guide under the conveyer and having a positioning device at its front end, a slide arranged above the conveyer and adapted to push a blank off it into engagement with the said positioning device, and means for sliding the pusher and the slide independently of each other.



6. In a wrapping machine, a slidable pusher; a wrapping and conveying device adapted to receive a blank and a sheet of wrapping material from the pusher, said device comprising a revoluble frame, an endless apron supported by the frame, crossbars secured to the end portions of the apron and operatively connected together, and means for revolving the frame intermittently to place the said crossbars alternately in the path of the pusher, the crossbar for the time being on the inlet side of the device being adapted to form a pocket in the apron in which the blank is positioned by the pusher, and the other crossbar being adapted to eject the previously inserted blank.

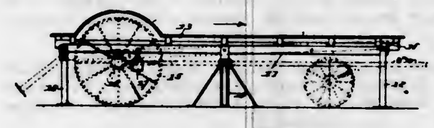
1,423,325. PRINTING MACHINE. JOHN HEBERLING, Rochester, N. Y. Filed Apr. 26, 1921. Serial No. 464,522. 41 Claims. (Cl. 101—19.)

1. A printing machine comprising a platen, a rotary carrier, and a plurality of printing elements mounted on said carrier and movable radially and axially of the carrier to and from a printing position for cooperation with the platen.



1,423,326. LANDING LIGHT OR FLARE FOR ATTACHING TO AIRCRAFT. HAROLD EDWARD SHERWIN HOLT, Farnborough, England. Filed Nov. 26, 1921. Serial No. 518,021. 10 Claims. (Cl. 240—1.)

6. A landing light comprising a flare holder, a flare body carried thereby and provided with igniting means, a shade attached to the flare holder and capable of being opened and closed, and means connecting the flare body and shade and controlled by the burning of the flare to regulate the opening of the shade.

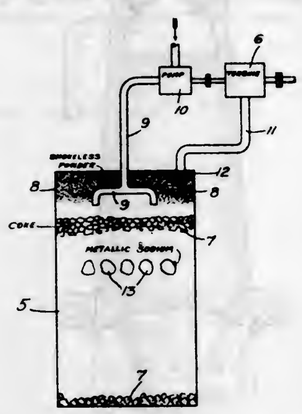


1,423,327. BANK-WINDOW SHIELD. HARRY W. HUNTRESS, Turlock, Calif. Filed June 22, 1920. Serial No. 390,787. 4 Claims. (Cl. 20—1.01.)

1. In combination with a counter, a shield rising therefrom, a side wall spaced therefrom, said shield having a door, fastening means for the door on the interior thereof and of said shield and the shield adjacent said side

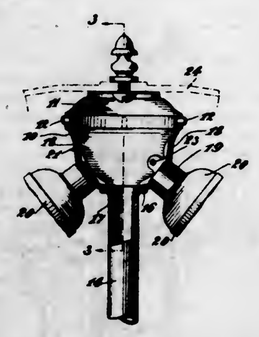
wall extending rearwardly to protect the fastening means against unauthorized opening.

1,423,328. HAY-RACK LIFT. JOSEPH ANTON JOHNSON, Blue Earth, Minn. Filed July 9, 1920. Serial No. 395,097. 1 Claim. (Cl. 254—50.)



A hay rack lift having intermediately fulcrumed tilting rails arranged in parallelism and spaced at an interval exceeding the width of a wagon running gear, foldable tilting supports for each end of each rail pivotally connected with the latter and designed to rest upon the surface traversed by the wagon running gear, the rails being provided with stops at one extremity for engagement with a rack supported by the wagon, and counterweights mounted upon the rails adjacent the other extremity for maintaining the said extremities depressed when the foldable supports at that end are displaced.

1,423,329. SHIPPING PACKAGE FOR WATCHES. HENRY C. KARR, Washington, D. C., assignor of one-fifth to Emil Bonnelycke, Washington, D. C. Original application filed Feb. 18, 1921, Serial No. 446,067. Divided and this application filed May 26, 1921. Serial No. 472,815. 3 Claims. (Cl. 206—18.)

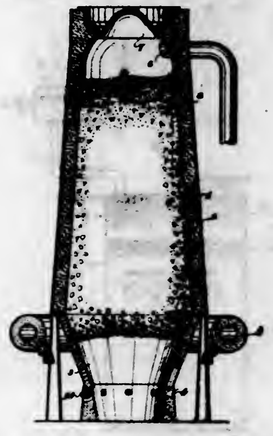


1. An improved shipping package for watches, comprising a box; a spring yoke laid flatwise therein and embodying a pair of spaced legs and a bridge connecting the same; and a watch inserted sidewise between said legs and having its stem engaged with said bridge, so that one leg overlies and the other leg underlies the watch to cushion the latter against shocks imparted to the box.

1,423,330. PRESSURE GENERATOR. ALEXANDER T. KASLEY, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Nov. 16, 1918. Serial No. 262,914. 5 Claims. (Cl. 60—42.)

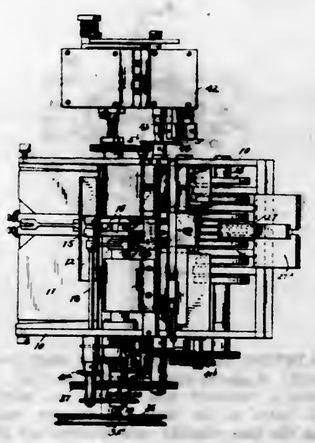
1. In a pressure generator, a closed combustion chamber containing a fuel, means for delivering an oxygen bearing solution to the fuel, and means for initially heating the fuel in response to an influx of solution.

1,423,331. LIGHTING FIXTURE. KARL KELLER, Brooklyn, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 1, 1921. Serial No. 497,651. 3 Claims. (Cl. 240—78.)



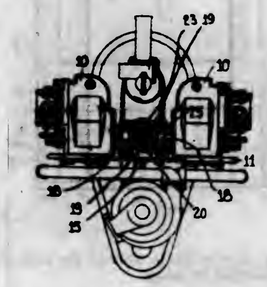
1. A lighting fixture comprising a shell provided with a plurality of spaced slots, shutters having a lug on one side with a threaded hole therein, set screws passing through holes in the shell and through said threaded holes in the lugs whereby said shutters are pivotally secured to the shell covering the slots therein at all times, and socket nipples carried by said shutters projecting through the slots in the shell.

1,423,332. PROCESS FOR THE SEALING OF CRACKS IN THE LINING OF BLAST FURNACES AND THE LIKE. THOMAS KENNAN, Birmingham, Ala. Filed Jan. 14, 1922. Serial No. 529,340. 4 Claims. (Cl. 266—1.)



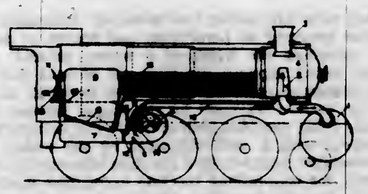
1. The hereindescribed process for the sealing of cracks in the lining of blast furnaces and the like, which con-

sists in raising the stock level above the cracked zone and concentrating a flow of air through the stock adjacent



to and above the cracked zone to cause the same to melt and run down the furnace lining and enter the crack.

1,423,333. REGISTER-OPERATING MECHANISM. ROBERT E. KIMBALL, Cleveland, Ohio, assignor to The Tickometer Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Oct. 22, 1915, Serial No. 57,285. Divided and this application filed Sept. 8, 1919. Serial No. 322,380. 9 Claims. (Cl. 233—98.)



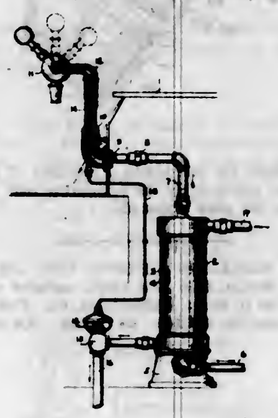
1. In a machine for counting transfers, tickets or similar devices having feeding means for feeding the devices one at a time therethrough, a shaft for operating a register for counting the devices as they are fed through the machine, means for operating the shaft including a continuously rotating member and a second rotary member engageable with but normally disengaged from the first, and means controlled by the movement of the devices from the support for causing direct intermittent driving engagement between said continuously rotating member and said second rotary member.

1,423,334. MAGNETO GEARING. CHARLES B. KERMAN, Buffalo, N. Y., assignor to Curtiss Aeroplane and Motor Corporation, a Corporation of New York. Original application filed May 18, 1916, Serial No. 98,336. Divided and this application filed Aug. 10, 1917. Serial No. 185,517. 6 Claims. (Cl. 290—1.)

3. In an internal combustion engine of the reversible type comprising an engine frame, a crank shaft capable of being driven in a reverse direction, dual opposed magnetos mounted upon one end of the engine frame and a driving connection between said shaft and said magnetos comprising a single reversible element incorporated therein to provide for the operation of the magnetos in the same direction upon the reversal of rotation of the shaft.

1,423,335. STEAM BOILER WITH FORCED-DRAFT FURNACE. CONRAD KOHLER, Zurich, Switzerland. Filed Mar. 17, 1920. Serial No. 366,660. 5 Claims. (Cl. 110—147.)

1. In a steam-boiler with forced draft-furnace, the combination of a furnace consisting of a fire-box with fire door and closed ash-pit, an under-grate blower, a conduit connecting the blower and ash pit, a blast device, means including said conduit connecting the ash pit with the blast device, and means for opening and closing the conduit and said connecting means so that the pressure above atmospheric inside the fire box is removed and an under-pressure is generated.



1,423,336. SANITARY CONTAINER. GUSTAV KORITTKE, Long Island City, N. Y. Filed Nov. 9, 1920. Serial No. 422,765. 1 Claim. (Cl. 211—32.)

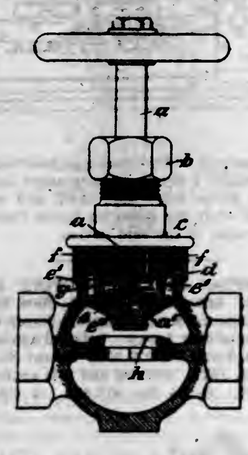
A roll paper container comprising a rigid frame, a hinged casing attached thereto, opposed spring latching

means for holding said casing in normal position on said frame, releasing means therefor, a drum rotatable in the frame, said drum being adapted to carry a roll of paper, a weight roll bearing against said paper roll, lever arms pivoted in the sides of said frame for supporting said roll, serrated means at the bottom edge of said casing for perforating the paper, and means formed with said casing whereby the paper may be manually withdrawn.

1,423,337. AUTOMATIC WATER-COOLING SYSTEM. OTTO A. LABUS, Wisconsin Rapids, Wis. Filed Nov. 3, 1921. Serial No. 512,560. 5 Claims. (Cl. 225—21.)

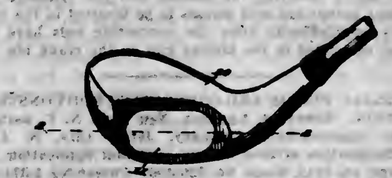
1. In an automatic water cooling system, a duct for refrigerants, another duct for water to be cooled and arranged in heat exchanging relation to the first-named duct, a faucet for the escape of water from the second duct, and an automatic valve responsive to variations in the water pressure in the second duct, due to opening and closing of the faucet, and in turn included in and controlling the flow of the refrigerant to said first-named duct.

1,423,338. ALLOY AND THE METHOD OF PRODUCING SAME. CLEMENS A. LAISE, Weehawken, N. J., assignor, by mesne assignments, to General Electric Company, Schenectady, N. Y., a Corporation of New York. Filed Sept. 13, 1920. Serial No. 409,964. 23 Claims. (Cl. 75—1.)



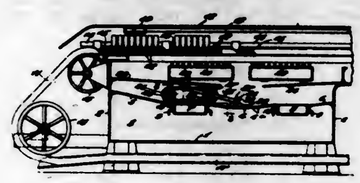
1. An alloy comprising tungsten, gold and vanadium, the tungsten predominating and the vanadium constituting about 0.1 per cent of the weight of said alloy.

1,423,339. SCREW GAUGE. CARL ASTOR LEDELL, Connersville, Ind. Filed Nov. 16, 1921. Serial No. 515,488. 11 Claims. (Cl. 33—147.)



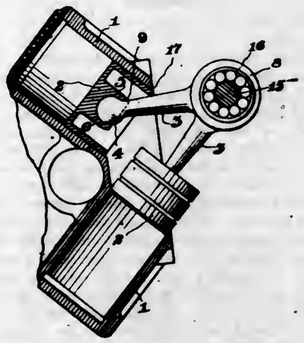
1. A thread measuring instrument comprising a main body, a roller provided with a circumferential portion formed to coact with the threads of the threaded element, means for yieldingly urging said roller transversely of its axis, an indicator, intermediate connections between the indicator and the roller to indicate variation of lateral position of the roller, and an abutment for the threaded member arranged in opposition to said roller.

1,423,340. VALVE. THOMAS WILLIAM LEES, Halifax, England. Filed Apr. 22, 1922. Serial No. 556,098. 2 Claims. (Cl. 251—88.)



1. A valve comprising in combination a casing, a stuffing box and nut in the upper part thereof, a screwed spindle working through said stuffing box and nut, a collar on said spindle, an annular member fitting loosely on the spindle, a seat opening, a valve disc adapted to close said opening having on its back a hollow stem into which the annular member is screwed, said member being adapted to engage the collar on the side remote from the disc, a spring confined on the spindle between the upper side of the disc and the collar and normally acting to hold the annular member against the collar, a driving recess in the upper side of the disc and a driving projection on the end of the spindle fitting in the recess, said recess being of such a depth as will permit of a certain longitudinal movement of the spindle relatively to the disc as the valve is being closed but will cause the end of the spindle to contact with the base of the recess before the spring is fully compressed.

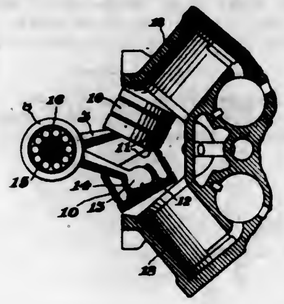
1,423,341. STRIKER PLATE FOR GOLF CLUBS. GEORGE A. LIPPINCOTT, Philadelphia, Pa. Filed Aug. 4, 1921. Serial No. 490,791. 7 Claims. (Cl. 46—4.)



1. A striker plate for golf clubs formed of a suitable shaped section of the shell of a suitably thick and relatively non-brittle metal.

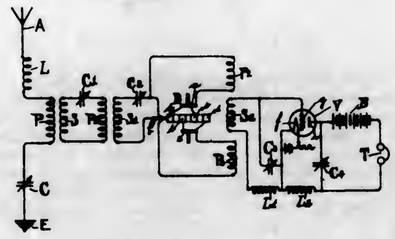
1,423,342. LABEL SEPARATOR AND REMOVER FOR BOTTLE-WASHING APPARATUS. CHARLES H. LOEW and JOHN R. GRUETTER, Cleveland, Ohio, assignors to The Loew Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Mar. 17, 1917, Serial No. 155,422. Divided and this application filed June 30, 1919. Serial No. 307,840. 5 Claims. (Cl. 141—7.)

2. In an apparatus of the character described, the combination of a shelf, a bottle support above said shelf, a label receiving device below said shelf, and means movable along said shelf for removing labels therefrom and delivering the same to the said device.



1,423,343. PISTON AND CONNECTING ROD CONSTRUCTION. ROBERT A. LUNDELL, New York, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed Apr. 18, 1918, Serial No. 229,306. Patent No. 1,371,701, dated Mar. 15, 1921. Divided and this application filed Oct. 23, 1920. Serial No. 418,889. 4 Claims. (Cl. 121—120.)

1. A multiple cylinder V-type fluid pressure motor, having a crank shaft and crank, cylinders located at equal acute angles on opposite sides of a plane passing through the axis of the crank shaft, pistons adapted to operate in the cylinders, connecting rods pivotally connected to said pistons and adapted to be assembled on the same crank pin before inserting the pistons into the cylinders, and means permitting said pistons to be inserted in the cylinders longitudinally after the connecting rods have first been assembled in the pistons and on the crank pin.

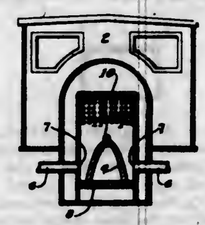


1,423,344. PISTON AND CONNECTING-ROD CONSTRUCTION. ROBERT A. LUNDELL, New York, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed Apr. 18, 1918, Serial No. 229,306. Patent No. 1,371,701, dated Mar. 15, 1921. Divided and this application filed Feb. 18, 1921. Serial No. 446,058. 6 Claims. (Cl. 121—120.)

1. A piston and connecting rod construction for engines comprising a piston, a connecting rod pivotally connected to said piston, a portion of the rim of the piston being cut away at one side, to permit a relatively smaller angular adjustment between two piston rods, to

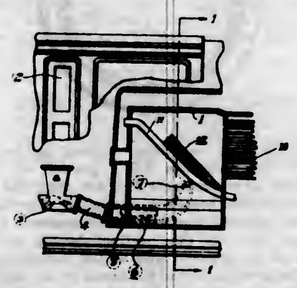
afford provision for assembling a plurality of pistons as a unit in an engine after the connecting rods have been connected to the same crank pin.

1,423,345. SIGNALING METHOD AND APPARATUS. DAVID G. MCCAA, Palo Alto, Calif., assignor of one-half to Cornelius D. Ebret, Philadelphia, Pa. Filed May 20, 1921. Serial No. 471,142. 24 Claims. (Cl. 250—8.)



1. The method of receiving high frequency oscillations, which consists in locally generating oscillations of frequency equal to the frequency of the received oscillations, periodically changing the co-action of the received and locally produced oscillations, and subjecting a translating instrument to the resultant of the received and locally produced oscillations.

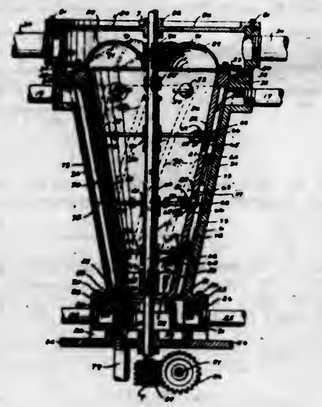
1,423,346. FIRE BOX. FREDERICK L. MCGAHAN, Los Angeles, Calif.; Viola K. Walker administratrix of said Frederick L. McGahan, deceased, assignor to The Purposed Mind Development Security Association of the World, a Trust Company. Original application filed Jan. 3, 1918, Serial No. 210,146. Patent No. 1,292,399. Divided and this application filed Jan. 17, 1919. Serial No. 271,715. 1 Claim. (Cl. 110—28.)



A fire-box for locomotives comprising a casing having end and side walls and grate bars forming the bottom of the fire-box, in combination with a tube sheet forming one end wall of the fire-box, horizontal fire tubes extending from said tube sheet, an elongated deflector having upwardly-converging side walls in the fire-box and positioned above the grate bars, the top surface of said deflector being below the said fire tubes, fuel discharge nozzles extending through opposite sides of the fire box and

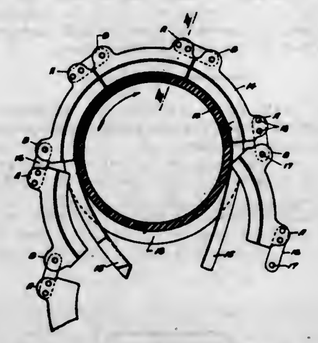
below the top of said deflector for delivering the charge of powdered fuel against the sides of said deflector, and

means for creating a draft through the fire box whereby the products of combustion are drawn from the fire-box and through the fire tubes.



1,423,347. FIRE BOX. FREDERICK L. MCGAHAN, Los Angeles, Calif.; Viola K. Walker administratrix of said Frederick L. McGahan, deceased, assignor to The Purposed Mind Development Security Association of the World, a Trust Company. Original application filed Jan. 3, 1918, Serial No. 210,146. Patent No. 1,292,399, dated Jan. 21, 1919. Divided and this application filed Jan. 17, 1919. Serial No. 271,716. 1 Claim. (Cl. 110—28.)

In a boiler, the combination of a fire-box having end and side walls, substantially horizontal fire tubes leading from one of the end walls, water tubes within the fire-box and extending diagonally from one end wall at a point below said fire tubes upwardly to the other end wall, at a point near its top, refractory material overlying and supported by said water tubes forming a partition dividing the fire box into two chambers communicating at the end of partition remote from the fire tubes only, and fuel discharging nozzles leading into the side walls of the fire-box and in substantial alinement to discharge the fuel delivered there-through toward each other, the point of ignition being at the center of the fire-box below said partition, means for creating a draft through the fire-box whereby the products of combustion traverse the chambers and exit through the said fire tubes.

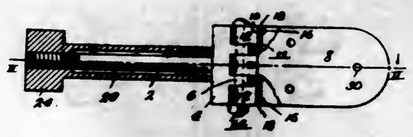


1,423,348. FAN. FREDERICK L. MCGAHAN, Los Angeles, Calif.; Viola K. Walker administratrix of said Frederick L. McGahan, deceased, assignor to The Purposed Mind Development Security Association of the World, a Trust Company. Original application filed Oct. 14, 1918, Serial No. 258,127. Divided and this application filed Dec. 8, 1919. Serial No. 343,354. 2 Claims. (Cl. 230—11.)

1. A fan of the character described, comprising a plurality of blades radiating from the hub, said blades each forming a member having a concaved and a convexed surface terminating in straight edges radiating from the hub and in the arc of a circle, the concaved surface substan-

tially facing in the direction of the axis of the fan, said blades being positioned relative to the hub to further provide an entrance into said concaved surface, which entrance faces in the direction of rotation of the fan.

1,423,349. MOLDING MACHINE. ROBERT MCCLENATHEN, Akron, Ohio, assignor to Kelly-Springfield Tire Company, Akron, Ohio, a Corporation of New Jersey. Filed Nov. 9, 1921. Serial No. 513,986. 9 Claims. (Cl. 18—6.)

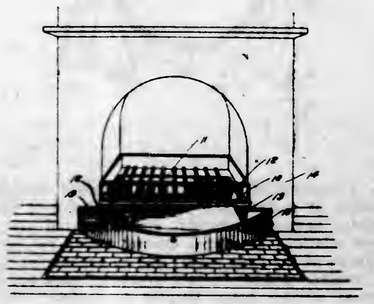


1. A machine of the character described comprising a plurality of spaced apart cylindrical drums of identical diameter having counterpart circumferential grooves in alined relation; associated driving means for revolving all drums at the same speed; and an articulated circulating pressure member in each groove of each drum, said pressure member being adapted to register with said grooves and to be circumferentially advanced simultaneously over the drums.

1,423,350. ADJUSTABLE HINGE. WILLIAM B. MCDONALD, Lawrence, Kans. Filed July 5, 1921. Serial No. 482,262. 2 Claims. (Cl. 16—128.)

1. A hinge consisting of a threaded shank, a transverse head at one end of said shank provided with knuckles, a plate adapted to be secured to a door or gate and provided at one end with knuckles adapted to inter-

lap with the knuckles on said shank, means for pivotally connecting the knuckles on the head and said plate, and a holder embodying internally threaded means into



which the threaded shank may be screwed and secured against accidental longitudinal movement in either direction.

1,423,351. AUTOMATIC RAILROAD-SWITCH THROW AND LOCK. FRANK H. MARTIN, Carterville, Ill. Filed July 9, 1921. Serial No. 483,544. 11 Claims. (Cl. 246—340.)

1. Operating means for railroad switch points, comprising a rockable switch stand connected to the points, a tripvee mounted to oscillate on a horizontal axis and connected to the stand, and vehicle-carried means adapted to travel in a path to enter and actuate the tripvees, that portion of the tripvees entered by the vehicle-carried means comprising divergent arms movable independently of each other in the same vertical plane.

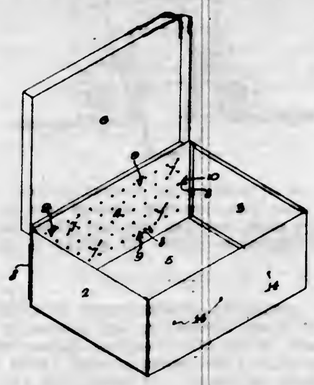
1,423,352. ASH PAN. CHARLES F. MILHOLEN, Kannapolis, N. C. Filed Nov. 10, 1920. Serial No. 423,080. 1 Claim. (Cl. 126—243.)

An ash pan for fireplaces having a body portion for disposition below a grate, lateral offsets on and extending a considerable distance from said portion for contact with the jambs of the fireplace to limit insertion of the pan, a front wall extending from the outer extremity of one of said offsets to the other offset, said front wall being deflected forwardly and the pan being unobstructed above its bottom forwardly of a line passing through said offsets so as to catch and retain ashes and sparks falling off the grate beyond the front margin thereof.

1,423,356. SANITARY BELT. DORA MOERER, Stevens Point, Wis. Filed Oct. 31, 1921. Serial No. 511,551. 2 Claims. (Cl. 24—198.)

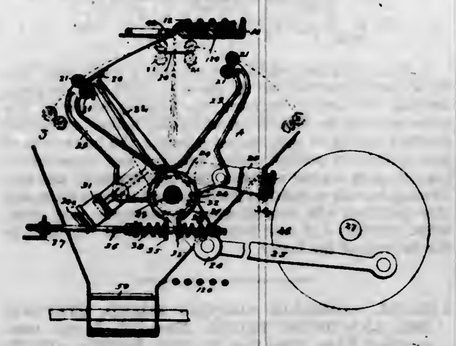
1. In a device of the character described, a clamp comprising a substantially rectangular loop, one side of the rectangle being formed by the ends of the loop extending toward each other and a sleeve secured to one of the ends and separably receiving the other end, and a second loop of approximately the same shape but slightly smaller than the first loop and having eyes formed in its ends and pivotally receiving the ends of the first loop.

1,423,354. AUTOMOBILE WHEEL RIM. GEORGE THOMAS NICHOLS, Gainesville, Tex., assignor of one-tenth to John P. Walling, Gainesville, Tex. Filed Apr. 7, 1920. Serial No. 371,941. 10 Claims. (Cl. 301—35.)



1. A wheel rim comprising a ring having a section thereof of less thickness for a portion of its circumference and transversely of the rim than the remaining section, apertures provided at spaced intervals in said section, an arcuate segment complementary to the ring section, and fitting over the thin section thereof, the combined thickness of the segment and of the section where fitted together being equal to the thickness of the remaining section, said segment being provided with means for engaging with said apertures whereby the segment is held in place upon the ring.

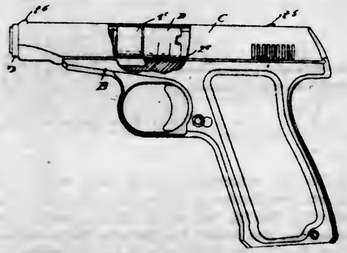
1,423,355. PHOTOGRAPHIC-ROLL-FILM SPOOL. MAGNUS NIELL, Stockholm, Sweden. Filed Sept. 5, 1919. Serial No. 321,932. 3 Claims. (Cl. 242—71.)



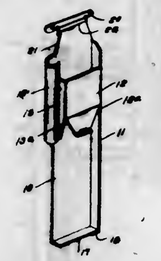
2. A spool of the character described comprising a hollow shaft made in one piece with open ends and of a generally cylindrical exterior and interior with heads extending in planes at substantially right angles to the axis of the tubular shaft and provided with grooves in their outer faces near the margins thereof, said shaft and heads being made in one piece and the shaft being in one piece of sheet metal throughout, said hollow shaft having near both ends thereof portions of the sheet metal thereof pressed inwardly into the space embraced by the shaft and adapted to form projections to cooperate with similar formations on a key insertable into the open ends of the shaft for forming an interlock between key and spool.

1,423,356. HUMIDOR. FERDINAND CARMODY, Philadelphia, Pa., assignor of one-half to Arthur W. Jones, Germantown, Philadelphia, Pa. Filed Nov. 5, 1920. Serial No. 421,853. 1 Claim. (Cl. 131—80.)

The combination of a container having a perforated face and struck up tongues constituting a guideway on said face; a relatively thin holder slidably mounted in the guideway provided by said tongues and consisting of two spaced thicknesses of sheet metal; with a sheet of water absorbent material mounted within the holder, the outer face of the latter being imperforate and the face adjacent the perforated side of the container having openings therein.



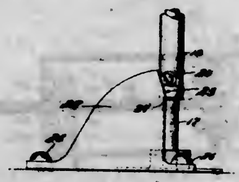
1,423,357. FIBROUS-PLANT-DECORTICATING MACHINE. FRANK O'NEILL, Jr., Philadelphia, Pa. Filed Nov. 28, 1917, Serial No. 204,829. Renewed Feb. 13, 1922. Serial No. 536,342. 21 Claims. (Cl. 19—12.)



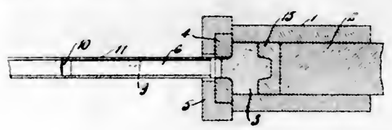
9. In a machine of the class described, the combination of plant suspending means, a decorticating mechanism situated beneath the same and comprising two sets of alternately acting plant engaging members, and means for imparting the movement of one member of a set to the other member in the same direction, whereby both simultaneously move in the same direction.

1,423,358. FIREARM. JOHN D. PEARSON, Jackson, Wyo. Original application filed July 17, 1919, Serial No. 311,689. Divided and this application filed Apr. 2, 1920. Serial No. 370,830. 17 Claims. (Cl. 42—3.)

1. In a firearm in combination, a frame of the firearm provided with a shoulder, a main slide supported by said frame and movable thereon and provided with a barrel-chamber, a barrel in said barrel-chamber rotatable for engaging the rear end of the barrel with said shoulder of the frame, means for supporting the barrel in said barrel chamber independently of said frame of the firearm, and means on the barrel coacting with means on the frame of the firearm for drawing the barrel rearwardly to bring the rear end of the barrel into engagement with said shoulder of the frame by partial rotation of the barrel.

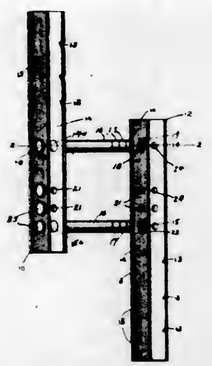


1,423,359. MECHANIC'S RULE AND PENCIL HOLDER. JAMES R. PLATT, Hartford, Ark. Filed Oct. 19, 1920. Serial No. 417,866. 3 Claims. (Cl. 24—13.)



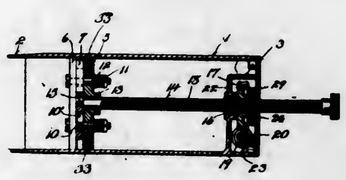
1. A mechanic's rule and pencil holder struck from a blank having a main fold upturned at one edge to form a flange, a transverse tongue extending from the free edge of the flange and provided with an extension lip extending toward the main fold, the portion of the opposite edge of the main fold beyond the plane of said lip being rolled to form a tubular pencil seat of which the open inner side is spanned by said extension lip.

1,423,360. ATTACHMENT FOR PHONOGRAPHS. CARLETON B. PRESTON, Providence, R. I. Filed Apr. 4, 1922. Serial No. 549,597. 3 Claims. (Cl. 274—9.)



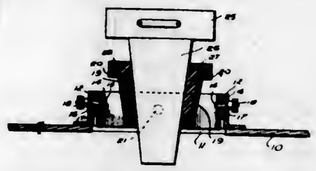
1. In combination with a phonograph including a horn mounted on slide with a vertical shaft, and a reproducer for cooperating with a record, a reproducer positioning attachment comprising a block having a face extending at an angle to the horizontal, and means cooperating with the horn for engaging with said face to rotate the horn to position the reproducer on the record.

1,423,361. DEVICE FOR PRODUCING EXTRUDED SHEET METAL. ALBERT F. ROCKWELL, Bristol, Conn., assignor to Marlin-Rockwell Corporation, New York, N. Y., a Corporation of New York. Filed June 25, 1919. Serial No. 306,546. 9 Claims. (Cl. 29—33.)



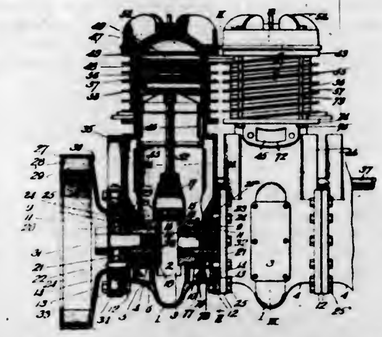
2. A device for reducing metal to sheet form comprising: a die member having a die opening of annular formation, means for forcing the metal to be reduced through said die opening, and means for cleaving the metal to produce a blank having the formation of a longitudinally-split tube.

1,423,362. CATTLE POKE. CHARLIE F. SCHNEIDER, Enid, Okla. Filed Jan. 7, 1921. Serial No. 435,641. 2 Claims. (Cl. 119—138.)



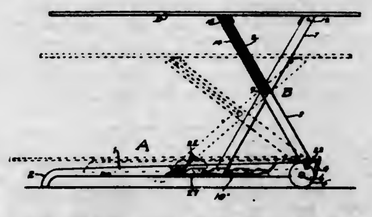
1. A cattle poke having bars, said bars having spaced and connected walls, connecting means extending through the innermost of said walls, and the outermost wall of one of said bars having openings therethrough, and said means being passable through said opening for insertion or removal.

1,423,363. HAIR-CUTTING APPLIANCE. SAMUEL SEVERSON, Valders, Wis. Filed May 18, 1920. Serial No. 382,236. 6 Claims. (Cl. 30—1.)



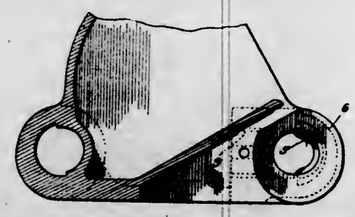
1. In an appliance of the class described, a casing, cutting mechanism therein, means for operating the cutting mechanism, and means simultaneously operable in synchronism with said last named means for withdrawing the cutting mechanism inwardly of the operating end of the casing.

1,423,364. AERIAL MOUNTING FOR CAMERAS. JOSEPH SHARPE, Hampton, Va. Filed Apr. 28, 1921. Serial No. 465,208. 3 Claims. (Cl. 95—12.5.)



2. In an aerial mounting for cameras, an outer pivoted frame, an inner frame pivotally mounted upon the outer frame, and a shock absorbing tube held within the inner frame and adapted to receive the bellows of an aerial camera.

1,423,365. INTERNAL-COMBUSTION MULTIMOTOR. FRANK W. SMITH, Kansas City, Mo., assignor, by mesne assignments, to Unit Motor Company, Kansas City, Mo., organized under a declaration of trust. Filed July 2, 1919. Serial No. 308,168. 12 Claims. (Cl. 123—195.)

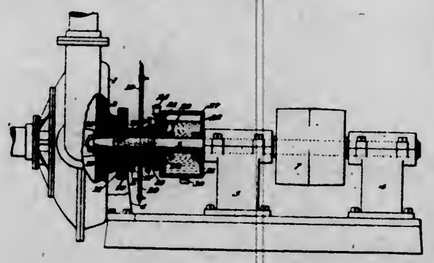


1. In an internal combustion engine, a crank case having a central chamber for the crank and two side chambers flanking the central chamber, for holding lubricant, the inner walls of the side chambers having hollow cylindrical portions axially of said central chamber, the inner ends of said cylindrical portions being enlarged and communicating with said central chamber, bushings fitting in and conforming to said cylindrical portions, and wicks within said side chambers and extending up through the said cylindrical portions and said bushings to conduct lubricant to the interior of the latter.

1,423,366. COMBINED IRONING BOARD, STEPLADDER, AND HOUSE TRUCK. HENRY C. SNOOK, Independence, Kans. Filed Sept. 21, 1920. Serial No. 411,779. 1 Claim. (Cl. 228—21.)

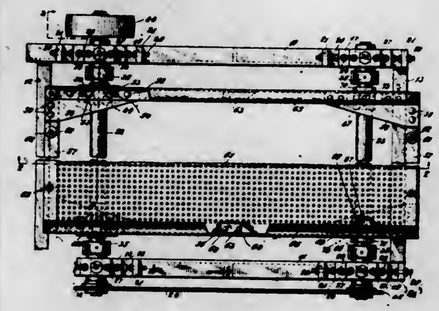
A combined ironing-board, step-ladder and truck, comprising a frame provided with handles and a pair of rollers; a pair of bars, each provided with a series of notches, said bars being secured to the inner faces of the longitudinal members of said frame; a second frame pivotally connected to said first-named frame at points adjacent said rollers, said second frame comprising spaced longitudinal members each having a slot therein at its free end, a third frame pivotally secured to said second frame by a rod passing through said slots, said third frame having at its outer end a transverse bar adapted to seat in pairs of said notches, an ironing-board adapted to be mounted on said second and third frames in various adjusted positions thereof, and a bolt for detachably securing said ironing-board in place, said bolt also serving to hold the longitudinal members of said second and third frames in alinement when adjusted to form a step-ladder.

1,423,367. PIN STOP FOR DREDGE BUCKETS. MARK L. SUMMERS, Hammonton, Calif., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Aug. 6, 1921. Serial No. 490,241. 4 Claims. (Cl. 74—43.)



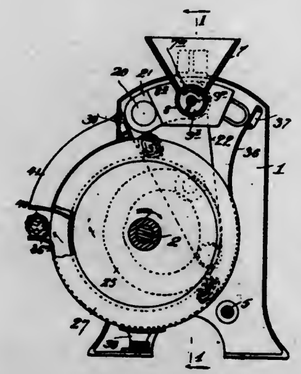
1. A dredge bucket having a pin opening and a lug-seat, a pin for said opening and having a lug adapted to said lug-seat, and means cast integral with the bucket to prevent endwise displacement of the pin and effective to confine the lug to its seat.

1,423,368. SOUND-BOX DIAPHRAGM. HERBERT L. TIFFT, Willimantic, Conn. Filed Mar. 31, 1921. Serial No. 457,506. 6 Claims. (Cl. 181—32.)



1. A diaphragm for the purpose indicated consisting of a fibrous base saturated with a solution of gutta percha and having an exterior metallic coating.

1,423,369. CENTRIFUGAL PUMP. WILLIAM FRANCIS TRENARY, Atlanta, Ga. Filed Dec. 30, 1918. Serial No. 268,816. 2 Claims. (Cl. 286—9.)

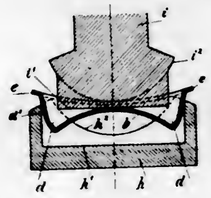


1. A shaft bearing, having a stuffing box, a divided bushing adapted to embrace the shaft, means to adjust the divided bushing to the shaft to compensate for wear on the shaft, means to supply liquid to the shaft within the bushing, and external circumferential grooves on the bushing members in communication with the liquid supply means to drain the liquid and solid matter from the bushing.

1,423,370. REVOLVING SHAKER SCREEN. JULIUS C. UHLARIK, Valhalla, N. Y., assignor to Robins Conveying Belt Co., a Corporation of New Jersey. Filed June 16, 1919, Serial No. 304,619. Renewed Dec. 7, 1921. Serial No. 520,762. 12 Claims. (Cl. 83—56.)

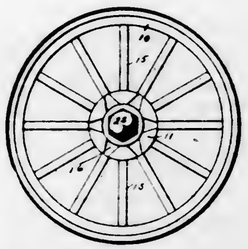
1. A screen frame, means to move it in a circular orbit, consisting of parallel shafts provided with eccentrics, adjustable counterbalance means at the eccentrics, a bearing for one of the eccentrics having freedom of motion longitudinally of the frame, and a screen plate mounted loosely upon the frame to cause the plate, due to its inertia, to travel in an orbit of its own, alternately lagging behind the orbit of the frame and jarring upon it when the orbits again coincide.

1,423,371. DOUGH-DIVIDING MACHINE. THOMAS S. VIRROW, Jersey City, N. J. Filed July 26, 1921. Serial No. 487,751. 18 Claims. (Cl. 107—15.)



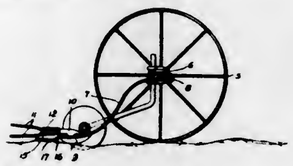
1. A dough dividing machine comprising a reciprocative and rotative plunger provided with means to feed dough, a receiver for the dough, and means to discharge dough from the receiver.

1,423,372. WATER-TUBE BOILER. KARL VÖRSMANN, Brunn, Austria. Filed July 5, 1917. Serial No. 178,724. 3 Claims. (Cl. 113—51.)



1. A process for the manufacture of headers for steam boilers, comprising shaping a blank between a first set of

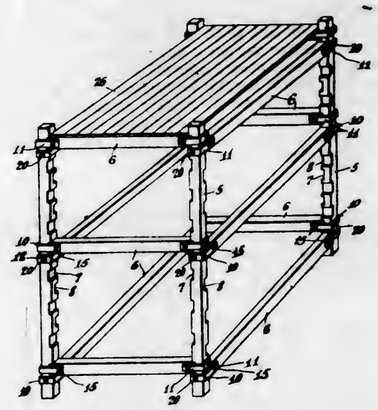
dies to have an upwardly curved bottom and surrounding side and end walls provided with outstanding flanges, and



subsequently flattening the bottom and thereby drawing in the top portions of the end walls towards each other between another set of dies.

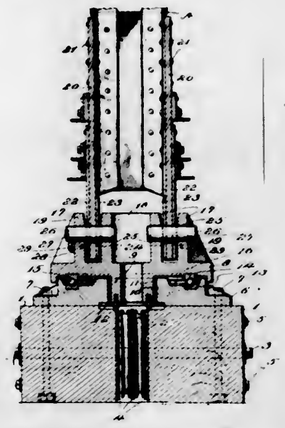
1,423,373. METAL WHEEL. JAMES H. WAGENHORST, Jackson, Mich. Filed Aug. 20, 1919. Serial No. 318,812. 4 Claims. (Cl. 301—58.)

1. A wheel comprising a hub, a sheet metal felly and sheet metal spokes connecting said felly and hub, the inner ends of said spokes being enlarged, the hub having flanges at its opposite ends provided with recesses adapted to receive the enlarged spoke end radially therein.



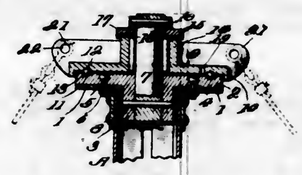
1,423,374. BEET TOPPER. SYLVESTER C. WARNER, McClure, Ohio. Filed Jan. 11, 1921. Serial No. 436,586. 8 Claims. (Cl. 55—107.)

1. A topping attachment for vegetable digging machines comprising a resilient arm rigidly attached to the frame of the machine and extending downwardly and rearwardly thereof, a ground-engaging shoe carried by said resilient arm, and a knife carried by said shoe, said knife being mounted to the rear thereof.



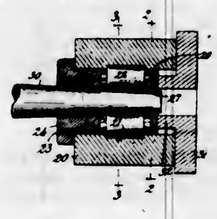
3. A top-cutting mechanism for vegetable digging machines, comprising a resilient arm attached to the frame of the machine and projecting downwardly and rearwardly therefrom, ground-engaging means carried by the rear end of said arm, a bracket carried by the rear end of said arm, a knife carried by the bracket, means for securing the knife to the bracket, and a plurality of top-directing fingers carried by the bracket, said top-directing fingers being secured to the bracket by the knife-securing means.

1,423,375. BUILDING CONSTRUCTION. FREDERICK WATT, Chicago, Ill., assignor of one-third to Thomas J. Pembor, Chicago, Ill. Filed Sept. 29, 1919. Serial No. 327,160. 4 Claims. (Cl. 304—2.)



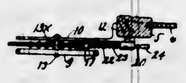
1. A building structure comprising a plurality of upright posts, each post having a series of corresponding transverse grooves in two adjacent sides thereof; a plurality of beams extending between the posts to form a self-supporting polygonal structure and having their ends seated in the grooves; and detachable screw clamps encompassing a post and the sides of a beam for securing an end of each beam in a groove of the corresponding post.

1,423,376. DERRICK. GEORGE F. WATTS, Boston, Mass. Filed July 13, 1921. Serial No. 484,458. 6 Claims. (Cl. 212—70.)



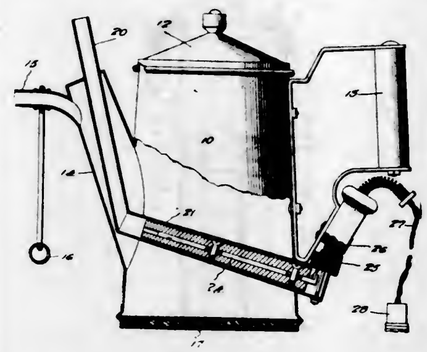
1. The combination of a foot-block consisting of a base plate and a mast step, anti-friction bearings interposed between the base plate and mast step, and a mast pivotally connected to the mast step and centrally located thereon, whereby the pressure exerted on the foot block by the mast regardless of its angle is equally distributed on the base plate by said anti-friction means.

1,423,377. MAST TOP. GEORGE F. WATTS, Boston, Mass. Filed July 13, 1921. Serial No. 484,459. 4 Claims. (Cl. 212—70.)



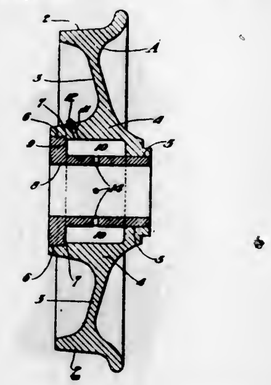
1. In a mast top, the combination with a derrick mast, a base plate mounted thereon and provided with a gudgeon pin, a spider plate mounted upon the base plate and surrounding the gudgeon pin, and anti-friction means interposed between the spider plate and gudgeon pin and between the spider plate and base plate.

1,423,378. METHOD AND APPARATUS FOR FINISHING CURVED SURFACES. HAROLD WESSON, Springfield, Mass. Filed Mar. 10, 1921. Serial No. 451,208. 6 Claims. (Cl. 29—90.)



1. The method of imparting, to an article of suitable rigid material, a finished surface of revolution of a very high degree of smoothness and extreme accuracy of dimensions, which consists in first machining said surface, by any appropriate means, to a very close approximation of the desired finished form and then subjecting the same to a treatment by rollers of relatively small curvature having hard polished surfaces, said rollers being forcibly pressed against said surface while being rolled along the same, the rolling and pressing being continued until said surface has been highly polished and compressed with precision to a predetermined dimension, and being discontinued when said dimension has been attained.

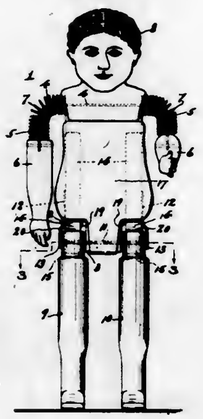
1,423,379. AUTOMOBILE DIRECTION SIGNAL. OSCAR M. WEST, St. Paul, Minn. Filed Aug. 29, 1921. Serial No. 496,500. 2 Claims. (Cl. 116—40.)



1. In a device of the class described, a vertically disposed outwardly projecting housing and means for securing same to a stationary part of a vehicle near the driver thereof, a foldable and horizontally extensible signal arm normally contained in the housing and means near the driver operatively connected with the signal arm to extend it out horizontally from the housing, said extensible signal arm being composed of cross bars pivotally connected at their crossings and pivoted together at their ends in the manner of lazy tongs, the outer members terminating in triangular points forming an arrow head when the arm is extended; the inner members of the arm forming beam levers mounted to tilt and slide in the housing, a cross head slidable in the housing and pivoted to the inner ends of said beam lever, a horizontally disposed rod fixed in the cross head, a bearing on the housing for the rod to slide in, a compression coil spring encircling the rod between the bearing and the cross head and tending at all times to push the cross head and the rod outward and thereby hold the extensible arm normally in folded position and means for imparting endwise movement of the rod against the pressure of the spring, said means comprising a guided cable having one end connected to the rod and the other end connected to an operating lever mounted near the driver of the car.

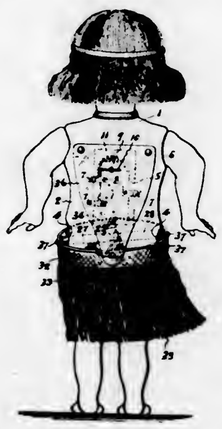
1,423,380. ELECTRICALLY-HEATED APPARATUS. ROBERT F. WHERLAND, Stanley, N. Dak. Filed Dec. 13, 1920. Serial No. 430,225. 3 Claims. (Cl. 219—44.)

1. A device of the class described, comprising a receptacle, a duct extending transversely therethrough, a discharge spout, a tube extending through said spout and having connection with the aforesaid duct, and an electrically heated element within said duct.



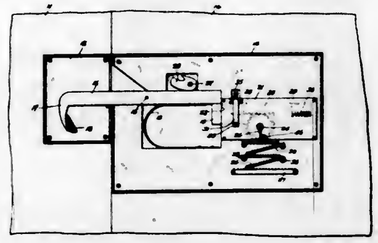
1,423,381. CAR WHEEL. THOMAS WALLEY WILLIAMS, Pittsburgh, Pa. Filed May 12, 1922. Serial No. 560,420. 1 Claim. (Cl. 295—35.)

In a forged steel car wheel, a hub portion counterbored for the greater portion of its length and having a smaller bored aperture in the bottom wall of said counterbore, said counterbored portion of said hub having an enlarged annular portion at its open end forming a shoulder, and a bushing of a diameter that will fit snugly within said bored



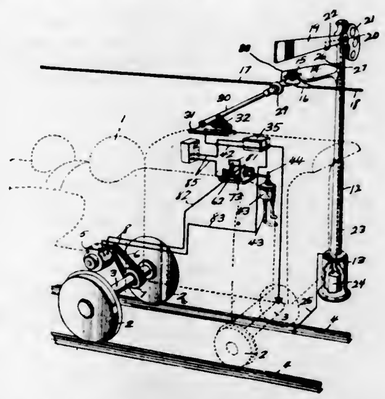
aperture fitted within said counterbore and having one end projecting into said bored aperture, an annular flange on the opposite end of said bushing adapted to snugly fit within the enlarged annular portion of said counterbore and abut said shoulder thereby forming a closed annular lubricant retaining recess, said bushing being provided with perforations to permit the passage of lubricant therethrough.

1,423,382. WALKING DOLL. DAVID ZAIDEN, East Orange, N. J. Filed Dec. 14, 1920. Serial No. 430,675. 6 Claims. (Cl. 46—40.)



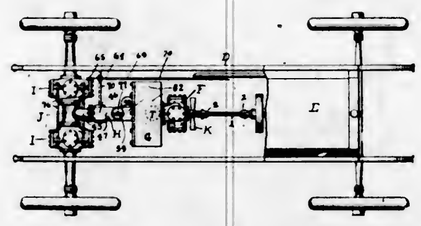
1. In a toy of the kind described, a body portion, leg portions pivotally connected with said body portion, and flat leaf springs attached to said body portion, the free ends of said springs respectively engaging the rear sides of said respective leg portions to hold the latter in normal longitudinal alinement with said body portion yet yieldable to rearward swinging movement.

1,423,383. HULA DOLL. DAVID ZAIDEN, East Orange, N. J. Filed May 9, 1921. Serial No. 467,805. 5 Claims. (Cl. 46—40.)



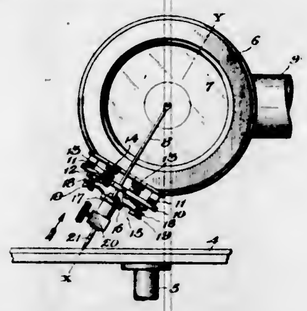
1. In a doll of the kind described, a body having a chambered interior and provided in its lower trunk portion with laterally opposite side openings, a spring motor mechanism supported within said chambered interior, means oscillated by said spring motor mechanism having portions extending oppositely through said side openings, and a skirt member attached to said latter means adapted to be rhythmically swayed from side to side by the operation thereof.

1,423,384. COMBINATION LOCK. CHARLES J. ANDERSON and WILLIAM H. VAN DYKE, Corning, N. Y. Filed Oct. 20, 1921. Serial No. 509,116. 8 Claims. (Cl. 70—18.)



1. A combination lock including a movable bolt, means for actuating the bolt, a plurality of rack bars pivoted to swing at their alternate ends, and a shaft carrying a gear pinion consecutively engageable with said rack bars, said shaft operative to engage the bolt moving means when the pinion arrives at a predetermined position on the rack bars.

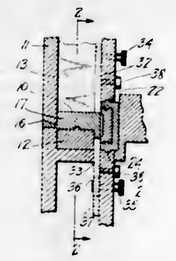
1,423,385. AUTOMATIC TRAIN-CONTROL DEVICE. JOHN P. ANGUS, Tonawanda, N. Y. Filed Mar. 20, 1919. Serial No. 283,792. 8 Claims. (Cl. 246—68.)



6. In a train control mechanism, the combination with the air brake lever and valve, of a frame joined with the air brake lever and including uper and lower racks, a gear shaft having a gear adapted to engage the upper rack, motor connections for rotating the gear to drive the frame forwardly, a guide on the frame for the gear shaft, a dielectric support on the frame having a current strip including upper and lower portions ending in insulated blocks, a contact arm adapted to engage the upper portions, a motor circuit including a source of energy and a pair of contacts, a switch arm adapted to engage the contacts to close the motor circuit, cam devices for elevating the frame to simultaneously cause the engagement of the lower rack with the gear and the lower strip portion with the contact and the end of the forward thrust of the frame, and a cam guide for the end of the gear shaft.

1,423,386. FLUID POWER-TRANSMISSION APPARATUS. JOSEPH H. BAIR, Philadelphia, Pa., assignor of eighteen-sixtieths to James O. David, Philadelphia, Pa., fifteen-sixtieths to Hervey S. Knight, Chicago, Ill., and ten-sixtieths to Lewis H. Taylor, Jr., Philadelphia, Pa. Filed July 1, 1916. Serial No. 107,211. 11 Claims. (Cl. 60—53.)

1. In a fluid driving or driven apparatus, the combination of a shaft, an eccentric mounted on said shaft, a piston reciprocated by said eccentric, a housing for said piston, means for varying the eccentricity of the eccentric mounted coaxially with the shaft; said shaft having a bore which receives the varying means, and a transverse sector face intersecting said bore; said eccentric being fitted to said bearing face and constructed with a toothed rack presented to the bore of the shaft; and said varying means including a pinion within the bore and meshing with said rack.



1,423,387. PHONOGRAPHIC SOUND BOX. LOUIS JOHN BERGDOLL, now by judicial change of name Louis John Bergson, Philadelphia, Pa. Filed Dec. 11, 1916. Serial No. 136,218. 3 Claims. (Cl. 274—35.)

1. In combination with a sound-box having a diaphragm and a stylus-bar connected therewith, a pivotally-mounted member connected with said bar arranged to impart vibration thereto in a plane substantially perpendicular to said diaphragm in response to properties in a record pertaining to recorded sound, a holder for a record-engaging part pivotally mounted on said member arranged to vibrate only in a plane substantially parallel with said diaphragm in response to other record properties, and a spring counteracting movement of said holder in both directions.

1,423,388. LINE-SLUG-CASTING MACHINE. SUNKER AOG. BISEY, New York, N. Y. Filed Sept. 4, 1920. Serial No. 408,298. 23 Claims. (Cl. 199—75.)

1. The process of producing a continuous typographical line slug of indefinite length with a mold of definite and less length which comprises repeatedly casting units in the mold in contact with preceding units and against successive matrices of a composed line of matrices, ejecting the

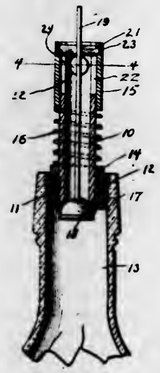
units from the mold as they are cast and automatically advancing the composed line of matrices through the engagement of the cast sections therewith.

1,423,389. PAINT VEHICLE. WILLIAM N. BLAKEMAN, Jr., Mount Vernon, N. Y. Filed Apr. 16, 1921. Serial No. 461,961. 6 Claims. (Cl. 134—56.)

6. A paint-vehicle carrying cocoanut oil; tung oil; and a mineral oil.

1,423,390. PAINT COMPOSITION. WILLIAM N. BLAKEMAN, Jr., Mount Vernon, N. Y. Filed Oct. 5, 1921. Serial No. 505,624. 10 Claims. (Cl. 134—39.)

10. A paint-composition, comprising a fatty oil; a pigment; cocoanut oil; tung oil; and a mineral oil.

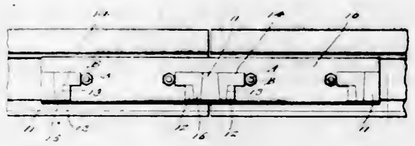


1,423,391. PIGMENT COMPOSITION FOR PAINTS. WILLIAM N. BLAKEMAN, Jr., Mount Vernon, N. Y. Filed Oct. 5, 1921. Serial No. 505,625. 8 Claims. (Cl. 134—58.)

8. A mixture, in paste form, of cocoanut oil; tung oil; and an anhydrous pigment.

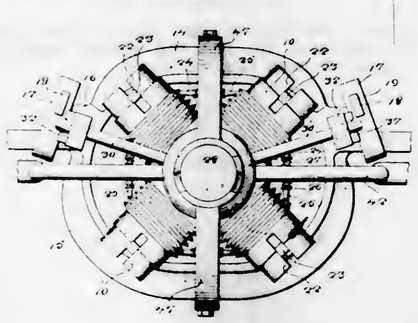
1,423,392. OIL. WILLIAM N. BLAKEMAN, Jr., Mount Vernon, N. Y. Filed Oct. 5, 1921. Serial No. 505,626. 2 Claims. (Cl. 134—56.)

2. A mixture of tung oil and cocoanut oil.



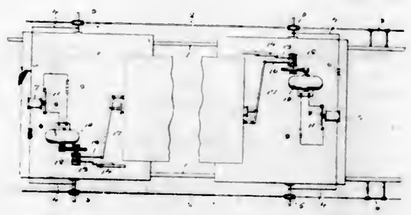
1,423,393. BATTERY FILLER. ARVEL A. BOSTON, New Martinsville, W. Va. Filed Sept. 8, 1919. Serial No. 322,255. 1 Claim. (Cl. 215—74.)

In combination with a container having a discharge mouth and a stopper therefor having a threaded aperture,



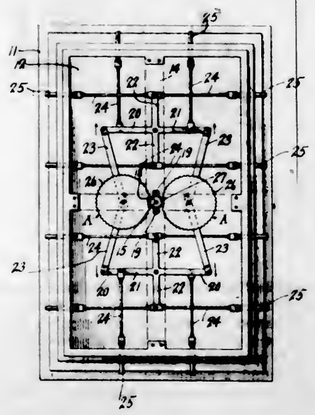
of a casing having escape ports in its outer end its inner end threaded and provided with an annular flange surrounding said casing adjacent the threaded portion, a curved seat formed within the threaded end, a semi-spherical valve normally engaging the seat, a stem oblong shape in cross section carried by said valve and passing through and beyond the outer end of said casing, a transversely disposed pin secured through the stem adjacent its outer end and adapted to reciprocate within oppositely disposed longitudinal slots formed in the outer end of the casing, a sleeve surrounding the casing and normally positioned over the escape ports, said sleeve being provided with grooves disposed upon diametrically opposite sides of its interior, and is adapted to receive the ends of the pin, and a coil spring engaging the sleeve and the annular flange for the purpose specified.

1,423,394. ANGLE BAR AND NUT LOCK. JACK JAMES BOWMAN, Portland, Oreg. Filed Nov. 29, 1921. Serial No. 518,605. 3 Claims. (Cl. 238—262.)



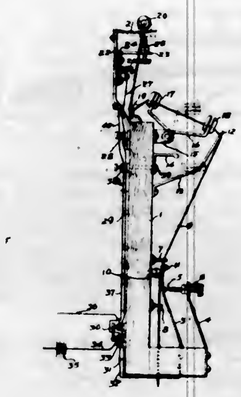
1. An angle bar formed at one end with an inclined flange and formed with a lug arranged in spaced relation to the flange, and a plate disposed against the bar and having an extension fitting between the flange and the lug, one end of the plate being engageable against a nut carried by a bolt passing through the bar.

1,423,395. MOTOR. EDWARD W. BROWN, Sparks, Okla., assignor, by direct and mesne assignments, of nine-tenths to The Brown Motor Company, Sparks, Okla., a Corporation of Oklahoma, and one-tenth to Rufus P. Roope, Chandler, Okla. Filed May 3, 1921. Serial No. 466,473. 8 Claims. (Cl. 123—44.)



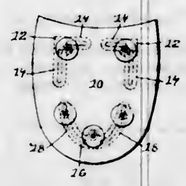
1. A motor comprising a track of irregular formation, a shaft arranged centrally of said track, a hub on said shaft, cylinders radiating from said hub, a piston sliding in each cylinder and continuously contacting said track, each cylinder having a port at each side thereof, and said ports being simultaneously utilized as inlet or outlets for the cylinder, and stationary valves mounted on the shaft and arranged in face to face contact with the adjacent end of the hub for controlling said ports.

1,423,396. AUTOMATIC TRAIN-STOPPING MEANS. GEORGE CHROMY, Stewart, Minn.; Joseph Chromy, administrator of said George Chromy, deceased. Filed Aug. 19, 1918. Serial No. 250,567. 1 Claim. (Cl. 246—66.)



In the means described for stopping a train, the combination of a railway track, electric conductors arranged alongside the track rails, and a train equipment comprising a normally interrupted circuit in which the said conductors and a circuit closer are interposed; said circuit being adapted to be completed when a similarly equipped train running in an opposite direction is in dangerous proximity on the track, a source of electric energy and an electric motor arranged in a normally interrupted circuit including said circuit closer, whereby said motor circuit will be completed by the circuit closer on the closing of the first-named circuit, and means operable by the electric motor for manipulating an engineer's valve and a throttle lever to stop the train, and including a single winding shaft and cables directly connecting said shaft with the engineer's valve and the throttle lever.

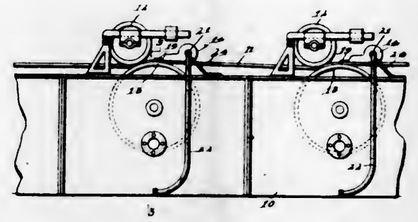
1,423,397. LOCK. WILLIAM O. COLEMAN, Indianapolis, Ind. Filed July 9, 1921. Serial No. 483,582. 4 Claims. (Cl. 70—53.)



1. A combination lock mechanism including a plurality of locking bolts connected in groups, each group being movable independently of the other groups, spaced pairs of gears, a connection between each gear and one group of said bolts, a controlling element mounted for both sliding and rotary movements, and a pinion carried by said element and adapted to mesh with each gear, whereby said groups of bolts are singly controlled.

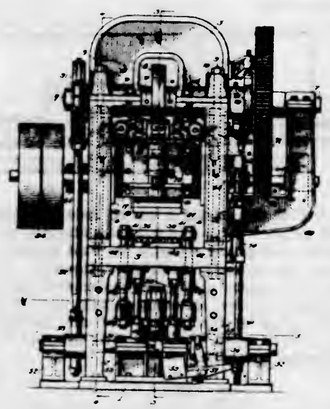
1,423,398. STOP MOTION. EDWARD FRANCIS CONNELL and JOHN FRANCIS CONNELL, Florence, Mass. Filed Jan. 4, 1921. Serial No. 434,977. 4 Claims. (Cl. 66—7.)

1. In an electrically operated stop motion, the combination of a standard, a contact leaf spring carried by the standard, said spring being secured at one end and adapted to be flexed by the pressure of a thread exerted on the free end thereof, a member also carried by the standard and arranged adjacent the spring, the spring and member extending in the same direction approximately parallel with each other, a contact screw carried by the member and adapted to engage the spring at a point intermediate of its ends when said spring is flexed, and an electric circuit connected with the spring and member.



1,423,399. RUBBER HEEL. ALIX COSTANTINO, Providence, R. I. Filed Feb. 18, 1921. Serial No. 446,100. 1 Claim. (Cl. 36—35.)

A rubber heel, having a plurality of spring fastening means for securing the rubber heel under spring tension to the heel of a shoe, boot or the like, said spring fastening means consisting of L shaped spring fastening members embedded in and adjacent the corners of the rubber heel and having a nail hole, curved spring arms and slots in the spring arms through which the rubber unites, and a U shaped spring fastening member embedded in and adjacent the rear end of the rubber heel and having a nail hole, curved spring arms and slots in the spring arms through which the rubber unites, all for the purpose as described.



1,423,400. ATTACHMENT FOR PAPER-MAKING MACHINES. CHRISTOPHER E. CRAMER, Hackensack, N. J. Filed Jan. 22, 1919. Serial No. 272,495. 1 Claim. (Cl. 92—49.)

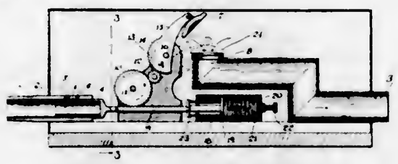
A suction slice comprising a substantially cylindrical body portion having a relatively narrow opening extending throughout its length, a tapered entrance chamber formed of side walls and top and bottom walls, the said entrance chamber being disposed tangentially with respect to the cylindrical body member and communicating with

the latter at its larger end and a forwardly projecting scraper apron formed by an extension of the lower wall of the entrance chamber and extending through the restricted mouth of said entrance chamber.

1,423,401. POWER PRESS FOR TILE, MOSAICS, AND THE LIKE. DAVID CROSSLEY, Trenton, N. J. Filed July 29, 1920. Serial No. 399,841. 20 Claims. (Cl. 25—56.)

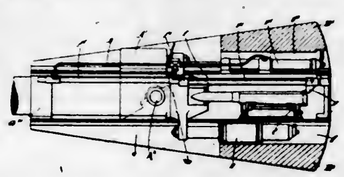
1. A power press of the class described including in combination a forming device composed of a series of stationary members, a die case surrounding said members, means for raising said die case, said means including a clutch and counterbalanced treadle, means including a shaft and plunger for compressing the material to form the tile and means for lowering said die case for ejecting the compressed material, said last mentioned means being operated from the said shaft independently of the said raising means.

1,423,402. PROTECTOR. MARY G. DARLING, Washington, D. C. Filed Apr. 18, 1922. Serial No. 554,559. 1 Claim. (Cl. 24—155.)



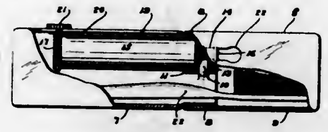
As a new article of manufacture, comprising a single piece of spring material bent upon itself to form a pin point receiving body portion and having its lower end closed, upwardly reaching spring clip portions extend-

ing from the closed end; said upwardly reaching portions being crimped at equidistant points throughout their



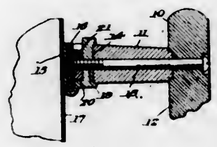
lengths to form gripping surfaces, and a rolled edge formed at the upper end of the portions; the material of the article being initially magnetized.

1,423,403. PRESSURE-CONTROLLED CUT-OFF. MELVIN L. DAVIS and GLEN W. COOK, Enid, Okla., assignors of one-third to Herbert H. Champlin, Enid, Okla. Filed Feb. 6, 1920. Serial No. 356,776. 13 Claims. (Cl. 67—115.)



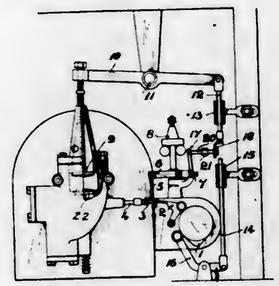
1. A cut-off, comprising a ported fluid inlet pipe, with a ported primary valve in normal registration therewith; tension-operated means opposing the fluid pressure against said valve but normally neutralized thereby, a fluid outlet pipe, and means operatively associated with a part of the primary valve, including a main valve for closing the outlet pipe by the influence of said tension means on the primary valve when the fluid pressure reaches a predetermined low point.

1,423,404. HIGH-ANGLE ORDNANCE. ARTHUR TREVOR DAWSON and GEORGE THOMAS BUCKHAM, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed Oct. 26, 1921. Serial No. 510,655. 3 Claims. (Cl. 89—37.)



1. In high angle ordnance, the combination with the gun cradle, of two members extending rearwardly from said cradle, one member being arranged above and the other below the axis of the gun cradle and each of said members being weighted at its rear part.

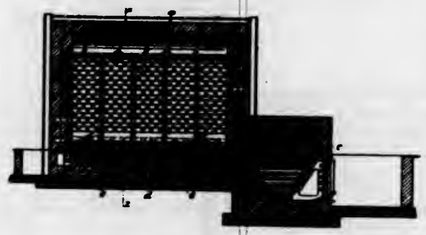
1,423,405. COMBINATION TOOTHBRUSH AND DENTIFRICE HOLDER. LOUIS DAYEH, Philadelphia, Pa. Filed Feb. 14, 1922. Serial No. 536,599. 2 Claims. (Cl. 132—84.)



2. A tooth paste holder comprising a substantially rectangular casing having a reduced neck portion, a closure for said neck portion having an inwardly turned tongue projecting thereinto, a slide fitting in a loop in the rectangular casing and having an angular portion provided, and a locking clasp pivoted on the said angular portion for gripping the neck of the tube of tooth paste.

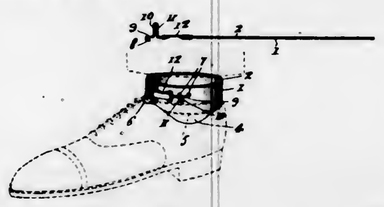
1,423,406. DETACHABLE HANDLE. BERT N. DONLEY, Muscatine, Iowa. Filed July 9, 1921. Serial No. 483,636. 2 Claims. (Cl. 16—114.)

1. The combination with a receptacle, of a handle, an engaging member carried by the handle, said member being provided with a socket to receive the handle, a tongue included in the engaging member, a screw carried by the handle and extending through said member, a seat provided in the member for the reception of a nut, to engage the bolt and hold the engaging member secured to the handle and a loop carried by the receptacle for engagement by the tongue.



1,423,407. INTERNAL-COMBUSTION ENGINE. PERCY DOUGALL, Kidderminster, England. Filed Aug. 27, 1920. Serial No. 406,267. 2 Claims. (Cl. 123—112.)

1. In an internal combustion engine, the combination with the cylinder, of separate air and gas intake valves, a governor controlling the gas valve so as to cause the latter to remain closed at excessive speed, an air-release valve in the cylinder, a cam for operating said air-release valve, and a displaceable intermediate member adapted to complete the operative connection between the cam and air-release valve, said displaceable member



being connected to the governor so as automatically to break the connection between the cam and air valve when the gas valve is operative and to establish the said connection when the gas valve is inoperative.

1,423,408. GAS-FIRED POTTERY KILN. ARTHUR McDOUGALL DUCKHAM, London, England. Filed Dec. 29, 1921. Serial No. 525,723. 7 Claims. (Cl. 25—145.)

1. A gas fired rectangular kiln for burning argillaceous ware, a gas bag therein constructed independently of the brickwork of the kiln proper, said gas bag dividing the kiln into a plurality of compartments, said bag having constricted apertures in the sides and top whereby heating gases escaping from the bag are evenly distributed and traverse the ware contained in the kiln between the bag and the walls of the kiln, the bulk of the gas passing through the ware in a horizontal direction.

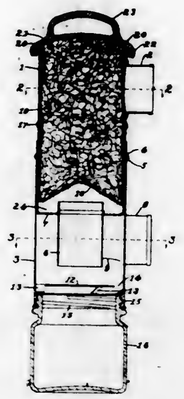
1,423,409. HOSE PROTECTOR. VICTOR H. FAIRLESS, Trenton, Tenn. Filed May 4, 1921. Serial No. 466,707. 1 Claim. (Cl. 36—70.)

A hose protector, comprising a flat flexible band adapted to be placed about the ankle above a shoe top and adapted to overlap at its ends for fitting ankles of different thicknesses, said band having spaced depending lugs adapted to lie at the sides of the ankle and project into the shoe top and having a depending tab near one end for engagement beneath the tongue of the shoe, a flat tape carried on one end of the band and adapted to lie flat across the overlapping ends of the band to hold the same together, and a hook on the free end of the tape, said band having a longitudinal row of openings near its other end for selectively receiving the hook therein, whereby the hook may be adjustably secured to said other end of the band for closing the same in different sizes and at all times providing a substantially flat outer surface for the band, substantially as described.

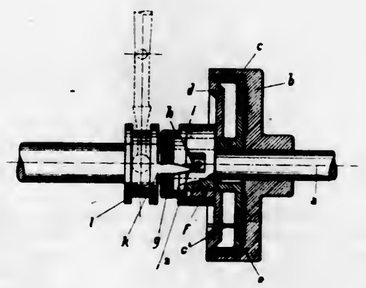
1,423,410. CLOCK ESCAPEMENT. WILLIAM J. FAWVER, Patesville, Ky. Filed Dec. 31, 1921. Serial No. 526,312. 2 Claims. (Cl. 58—134.)

1. In combination with a pendulum, an escapement wheel and a verge associated with the latter, a clutch mechanism between the pendulum rod and the verge comprising a drum, a split ring frictionally engaging about the drum and connected with the verge, a pair of levers connected with the split ring at opposite sides of the split therein and having their inner edges formed with normally engaging projections, the lower ends of said levers being formed with outward projections, a pair of banking pins mounted upon the clock frame and carrying studs engageable by said levers, said pendulum rod being associated with the verge and verge wire.

1,423,411. LIQUID-LEVEL INDICATOR. STANLEY W. FINCH, Washington, D. C. Filed Dec. 31, 1921. Serial No. 526,241. 3 Claims. (Cl. 73—82.)



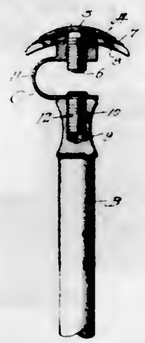
1. In combination with an oil reservoir of an internal combustion engine; a vented chamber in communication with the lower portion thereof; a wire bent to substantially U-form, the short member which connects the arms thereof being journaled in the casing at one side thereof; a float in the chamber carried by the inner arm of said U-shaped member; and stops located upon the face of the casing adapted to coact with the other arm to limit the movement of the U-shaped member and to thereby prevent the float from contacting the walls of the chamber.



1,423,412. AIR CLEANER. HERMAN H. GARNER, Pomona, Calif. Filed Sept. 20, 1918. Serial No. 254,923. 9 Claims. (Cl. 183—67.)

1. A cleaner for catching and holding the dust carried in the air used in an internal combustion engine comprising a casing; an inlet through which air is taken into

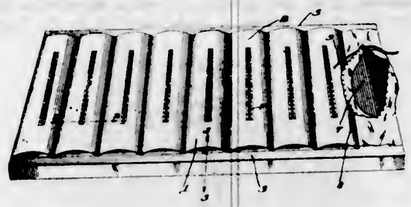
said casing, said inlet being so formed as to give the air as it enters the casing a rapidly whirling movement; an outlet through which said air is taken from said casing; and a body of oil saturated fibrous material in said casing between said inlet and outlet, said fibrous material having a recess formed in the bottom thereof and extending upwardly into the body of said material.



1,423,413. FRICTION CLUTCH. JULES HENRI GIAUQUE and CHARLES HAESLER, Le Locle, Switzerland. Filed June 14, 1920. Serial No. 388,873. 4 Claims. (Cl. 192—78.)

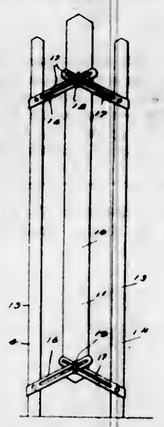
2. A friction clutch comprising a shaft, a drum rotatable thereon, a pair of discs, a friction element adapted to be operated in the relative movement of the discs to engage the drum, one of said discs being mounted on the shaft against rotation, a pair of rings, one ring being carried by each disc, means for adjusting and preventing axial movement in one direction of the ring on the first mentioned disc, the rings being formed to move axially in relative rotation and a separate means for producing relative rotation of the rings.

1,423,414. SAFETY RAZOR. OSCAR L. GLASER, Oak Park, Ill., assignor of one-half to John F. Blything, Oak Park, Ill. Filed July 10, 1919. Serial No. 309,880. 2 Claims. (Cl. 30—12.)



1. An attachment for a safety razor which has a relatively rigid blade holder and a relatively rigid handle, comprising a substantially U shaped spring member one leg of which is attachable against the blade holder to carry the same and the other leg of which is attachable against the end of the handle.

1,423,415. HOLDER. MATTHEW GLASS, Philadelphia, Pa. Filed Oct. 8, 1921. Serial No. 506,425. 2 Claims. (Cl. 15—14.)

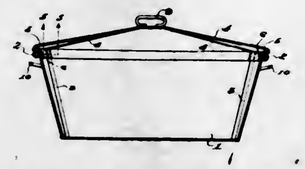


1. A device of the class described comprising a stationary jaw provided with spaced guide eyes and a shank disposed in a plane at right angles to said jaw and provided with a guide loop, a handle extending from said shank, a movable jaw parallel to said stationary jaw, parallel arms extending at right angles from said movable jaw and extending through the guide eyes of said stationary jaw, a shank connected to said parallel arms disposed in a plane parallel with said arms and extending through the guide loop of the first mentioned shank, and a handle extending from the last mentioned shank and disposed in a plane parallel to the handle aforesaid.

1,423,416. MATTRESS. ARTHUR B. GOMES, Peoria, Ill. Filed Oct. 15, 1921. Serial No. 507,977. 3 Claims. (Cl. 5—13.)

1. As a new article of manufacture, a mattress composed of an outer casing divided into a plurality of transverse sections and a pair of longitudinal sections along its edges, and individual fillers inserted in each of said sections.

1,423,417. DISPLAY RACK. JOHN F. GORMAN, Spokane, Wash. Filed Nov. 14, 1921. Serial No. 514,960. 2 Claims. (Cl. 211—14.)

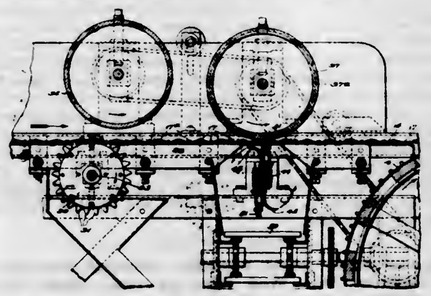


1. A display rack comprising an inner section, outer sections located upon opposite sides of the inner section, each of said sections including vertically disposed end members and horizontally disposed bars connecting the end members and relatively slidable means connecting the said end members of each section, whereby the sections may be spaced apart and the inner section elevated, or the said sections arranged in contact and the inner section lowered.

1,423,418. DRAIN PLUG. WILLIAM GRIKSCHEIT, Detroit, Mich., assignor of one-half to Thomas B. Mothersill, Windsor, Ontario, Canada. Filed Oct. 27, 1919. Serial No. 333,708. 4 Claims. (Cl. 251—8.)

3. A drain plug comprising two members, one having an axial passage therethrough with an externally threaded nipple at one end thereof and a counterbore at the opposite end internally threaded, forming an annular shoulder or valve seat at the inner end of said counterbore, the other member having a portion externally threaded to engage said threaded counterbore, being provided with an imperforate portion at its inner end for engaging said valve seat and having an axial passage from its outer end to said imperforate portion with a right angled port communicating with said counterbore and hexagonal surfaces upon each of said members for adjusting them.

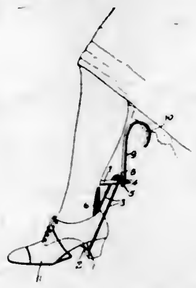
1,423,419. BASKET. CHARLES HALASKA, Milwaukee, Wis. Filed Jan. 15, 1921. Serial No. 437,470. 1 Claim. (Cl. 220—72.)



As a new article of manufacture, an oval basket constructed of sheet metal and having outstruck reinforcing ribs at each end equidistant of the center and extending through the full height of the basket, a cover and outstruck ribs radiating from the axis of said cover and adapted to register with the ribs on said basket.

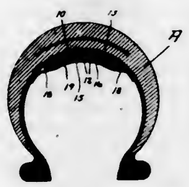
1,423,420. PLATE ENVELOPE. ALFRED P. HANTSCH, New Brunswick, N. J. Filed June 4, 1920. Serial No 386,434. 4 Claims. (Cl. 95—66.)

1. A plate carrying member which comprises an apertured portion, a portion to back a plate, a portion adapted to be bent upon itself to cover the face of a plate, a manipulative tab, and portions at the margins of said apertured portions and adapted to fold about a plate so as to hold the plate and backing portion and the face-covering portions in intimate association.



1,423,421. MACHINE FOR SKINNING AND CORING TOMATOES. HIRAM R. HARDING, Baltimore, Md., assignor to The Harding Peeling Machine Company, Inc., Baltimore, Md., a Corporation of Maryland. Filed May 10, 1921. Serial No. 468,415. 5 Claims. (Cl. 146—14.)

3. In a machine for skinning and coring tomatoes in a continuous operation, the combination with a wire-



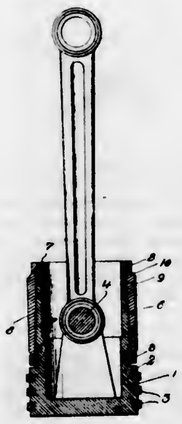
mesh conveyor belt comprising continuous longitudinal steel-wire strands and intermeshed crossed-wires, of means for washing and scalding tomatoes, means for slitting the tomatoes, and means cooperating with the conveyor belt for separating the pulp from the skins and cores.

1,423,422. SHOEHORN. IRWIN OTTO HARMS, Hillsboro, Kans. Filed Aug. 31, 1921. Serial No. 497,173. 3 Claims. (Cl. 132—8.)

1. A device of the character stated, including a heel engaging yoke, a cross piece connecting the extremities of the yoke, a plate pivoted on the yoke, a shoe horn integral with one end of the plate and located in a transverse plane to the plane of the plate, a handle integral with the other end of the plate, and substantially parallel with the shoe horn.

1,423,423. TIRE LINER. CHARLES F. HICKS, Romeo, Mich. Filed Mar. 31, 1922. Seral No. 548,431. 3 Claims. (Cl. 152—18.)

3. A reliner of the character described comprising a strip of flexible material, a plurality of longitudinally and transversely curved plates arranged in overlapping relation and riveted onto said strip, a relatively narrow packing strip disposed outwardly of said first named strip and covering the rivets, an outmost strip of rubberized fabric disposed outwardly of said packing strip and of greater width than first named strip whereby to project beyond the edges thereof, a second strip of rubberized fabric disposed inwardly of the metal plates, a plurality of metal plates disposed upon the outer periphery of said last named rubberized strip and formed at their corners with prongs pushed through and bent over with respect to said last named rubberized strip, said last named strip being of the same width as said first named rubberized strip and the projecting edges of both of the rubberized strips being vulcanized together, and a strip of fabric disposed inwardly of the assembled rubberized strips whereby to cover the prongs and prevent chafing of the inner tube.

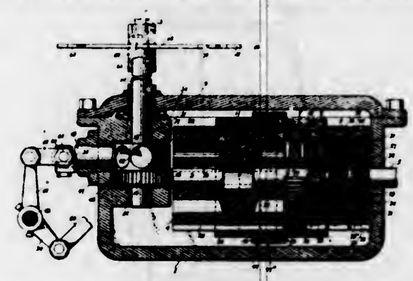


1,423,424. WELL BUCKET. JAMES M. HOLLIDAY, Hollister, Mo. Filed Sept. 10, 1921. Serial No. 499,604. 2 Claims. (Cl. 294—69.)

1. In combination, a bucket, a valve mechanism in the bottom end thereof, a valve stem controlling the valve mechanism and extending through the bucket so as to terminate adjacent the upper end thereof, means for normally holding the valve atem so as to hold the valve mechanism in an open position, a bracket mounted on the upper end of the bucket, a guide rod fixed to the upper

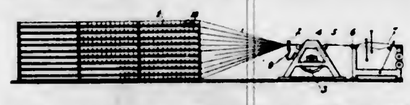
end of the bracket with an aperture in each end, links slidably mounted in the apertures, a ring connecting the upper end of the links, and levers pivotally mounted to the lower end of the bracket so as to be controlled by the links and so as to operate the valve atem upon the lifting of the bucket so as to close the valve mechanism.

1,423,425. PISTON. CHRISTIAN PAUL HOUSEMAN, York, Pa. Filed Aug. 16, 1921. Serial No. 492,711. 1 Claim. (Cl. 74—108.)



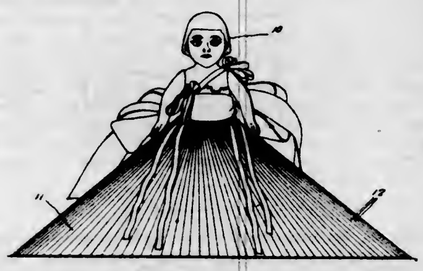
A piston of the class described having a tapered part, a split sleeve having a tapered bore engaging said tapered part and means for adjusting the sleeve longitudinally and circumferentially on the piston, such means comprising a pair of collars for engaging the ends of the sleeve.

1,423,426. TRANSMISSION GEAR FOR AUTOMOBILES. GEORGE O. HOWSETH, Morattico, Va. Filed Oct. 3, 1921. Serial No. 504,984. 18 Claims. (Cl. 74—59.)



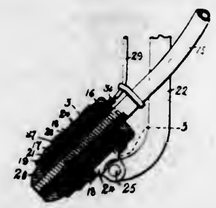
1. In transmission gear mechanism for auto-vehicles, a drive shaft, a drum fixed to said drive shaft and having

external spline grooves running longitudinally thereof, a driven shaft, a plurality of speed change gear units on said driven shaft, said gear units being externally toothed of uniform diameter and a sleeve provided with internal



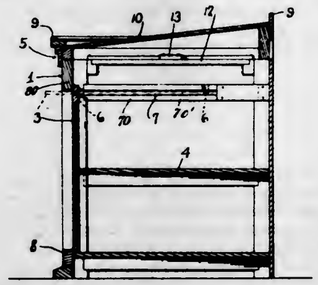
gear teeth at each end, means for shifting said sleeve so that while the internal teeth at one end permanently engage the grooves of said spline drum the internal teeth on the other end of said sleeve progressively engage external teeth of one of the speed change gear units.

1,423,427. APPARATUS FOR WEAVING BICYCLE AND AUTO CANVAS. ANDRIES WILLEM JANSEN, Geldrop, Netherlands. Filed Dec. 13, 1921. Serial No. 522,074. 3 Claims. (Cl. 139—18.)



2. Weaving apparatus, comprising a tension device, and a plurality of spaced creels arranged in front of said tension device, said tension device comprising a plurality of cooperating rollers and a reed yieldingly supported in front of said rollers and each of said creels comprising a carrier extending radially with respect to said tension device, a row of bobbin pins supported by said carrier, and a member at the front of said carrier and extending laterally thereof, said member being provided with a plurality of guiding eyes for the individual warp threads carried by the bobbins supported in said carrier.

1,423,428. AMUSEMENT DEVICE. EMILY URSULA JAQUES, Visalia, Calif. Filed July 18, 1921. Serial No. 485,556. 2 Claims. (Cl. 46—41.)

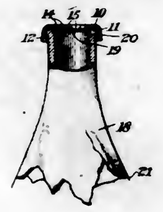


1. A device of the character described, comprising an image, a plurality of message carrying members consisting of sheets folded into triangular shape, the free corners thereof being arranged against the folded portions of said sheet and carrying said message, and means for supporting said members upon the image with said corners concealed from view, said members collectively forming a dress for said image.

1,423,429. SAND-PIPE HEATER. CHILION B. JOHNS, Ebensburg, Pa. Filed Feb. 21, 1922. Serial No. 538,391. 2 Claims. (Cl. 291—20.)

1. An attachment for sand pipes comprising cap members attached to the sand pipe at the discharge end in spaced relation, a tubular member connecting said cap members and spaced from the sand pipe, heat imparting means between the tubular member and the pipe, and a combined nozzle device and lock nut attached to the pipe at its discharge end.

1,423,430. COUNTER. LAURENCE E. JONES, Wichita Falls, Tex. Filed Apr. 30, 1920. Serial No. 377,890. 1 Claim. (Cl. 211—11.)

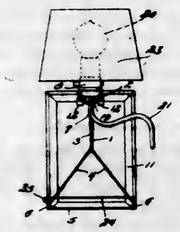


The combination of a casing having a bottom wall and side walls and also having an opening in one of said side walls, spaced above said bottom wall, bars arranged in the casing with their forward ends spaced from the side wall having the opening in the same horizontal plane as the upper portion of said opening, and having guideways, and a door to control said opening, said door arranged when closed to rest on said bottom wall back of the lower portion of said side wall, and being movable vertically to clear the portion of the side wall and swing outwardly beyond the wall portion below the opening, and being provided with trunnions slidable rearwardly in said guideways, whereby on opening of the door the opening will be entirely unobstructed and the door will be entirely out of the way for the removal of goods through the opening.

1,423,431. BOTTLE CAP. OTTO KAMPFE, Bellmore, N. Y., assignor of one-half to Henry C. Walker, New York, N. Y. Filed July 31, 1920. Serial No. 400,473. 4 Claims. (Cl. 215—38.)

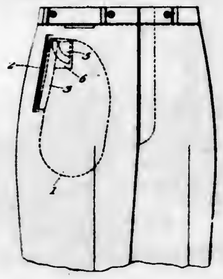
1. A bottle cap comprising an annular retainer member having an external flange adapted to engage the neck of a bottle and an inwardly extending internal flange, and a closure member having a peripheral flange, the said closure member and its peripheral flange being adapted to be engaged in the sealing operation by the said inwardly extending internal flange of the retainer member to turn over the peripheral flange of the closure member

causing the same to engage a portion of the internal flange of the retainer member, while the periphery of the internal



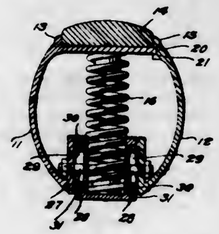
flange of the retainer member forces a portion of the closure member into the neck of the bottle to effectually seal the same.

1,423,432. AUTO THEFT PROTECTION. ANDREW KENDECHY, Cleveland, Ohio. Filed June 15, 1920. Serial No. 389,166. 3 Claims. (Cl. 200—43.)



1. A switch comprising a base, spaced contact plates carried thereby, said plates including a pair of opposed semi-circular members, one of said members being adapted to define separate contacts each having one end spaced from the ends of the other semi-circular member, a switch closing member adapted to bridge the space between the contact plates, rotatable disks for normally holding the switch closing member in inactive position and means whereby the disks may be rotated to release the member to bridge the space between the contact plates and selectively close a circuit.

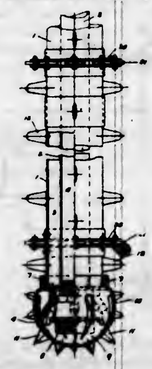
1,423,433. LAMP. ADOLPH A. KETCHEM, Chicago, Ill. Filed May 13, 1921. Serial No. 469,177. 6 Claims. (Cl. 240—4.)



1. In a combination easel and lamp, the combination of a picture frame, a support therefor, a lamp supporting member thereon at its upper end, and means upon said supporting member for retaining a picture backing in said picture frame.

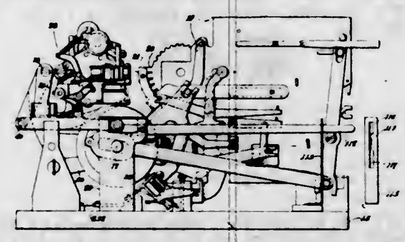
1,423,434. POCKET. JOHN LEE KIRK, Waynesboro, Pa. Filed Mar. 21, 1921. Serial No. 454,179. 1 Claim. (Cl. 2—15.)

A pocket for replacing a worn pocket of a garment having an opening therein and a strip of adhesive around the opening and means for adjusting the size of the opening, such means consisting of a flap formed of one side of the pocket and a small pocket at the opposite side thereof for receiving the flap.



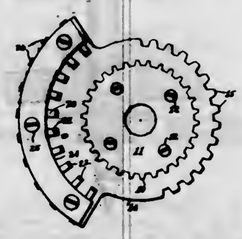
1,423,435. COMBINATION TIRE AND RIM. CHARLES O. LAMBREMONT, Plaquemine, La. Filed July 3, 1920. Serial No. 393,834. 1 Claim. (Cl. 152—38.)

In combination, a sectional tire, a rim including spaced parallel sides arranged between the tire sections, partitions formed on the tire sections, the partitions of one section being comparatively wide with regard to the partitions of the other section, fastening means passed through said sections for holding the latter operatively associated, said fastening elements being passed through said partitions, certain of said partitions being reduced to form stops, an annular flange formed on each tire section, a tread portion fitted between said flanges, yieldable means interposed between the tire and said rim, each side of said rim having recesses, washers fitted in said recesses and having elongated slots, and pins carried by the tire sections and movable within said slots of the washers to provide for an eccentric movement of the tire with regard to the wheel as described.



1,423,436. COMBINED WATER-JET AND SUCTION APPARATUS AND MEANS FOR OPERATING THE SAME. LEE LARSEN, Tampico, Mexico. Filed June 1, 1920. Serial No. 385,849. 5 Claims. (Cl. 37—45.)

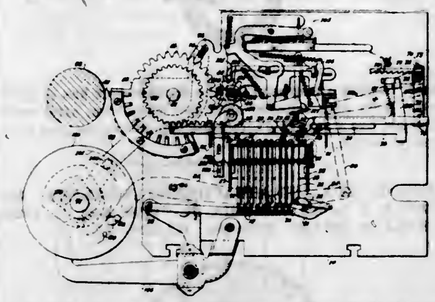
1. A combined water jet and suction apparatus, consisting of two concentrically arranged tubes forming an annular space for conducting water for the jet pipe system and a passage for the excavated material; a ball bearing swivel attached to the upper end of the tubes, having inlet for water supply and outlet for the excavated material arranged to said tubes, the lower end of said tubes being connected to a bowl-shaped head, said jet pipe being jointed to said annular space passing through



said head, said head having means for cutting and loosening material to be excavated.

1,423,437. CARRIAGE OPERATING MECHANISM. WILLIAM W. LASKER, Brooklyn, N. Y., assignor to Powers Accounting Machine Company, New York, N. Y., a Corporation of Delaware. Original application filed Mar. 28, 1917, Serial No. 158,142. Divided and this application filed Jan. 30, 1918. Serial No. 214,478. 5 Claims. (Cl. 235—58.)

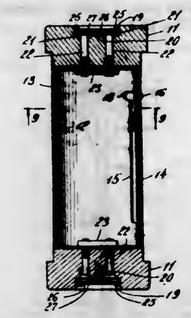
2. In an apparatus of the character described, the combination of a carriage; a lever comprising two parts having openings adapted to be alined with each other; means operatively connecting the carriage to one of said parts; means for reciprocating the other of said parts; and means adapted to be passed through said openings to lock said parts together.



1,423,438. TYPE CARRIER. WILLIAM W. LASKER, Brooklyn, N. Y., assignor to Powers Accounting Machine Company, New York, N. Y., a Corporation of Delaware. Original application filed Mar. 28, 1917, Serial No. 158,142. Divided and this application filed Apr. 3, 1918. Serial No. 226,497. 8 Claims. (Cl. 235—58.)

1. In a type carrier, the combination of a flat main portion provided with recesses and openings; and type pieces

against the face of said portion and each provided with lateral projections engaging in the notches and recesses respectively.

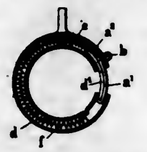


1,423,439. SECTOR CONTROL FOR TABULATING MACHINES. WILLIAM W. LASKER, Brooklyn, N. Y., assignor to Powers Accounting Machine Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 3, 1918. Serial No. 226,499. 22 Claims. (Cl. 235—58.)

1. In an apparatus of the character described, the combination of character carriers; means for preventing retrograde movement of the carriers and comprising a device associated with each carrier, and a single device engaged part common to all of the devices; and means for moving the single engaged part out of the path of the devices.

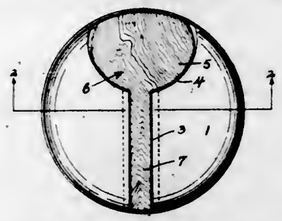
12. In a device of the character described, the combination of accumulating means; means for positioning the accumulating means comprising a movable part; means for engaging said movable part for positioning the accumulating means; and a roller adapted to be engaged by the accumulating means for pushing said movable part out of the path of said driving means when the accumulator is in total indicating position.

1,423,440. IDENTIFYING MEANS FOR PNEUMATIC-DISPATCH-TUBE CARRIERS. FRANK S. LEAVITT, Melrose, and ERNEST A. STAPLES, Dorchester, Mass., assignors to Atlas Devices Company, Inc., a Corporation of New York. Filed July 29, 1921. Serial No. 488,313. 5 Claims. (Cl. 243—39.)



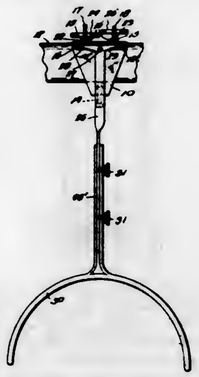
1. A pneumatic dispatch tube carrier comprising a body portion and a buffer head at the end thereof, said buffer head having a recess, means in said recess for securing the buffer head to said body portion, and an identifying device fastened in the recess by said buffer securing means.

1,423,441. BOLT FOR SPRING RINGS AND PROCESS OF MANUFACTURING THE SAME. LUCIEN LEMAITRE, Paris, France. Filed Mar. 24, 1921. Serial No. 455,304. 2 Claims. (Cl. 29—166.6.)



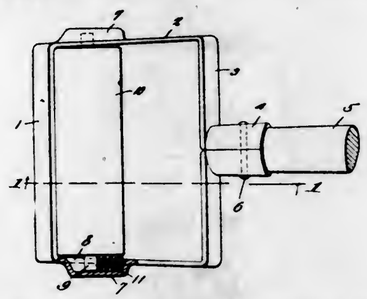
1. A bolt for a spring ring for jewelry, characterized in that the body of the bolt and the operating button are

formed by a common metal wire of semi-cylindrical section or of flattened half-round form, this wire being bent at a point in its length in order to form the button, and at each of its ends, its flat surfaces being applied one against the



other, in such a manner that the finished bolt has a cylindrical form with rounded ends and its button, after compression, has a perfectly circular section with its joint completely hidden.

1,423,442. BOX AND ATTACHMENT THEREFOR. EDWIN C. J. LLOYD, Jeannette, Pa. Filed Aug. 31, 1920. Serial No. 407,120. 2 Claims. (Cl. 220—85.)

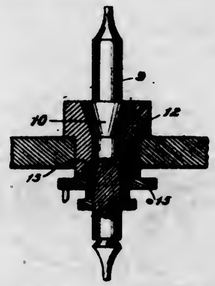


2. In combination with a box including a cover provided with a diametrically extending dovetail groove and a recess communicating with the groove at one end thereof and open at its outer end, said recess being of greater depth than said groove, a brush including a handle fitting snugly within the groove and a head positioned within said recess and including bristles disposed at right angles to the handle.

1,423,443. CARRIAGE-SHIFTING MECHANISM FOR TYPEWRITERS. ROCKWELL A. LOOMIS, Guatemala, Guatemala. Filed Nov. 7, 1921. Serial No. 513,463. 5 Claims. (Cl. 197—78.)

1. The combination with a typewriter of a lever pivoted thereto and depending therefrom and levers pivoted to the frame and extending over the typewriter mechanism and adapted to be depressed selectively by movements of the first-mentioned lever in opposite directions.

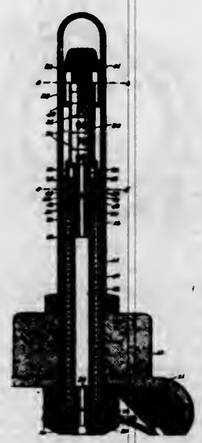
1,423,444. MOP. JOHN MCNAUGHTON, New York, N. Y. Filed Jan. 21, 1920. Serial No. 352,964. 1 Claim. (Cl. 15—119.)



A mop head including forwardly converging sides, a transversely rounded connection integral with the sides at the forward ends thereof, there being longitudinal depressions within the inner faces of the sides of the head, a roller interposed between the sides, studs projecting therefrom and slidable within the depressions, and springs housed within the depressions and thrusting against the studs to hold the roller normally pressed against the connection, said springs being housed between the ends of the roller and the side portions of the head.

1,423,445. SHOE. EMILIO MAGALDI, Naples, Italy. Filed May 14, 1920. Serial No. 381,487. 1 Claim. (Cl. 36—35.)

In a shoe, an upper sheet metal portion having a flange adapted to fit about the rear of the shoe, an apertured sole secured to said upper portion, a rubber ring carried by the upper portion, a lower or wear part comprising a plurality of members, one of which extends into the rubber ring but is of less height than the same to form an air space, and means for detachably securing the said lower portion to the upper portion.

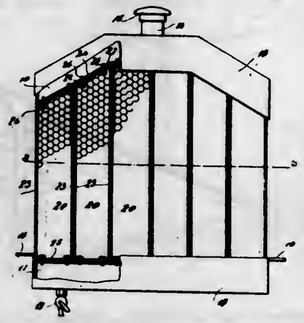


1,423,446. BALANCE STAFF FOR TIMEPIECES. WILLIAM H. H. NEEDY, Hagerstown, Md. Filed Aug. 11, 1921. Serial No. 491,598. 2 Claims. (Cl. 58—140.)

1. In a device of the class described, a balance arm, a bushing rigidly affixed centrally of said arm, the bushing

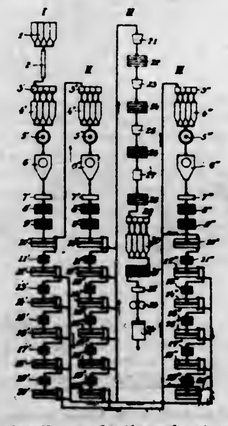
having an angular surface in its bore, a staff, an enlargement on said staff corresponding to the shape and size of the angular portion of said bushing, the bushing having a recess in one end, threads on said staff, and a nut to engage with said threads and adapted to enter said recess and to draw the bushing and enlargement in locking engagement with each other.

1,423,447. MAXIMUM-PRESSURE INFLATING VALVE AND GAUGE. SAMUEL B. NOE, Ocean Grove, N. J. Filed Mar. 1, 1921. Serial No. 448,842. 9 Claims. (Cl. 152—11.5.)



9. A maximum pressure inflating valve and gauge for inflatable bodies comprising an outer sleeve adapted for connection at its inner end with said body, said sleeve having its bore reduced adjacent its outer end to provide an annular internal stop shoulder, an inner sleeve telescopically arranged in said outer sleeve and projectable through said reduced bore, an inwardly opening check valve in said sleeve, a reduced neck extending inwardly from said hollow sleeve, an enlarged head carried by the free end of said neck and adapted to co-act with the stop shoulder of the outer sleeve to limit the outward projection of the inner sleeve therethrough, an extensible elastic tube connecting the head with the inner end of the outer sleeve, establishing communication between the inflatable body and said sleeve and functioning to normally retract the inner sleeve within the outer sleeve, outlet openings in the enlarged head communicating with its bore, a valve slidably mounted on the neck, and means disposed between the valve and the inner sleeve for normally projecting said valve into contact with the enlarged head to close the outlet openings, said valve being operable to relieve the inflatable body of excess pressure when the internal pressure reaches a predetermined maximum.

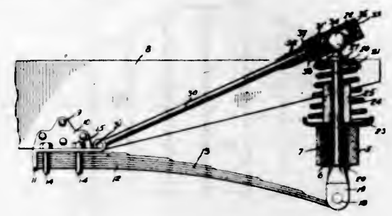
1,423,448. FOUNTAIN PEN. JAMES A. O'CONNOR, Bridgeport, Conn. Filed Dec. 15, 1920. Serial No. 430,894. 4 Claims. (Cl. 120—42.)



3. In a fountain pen, the combination of a pen, a shield extending over a portion only of the pen leaving the greater portion thereof exposed for writing, a nozzle, a stop surface on the shield, a stop surface on the nozzle, an internal joint surface on said shield, and a cap having stop surfaces bearing on said stop surfaces and an external joint surface bearing on the internal joint surface of the shield throughout its extent, said stop surfaces on said cap being spaced apart the distance between the stop surface on the nozzle and the stop surface on the shield.

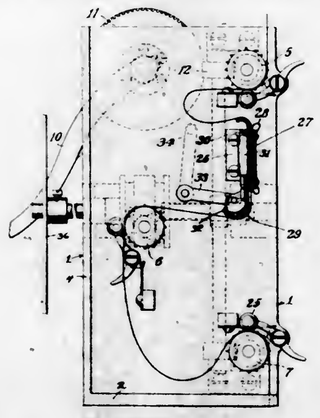
1,423,449. SECTIONAL RADIATOR. ROY OSHKOSH, Manitowoc, Wis., assignor of one-fourth to Samuel W. Randolph, Manitowoc, Wis. Filed Aug. 28, 1920. Serial No. 406,589. 1 Claim. (Cl. 257—130.)

An automobile radiator comprising upper and lower tanks, the upper tank being provided in its bottom with a plurality of openings and a series of threaded holes, the lower tank being provided in its top with a plurality of openings and a series of threaded holes, a plurality of sections disposed between said tanks and having their upper and lower ends flat to conform to the bottom and top of the upper and lower tanks respectively, said sections being disposed in contacting relations to one another, cap screws carried by the upper and lower ends of the sections and threadedly engaged within said threaded holes in the bottom of the upper tank and top of the lower tank, and said flat ends being provided with openings registering with the openings in the tanks, the sections being removable.



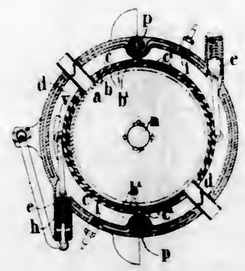
1,423,450. PROCESS FOR THE PRODUCTION OF OAT GROATS AND THE LIKE. HANS CHRISTIAN OTTERSTEDT, Svalof, Sweden. Filed Oct. 20, 1920. Serial No. 418,254. 2 Claims. (Cl. 83—42.)

1. A process for the production of oat groats, consisting in first treating the oats for the purpose of hulling



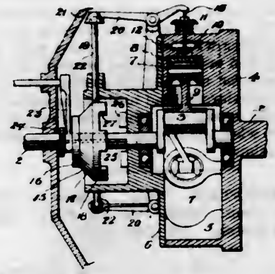
the same and for initial separation of the hulls and the material not thoroughly hulled in part from the cleaned hulled material, then subjecting the cleaned hulled material and the included material not thoroughly hulled to independent and successive separation to divide therefrom at each separation a proportion of the cleaned hulled material, then subjecting all of the cleaned hulled material from each separating step to a final treatment and returning all other material from the final separating step for initial treatment.

1,423,451. SPRING SUSPENSION. VICTOR W. PAGE, New York, N. Y. Filed Apr. 5, 1921. Serial No. 458,655. 12 Claims. (Cl. 267—29.)



1. A spring suspension for vehicles comprising a cantilever spring rigidly secured at one end to the frame of the vehicle, a radius rod pivotally secured at one end to the frame of the vehicle at the point of securement of the cantilever spring, an axle provided with a perforation, a rigid member slidably mounted in said perforation, said rigid member being pivotally connected to the cantilever spring and to the radius rod, a coil spring interposed between the top face of said axle and the upper end of said rigid connecting member, and means for engagement with the upper end of said rigid connecting member to limit the sliding movement thereof relative to the axle upon compression of said coil spring to a predetermined degree.

1,423,452. MOTION-PICTURE MACHINE. NICHOLAS POWER, Brooklyn, N. Y., assignor to Nicholas Power Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 21, 1914. Serial No. 873,253. Renewed Dec. 10, 1920. Serial No. 429,808. 8 Claims. (Cl. 88—17.)

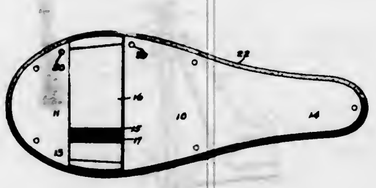


1. In a moving picture machine, the combination of a frame, an intermittently operated film feeding sprocket supported in fixed position thereon, a plate having a projection aperture supported in fixed relation to said sprocket, and means having a film engaging surface stationary with regard to the movement of the film between said plate and sprocket for varying the length of film between said plate and said sprocket.

1,423,453. INTERNAL-COMBUSTION TURBINE. THOMAS JAMES PUPLETT, Manchester, England. Filed Dec. 9, 1921. Serial No. 521,245. 7 Claims. (Cl. 60—41.)

1. In internal combustion turbines, the combination with a vane wheel, of a cylindrical ring-like element arranged in spaced relation peripherally of the wheel, a sleeve vave disposed about and contacting with the ring-like element, an annular combustion chamber arranged in spaced relation about the periphery of the sleeve valve, means for controlling the admission of compressed gases into the combustion chamber, means for igniting the gases, the ring-like element and sleeve having guide passages therethrough for directing the products of combustion against the vane wheel and spring controlled means normally keeping said passages out of alignment actuated by the pressure of combustion in said annular chamber for moving the sleeve valve to bring the passages in the ring and sleeve valve into alignment with one another and means for exhausting the products of combustion.

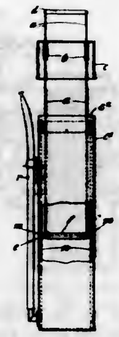
1,423,454. TRANSMISSION MECHANISM. REYNOLD J. REISER, Kenosha, Wis. Filed July 31, 1920. Serial No. 400,298. 2 Claims. (Cl. 192—57.)



1. In a transmission mechanism, a drive shaft, a driven shaft, cylinders connected to one of the shafts, pistons working in said cylinders and connected to the other shaft, valves adjustable for controlling the flow of a fluid to and from the cylinders, an actuator, a slidably actuated and linked mechanism operated by said actuator and controlling the position of said valves, said mechanism including a pivoted lever for each valve and a pin connected to the lever and engaging said actuator.

1,423,455. HANGER. WILLIE LEE RIVERS and GEORGE BRITTON DIXON, Dallas, Tex. Filed Jan. 28, 1922. Serial No. 532,519. 1 Claim. (Cl. 16—172.)

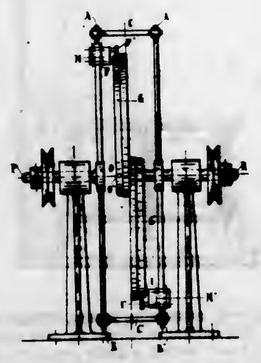
Hangers for the purpose set forth, comprising cooperating members each of which including a flat body apertured for the reception of securing means, each of said bodies having a laterally extending head on the upper end thereof, one of said heads having an upwardly inclined flange at the outer edge thereof which is of a less width than the head proper and which has a notch in a line with its juncture with the head, the head of the cooperating member having its outer edge provided with a downwardly inclined finger and its outer edge arranged at an angle from the terminal of the finger to its juncture with the body, as and for the purpose set forth.



1,423,456. FOOT SUPPORT. ARPAD ROTH, New York, N. Y. Filed June 3, 1921. Serial No. 474,703. 2 Claims. (Cl. 36—37.)

1. A foot support comprising a pear-shaped body having the rear enlarged portion thereof twisted transversely to dispose the same at an angle to the forward restricted portion, and a depending brace secured to under side of the rear enlarged portion for maintaining said portion at an angle, said foot support being arranged within the shoe to dispose the elevated side toward the inner side of the heel in order that the position of the heel of the foot will be inverted to promote the correct articulation and posture of the same.

1,423,457. DAYLIGHT DEVELOPING TANK FOR PHOTOGRAPHIC ROLL FILMS. GEORGE VERE ROWDEN, Hove, England. Filed Jan. 28, 1921. Serial No. 440,788. 2 Claims. (Cl. 95—90.5.)

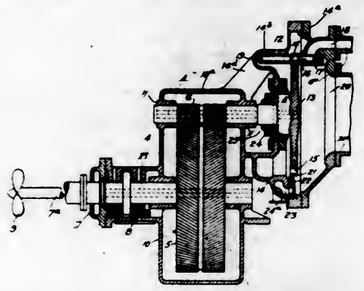


1. A daylight developing tank for roll films comprising a tank having a pair of opposed guides on its inner walls, a cap adapted to close said tank, a support for the roll of film within said tank, and a feeding slide consisting of two members adapted to slide through the cap of the tank, a connection between the outer ends of said members, a bar carried by the inner ends of said members, one or more rollers mounted on said bar between said

members and rollers mounted on the ends of said bar exterior to said members and adapted to engage the guides in the tank

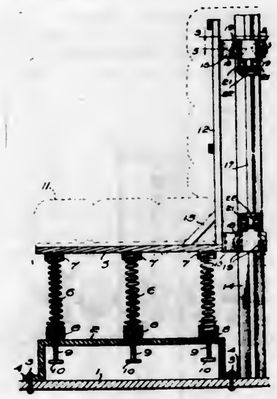
---

1,423,458. CHANGE-SPEED GEAR. ANDRÉ SAVARY, Paris, France. Filed Mar. 23, 1921. Serial No. 454,833. 4 Claims. (Cl. 74—14.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A change-speed gear, comprising a driving shaft, a member secured to said shaft to rotate therewith, a weight slidably mounted on said member, and an element provided with a race which is slidably engaged at its periphery by the weight; said weight being shiftable along said member away from the axis of said shaft and pressed against said race by the action of centrifugal force, when the driving shaft is rotated, so as to drive said element at a speed which varies automatically consequent upon the to and fro movement of the weight with relation to said axis.

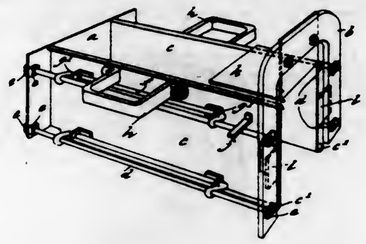
1,423,459. GEARED TURBINE. HENRY F. SCHMIDT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed Aug. 31, 1917. Serial No. 189,217. 23 Claims. (Cl. 60—70.)



1. In an organized power developing apparatus, a gearing comprising a driving gear, a driven gear, and a casing

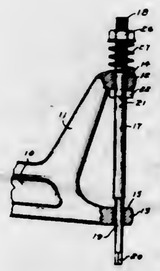
in which said gears are journaled, in combination with a turbine comprising a rotor element, mounted on an over-

hanging end of the shaft of the driving gear, a housing for the rotor element, divided along planes corresponding to divisions of the casing.



1,423,460. SPRING SEAT. LOUIS SCHREIBER, Holland, Mich. Filed Aug. 29, 1921. Serial No. 496,300. 2 Claims. (Cl. 155—53.)

1. A spring seat comprising a base, springs arranged on said base, a seat bottom arranged on said springs, a back secured to said seat bottom, a guide arranged adjacent said back near each side thereof, brackets secured to said back adjacent said guides, a pair of rollers carried by each of said brackets and engaging opposite sides of said guides, the axes of said rollers being arranged parallel to said back, and a roller carried by each of said brackets, the axes of said last named rollers being arranged at right angles to said back and adapted to engage the inner faces of said guides.



1,423,461. MOLD FOR USE IN BUILDING WALLS, MAKING BLOCKS, SLABS, TILES, OR BRIQUETTES. BASIL SCRUBY and GEORGE KETTELWELL HARKNESS, Harlow, England. Filed Apr. 6, 1920. Serial No. 371,605. 5 Claims. (Cl. 25—121.)

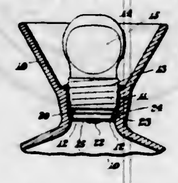
1. A bottomless mold of the class described, comprising two end members suitably spaced apart, rigid longitudinally disposed pieces connected at their opposite ends directly to said end members and holding said end members relatively immovable, a pair of movable side mold plates, and connecting arms pivoted to the movable side plates and to the rigid connecting pieces, said movable side plates being adapted to swing upward and outward about the axes of the rigid connecting pieces from an operative position into an inactive position.

5. A bottomless mold of the class described, comprising an open arched end member and a closed end member suitably spaced apart, longitudinally disposed pieces rigidly connecting the two end members and adapted to hold them relatively immovable, a pair of movable longitudinally arranged side mold plates extending from one end member to the other and having parts extending through and beyond the open end member, and connecting arms pivoted to the movable side plates and to the rigid connecting pieces and adapted to swing upward and outwardly about the axes of the rigid connecting pieces from an operative position into an inactive position.

1,423,462. FACING TOOL. JAMES ANSON SHARPNACK, Rices Landing, Pa. Filed Feb. 5, 1921. Serial No. 442,731. 3 Claims. (Cl. 90—11.)

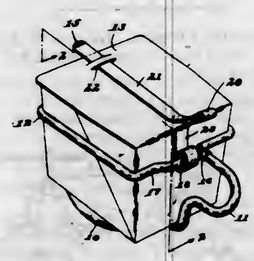
1. A facing tool, comprising an elongated shank having one end threaded and adapted to be inserted in the registering openings of a steering knuckle axle and turned therein, a removable cutter on the shank intermediate of its ends, the cutter being provided with a recessed lower edge and the shank with means for engaging the recessed edge of the cutter, a nut on the threaded end of the shank, and a spring on the shank and adapted to be compressed by the nut between it and the said axle, whereby the cutter will be held in locked engagement with the inner face of one arm of the knuckle axle.

1,423,463. STOPPER FOR HOT-WATER BOTTLES. AI B. SHAW, Medford, Mass., assignor to Shaw Specialty Co. Inc., West Medford, Mass., a Corporation of Massachusetts. Filed Feb. 7, 1921. Serial No. 442,968. 6 Claims. (Cl. 150—8.)



1. A hollow threaded bottle stopper having a bottom plate, a headed screw extending through said bottom plate

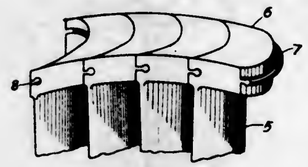
and freely revoluble therein, a packing disk surrounding the shank of said screw, a washer threaded to said screw



between said disk and stopper, and means for preventing the displacement of said disk.

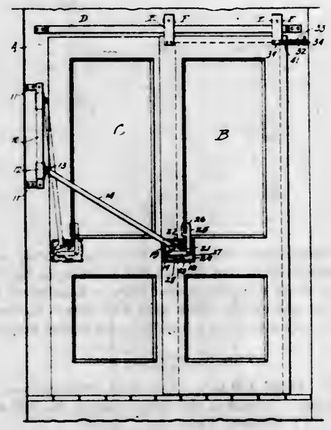
1,423,464. STOPPER FOR HOT-WATER BOTTLES. AI B. SHAW, Medford, Mass., assignor to Shaw Specialty Co. Inc., West Medford, Mass., a Corporation of Massachusetts. Filed Jan. 20, 1922. Serial No. 530,672. 6 Claims. (Cl. 215—49.)

1. A threaded bottle stopper having a bottom plate provided with a central flanged projection; a packing member freely revoluble about said flanged projection; and a metal washer between said packing member and bottom plate.



1,423,465. RECEPTACLE HOLDER. ORVILLE O. SHELINE, Chicago, Ill. Filed June 10, 1921. Serial No. 476,456. 5 Claims. (Cl. 4—39.)

1. A holder adapted to receive a receptacle having a cover mounted thereon comprising means cooperating with the holder to maintain the cover in closed position, said means comprising a continuous strip of flexible material having one end fixedly attached to the holder and the other end attached to the cover of the receptacle.

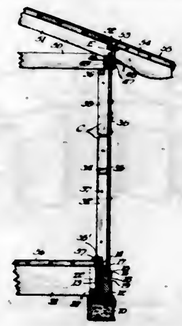


1,423,466. INTERLOCKING BLADE SHROUD. JOHN EDWIN SNYDER, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 2, 1920. Serial No. 414,179. 5 Claims. (Cl. 253—177.)

1. In combination with the impulse blades of a turbine, a shrond member formed on the end of each blade and having convex and concave faces formed to cooperate

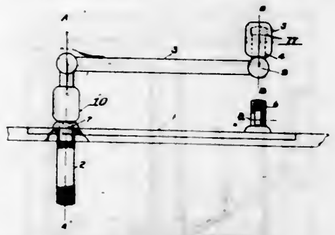
with the faces of adjacent blades, and an interlocking key for locking adjacent faces together.

1,423,467. SELF-CLOSING AND CONTROLLING MEANS FOR DOORS. BERNHARD SPITZFADEN, Brooklyn, N. Y. Filed Sept. 30, 1920. Serial No. 413,839. 9 Claims. (Cl. 292—262.)



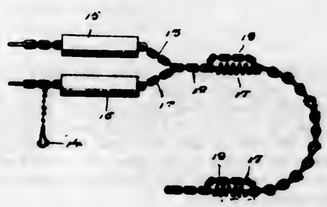
1. A self-closing means for doors including a vertical guide rod, a vertically sliding element thereon, a lever pivoted to said element and adapted to be pivoted at its opposite end to a door, and spring means exerting its pressure at one end on said lever and adapted at its opposite end to be secured to the door, said means normally tending to rock said lever in a direction to move the said lever for closing the door.

1,423,468. WOODEN BUILDING. JOSEPH G. STADELMAN, Chicago, Ill. Filed July 17, 1919. Serial No. 311,576. 7 Claims. (Cl. 20—2.)



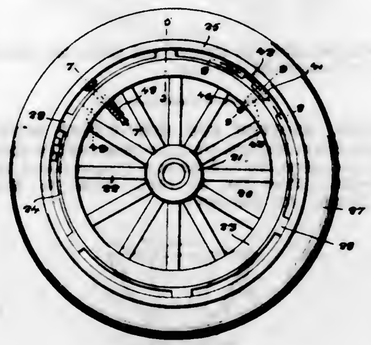
1. In portable house construction, the combination of a sill beam, and side wall sections, a longitudinally extending groove in the top of said beam, the upper outer corner of said beam being cut away to leave a supporting ledge, each side section comprising vertical studs, a board secured to the inner lower ends of said studs, and siding boards se-

cured against the outside of said studs, said board secured to the inner lower ends of said studs and siding boards en-



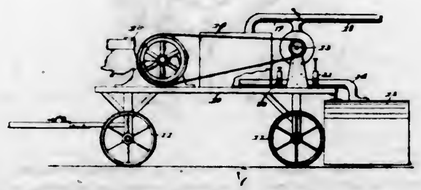
gaging in said groove and on said ledge respectively, and said studs engaging on said beam between said groove and ledge.

1,423,469. COMBINATION HANDLE AND CRANK. PETER LOUIS STREIT, Grand View, N. Y. Filed Aug. 20, 1920. Serial No. 404,826. 5 Claims. (Cl. 74—33.)



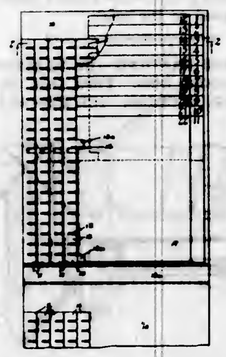
1. A combination crank and handle comprising a crank arm, means fixed to one end of the crank arm for attaching it to a shaft to operate the latter, a hand-piece hinged to the other end of the crank arm, and means for connecting it to a casing to form a handle for carrying purposes.

1,423,470. TIRE CHAIN. LOUIS C. STUKENBORG, Memphis, Tenn. Filed Aug. 30, 1921. Serial No. 496,811. 1 Claim. (Cl. 152—14.)



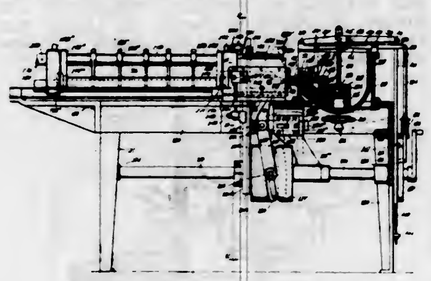
An anti-skid attachment for automobile wheels comprising a chain adapted to extend transversely over the tread of the tire, branches projecting from one end of the chain, sleeve-like members of yieldable material carried by said branches, a short chain suspended from one of said branches, a snap hook carried by the short chain and adapted to secure said branches to the other end of the chain proper, said branches being arranged at the opposite sides of the spoke of the wheel, with said sleeve-like member engaging said spoke, a coiled spring arranged at each side of the wheel, and each spring having its terminal secured to the chain at spaced points to provide a slack in the chain at the opposite sides of the wheel for the purpose specified.

1,423,471. DEMOUNTABLE RIM. SHERWOOD W. SWANSON, Jacksonville, Fla. Filed Oct. 18, 1919. Serial No. 331,727. 1 Claim. (Cl. 301—17.)



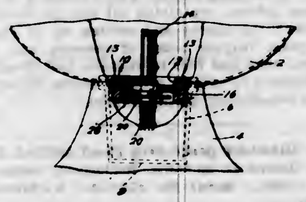
A device of the character described comprising a pair of laterally separable annular elements, a plurality of projections formed upon one of said elements and projecting onto the other, said projecting portion being formed with recesses constituting seats, a plurality of projections formed upon the other element and provided with tongues adapted to enter said recesses, said projections being wedge shaped longitudinally and being dove-tailed in cross-section, the assembled projections being adapted for disposition within retaining sockets, and means for locking said elements against relative rotation.

1,423,472. COTTON PICKER. HUBERT W. TAYLOR, Frederick, Okla. Filed Sept. 23, 1920. Serial No. 412,163. 1 Claim. (Cl. 56—12.)



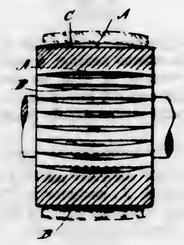
A cotton harvesting machine having a truck and motor actuated suction fan supported thereby, a transversely arched suction hood, a receiving box mounted on the truck, a discharge conductor connected with the receiving box, an inlet conductor extending from the suction hood to the receiving box and in communication with the fan at an intermediate point, and valves disposed in the inlet conductor on either side of the point of connection with the fan for the purpose specified.

1,423,473. FOLDER FOR PRESCRIPTION BLANKS. ROLAND BAXTER TAYLOR and LUCINDA TAYLOR, Melville, Saskatchewan, Canada. Filed May 19, 1921. Serial No. 471,001. 3 Claims. (Cl. 129—19.)



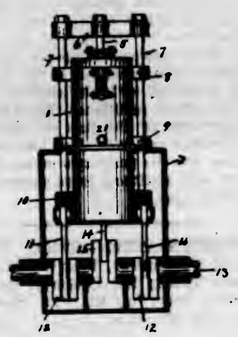
1. In a device of the class described, a series of strips of varying widths superimposed in stepped form, each strip presenting a longitudinal series of tabs adapted to be secured to the sheets to be held.

1,423,474. STRIP-CASTING MACHINE. JOHN S. THOMPSON, Chicago, Ill. Filed Nov. 20, 1920. Serial No. 425,363. 7 Claims. (Cl. 164—42.)



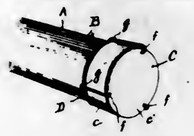
1. A device for cutting strips of material into sections of definite length, the combination of a cutting and trimming mechanism; an intermittently moving means for operating said mechanism; a ratchet operated by said intermittently moving means, and means operated at a predetermined time by said ratchet to connect said intermittently moving means to said cutting mechanism.

1,423,475. PERCOLATOR. MAURICE L. WARNER, Meriden, Conn., assignor to Manning, Bowman & Company, Meriden, Conn., a Corporation of Connecticut. Filed Dec. 13, 1921. Serial No. 521,971. 7 Claims. (Cl. 53—3.)



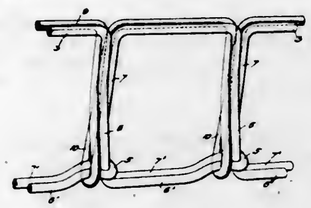
1. A percolator having, in combination, a heating chamber having an opening in its upper end, and a percolator tube provided with an enlarged portion having a rounded edge engaging the wall of said opening so as to permit tipping movement of the tube with relation to the heating chamber.

1,423,476. PULLEY. MILTON F. WILLIAMS, St. Louis, Mo., assignor of forty-nine one-hundredths to Harold M. Plaisted, St. Louis, Mo. Filed Aug. 19, 1920. Serial No. 404,564. 6 Claims. (Cl. 64—17.)



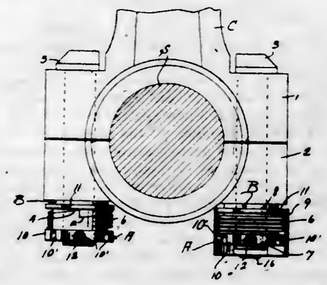
1. A high speed pulley provided with transverse grooves that are radially deeper in the middle of the pulley face than near the rim edges, and one face of which grooves is inclined backward in the direction of rotation, substantially as described.

1,423,477. INTERNAL-COMBUSTION ENGINE. FERDINAND BIRCHBAUER, Baltimore, Md., assignor of one-half to Joseph H. Fallis, Baltimore, Md. Filed Sept. 16, 1919. Serial No. 324,121. 1 Claim. (Cl. 123—51.)



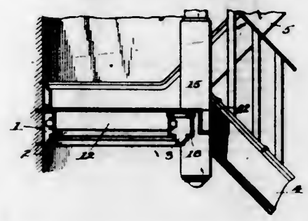
In an internal combustion engine, the combination of the cylinder having a passage at its upper end, an intake opening in said passage, and ports connecting said passage with the combustion chamber of said cylinder, a valve to control said intake opening, a passage at the lower end of said cylinder, an exhaust opening to the passage at the lower end of the cylinder, and ports leading from the combustion chamber to the passage at the lower end of the cylinder, a crank-case into which the lower end of said cylinder projects, a crank-shaft mounted in said case and having two cranks set at the same degree and one crank set opposite to the first mentioned two cranks, two pistons within said cylinder, a rod connecting the lower piston with the crank shaft, a cross-head above said cylinder, a rod connecting the upper piston with the said cross-head, a ring surrounding the lower end of the said cylinder, two rods connecting the cross-head with said ring, and rods connecting the said ring with the first mentioned two cranks on the crank-shaft.

1,423,478. BUNDLED WIRE. SPENCER C. CARY, Brooklyn, N. Y., assignor to Cary Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 3, 1922. Serial No. 549,122. 15 Claims. (Cl. 206—59.)



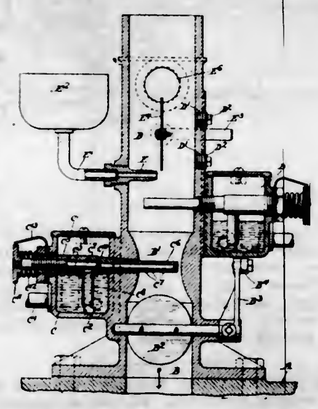
1. A commercial package embodying a multiplicity of elements in lengths, means against which the ends of the elements engage, certain of said elements extended beyond said means and secured intermediate the ends of the elements to retain said means fixedly relatively to the ends of the elements.

1,423,479. SEAM FOR SEWED ARTICLES. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Aug. 4, 1917. Serial No. 184,448. 9 Claims. (Cl. 112—262.)



7. A seam for sewed articles comprising body-fabric material having punctures, a main thread having portions extending lengthwise of the line of seam at the upper face of the material and presenting penetrative main loops extending through said punctures to the under face of the material and enchained with one another to form single-chain stitches, and an additional thread having portions extending lengthwise of the line of seam at the upper face of the material and presenting auxiliary penetrative loops extending into the punctures occupied by said main loops, each of said auxiliary loops embracing and being keyed by a main loop.

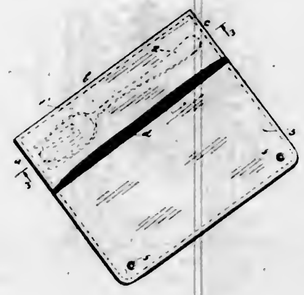
1,423,480. COMPENSATING DEVICE. JOSEPH GUMBER and FRED. F. FEARHEILEY, East Moline, Ill., assignors to Automatic Takeup Nut Company, East Moline, Ill., a Corporation. Filed July 16, 1921. Serial No. 485,337. 3 Claims. (Cl. 85—32.)



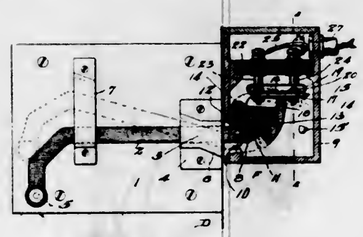
1. A compensating device of the class described comprising two members, said members having rotation one relative to the other when applied to the work, opposed faces of the members being provided with beveled portions adapted to contact, a spring coacting with said members to automatically rotate the members one with respect to the other, and means engageable with the members for holding the same against relative rotation before being applied to the work.

1,423,481. STAIR LANDING OR PLATFORM. AKOS J. HALL, Cleveland, Ohio. Filed Sept. 23, 1919. Serial No. 325,612. 2 Claims. (Cl. 189—43.)

1. In a metal stair platform, the combination of beams having openings therein, means for anchoring said beams in a wall, cross beams interposed between said beams, means on said cross beams received in the openings of said beams for supporting the cross beams thereon, and a floor platform fastened to the beams.



1,423,482. PROCESS OF SUPPLYING A COMBUSTIBLE MIXTURE TO INTERNAL-COMBUSTION ENGINES. WILLIAM H. C. HIGGINS, Jr., Laporte, Ind. Filed Sept. 24, 1917. Serial No. 193,043. 2 Claims. (Cl. 123—25.)

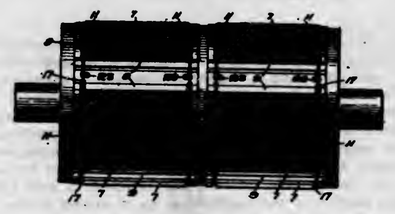


2. The process of supplying a combustible mixture to an internal combustion engine, which consists in moving a continuous column containing all the air used in the engine toward the engine and setting up in such continuous column varying zones of pressure and feeding water to one zone and fuel to another, and causing said zones of pressure to vary in relative degree during variation in the velocity of the air column.

1,423,483. DISPLAY ROLL FOR FLAT METAL TABLEWARE. JAMES G. LUDLUM, Bridgeport, Conn. Filed June 21, 1921. Serial No. 479,221. 3 Claims. (Cl. 150—52.)

1. A display roll for flat metal table ware comprising a plurality of partitions of soft flexible material all of which are secured together at one side to form a plurality of juxtaposed pockets adapted to hold the table ware articles in nested relation, a tab secured to the partitions at the sides which are secured together and adapted to be wrapped around the same, and means for securing the tab in wrapped relation.

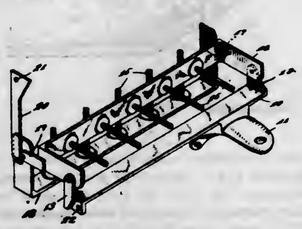
1,423,484. DOOR LOCK. HOMER BAR MCCARTY, Ogden, Utah, assignor to O-K Elevator Safety Lock Company, Ogden, Utah, a Corporation. Filed July 7, 1921. Serial No. 482,973. 3 Claims. (Cl. 187—31.)



3. The combination in a door locking mechanism including electrical connections forming part of a control circuit, of a casing and terminal posts therein, a shaft within the casing, a carrier pivoted on said shaft and a conductor plate on said carrier adapted to contact with said posts, a weighted bumper arm pivoted on said shaft and a lug on said arm to engage and hold said carrier in uplifted position, a sliding door and latch bar pivoted thereon, a hooked end on said latch bar adapted to be projected through an opening in said casing, a locking lug on said casing for the hooked end, and said hooked end adapted to hold said bumper arm and carrier in uplifted position, for the purpose described.

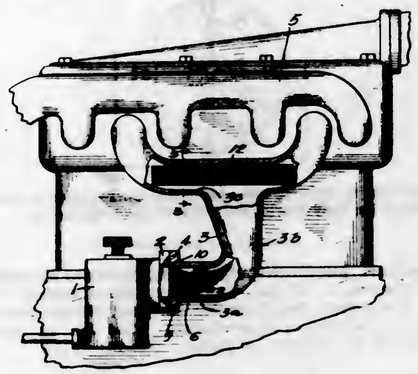
1,423,485. BUSINESS-HOURS PLACARD. JOHN T. MCNIFF, Waterbury, Conn., assignor to Raymond F. McNiff, Waterbury, Conn. Filed Feb. 19, 1921. Serial No. 446,238. 3 Claims. (Cl. 116—131.)

1. A business hours placard comprising solely a flat body formed from card-board and having arranged thereon general readable matter, and a plurality of contextual tabs, the latter conjointed collectively by means of metallic rings with said body for a free swinging movement upwardly over and beyond the uppermost margin thereof, and bearing, respectively, specific readable matter readable contextually into the general readable matter aforenamed when caused, separately or more or less collectively, to traverse and overlie the upper portion of that face of the body bearing such general readable matter.



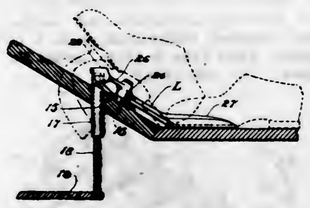
1,423,486. SECURING MEANS FOR PRINTING PLATES. CHARLES A. MEISEL, Dorchester, Mass., assignor to Meisel Press Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 26, 1921. Serial No. 440,150. 4 Claims. (Cl. 101—378.)

1. In combination with a plate holder a binder adapted to overlie a plate thereon, means to secure one end of the binder to the holder, a plug on the other end of the binder, said holder having a cavity of relatively great depth to receive the plug and means to depress the plug into the cavity.



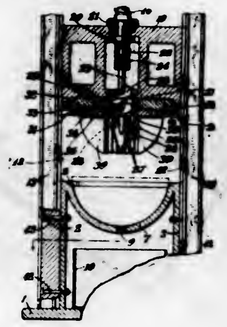
1,423,487. SPOOL HOLDER FOR SEWING MACHINES. HENRY A. MEISSEL, Indianapolis, Ind., assignor to Kahn Tailoring Company, Indianapolis, Ind., a Corporation of Indiana. Filed June 2, 1921. Serial No. 474,546. 10 Claims. (Cl. 242—139.)

2. As an article of manufacture, a spool holder for sewing machines comprising a main bar adapted to be secured



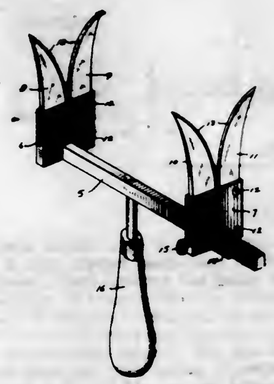
to a sewing machine and presenting an unobstructed upper surface, and a spool pin supporting bar provided with a relatively fixed depending spool pin and hingedly connected to said main bar to support the spool pin in retaining position perpendicular to the main bar and with its end spaced from the main bar a distance exceeding the thread diameter and movable to move the spool pin to a position substantially at right angles to the main bar and into a spool receiving position.

1,423,488. HOMOGENIZER. LUCIUS J. PHELPS, Los Angeles, Calif., assignor to William J. Humphreys, San Gabriel, Calif. Filed May 19, 1921. Serial No. 470,926. 4 Claims. (Cl. 48—180.)



1. The combination with an internal combustion engine including an intake manifold having a flanged coupling end and including a transverse portion communicating with a perpendicular extension, of an impingement element in said manifold for breaking up the combustible mixture and including an annulus clamped in position by said coupling flange for supporting said impingement element, and a second impingement element for breaking up the combustible mixture and received in said transverse portion of the manifold so as to extend across the perpendicular extension of said manifold.

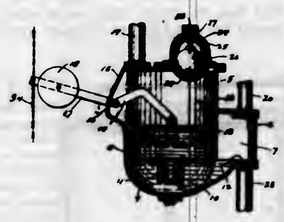
1,423,489. FOOT ACCELERATOR. HERBERT V. SOUSMAN, Wilmington, and JESSE M. FROST, Long Beach, Calif. Filed Dec. 29, 1921. Serial No. 525,612. 3 Claims. (Cl. 74—81.)



3. A foot accelerator comprising a lever including an inclined portion and a horizontal portion, means for pivotally sustaining the lever so that the same is adapted for swinging movement over the floor boards of a motor vehicle, a foot rest beneath the lever, a shaft having operative connection with the lever, and means carried by the lever and engageable with the shaft for limiting the movement of the lever in one direction or the other.

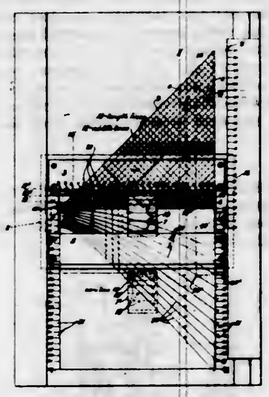
1,423,490. FRUIT SEEDER AND SLICER. GEORGE VAFIADES and JOHN KOUKOS, New York, N. Y. Filed Dec. 16, 1920. Serial No. 431,247. 14 Claims. (Cl. 146—6.)

7. In a fruit cutting device a cutter having a plurality of radially disposed double blades and peripheral blades arranged between each pair of blades.



1,423,491. BUDDING IMPLEMENT. VINCENT CALANDRA, Buffalo, N. Y. Filed Mar. 24, 1920. Serial No. 368,277. 4 Claims. (Cl. 47—6.)

1. A budding implement characterised by having a rigid bar, stationary cutting blades rigidly mounted at one end of the bar, adjustable cutting blades slidably mounted upon the opposite end of the bar, and means for locking the adjustable blades in position.

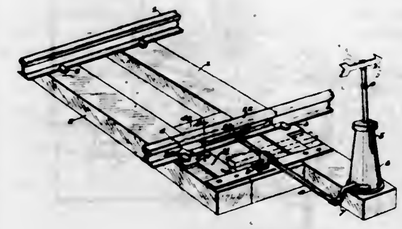


1,423,492. REGULATOR FOR VAPOR HEATING SYSTEMS. LESTER A. CHENEY, Kenmore, N. Y. Filed Feb. 1, 1918, Serial No. 214,848. Renewed Dec. 20, 1921. Serial No. 523,773. 6 Claims. (Cl. 236—31.)

1. In a vapor heating system, the combination with a boiler, of a regulator connected with the boiler, means for conducting all the condensation of the system to and through the regulator, means connected with the regulator and the dampers of the boiler for controlling the boiler

pressure, and means for maintaining definite levels of water within the regulator for any given steam pressure, independent of the height of the water within the boiler.

1,423,493. COMPUTING DEVICE. JOHN G. CLARK, Holyoke, Mass. Filed Nov. 4, 1919. Serial No. 335,615. Renewed May 2, 1922. Serial No. 558,039. 7 Claims. (Cl. 235—80.)

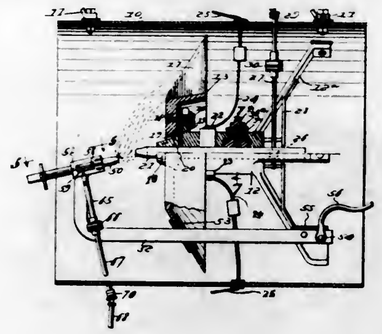


1. In a computing device of the kind described, the combination, a base-piece having thereon intersecting lines for forming rectangular shaped figures, curves on the base-piece and reference numerals thereon, a slide movable on the base-piece and over the figures, a movable piece carried by the slide and adapted to move transversely of the figures and having a zero line thereon which is designed to cooperate with the points of intersection of the said lines, said base-piece having numerals placed on the sides of the rectangular shaped figures and other numerals at the side of the curves, and with both of which the movable piece cooperates, said movable piece having correction lines which cooperate with the curves for determining the final result with reference to the numerals that are placed at the sides of the base-piece.

1,423,494. PROCESS FOR THE PREPARATION OF AROMATIC NITRAMINES. LOUIS HAAS, Paris, France, assignor to The Société Chimique De La Grande Paraisse, Paris, France. Filed Sept. 2, 1921. Serial No. 498,668. 2 Claims. (Cl. 260—128.)

2. A method of carrying out the process claimed in claim 1, consisting in introducing the chloronitro-derivative into acetic acid saturated with gaseous ammonia, maintaining a temperature of approximately 125°–130° C. and continuing to pass gaseous ammonia through so that the ammonium acetate is continuously regenerated.

1,423,495. DERAILER. JOHN H. HAMMONTRE, Los Angeles, Calif. Filed Jan. 3, 1921. Serial No. 434,623. 5 Claims. (Cl. 246—163.)



1. A derailer for a track including actuating mechanism for the same and a section of a track rail removable by said actuating means to cause the wheel of a car upon said track to drop from the rail, the joint between said rail proper and removable section forming an inclined end for the rail proper.

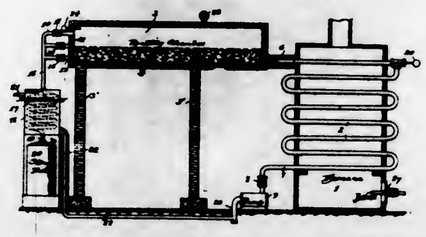
1,423,496. PUMP. LEWIS H. HANEY, Los Angeles, Calif. Filed Nov. 11, 1920. Serial No. 423,328. 4 Claims. (Cl. 253—179.)

1. The combination with a liquid impelling device including a rotatable impeller having a spiral blade provided with a radial port communicating with the bore of said impeller so as to discharge a portion of the liquid between the periphery of said impeller and its casing to form a fluid bearing.

1,423,497. ELECTRIC-ARC MECHANISM FOR SEARCHLIGHTS. LYMAN C. JOSEPHS, Jr., U. S. Army, assignor to Newton D. Baker, Secretary of War, trustee. Filed June 9, 1919. Serial No. 302,980. 6 Claims. (Cl. 176—51.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

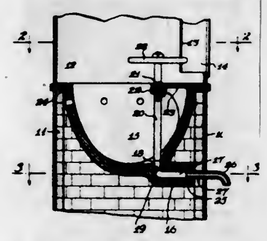
6. In a high intensity arc mechanism the combination with positive and negative electrodes, a slotted shield surrounding the positive electrode and a housing inclosing the shield; of means for directing the arc flame through the slot of said shield.

1,423,498. NECKTIE HOLDER. PETER KLINKHAMMER, Los Angeles, Calif. Filed Dec. 3, 1921. Serial No. 519,722. 1 Claim. (Cl. 24—60.)



A necktie holder formed from a single length of resilient wire bent to provide a yoke adapted to embrace the shank of a collar button, said yoke having a restricted mouth, linear portions extending from the ends of the yoke and arranged in divergent relation with respect to each other, and hooks having upwardly extending prongs formed on the terminals of said portions and terminating at points below said mouth, said prongs being arranged in a plane disposed at an angle with respect to the plane of the linear portions.

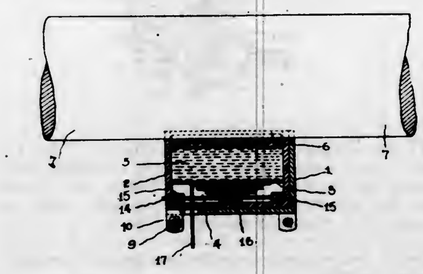
1,423,499. WRENCH. JOE S. MCKIBBON, Los Angeles, Calif. Filed Feb. 9, 1922. Serial No. 535,210. 7 Claims. (Cl. 81—118.)



1. A wrench comprising a stationary jaw, a movable jaw associated with the stationary jaw to occupy a retracted position in which the faces of the jaws are disposed in converging relation to each other, and a projected position in which said faces are disposed in spaced parallelism, means for automatically opening the jaws, and adjustable means for limiting the opening action.

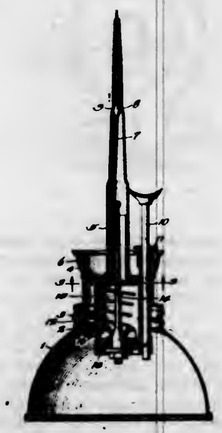
1,423,500. PROCESS OF TREATING PETROLEUM OIL. ROY CROSS, Kansas City, Mo., assignor to Gasoline Products Company, Inc., New York, N. Y., a Corporation of New York. Continuation of application Serial No. 211,407, filed Jan. 11, 1918. This application filed May 2, 1921. Serial No. 466,119. 15 Claims. (Cl. 196—25.)

2. A continuous process of treating oils under pressure without substantial distillation, consisting in passing the oil in a relatively small stream through a heating zone where the oil is heated to a cracking temperature, in discharging the oil from the heating zone in a substantially liquid phase and at a cracking temperature to an enlarged insulated reacting chamber located outside of the heating zone where further cracking takes place, maintaining the oil in both the enlarged insulated reacting chamber and the heating zone under pressure of evolved gases of the oil having a critical temperature below the cracking temperature of the bulk of the oil, said pressure being always sufficient to prevent any substantial vaporization of the oil, and in continuously removing the bulk of the oil in liquid phase and said pressure gases from said reacting chamber.



1,423,501. MELTING POT. JOHN B. MCCLAIN, Brooklyn, N. Y., assignor of one-fifth to Richard Meier, Brooklyn, N. Y. Filed Oct. 25, 1920. Serial No. 419,395. 2 Claims. (Cl. 263—11.)

1. The combination with a furnace having upper and lower compartments, the latter of reduced cross sectional dimension to provide a horizontal shoulder, said lower compartment having an opening in one of its side walls, of a melting pot of parabolical formation having an outwardly extending peripheral flange at its upper end adapted to engage said shoulder for supporting the melting pot within the lower compartment, a downwardly and laterally directed integral spout extending from the bottom of said melting pot and affording a space thereabove for the free circulation of heat thereabout for heating the outlet nozzle on all sides and allowing the portion of the bowl lying above the outlet nozzle to be subjected to the heat, said nozzle being provided with a central bore communicating with the interior of the melting pot and having its outer end in vertical alignment with the side of the pot and with its bore disposed in a horizontal plane with the opening in the side wall, a detachable nozzle adapted to be received by the outer end of the spout and insertable through the opening in

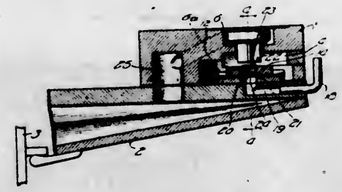


the side wall of the furnace, and means located within the bowl for closing the inner end of the bore of the nozzle having a manipulating device extending above the bowl for actuating the closure.

1,423,502. GREASE CELLAR. WILLIAM FRANCIS MITCHELL, Clifton, N. J., assignor of one-half to Frank R. Allen, Passaic, N. J. Filed June 26, 1920. Serial No. 391,950. 3 Claims. (Cl. 64—35.)

1. In a device of the character described, the combination of an open front case having a bottom and side walls, a closed box therein resting on the bottom of the case having an open top and adapted to contain a cake of lubricant and means for securing the box in the case, substantially as shown and described.

1,423,503. OIL CAN. ELDRIDGE H. NOBLE, Waukegan, Ill.; William J. Smith, administrator of said Eldridge H. Noble, deceased. Filed Nov. 17, 1919. Serial No. 338,676. 2 Claims. (Cl. 221—45.)



1. A can having a discharge spout; a stopper within the bore of the spout; mechanism accessible for operation upon the exterior of the can and in operating connection with the stopper upon the interior of the can; a pump barrel to which the stopper is attached and moving with the stopper, the aforesaid mechanism being in actuating relation to this pump barrel; a piston within the pump barrel and substantially fixed with respect to the can; and a spring between the piston and the outer end of the pump barrel normally to place the pump barrel in its outer position and to apply the stopper to the spout, there being communication between the pump barrel and the can interior when the pump barrel is in its outer position.

1,423,504. SAW FOR CUTTING METALS. PERCY VENABLES VERNON, Keresley, England. Filed Oct. 30, 1919. Serial No. 334,505. 6 Claims. (Cl. 29—69.)

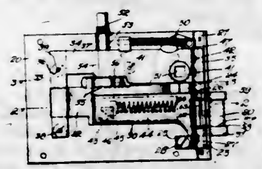
1. The combination of a saw having teeth and a device adapted to enter the spaces between the said teeth and to traverse the cutting faces thereof.

1,423,505. PNEUMATIC ACTION FOR PLAYER PIANOS AND THE LIKE. ADOLPH P. GUSTAFSON, Chicago, Ill., assignor to M. Schuls Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1919. Serial No. 280,120. 19 Claims. (Cl. 84—53.)

17. The combination of a pneumatic and a block mounted on the fixed member of said pneumatic, a pouch mounted on said block, and a second block mounted on said pouch, said second mentioned block being provided with a thimble forming a bleed port and said pouch also being provided with a bleed port, and said fixed member of said pneumatic being provided with a duct adapted for connection with a tracker board tube and extending to said pouch.

1,423,506. PRUNING SAW. AARON SLOTHOWER, Warren, Oreg. Filed June 23, 1920. Serial No. 391,238. 7 Claims. (Cl. 30—11.)

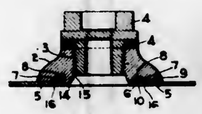
1. A pruning saw comprising a handle of flat substantially oval cross section, said handle being of rectilinear formation, a socket mounted on one end of the handle, said socket comprising a section of sheet metal bent upon itself to envelop the handle, fastening means passed



through the handle and socket sides, said sides being disposed inwardly toward each other beyond the free end of the handle and having a notch at the free end thereof and forming a spur at the bight portion forming the back of the socket and handle, and a blade carried between said side portions.

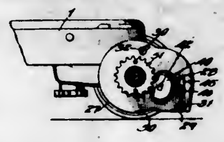
REISSUES.

15,411. TREATMENT FOR VENEREAL DISEASES. WILLIAM E. CRAIG, Joplin, Mo., assignor, by mesne assignments, to Craig Chemical Corporation, Cleveland, Ohio, a Corporation of Delaware. Filed Mar. 3, 1922. Serial No. 540,897. Original No. 1,408,170, dated Feb. 28, 1922, Serial No. 265,356, filed Dec. 5, 1918. 13 Claims. (Cl. 167—7.)



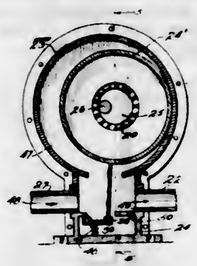
11. A remedy for internal use for venereal diseases comprising the product incident to the admixture of mercury, opium, quinine, and licorice, the said several ingredients being in substantially the quantity and bearing that relative proportion to each other fixed by the limits of the therapeutical action required substantially as described.

15,412. FASTENING DEVICE. LEON OTTINGER, New York, N. Y. Filed July 19, 1921. Serial No. 485,991. Original No. 1,312,199, dated Aug. 5, 1919, Serial No. 226,411, filed Apr. 3, 1918. 25 Claims. (Cl. 292—192.)



1. In a latch, a latching member adapted to be projected and retracted, a strike, and means adapted to expand the latching member in its transverse dimension during projection including a part carried by the latching member and co-acting with the strike, and means cooperating with said part to move the same into operative engagement with the strike and preventing return movement of said part to its normal position and permitting of such return movement only upon a retraction movement initially applied to said latching member.

15,413. SPUT FOR METALLIC RECEPTACLES. HENRY S. REYNOLDS, Brooklyn, N. Y., assignor to Meurer Steel Barrel Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 7, 1921. Serial No. 443,308. Original No. 1,332,686, dated Mar. 2, 1920, Serial No. 271,484, filed Jan. 16, 1919. 10 Claims. (Cl. 220—39.)



10. A metallic receptacle having an opening therein, and a sput fitted within said opening and provided with a recess offset with respect to the plane of the adjacent portion of the receptacle and with a bendable flange, the edge portions of said receptacle being forced into said offset recess and into engagement with interlocking irregularities formed on the sput, and said flange on said sput being bent to grip said edge portion within said recess and hold it in said interlocking relation.

15,414. SUCTION CARPET SWEEPER. JAMES M. SPANGLER, deceased, late of Canton, Ohio, by The Hoover Suction Sweeper Company, New Berlin, Ohio, a Corporation of Ohio, assignee. Filed June 22, 1917. Serial No. 176,445. Original No. 1,151,731, dated Aug. 31, 1915, Serial No. 733,988, filed Nov. 29, 1912. 23 Claims. (Cl. 15—8.)

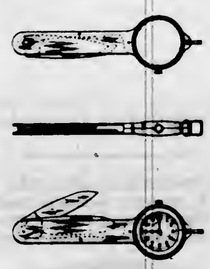
10. The combination with a suction-cleaner hood of a brush and a brush support comprising a carrying plate mounted on the hood and means for holding the carrying plate in a predetermined position on the hood, and an adjusting plate pivoted to the carrying plate, the adjusting plate being provided with means whereby it may be locked in varying positions on the carrying plate and with a brush bearing.

15,415. PUMP MECHANISM. ELMER B. THOMPSON, Des Moines, Iowa, assignor to Thompson Manufacturing Company, Des Moines, Iowa. Filed Jan. 16, 1922. Serial No. 529,781. Original No. 1,156,724, dated Oct. 12, 1915, Serial No. 842,712, filed June 3, 1914. 3 Claims. (Cl. 230—30.)

1. A pump comprising a stationary outer cylinder, a hollow support therefor communicating with the same and having intake and exhaust ports, an eccentrically movable inner cylinder within the said outer cylinder for contact at one point in its periphery with the wall of the latter, a wing at the periphery of the inner cylinder and extended into the hollow support, a plate flexibly connecting the wing with one wall of the support below one of the ports to shut off communication between the spaces at the opposite sides of the said wing within the cylinder and support, and counterbalancing means for the plate and inner cylinder.

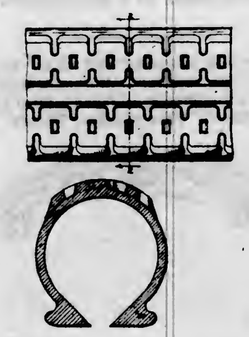
15,416. BOOT TOP. CHARLES TWEEDIE, Jefferson City, Mo. Filed May 20, 1922. Serial No. 562,538. Original No. 1,153,977, dated Sept. 21, 1915, Serial No. 876,404, filed Dec. 10, 1914. 8 Claims. (Cl. 36—2.)

1. A boot-top to be worn over a low shoe, said boot-top having full length quarters following the general lines of the upper portion of a high boot, the lower edges of said boot-top being arranged to coincide with the edges of the sole of the shoe around the heel and along the sides of the shank, and the front and back lower portions of said boot-top being sprung in a sufficient amount to make the lower edges of such portions closely hug the shoe,



and a strap connecting the lower side edges of the boot-top, said strap being arranged to lie beneath and fit the

shank of the shoe from the breast of the heel to the points where the lower edges of the boot-top intersect the edges of the sole.

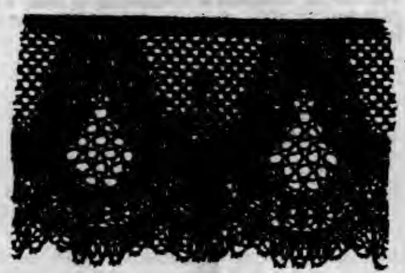


DESIGNS.

61,220. COMBINATION WATCH AND KNIFE. WILLIAM OCHSE, San Antonio, Tex. Filed Dec. 27, 1921. Serial No. 525,250. Term of patent 14 years.

The ornamental design for a combination watch and knife, or article of similar nature, substantially as shown.

61,221. TIRE. WILLIAM CARNAL, Akron, Ohio, assignor to The Carey Tire & Rubber Company, Carey, Ohio, a Corporation of Ohio. Filed Sept. 8, 1920. Serial No. 409,004. Term of patent 14 years.

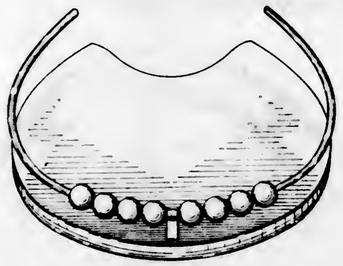


The ornamental design for a tire as shown.

61,222. DISH, PLATE, OR SIMILAR ARTICLE. GILBERT L. CROWELL, Jr., Arlington, N. J., assignor to Dominick & Huff, New York, N. Y., a Joint-Stock Company, New York, N. Y. Filed Oct. 22, 1921. Serial No. 509,744. Term of patent 7 years.

The ornamental design for a dish, plate, or similar article, as shown.

61,223. LACE. JOHN DRAYCOTT, Pawtucket, R. I. Filed Jan. 11, 1922. Serial No. 164. Term of patent 3½ years.



The ornamental design for a lace as shown.

61,224. TOY. MINGA POPE DURYEA and CORINNE INGRAHAM. New York, N. Y. Filed Dec. 13, 1920. Serial No. 430,589. Term of patent 3½ years.

The ornamental design for a toy as shown.

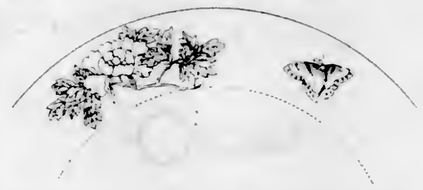
61,225. TRAY. JOSEPH GANNON, Walton, N. Y., assignor to Steinfeld Bros., New York, N. Y. Filed Feb. 8, 1921. Serial No. 443,477. Term of patent 14 years.

The ornamental design for a tray as shown and described.

61,226. STANDARD FOR LIGHTING FIXTURES. JOSEPH W. GOSLING, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 12, 1921. Serial No. 500,216. Term of patent 14 years.

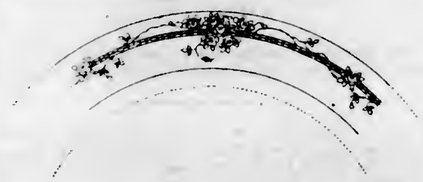
The ornamental design for a standard for lighting fixtures as shown.

61,227. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,643. Term of patent 7 years.



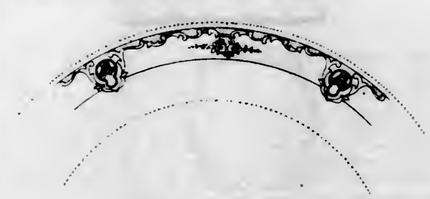
The ornamental design for a plate or similar article, as shown.

61,228. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,645. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

61,229. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,646. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

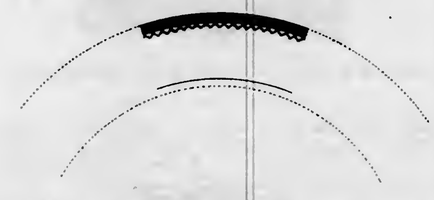
61,230. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,647. Term of patent 7 years.

The ornamental design for a plate or similar article as shown.

61,231. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,648. Term of patent 7 years.

The ornamental design for a plate or similar article as shown.

61,232. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,649. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

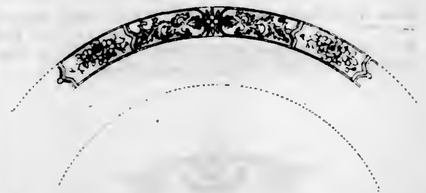
61,233. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,650. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

61,234. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,651. Term of patent 7 years.

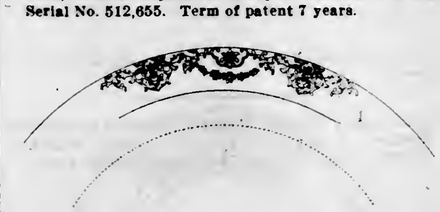
The ornamental design for a plate or similar article, as shown.

61,235. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,653. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

61,236. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,652. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

61,237. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,654. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

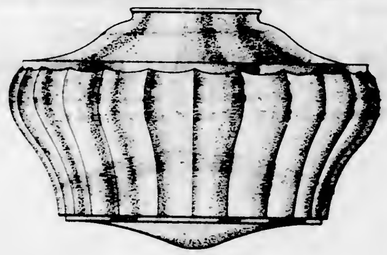
61,238. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,655. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

61,239. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,656. Term of patent 7 years.

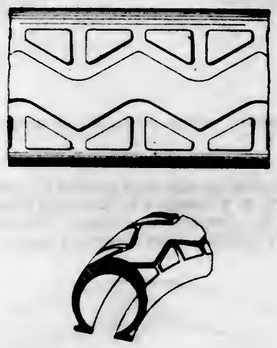
The ornamental design for a plate or similar article, as shown.

61,240. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,657. Term of patent 7 years.



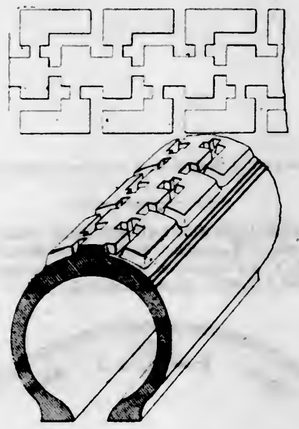
The ornamental design for a plate or similar article, as shown.

61,241. PLATE OR SIMILAR ARTICLE. TEIJI KOTATO, New York, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Nov. 3, 1921. Serial No. 512,658. Term of patent 7 years.



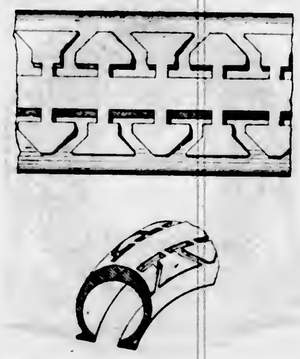
The ornamental design for a plate or similar article, as shown.

61,242. LAMP SHADE, GLOBE, OR SIMILAR ARTICLE. HARRISON D. MCFADDIN, East Orange, N. J. Filed Sept. 9, 1921. Serial No. 499,570. Term of patent 3½ years.



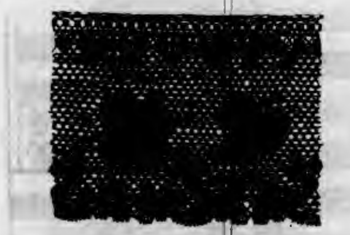
The ornamental design for a lamp shade, globe or similar article, as shown.

61,243. TIRE TREAD. HAROLD D. MITCHELL, Brooklyn, N. Y., assignor to C. Kenyon Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 3, 1921. Serial No. 512,661. Term of patent 14 years.



The ornamental design for a tire tread substantially as shown.

61,244. TIRE TREAD. HAROLD D. MITCHELL, Brooklyn, N. Y., assignor to C. Kenyon Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 3, 1921. Serial No. 512,662. Term of patent 14 years.

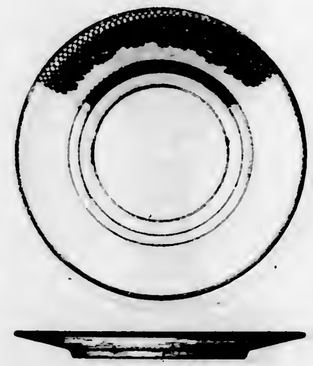


The ornamental design for a tire tread substantially as shown.

61,245. TIRE TREAD. HAROLD D. MITCHELL, Brooklyn, N. Y., assignor to C. Kenyon Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 3, 1921. Serial No. 512,664. Term of patent 14 years.

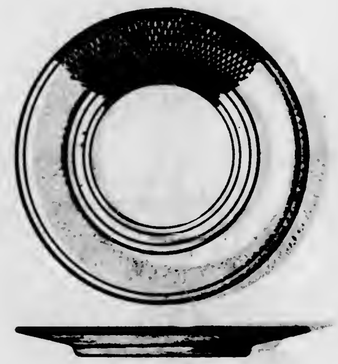
The ornamental design for a tire tread substantially as shown.

61,246. LACE. HANS ALBERT PHILIPS, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Feb. 3, 1922. Serial No. 518. Term of patent 7 years.



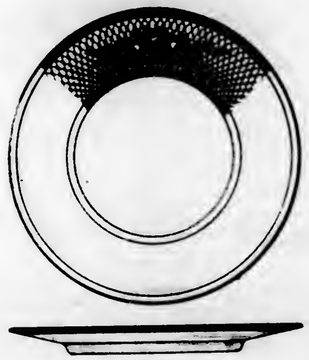
The ornamental design for lace substantially as shown.

61,247. GLASS DISH. CHARLES L. REISENSTEIN, Pittsburgh, Pa. Filed Nov. 1, 1921. Serial No. 512,095. Term of patent 7 years.



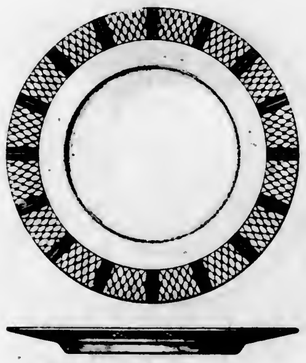
The ornamental design for a glass dish, substantially as shown.

61,248. GLASS DISH. CHARLES L. REISENSTEIN, Pittsburgh, Pa. Filed Nov. 1, 1921. Serial No. 512,096. Term of patent 7 years.



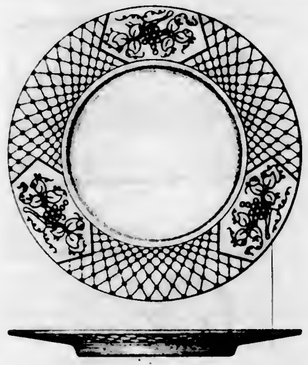
The ornamental design for a glass dish, substantially as shown.

61,249. GLASS DISH. CHARLES L. REISENSTEIN, Pittsburgh, Pa. Filed Nov. 1, 1921. Serial No. 512,097. Term of patent 7 years.



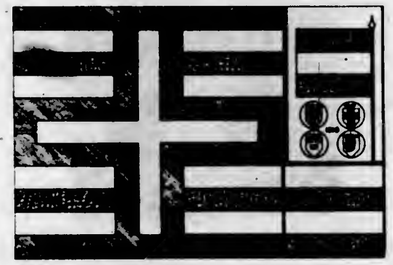
The ornamental design for a glass dish, substantially as shown.

61,250. GLASS DISH. CHARLES L. REISENSTEIN, Pittsburgh, Pa. Filed Nov. 1, 1921. Serial No. 512,098. Term of patent 7 years.



The ornamental design for a glass dish, substantially as shown.

61,251. GLASS DISH. CHARLES L. REIZENSTEIN, Pittsburgh, Pa. Filed Nov. 1, 1921. Serial No. 512,099. Term of patent 7 years.



The ornamental design for a glass dish, substantially as shown.

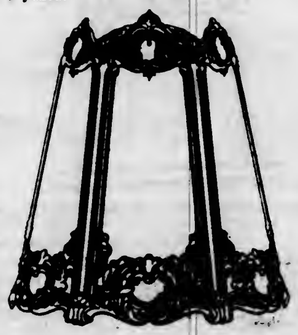
61,252. GLASS DISH. CHARLES L. REISENSTEIN, Pittsburgh, Pa. Filed Nov. 1, 1921. Serial No. 512,100. Term of patent 7 years.

The ornamental design for a glass dish, substantially as shown.

61,253. FLAG FOR IRELAND. PATRICK D. RIORDAN, New York, N. Y. Filed July 5, 1921. Serial No. 482,605. Term of patent 14 years.

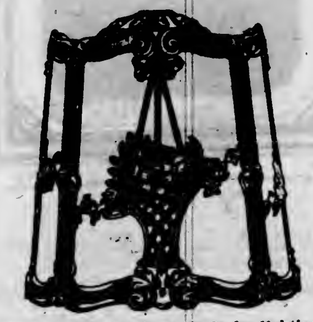
The ornamental design for a flag for Ireland as shown.

61,254. SHADE FOR LIGHTING FIXTURES. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Oct. 22, 1921. Serial No. 509,721. Term of patent 7 years.



The ornamental design for a shade for lighting fixtures, as shown.

61,255. SHADE FOR LIGHTING FIXTURES. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Oct. 22, 1921. Serial No. 509,722. Term of patent 7 years.



The ornamental design for a shade for lighting fixtures, as shown.

61,256. SHADE FOR LIGHTING FIXTURES. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Oct. 22, 1921. Serial No. 509,723. Term of patent 7 years.

The ornamental design for a shade for lighting fixtures, as shown.

61,257. SHADE FOR LIGHTING FIXTURES. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Oct. 22, 1921. Serial No. 509,724. Term of patent 7 years.

The ornamental design for a shade for lighting fixtures, as shown.

61,258. PEDESTAL FOR LIGHTING FIXTURES. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Oct. 22, 1921. Serial No. 509,727. Term of patent 7 years.

The ornamental design for a pedestal for lighting fixtures, as shown.

61,259. PEDESTAL FOR LIGHTING FIXTURES. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Oct. 22, 1921. Serial No. 509,728. Term of patent 7 years.

The ornamental design for a pedestal for lighting fixtures, as shown.

61,260. PEDESTAL FOR LIGHTING FIXTURES. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Oct. 22, 1921. Serial No. 509,729. Term of patent 7 years.

The ornamental design for a pedestal for lighting fixtures, as shown.

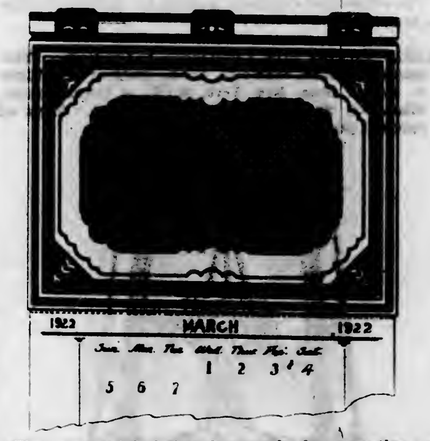
61,261. PEDESTAL FOR LIGHTING FIXTURES. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. N. Y., a Copartnership. Filed Oct. 22, 1921. Serial No. 509,730. Term of patent 7 years.

The ornamental design for a pedestal for lighting fixtures, as shown.

61,262. PEDESTAL FOR LIGHTING FIXTURES. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Oct. 22, 1921. Serial No. 509,731. Term of patent 7 years.

The ornamental design for a pedestal for lighting fixtures, as shown.

61,263. PEDESTAL FOR LIGHTING FIXTURES. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Nov. 8, 1921. Serial No. 513,821. Term of patent 7 years.



The ornamental design for a pedestal for lighting fixtures, as shown.

61,264. SHADE FOR LIGHTING FIXTURES. FREDERICK ROETTGES, Stamford, Conn., assignor to William R. Noe & Sons, New York, N. Y., a Copartnership. Filed Nov. 8, 1921. Serial No. 513,822. Term of patent 7 years.

The ornamental design for a shade for lighting fixtures, as shown.

61,265. CALENDAR MOUNTING. DONALD MITCHELL WESTON, Dalton, Mass., assignor to Byron Weston Company, Dalton, Mass., a Corporation of Massachusetts. Filed Apr. 7, 1922. Serial No. 1,630. Term of patent 14 years.

The ornamental design for a calendar mounting, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 18, 1922.

Claims use since June 1, 1920.

Ser. No. 129,479. (CLASS 25. LOCKS AND SAFES.) STRONGHART COMPANY, Chicago, Ill. Filed Mar. 9, 1920.

Particular description of goods.—Small Portable Savings Banks and Safes.
Claims use since about Jan. 1, 1914.

Ser. No. 130,819. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) ALBERT C. FISCHER, doing business as Servicised Products Company, Chicago, Ill. Filed Apr. 8, 1920.

SERVICISED

LOOK FOR IT ON ALL PURCHASES

No claim is made to words "Look for it on all purchases."
Particular description of goods.—Roofing Paints, Barn Paints, Cold-Water, Oil, Metal, and Dampproofing Paints.
Claims use since Feb. 1, 1916.

Ser. No. 134,058. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) CADILLAC PHONOGRAPH CORPORATION, Chicago, Ill. Filed June 23, 1920.

Particular description of goods.—Phonographs and Tone Arms, Sound Boxes, Horns, and Amplifiers for Talking Machines and Phonographs.
Claims use since Apr. 1, 1920.

Ser. No. 137,269. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) THE RELIANCE GAUGE COLUMN COMPANY, Cleveland, Ohio. Filed Sept. 16, 1920. Under ten-year proviso.

RELIANCE

Particular description of goods.—Steam-Boiler Fittings and Furnishings, Comprising Gauge Cocks, Steam Traps, Floats, and Alarm Devices for Use in Connection with the Foregoing.
Claims use since prior to 1886.

Ser. No. 138,651. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) PIONEER INSTRUMENT COMPANY, Brooklyn, N. Y. Filed Oct. 21, 1920.

PIONEER

Trade-mark "Pioneer."
Particular description of goods.—Compasses, Banking Indicators, Turn Indicators, Pitching Indicators, Air-Speed Indicators, Air-Distance Recorders, Pitot Tubes, Venturi Tubes, Altimeters, Aerial Cameras, Rate-of-Climb Indicators, Vertimeters, Gasoline Gauges; Manometers, Indicating and Recording; Bomb Sights, Drift Indicators, Tachometers, Statoscopes, Inclinometers, Depth Indicators, Ships' Logs, Course and Distance Indicators.
Claims use since Mar. 1, 1919.

Ser. No. 139,722. (CLASS 12. CONSTRUCTION MATERIALS.) STASO LAMINATED SLATE COMPANY, Chicago, Ill. Filed Nov. 16, 1920.

No claim is made to exclusive use of words "Cannot Fade," "Resists Fire," "Resists Weather," and "Non-Fading Slate Roof Surface" or representation of the goods except when associated with the words "Sta-So" in the arrangement shown.
Particular description of goods.—Crushed Slate for Use as a Surfacing Grit for Prepared Roofings.
Claims use since Sept. 1, 1919.

Ser. No. 139,765. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1920. Under ten-year proviso.

ADAMS

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping and Toilet Use.
Claims use since on or about Jan. 1, 1841.

Ser. No. 139,830. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 18, 1920.

PIUTE

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing and Sweeping.
Claims use since on or about Jan. 1, 1908.

Ser. No. 139,833. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 18, 1920.

TRUMPET

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing and Sweeping.
Claims use since on or about Jan. 1, 1900.

Ser. No. 140,085. (CLASS 45. BEVERAGES, NONALCOHOLIC.) ANGEL VELO Y FILGUEIRA, Habana, Cuba. Filed Nov. 24, 1920.

No claim to exclusive use of words "Agua Mineral San Francisco" appearing in upper portion of margin or to "Cuba" apart from mark shown.
Particular description of goods.—Mineral Water.
Claims use since Jan. 1, 1917.

Ser. No. 140,420. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOHN L. WHITING-J. J. ADAMS COMPANY, Boston, Mass., assignor to John L. Whiting-J. J. Adams Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 29, 1920. Under ten-year proviso.

CAR & PANEL

Particular description of goods.—Brushes for Painting, Varnishing, or Applying Various Liquids and for Cleaning, Polishing, and Sweeping.
Claims use since on or about Nov. 1, 1884.

Ser. No. 141,302. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) GENERAL STEEL PRODUCTS CO., Detroit, Mich. Filed Dec. 20, 1920.

Particular description of goods.—Bar Steel, Sheet Steel, Band Steel, and Steel Plates, None of Said Goods Being Adaptable for Use as Tool Steel.
Claims use since July 1, 1920.

Ser. No. 142,005. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) COMPAGNIE, INDUSTRIELLE ET COMMERCIALE DU CYCLE ET DE L'AUTOMOBILE, Neuilly-sur-Seine, France. Filed Jan. 10, 1921.

STROMBOS

Particular description of goods.—Mechanically-Operated Warning Devices—Namely, Horns, Hooters, Sirens, Bells, and Fog Signals—and Parts of Said Devices.
Claims use since Dec. 12, 1913.

Ser. No. 142,560. (CLASS 39. CLOTHING.) JONES BROS. GARMENT CO., Dubuque, Iowa. Filed Jan. 21, 1921.

SLEEPER

Particular description of goods.—Sleeping Garments.
Claims use since 1903.

Ser. No. 143,374. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) MULLER AND PHIPPS (ASIA) LIMITED, New York, N. Y. Filed Feb. 9, 1921.

Mogul

Particular description of goods.—Carriage Gongs.
Claims use since June 1, 1918.

Ser. No. 143,839. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) STORM MANUFACTURING COMPANY, Minneapolis, Minn. Filed Feb. 19, 1921.

STORM

Particular description of goods.—Boring Tools and Machines, Reamers, Valve-Seating Tools, Milling Machines, Drill Presses, Burnishing Machines, Vises, and Jigs.

Claims use since Feb. 7, 1922.

Ser. No. 161,636. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Apr. 1, 1922.

PARYLINE

Particular description of goods.—Coal-Tar Chemicals or Intermediates, Rubber Accelerators or Catalysers, Rubber-Compounding Ingredients, and Flotation Agents.
Claims use since Feb. 8, 1922.

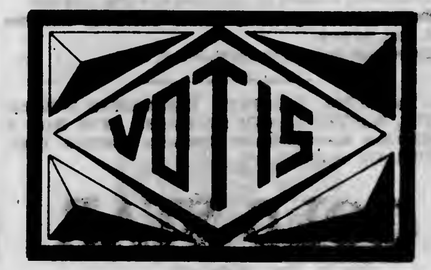
Ser. No. 161,637. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Apr. 1, 1922.

PHENALDINE

Particular description of goods.—Coal-Tar Chemicals or Intermediates, Rubber Accelerators or Catalysers, Rubber-Compounding Ingredients, and Flotation Agents.
Claims use since Feb. 13, 1922.

Ser. No. 161,638. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Apr. 1, 1922.

THANILIDE



Particular description of goods.—Coal-Tar Chemicals or Intermediates, Rubber Accelerators or Catalysers, Rubber-Compounding Ingredients, and Flotation Agents.
Claims use since Feb. 6, 1922.

Ser. No. 161,639. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL ANILINE & CHEMICAL COMPANY, INCORPORATED, New York, N. Y. Filed Apr. 1, 1922.

TRENYLINE

Particular description of goods.—Coal-Tar Chemicals or Intermediates, Rubber Accelerators or Catalysers, Rubber-Compounding Ingredients, and Flotation Agents.
Claims use since Feb. 6, 1922.

Ser. No. 161,647. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH RADKEVICH, Waterbury, Conn. Filed Apr. 1, 1922.

Particular description of goods.—Healing Salve.
Claims use since Aug. 15, 1921.

Ser. No. 161,654. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) JOHN T. STANLEY CO. INC., New York, N. Y. Filed Apr. 1, 1922.

Kan-Nu

Particular description of goods.—Oil Soap.
Claims use since Feb. 1, 1922.

Ser. No. 161,715. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) ABNER-DRURY COMPANY, Washington, D. C. Filed Apr. 4, 1922.

ABNER AD DRURY

Particular description of goods.—Ginger Ale.
Claims use since Mar. 14, 1922.

Ser. No. 161,729. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE HART & HEGEMAN MANUFACTURING COMPANY, Hartford, Conn. Filed Apr. 4, 1922.

Trade-mark consists of representation of a gold star.
Particular description of goods.—Electrical Switches and Pull Sockets.
Claims use since on or about Dec. 7, 1921.

Ser. No. 161,730. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE HART & HEGEMAN MANUFACTURING COMPANY, Hartford, Conn. Filed Apr. 4, 1922.

GOLD STAR

Particular description of goods.—Electrical Switches and Pull Sockets.
Claims use since on or about Dec. 7, 1921.

Ser. No. 161,749. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) FRANK RYAN, trading as the Oriole Belt Dressing Co., Baltimore, Md. Filed Apr. 4, 1922.

ORIOLE

Particular description of goods.—Belt Dressing.
Claims use since about Jan. 20, 1922.

Ser. No. 161,783. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) LOYD WIRELESS TELEPHONE CORPORATION, Dover, Del. Filed Apr. 5, 1922.

VOCAPHONE

Particular description of goods.—Wireless Transmitting and Receiving Apparatus.
Claims use since Mar. 26, 1922.

Ser. No. 161,790. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) PAGE-LEWIS ARMS COMPANY, Chicopee Falls, Mass. Filed Apr. 5, 1922.

No claim to words "Single Shot Rifles" or to "Chicopee Falls, Mass. U. S. A." apart from mark shown.
Particular description of goods.—Rifles.
Claims use since Feb. 1, 1922.

Ser. No. 161,803. (CLASS 37. PAPER AND STATIONERY.) STANDARD CRAYON MANUFACTURING CO., Danvers, Mass. Filed Apr. 5, 1922.

RED SEAL BRAND

No claim to word "Brand" apart from mark shown; but applicant waives none of its common-law rights in said mark or any element thereof.
Particular description of goods.—Wax and Chalk Crayons.
Claims use since 1902.

Ser. No. 161,833. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) PHILIP H. GUNDERMANN, doing business as Atlas Torch Mfg. Co., Chicago, Ill. Filed Apr. 6, 1922.

No claim is made to the words "Atlas Torch Mfg. Co., Chicago, Ill., U. S. A." apart from the mark shown.
Particular description of goods.—Plumbers' Torches.
Claims use since Mar. 28, 1922.

Ser. No. 161,839. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) WALTER JAMRO, Manchester, N. H. Filed Apr. 6, 1922.

The picture and signature shown are that of applicant.
Particular description of goods.—Electrically-Operated Theft-Preventing Device.
Claims use since Oct. 14, 1921.

Ser. No. 161,846. (CLASS 12. CONSTRUCTION MATERIALS.) MARQUETTE CEMENT MANUFACTURING CO., Chicago, Ill. Filed Apr. 6, 1922.

Marquette

On the drawing the cross lines or shading indicate black and oblique lines or shading indicate green.
Particular description of goods.—Portland Cement.
Claims use since January, 1897.

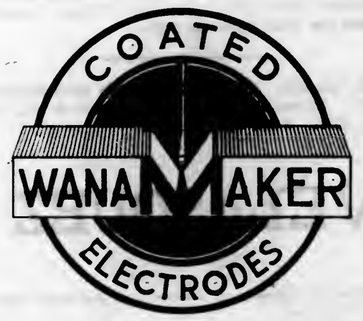
Ser. No. 161,857. (CLASS 37. PAPER AND STATIONERY.) STANDARD CRAYON MANUFACTURING CO., Danvers, Mass. Filed Apr. 6, 1922.

VELASQUEZ

Trade-mark consists of surname of deceased Spanish artist, Velasquez.
Particular description of goods.—Wax and Chalk Crayons.
Claims use since 1914.

Ser. No. 161,870. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) THE ART METAL WORKS, INC., Newark, N. J. Filed Apr. 7, 1922.

RONSON REDSKIN RELOAD



No claim to exclusive use of the word "Reload" apart from the mark.
Particular description of goods.—Pieces of Sparking Metal.
Claims use since Apr. 4, 1922.

Ser. No. 161,882. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) FOSTER MILLIKEN, New York, N. Y. Filed Apr. 7, 1922.

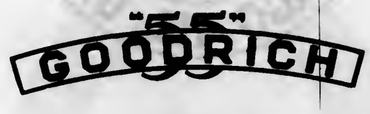
"TALKING LAMP"

Trade-mark consists of the words "Talking Lamp."
Particular description of goods.—Electric Street Signaling Lamps.
Claims use since December, 1921.

Ser. No. 162,011. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) INTERNATIONAL WELDING ENGINEERING CORPORATION, Chicago, Ill. Filed Apr. 10, 1922.

The words "Coated Electrodes" are disclaimed apart from mark.
Particular description of goods.—Arc-Welding Metal Electrodes.
Claims use since about Apr. 30, 1920.

Ser. No. 162,080. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) WORCESTER ELECTRIC SUPPLY Co., Worcester, Mass. Filed Apr. 10, 1922.



Particular description of goods.—Bicycles.
Claims use since 1921.

Ser. No. 162,106. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) FOSTER, MERRIAM & COMPANY, Meriden, Conn. Filed Apr. 11, 1922.

Bear-Tite

Particular description of goods.—Metallic Piston Rings.
Claims use since Jan. 17, 1922.

Ser. No. 162,167. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) THE B. F. GOODRICH COMPANY, New York, N. Y. Filed Apr. 12, 1922.

Particular description of goods.—Pneumatic-Tire Casings Made of Rubber Combined with Fabric.
Claims use since about February, 1922.

Ser. No. 162,187. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MASTER CHEMICAL Co., Columbus Junction, Iowa. Filed Apr. 12, 1922.

MASTER

Particular description of goods.—Embalming Fluid.
Claims use since May 1, 1921.

Ser. No. 162,225. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MAE EDNA WILDER, Rochester, N. Y. Filed Apr. 12, 1922.

HYLAS

Particular description of goods.—Face Cream.
Claims use since Feb. 28, 1922.

Ser. No. 162,227. (CLASS 37. PAPER AND STATIONERY.) E. A. PAUL WOLF CO., New York, N. Y. Filed Apr. 12, 1922.

No claim to words "Loose Leaf Devices" apart from the mark shown.
Particular description of goods.—Loose-Leaf Devices.
Claims use since February, 1922.

Ser. No. 162,260. (CLASS 37. PAPER AND STATIONERY.) NATIONAL BLANK BOOK Co., Holyoke, Mass. Filed Apr. 13, 1922.

Aladdin

Particular description of goods.—Loose-Leaf Binders and Bound Blank Books and Indexes.
Claims use since Mar. 25, 1922.

Ser. No. 162,309. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NORTHERN JOBBING COMPANY, Chicago, Ill. Filed Apr. 14, 1922.

NJC

Particular description of goods.—Lye.
Claims use since Jan. 1, 1915.

Ser. No. 162,359. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) JAMES R. SAUNDERS, Chicago, Ill. Filed Apr. 15, 1922.

SOSA

Particular description of goods.—Soap.
Claims use since on or about Feb. 1, 1922.

Ser. No. 162,366. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) WITHEROW STEEL COMPANY, Pittsburgh, Pa. Filed Apr. 15, 1922.

Particular description of goods.—Rolled Iron and Steel Blanks and Shapes.
Claims use since Mar. 4, 1922.

Ser. No. 162,367. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) WITHEROW STEEL COMPANY, Pittsburgh, Pa. Filed Apr. 15, 1922.

The lining in drawing indicates shading.
Particular description of goods.—Rolled Iron and Steel Blanks and Shapes.
Claims use since Mar. 4, 1922.

Ser. No. 162,388. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM H. ENELL, doing business as Warren Laboratories, Rochester, N. Y. Filed Apr. 17, 1922.

No claim is made to words "Di Gastric Tablets" apart from mark shown.

Particular description of goods.—Medicine for Stomach Troubles.

Claims use since on or about Jan. 15, 1922.

Ser. No. 162,405. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) JOHN W. HANCOCK, doing business as J. W. Hancock Electrical Co., Denver, Colo. Filed Apr. 17, 1922.

COLUMBALITE

Particular description of goods.—Electric-Light Fixtures.

Claims use since Nov. 1, 1921.

Ser. No. 162,417. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) INTERNATIONAL CONSOLIDATED CHEMICAL CORPORATION, INC., doing business as the Dae Health Laboratories, New York, N. Y. Filed Apr. 17, 1922.

Vitamized

Particular description of goods.—Medicinal Preparation for Malassimilation and Nutritional Disorders.

Claims use since Dec. 22, 1921.

Ser. No. 162,452. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) RUTLAND FIRE CLAY CO., Rutland, Vt. Filed Apr. 17, 1922. Under Sec. 9 of the act of Mar. 19, 1920.

RUTLAND

Particular description of goods.—Liquid Stove Polish, Metal Polish, Enamel Cleaner, and Waste-Pipe Cleaner.

Claims use since some time in March, 1901.

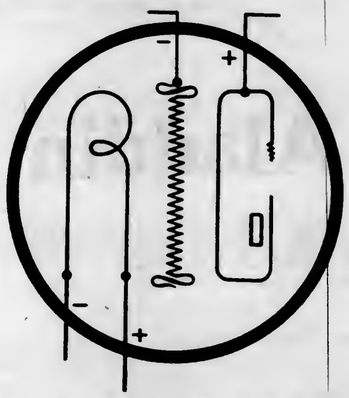
Ser. No. 162,476. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) P. L. BEARDEN, Dallas, Tex. Filed Apr. 18, 1922.

DUST-ETER

Particular description of goods.—Polishing Cloth.

Claims use in business in State commerce since Mar. 20, 1922; in interstate commerce since Apr. 11, 1922.

Ser. No. 162,616. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) PHILIP E. EDELMAN, New York, N. Y. Filed Apr. 20, 1922.



Edelman's Raytainor

No claim to the word "Edelman's" except in connection with the mark.

Particular description of goods.—Complete Loud-Speaking Wireless Receiving Sets, Radio Cabinets, Containing Radio Apparatus Mounted in and on Said Cabinets, Combined Radio and Phonograph Machines, and Wireless Receiving Sets and Parts.

Claims use since Aug. 1, 1921.

Ser. No. 162,669. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) BRENT DANIEL, doing business as Radio Instrument Company, Washington, D. C. Filed Apr. 21, 1922.

Particular description of goods.—Radio, Telegraph, and Telephone Transmitting and Receiving Apparatus.

Claims use since Sept. 1, 1920.

Ser. No. 162,767. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) PACIFIC CHEMICAL COMPANY, Los Angeles, Calif. Filed Apr. 22, 1922.

HASTY

Particular description of goods.—Hand Soap.

Claims use since Jan. 28, 1922.

Ser. No. 162,810. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) EAGLE CHEMICAL COMPANY, Milwaukee, Wis. Filed Apr. 24, 1922.

Zerobac

Particular description of goods.—Cleansing, Sterilizing, and Disinfecting Compound.

Claims use since about Oct. 5, 1921.

Ser. No. 162,840. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) MID-WEST MANUFACTURING COMPANY, Minneapolis, Minn. Filed Apr. 24, 1922.

RED DEVIL

Particular description of goods.—Burnishing Compound.

Claims use since Nov. 15, 1921.

Ser. No. 162,857. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) SALOMON & WIENER, INC., New York, N. Y. Filed Apr. 24, 1922.

Particular description of goods.—Unmanufactured Fur.

Claims use since Feb. 1, 1922.

Ser. No. 162,903. (CLASS 37. PAPER AND STATIONERY.) STANDARD OIL COMPANY OF NEW YORK, New York, N. Y. Filed Apr. 25, 1922.

SOCONY

Particular description of goods.—Crayons.

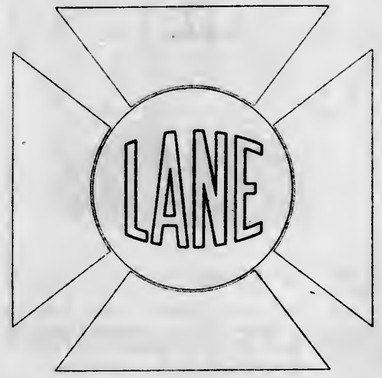
Claims use since Feb. 26, 1908.

Ser. No. 162,959. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) A. G. SPALDING & BROS., New York, N. Y. Filed Apr. 26, 1922.

KRO FLITE

Particular description of goods.—Golf Balls.

Claims use since Mar. 21, 1922.



Ser. No. 163,043. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) FRED WRIGHT HOGUE, McGregor, Iowa. Filed Apr. 28, 1922.

"GUSTO"

Particular description of goods.—Liquid Preparation for Cleaning Rugs, Carpets, Upholstery, and the Like.

Claims use since Dec. 21, 1920.

Ser. No. 163,155. (CLASS 12. CONSTRUCTION MATERIALS.) ARTHUR E. LANE LUMBER CORP., New York, N. Y. Filed May 1, 1922.

Particular description of goods.—Wood Shingles.

Claims use since about 1912.

Ser. No. 163,178. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) THE RIESER COMPANY, New York, N. Y. Filed May 1, 1922.

Rovina

Particular description of goods.—Hair Nets.

Claims use since May 29, 1920.

Ser. No. 163,181. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) THE RIEGEL COMPANY, New York, N. Y. Filed May 1, 1922.

PENELA

Particular description of goods.—Hair Nets.
Claims use since May 29, 1920.

Ser. No. 163,228. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) MULHENS & KROPFF, INCORPORATED, New York, N. Y. Filed May 2, 1922.

L'OFFRANDE

Particular description of goods.—Toilet Soaps.
Claims use since March, 1922.

Ser. No. 163,273. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ALONZO C. HOLLOWAY, Hoisington, Kans. Filed May 3, 1922.

The portrait comprising a part of trade-mark is that of applicant.
Particular description of goods.—Cough Sirup Used in the Treatment of Colds, Croup, Whooping Cough, Asthma, Consumption, and All Kinds of Lung Trouble.
Claims use since Mar. 18, 1922.

Ser. No. 163,280. (CLASS 37. PAPER AND STATIONERY.) WILLIAM MANN COMPANY, Philadelphia, Pa. Filed May 3, 1922.

MANCO

Particular description of goods.—Checks, Check-Book Cases, and Check-Book Covers, and Safety Paper.
Claims use since about Dec. 27, 1921; on safety paper since Mar. 1, 1922.

Ser. No. 163,297. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) TURNER & WALLS, New York, N. Y. Filed May 3, 1922.

BOCAIRE

Trade-mark "Bocaire."
Particular description of goods.—Shirtings in the Piece Woven from Silk or Cotton or Mixtures of the Same.
Claims use since Apr. 24, 1922.

Ser. No. 163,298. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) TURNER & STROOCK, INC., New York, N. Y. Filed May 3, 1922.

DOUV=CHINE

Particular description of goods.—Cloth Made of Artificial Silk.
Claims use since Apr. 21, 1922.

Ser. No. 163,388. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) S. GLEMBY'S SONS CO., INC., New York, N. Y. Filed May 5, 1922.

KISMET

Particular description of goods.—Hair Nets.
Claims use since Mar. 27, 1922.

Ser. No. 163,389. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) S. GLEMBY'S SONS CO., INC., New York, N. Y. Filed May 5, 1922.

Myro

Particular description of goods.—Hair Nets.
Claims use since Mar. 27, 1922.

Ser. No. 163,390. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) S. GLEMBY'S SONS CO., INC., New York, N. Y. Filed May 5, 1922.

SWANNETTE

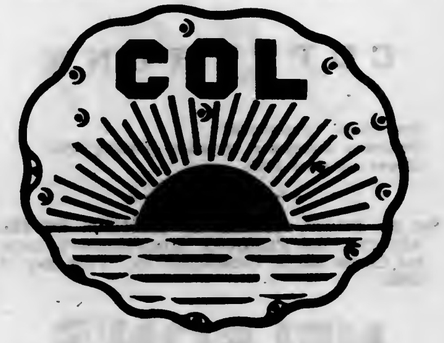
Particular description of goods.—Hair Nets.
Claims use since Mar. 27, 1922.

Ser. No. 163,414. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) ROYAL LEMON PRODUCTS CO., St. Paul, Minn. Filed May 5, 1922.

Particular description of goods.—Washing Powders.
Claims use since June 15, 1916.

Ser. No. 163,442. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) GRAIN JUICE COMPANY, Dallas, Tex. Filed May 6, 1922.

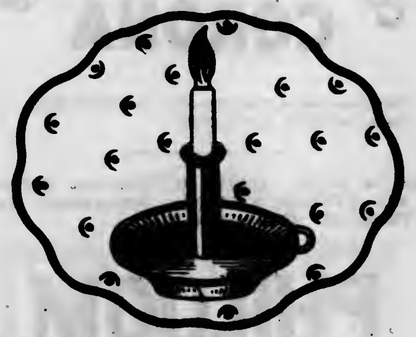
TROPI-COLA



No claim to word "Cola" apart from mark.
Particular description of goods.—Nonalcoholic, Noncereal, Maltless Beverages Sold as Soft Drinks and Sirups for Making Same.
Claims use since Feb. 1, 1921.

Ser. No. 163,490. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) ZOLLINGER AND SCHRÖTH, INC., New York, N. Y. Filed May 6, 1922.

VEL DU BARRY



Particular description of goods.—Silk Piece Goods.
Claims use since Apr. 27, 1922.

Ser. No. 163,672. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) SARAH A. COLSON and JESSIE L. COLSON, administratrices of the estate of Edwin Colson, Elmer, N. J. Filed May 11, 1922.

CUTTYHUNK

Trade-mark "Cuttyhunk."
Particular description of goods.—Fishing Line.
Claims use since 1850.

Ser. No. 163,820. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) HUGH NELSON'S COLUMBIA CARPET MILLS, Philadelphia, Pa. Filed May 13, 1922.

NELSON'S
COLUMBIA CARPET MILLS
CORONA

Particular description of goods.—Axminster Rugs.
Claims use since Apr. 3, 1922.

Ser. No. 163,893. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) PHILIPSBORN'S INC., Chicago, Ill. Filed May 15, 1922.

PHILOOM

Particular description of goods.—Silk Taffetas and Satin Messalines in the Piece.
Claims use since Apr. 1, 1922.

Ser. No. 163,903. (CLASS 12, CONSTRUCTION MATERIALS.) THOMAS MOULDING BRICK COMPANY, Chicago, Ill. Filed May 15, 1922.

T-M-B
FLOORING

No claim to exclusive use of word "Flooring" apart from mark.
Particular description of goods.—Mastic Flooring.
Claims use since 1917.

Ser. No. 163,937. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ABRAHAM MELL, New York, N. Y. Filed May 16, 1922.

Green River

Particular description of goods.—Hair Tonic.
Claims use since Mar. 9, 1922.

Ser. No. 163,953. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) VICTOR-MONAGHAN COMPANY, Greenville, S. C. Filed May 16, 1922.

SENECA

Trade-mark "Seneca."
Particular description of goods.—Cotton Piece Goods.
Claims use since Mar. 13, 1918.

Ser. No. 164,027. (CLASS 37. PAPER AND STATIONERY.) EUGENE DIETZGEN COMPANY, Chicago, Ill. Filed May 18, 1922.

EDCO

Particular description of goods.—Lead Pencils.
Claims use since Feb. 12, 1922.

Ser. No. 164,061. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) JACOB MILLER SONS & Co., Philadelphia, Pa. Filed May 18, 1922.

DECORAY

Particular description of goods.—Cotton Goods, Silk Goods, Linen Goods, and Mixtures of Cotton and Silk and Linen and Silk, All in the Piece.
Claims use since May 5, 1922.

Ser. No. 164,062. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) JACOB MILLER SONS & Co., Philadelphia, Pa. Filed May 18, 1922.

TWEEDTEX

Particular description of goods.—Cotton Goods, Silk Goods, Linen Goods, and Mixtures of Cotton and Silk and Linen and Silk, All in the Piece.
Claims use since May 11, 1922.

Ser. No. 164,063. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) JACOB MILLER SONS & Co., Philadelphia, Pa. Filed May 18, 1922.

ECRUSHEEN

Particular description of goods.—Cotton Goods, Silk Goods, Linen Goods, and Mixtures of Cotton and Silk and Linen and Silk, All in the Piece.
Claims use since May 9, 1922.

Ser. No. 164,113. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MORRIS, MANN & REILLY, INC., Chicago, Ill. Filed May 19, 1922.

M.M.R

Particular description of goods.—Hair Nets.
Claims use since April 15, 1922.

Ser. No. 164,121. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) B. SHACKMAN & Co., New York, N. Y. Filed May 19, 1922.

BEAUTY

Particular description of goods.—Snapping Mottoes.
Claims use since 1916.

Ser. No. 164,124. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) B. SHACKMAN & Co., New York, N. Y. Filed May 19, 1922.

LEADER

Particular description of goods.—Snapping Mottoes.
Claims use since January, 1921.

Ser. No. 164,166. (CLASS 37. PAPER AND STATIONERY.) INTERNATIONAL PAPER COMPANY, New York, N. Y. Filed May 20, 1922.

IPCO

Particular description of goods.—Paper Used for Writing and Printing Purposes.
Claims use since Apr. 22, 1922.

Ser. No. 164,170. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) F. W. KLINGER AND LANGBEIN Co., Philadelphia, Pa. Filed May 20, 1922.

Common Sense

Particular description of goods.—Fishing-Fly Books.
Claims use since about Jan. 1, 1913.

Ser. No. 164,250. (CLASS 37. PAPER AND STATIONERY.) CHARLES F. HUBBS & COMPANY, New York, N. Y. Filed May 22, 1922.

RAPWELL
KRAFT

Particular description of goods.—Wrapping Paper.
Claims use since 1920.

Ser. No. 164,251. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ITEN BISCUIT CO., Clinton, Iowa. Filed May 22, 1922.

FAIRY

Particular description of goods.—Soda Crackers.
Claims use since 1905.

Ser. No. 164,306. (CLASS 37. PAPER AND STATIONERY.) J. C. BLAIR COMPANY, Huntingdon, Pa. Filed May 23, 1922.

Particular description of goods.—Paper for Writing and Printing Purposes, Drawing Paper, Pencil Paper, Envelopes for Correspondence, Writing, Pencil, Drawing, and Spelling Tablets, and Blank Books.
Claims use since February, 1922.

Ser. No. 164,327. (CLASS 37. PAPER AND STATIONERY.) C. P. LESH PAPER COMPANY, Indianapolis, Ind. Filed May 23, 1922.

HOOSIER

Particular description of goods.—Paper and Envelopes.
Claims use since November, 1908.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

IN RE SCHOLLENBERGER.

No. 1463. Decided March 6, 1922.

1. REJECTION—NEW GROUNDS—FAILURE TO REMAND WHEN NOT REQUESTED IS NOT ERROR.

Where the applicant did not request the Commissioner, who rejected the application on a ground not considered by the Examiner, to remand the case to the Examiner for amendment of the claims, but instead appealed from the Commissioner's decision, he cannot complain of the Commissioner's failure to remand.

2. PATENTABILITY—DOUBT RESOLVED IN FAVOR OF APPLICANT.

Where there is doubt as to the patentability of a claim, *Held* that the doubt should be resolved in favor of the applicant.

Mr. Paul Finckel and *Mr. Ray P. Scott* for Schollenberger.

Mr. T. A. Hostetler for the Commissioner of Patents.

SMYTH, *C. J.:*

This is an appeal from a decision of the Commissioner of Patents rejecting an application for a patent. The structure upon which the patent is sought is described in one claim, which reads as follows:

> In a sanitary closet, the combination with a room, of a toilet bowl therein, having a seat and hinged cover, a tank below said bowl, a relatively large tubular conducting member between said bowl and said tank, a primary vent pipe leading from the upper portion of said tank upwardly through said room, immediately back of the bowl and adjacent to it, and a comparatively small by-pass or secondary vent pipe connecting the upper rear interior of said bowl at the point nearest said primary vent pipe, with said primary vent pipe at an angle of substantially forty-five degrees.

The Primary Examiner and the Examiners in Chief denied the application, on the ground that the invention described was anticipated by patents to three persons, while the Commissioner proceeded on the assumption that—

> the specific coaction between the various details recited, which is necessary to a paentable combination,

was not shown.

Appellant says that since his application was not twice rejected or rejected at all by the Primary Examiner on the ground given by the Commissioner, the latter should have remanded the case to the former with directions that he, the appellant, be permitted to modify his claims so as to obviate the newly-raised objection. But the ready answer to this is that he did not ask that this be done, but appealed from the Commissioner to this court. It cannot be properly said that the Commissioner erred in failing to do that which he was not requested to do.

It seems to be the settled law that to constitute a combination, as distinguished from an aggregation, it is essential that there should be some joint operation performed by the combination which produces a new and useful result. (*American Chocolate Machinery Co.* v. *Helmstetter*, 142 Fed., 978; *in re Lower*, 49 App. D. C., 226; 263 Fed., 478; 272 O. G., 913.) But does not the device we are considering produce such a result? Dealing with this subject are affidavits of two disinterested engineers of broad experience in the heating and ventilating art. One of them is a graduate of the Massachusetts Institute of Technology, and the other, of the Nebraska State University. For nearly eighteen years they have studied problems of ventilation and movements of air. Each engineer carefully examined the references cited by the Office, and compared them, element by element, with the Shollenberger device. They pointed out the differences between the latter and the references, and said the differences were real, fundamental, and essential. According to them, the device of the application is original and accomplishes a new result. There are more than three thousand of the devices in use, a fact which tends to corroborate the testimony of the engineers that the device achieves results not reached by those of the references. Weight should be given to this on the question of patentability. (*In re Thomson*, 26 App. D. C., 419, 425; 120 O. G., 2756.) It would seem that Shollenberger has succeeded where others have failed, and this is evidence of invention. (*In re Rowell*, 48 App. D. C., 238, 241; 259 O. G., 778, and cases cited.)

In view of these things we have serious doubt as to the patentability of the device. And, following our rule that where there is such doubt it should be resolved in favor of the applicant, we hold the claim of the issue is patentable, and accordingly reverse the decision of the Commissioner.

Reversed.

U. S. Circuit Court of Appeals—Seventh Circuit.

CONDRON CO. v. CORRUGATED BAR CO.

Decided March 18, 1922.

[279 Fed. Rep., 867.]

1. PATENTS—1,005,756, CLAIMS 2, 4, 6, 7, FOR REINFORCED CONCRETE FLOOR CONSTRUCTION, HELD INVALID.
The Sinks patent, No. 1,005,756, claims 2, 4, 6, and 7, for an improvement in reinforced construction of floors resting on supporting posts, which differed from prior patents by substituting rods for heavy meshed wire and by a different arrangement of the rods, *Held* void for want of invention.

2. SAME—FACILITY IN ESTIMATING STRENGTH OR COST DOES NOT MAKE PATENTABLE A STRUCTURE NOT OTHERWISE DISCLOSING INVENTION.
The fact that a change in the arrangement of reinforcing rods for concrete floor construction made it easier to estimate the required strength of the materials and the cost of construction does not make it patentable, where the changes in the structure itself did not involve invention.

APPEAL from the District Court of the United States for the Eastern Division of the Northern District of Illinois.

Suit for infringement of a patent by the Condron Company against the Corrugated Bar Company. From a decree dismissing the bill (256 Fed., 672), complainant appeals. Affirmed.

Mr. Melville Church and *Mr. Arthur M. Hood* for the appellant.

Mr. Wallace R. Lane for the appellee.

Before BAKER, ALSCHULER, and EVANS, Circuit Judges.

ALSCHULER, *Cir. J.:*

The action was for infringement of Sinks patent, No. 1,005,756, October 10, 1911. On the hearing claims 2, 4, 6 and 7 were relied on. The district court dismissed the bill for want of equity on the ground of invalidity.

[1] The patent is in the art of reinforced concrete construction of floors resting upon supporting posts. The patent calls it a "monolithic structure," the reinforced concrete of the supporting posts and of the floors being molded together. The claimed achievement is through such an arrangement of reinforcing bars, extending rectangularly from post to post, crossing each other above the posts, whereby this part of the structure will constitute what in the patent is termed "inclosing slabs," constituting part of the floor, and at the same time affording support for the intervening floor filling the space between these "inclosing slabs." The intervening slabs are directly strengthened and supported by transverse bars extending between and supported by the inclosing slabs, and are disposed within the slab, so as to be where the greatest tensile strength is necessary. But when completed the entire floor is in fact a single slab, without any deep supporting beams below, save only as the widely flaring post tops of the patent in a measure serve the function of such beams.

Advantage is claimed, not only in doing away with deep floor beams or girders, but also in enabling engineers more readily and accurately to figure strains and stresses. Reinforced-concrete floors, supported by succession of posts, without the deep floor beams or girders, were not new with Sinks. Norcross—Patent No. 698,542, 1902—showed such a floor. It does not appear that his supporting posts were monolithic with the floors; but this is a mere detail of construction, wherein patentability does not reside, and is not claimed. His reinforcing agent was not rods; but he describes a heavy meshed wire, and extends it rectangularly from post to post, thus having in the same sense as Sinks inclosing slabs, in that his heaviest reinforcement is directly from post to post. To substitute rods of varying dimensions, for taking care of the estimated strain, would not involve invention.

Patent No. 1,003,384, to Turner, September 12, 1911, though not necessarily in the prior art, shows a peculiar arrangement of rods just above the posts and for supporting the intervening floor he had rods extending diagonally from post to post instead of rectangularly between the inclosing slabs as in Sinks. He showed the same absence of floor beams and girders. The District Court of New Jersey (236 Fed., 252) held this patent and divisional patent to Turner No. 985,119 invalid, and in sustaining the decree in that case the court of appeals said:

> There is to-day neither invention nor novelty in merely placing metal reinforcement in concrete at places at which strains come. The very principle of reinforcement, as the word denotes, is to give force to or strengthen the place that is weak by adding something that is strong. Invention in reinforcement is to be found only in discovering a new principle or in employing new means embodying the old principle. Therefore one striving to find a new principle, or to invent a new means of concrete reinforcement under the old principle, enters a well-known and widely practiced art, and must do something more than care for tensile strains at places where they are known to come. (*Turner* v. *Lauter Piano Co.*, 248 Fed., 930; 161 C. C. A., 48.)

In *Turner* v. *Deere & Webber Building Co.* (249 Fed., 752; 161 C. C. A., 662, 8th C. C. A.) the court, passing upon claims of Turner's divisional patent, No. 985,119, said:

> The evidence of prior practice in building and prior publications and patents show that little was left for patentable invention in placing the customary pieces of metal here or there, or turning them this way or that, in the mass of concrete.

The decree was sustained, holding the claims there in issue void for want of invention.

[2] As to the contention of greater facility in the Sinks structure for figuring strains and stresses, this would not support the claims of the patent, particularly as no method for figuring them is pointed out by Sinks. We are not aware that an alleged improvement in a structure, not in itself involving invention, would be patentable merely because it might be more easy to estimate its strength, or to figure its cost. From a reading of the opinion of Judge A. L. Sanborn, who heard the case in the district court, we are satisfied that a proper disposition of the case was there made. (256 Fed., 672.)

The decree of the district court is affirmed.

PATENT SUITS.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 21, 1922.

Leslie & Welsh, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Flora W. Pinkus, of 93 Third Avenue, New York, for registration of a trade-mark and trade-mark registered November 6, 1894, No. 25,463, to Leslie & Welsh, 297 Main Street, Buffalo, N. Y., and a notice of such declaration sent by registered mail to said Leslie & Welsh at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Leslie & Welsh, their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 26, 1922.

Paragon Malt Extract Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of the Pabst Corporation, Milwaukee, Wis., the Decatur Brewing Co., 604 Cantrell Street, Decatur, Ill., and the Pabst Brewing Company, 917 Chestnut Street, Milwaukee, Wis., for registrations of trade-marks and trade-mark registered March 5, 1907. No. 61,117, to the Paragon Malt Extract Co., 3553 Third Avenue, New York, N. Y., and a notice of such declaration sent by registered mail to the said Paragon Malt Extract Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Paragon Malt Extract Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 30, 1922.

The Rhubaral Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The William S. Merrell Company, of Fifth and Pike Streets, Cincinnati, Ohio, for registration of a trade-mark and trade-mark registered June 2, 1914, No. 97,440, to The Rhubaral Company, of 1151 Market Street, Wheeling, W. Va., and a notice of such declaration sent by registered mail to said The Rhubaral Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said The Rhubaral Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

The I. C. Hunsicker & Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Pittsburgh Dry Goods Company, No. 935 Penn Avenue, Pittsburgh, Pa., for registration of a trade-mark and trade-mark registered January 17, 1893, No. 22,342, to The I. C. Hunsicker & Co., Fourth and Washington Streets, Reading, Pa., and a notice of such declaration sent by registered mail to said I. C. Hunsicker & Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said I. C. Hunsicker & Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

Changes in Classification.

(ORDER No. 2,762.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 30, 1922.

The following changes in the classification of inventions are hereby directed, to take effect immediately:

In class 137, Water Distribution (Division XXXIX), abolish subclasses—

Cocks and faucets—
85. Thermal—
92. High temperature.

Rotary pumps—
176. Peripheral supply,
End supply—
177. Plural shafts—
Series—
178. Reversely rotating,
179. Single shaft—
180. Opposed delivery,
181. Opposed supply,
182. Series,
183. Tangential delivery,

Rotary pumps—
Center supply—
184. Plural shafts—
185. Series—
186. Reversely rotating,
187. Single shaft—
188. Series—
189. Concentric,
190. Opposed supply—
191. Tangential delivery—
192. Angular vane
193. Tube-wheel,

Rotary pumps—
Center supply—
Single shaft—
194. Single supply—
195. Angular vane—
196. Tangential delivery,
197. End flow,
198. End delivery,
199. Center delivery,
200. Tangential delivery,
201. Tube-wheel.

The patents formerly contained in these subclasses have been placed for the most part in class 103, Pumps, reclassified in this order, and class 280, Air and Gas Pumps, subclass 11, Fan blowers.

In class 103, Pumps (Division IX), abolish the existing subclasses and establish in lieu thereof the following subclasses and definitions:

103.—PUMPS.
1. **Miscellaneous.**
2. **Multiple suction or discharge.**
3. **Reversible flow.**
4. **Combined types—**
5. Series.
6. **Multiple fluids—**
7. Single pump—
8. Cooperating piston,
9. Separate pulsation chambers.
10. **Convertible types.**
11. **Regulators—**
12. Combined controlling devices,
13. Throttle valve—
14. Float,
15. Thermostatic,
16. Expansible-chamber operated—
17. Valve controlled—
18. Float,
19. Multiple fluid pressure—
20. Valve controlled,
21. Flow controlled,
22. Starting and stopping devices—
23. Connectors and disconnectors—
24. Belt shifter,
25. Electric motor—
26. Float controlled,
27. Explosive engine,
28. Float—
29. Reciprocating rack,
30. Curved rack,
31. Gravity vessel—
32. Float controlled,
33. Expansible-chamber operated—
34. Float controlled,
35. Speed control—
36. Overflow to motor,
37. Variable capacity—
38. Stroke regulators,
39. Load distribution—
40. Check-valve controller,
41. By-pass—
42. Pressure operated.

103.—PUMPS—Continued.
43. **With motor—**
44. Fluid transmission—
45. Pump and motor circuit,
46. Drilled-well type,
47. Reciprocating motor—
48. Direct connected—
49. Multiple units,
50. Single acting plunger—
51. Double plunger,
52. Common piston,
53. Electric motor,
54. Explosive motor,
55. Gravity vessel,
56. Buoyant motor,
57. Rotary motor,
58. Current motor—
59. Rotary—
60. Water wheel—
61. Water bucket attached,
62. Endless-chain pump,
63. Endless chain,
64. Tide or wave motor—
65. Vane or bucket—
66. Oscillating,
67. Rotary,
68. Float—
69. Pivoted,
70. Vertically guided,
71. Weight.
72. **Endless chain—**
73. Piston type—
74. Pistons.
75. **Momentum-liquid piston—**
76. Vibrating tube,
77. Hydraulic ram—
78. Multiple drive pipes,
79. With pump.
80. **Paddle.**
81. **Rocking channel.**
82. **Scoop.**
83. **Rotary—**
84. Viscosity type,
85. Dipping channel—
86. Helicoidal,
87. With motor,
88. Screw and centrifugal,

103.—PUMPS—Continued.
Rotary—
89. Screw—
90. Drilled-well type,
91. Rotary casing,
92. Multiple impellers—
93. Series,
94. Reversely rotating,
95. Centripetal,
96. Centrifugal—
97. Regulators,
98. With turbo diffuser,
99. Tube type—
100. Radiating channels,
101. Bowl type,
102. Drilled-well type,
103. Center intake—
104. Opposed intakes,
105. Multiple impellers—
106. Convertible,
107. Parallel,
108. Series—
109. Opposed intakes,
110. Concentric,
111. Elements—
112. Balancing devices,
113. Priming and venting devices,
114. Liners and materials,
115. Impellers.
116. **Expansible chamber—**
117. Rotary—
118. With motor,
119. Drilled-well type,
120. Variable capacity,
121. Rotary cylinder,
122. Movable abutment—
123. Reciprocating,
124. Oscillating,
125. Rotary,
126. Intermeshing impellers—
127. Beveled,
128. Helical,
129. Alternating pistons,
130. Planetary piston—
131. Nonrotating—
132. Movable abutment,
133. Nutating axis,

The patents formerly contained in these subclasses have been placed for the most part from class 137, Water Distribution, subclasses 34.3, Drain valves, Automatic control, By thermal element, and 161, High temperature, and the subclass indented thereunder, hereinafter established.

In class 137, Water Distribution (Division XXXIX), establish subclasses—

Drain valves—
34. Manual control,
34.1. Automatic control—
34.2. Liquid pressure,
34.3. By thermal element.
161. **High temperature—**
162. Valve closing, fuse operated.

The patents contained in subclasses 34, 34.1, and 34.2, above, have been taken for the most part from class 103, Pumps, subclass 60, Elements, Cut-off and drain devices, hereinafter abolished, and those contained in subclasses 34.3, 161, and 162 have been taken for the most part from class 137, Water Distribution, subclasses 35, Cocks and faucets, Thermal, and 92, Cocks and faucets, Thermal, High temperature, hereinbefore abolished.

Abolish class 160, Steam and Vacuum Pumps (Division XVIII), the patents formerly contained in this class having been placed for the most part in class 103, Pumps, reclassified in this order.

In class 253, Motors—Fluid (Division IX), abolish the following subclasses with their definitions:

163.—PUMPS—Continued.
Expansible chamber—
Rotary—
134. Movable vane—
135. Reciprocating—
136. Radial—
137. Diametrically cooperating—
138. Intersecting,
139. Axially moving,
140. Oscillating—
141. Radial pivot—
142. Axial,
143. Rotary,
144. Stationary pivot,
145. Oscillating piston—
146. Valved piston,
147. With motor,
148. Collapsible chamber—
149. Rotary compress,
150. Diaphragm—
151. Valved,
152. With motor,
153. Reciprocating piston—
154. Fuel-feeder types,
155. Drilled-well type—
156. Double acting,
157. Axially rotating,
158. Movable cylinder—
159. Oscillating,
160. Rotary—
161. Multiple cylinders—
162. Parallel,
163. Flow controlling,
164. Fluid transmission—
165. Liquid,
166. Opposing pistons,
167. Successive pistons—
168. Differential pistons,
169. Multiple cylinders—
170. Duplex,
171. Aligned—
172. Center inlet and delivery,
173. Annularly disposed,
174. Radiating,

163.—PUMPS—Continued.
Expansible chamber—
Reciprocating piston—
175. Double acting—
176. Multiple cylinders—
177. Parallel,
178. Valved piston—
179. Drilled-well type—
180. Valve puller,
181. Removable barrel,
182. Multiple cylinders—
183. Duplex,
184. Aligned cylinders—
185. Center supply,
186. Center delivery,
187. Solid piston combined,
188. Hollow piston rod—
189. Valved piston combined,
190. Solid piston combined,
191. Multiple cylinders,
192. Double-acting piston—
193. Hollow suction rod,
194. Successive pistons—
195. Combined solid piston—
196. Hollow piston rod,
197. Reversed valves,
198. Oppositely moving—
199. Reversed valves,
200. Aligned,
201. Solid piston combined.
202. Elements—
203. Priming and venting,
204. Agitating, flushing, and fluid packing,
205. Operating devices—
206. Power and load equalizers,
207. Multiple actuators,
208. Animal or vehicle,
209. Vehicle and cable,
210. Quick return,
211. Spring or weight,
212. Flexible transmission,
213. Cams and eccentrics,
214. Rack and pinion,
215. Oscillating lever,

163.—PUMPS—Continued.
Elements—
216. Cylinders, liners, and materials,
217. Stocks and casings,
218. Supports—
219. Tube-well types,
220. Sand traps and strainers,
221. Drain devices,
222. Accumulators,
223. Cushioning devices—
224. Air and vacuum chambers,
225. Valved pistons,
226. Releasable piston-rod and cable couplings,
227. Valve actuation,
228. Valves—
229. Standing,
230. Multiple.
231. Pneumatic displacement and air jet.
232. Aerated column—
233. Series.
234. Pneumatic displacement—
235. Vacuum and pressure,
236. Vacuum,
237. Hydraulic compression,
238. Multiple chambers—
239. Series.
240. Automatic valve actuation—
241. Electric motor,
242. Gravity vessel—
243. Movable pump chamber,
244. Rotary motor,
245. Reciprocating motor—
246. Float controlled,
247. Mechanically controlled,
248. Float.
249. Combustion—
250. Momentum liquid piston,
251. Vacuum.
252. Steam and vacuum—
253. Boiler feeders,
254. Steam loop.
255. With generator,
256. Multiple chambers—
257. Duplex.

WM. A. KINNAN, *Acting Commissioner.*

Changes in Classification.

(ORDER No. 2,763.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 22, 1922.

It is hereby directed that class 76, Metal Tools and Implements—Making, be transferred from Division XIII to Division XIV, to take effect immediately.

WM. A. KINNAN,
Acting Commissioner.

Changes in Classification.

(ORDER No. 2,768.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 5, 1922.

The transfer of the following classes is hereby directed, to take effect immediately:

Classes 9, Boats and Buoys; 114, Ships; 115, Marine Propulsion, and 124, Air Guns, Catapults, and Targets, from Division XLIV to Division XXII.

Classes 221, Dispensing, and 225, Dispensing Beverages, from Division XLIII to Division XLIV.

Class 107, Bread, Pastry, and Confection Making, from Division XV to Division XLIV.

WM. A. KINNAN,
Acting Commissioner.

Interference Defined.

RULE 93. An interference is a proceeding instituted for the purpose of determining the question of priority of invention between two or more parties claiming substantially the same patentable invention. In order to ascertain whether any question of priority arises the Commissioner may call upon any junior applicant to state in writing the date when he conceived the invention under consideration. All statements filed in compliance with this rule will be returned to the parties filing them. In case the applicant makes no reply within the time specified, not less than ten days, the Commissioner will proceed upon the assumption that the said date is the date of the oath attached to the application. The fact that one of the parties has already obtained a patent will not prevent an interference, for, although the Commissioner has no power to cancel a patent, he may grant another patent for the same invention to a person who proves to be the prior inventor.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 300—No. 4. TUESDAY, JULY 25, 1922. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Disclaimers.

899,446.—*Robert Faries*, Williamsport, Pa. PRESSURE INDICATOR AND REGULATOR. Patent dated September 22, 1908. Disclaimer filed July 14, 1922, by the assignee, *A. Schrader's Son, Incorporated.*

Hereby disclaim claims 1, 2, 3, 4, 5, 7, 10, 11, 12, and 14 of the said Patent No. 899,446, the said claims reading as follows:

"1. The combination of movably mounted valve mechanism, comprising a valve and its seat, the valve being movable to and from its seat, and pressure-indicating means for showing varying pressures, operated by the movement of said mechanism.

"2. The combination of movably mounted valve mechanism, comprising a valve and its seat, the valve being movable to and from its seat, means for placing said mechanism in communication with the pressure-containing structure, at all points in the movement of said mechanism, and indicating means for showing varying pressures, operated by the movement of said mechanism.

"3. The combination of a stem or casing, adapted to be attached to a fluid-pressure receiving structure, a valve mechanism movably mounted in said casing, comprising a valve and its seat, to and from which the valve is movable, and indicating means for showing varying pressures within said structure, operated by the movement of said mechanism.

"4. The combination of a stem or casing adapted to be attached to a fluid-pressure receiving structure, an inwardly opening valve mechanism movably mounted in said casing, an extensible and contractible connection between said valve mechanism and the interior of the pressure-receiving structure, and indicating means operated by said valve mechanism.

"5. The combination of movably mounted valve mechanism, comprising a valve and its seat, the valve being movable to and from its seat, pressure-indicating means for showing varying pressures operated by the movement of said mechanism, and automatic means for relieving excess pressure.

"7. The combination of a stem or casing adapted to be attached to a fluid-pressure receiving structure, an inwardly opening valve mechanism movably mounted in said casing, an extensible and contractible connection between said valve mechanism and the interior of the pressure-receiving structure, indicating means operated by said valve mechanism, and a spring opposing the movement of the indicating means by pressure on the valve mechanism.

"10. The combination with a pneumatic tire, of a pressure indicator comprising a tube or casing attached to the tire for showing varying pressures within the tire, and a member slidably connected with said tube or casing, having a pressure-receiving part in communication with the interior of the tire.

"11. The combination of movably mounted valve mechanism, comprising a valve and its seat, to and from which the valve is movable, pressure indicating means operated by the movement of such mechanism, a spring yieldingly opposing the movement of the indicating means by pressure, and means to positively prevent movement of the indicator by pressure on said mechanism.

"12. The combination of movably mounted valve mechanism, comprising a valve and its seat, to and from which the valve is movable, pressure indicating means operated by the movement of such mechanism, a spring yieldingly opposing the movement of the indicating means by pressure, and a screw cap adapted to engage the valve mechanism and hold it from movement by pressure.

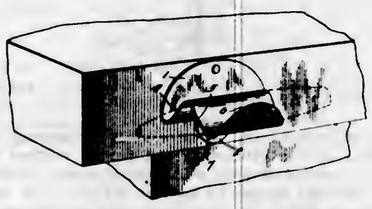
"14. The combination of a pressure indicator having a spring acting yieldingly in opposition to pressure to move the indicator, and means to positively hold the indicator from movement by such pressure."

Hereby further disclaim from the scope of claim 6 and of claim 13 (1) any combination which does not constitute an inflation valve for pneumatic tires which "is normally closed to prevent egress of air from within the tube, but yields inwardly to permit the ingress of air thereto, in the well known manner" and (2) any combination of elements in which the "valve mechanism" set forth in said claim 6 and in said claim 13 is not that "through which air is injected into the tire and therein retained."

1,035,185.—*William P. Hammond*, New York, N. Y., and *Theodore A. Hammond*, Passaic, N. J. VALVE FOR PNEUMATIC TIRES. Patent dated August 13, 1912. Disclaimer filed July 14, 1922, by the assignee, *A. Schrader's Son, Incorporated.*

Hereby disclaim from the scope of each and all of the claims of said Patent No. 1,035,185, (1) any combination which does not constitute a "valve for pneumatic tires" as such term is understood in the art, and was so understood at the date of said patent, that is to say, a valve or valve stem constructed and adapted for connection with a pump or other inflating means for the purpose of inflating the tire, and (2) any combination of elements in which the "valve mechanism" set forth in the claims does not comprise the inwardly-opening check valve and seat of such pneumatic tire valve or valve stem.

Condition of Applications Under Examination at Close of Business July 15, 1922.



(Total number of applications waiting action, excluding Trade-Mark division, 67,657; Trade-Mark division, 8,522. Oldest new case, May 18; oldest amended, Apr. 18, 1921. The dates given are 1921 except where * indicates 1922.)

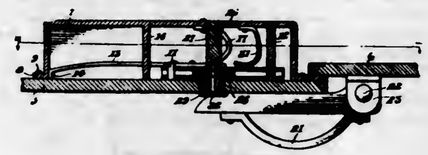
PATENTS

GRANTED JULY 25, 1922.

1,423,507. CIGAR REST. LOUISE ALLEN, Hawarden, Iowa. Filed Dec. 3, 1920. Serial No. 428,054. 1 Claim. (Cl. 131—51.)

As a new article of manufacture, a cigar holder consisting of an elongated strip of metal having a tongue formed within the body of the strip, said tongue and the adjacent end of the strip being aligned to permit of attachment to a vertical wall, and having openings for fasteners, the free end of the strip being bent to approximately right angles to the tongues and adjacent end of the strip and formed into a plurality of looped portions, the outermost of said looped portions being of suitable shape and size to hold a cigar and in a position spaced substantially apart from the wooden or other vertical wall to which the device may be attached.

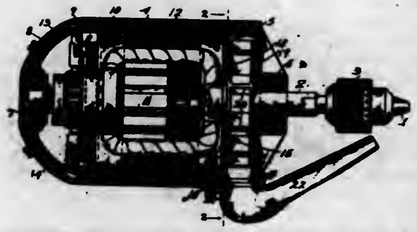


1,423,508. CAR-SEAT CONSTRUCTION. FRANK ANDRUSYSZYN, Revloc, Pa. Filed Dec. 1, 1921. Serial No. 519,173. 1 Claim. (Cl. 155—101.)

A car seat construction comprising a plurality of seats arranged in series, each seat comprising a base frame, a hinged back carried by each base frame, a connecting rod pivotally secured to the corresponding sides of the seat backs, means for shifting said rod to cause a simultaneous movement of the seat backs and spring devices associated with said connecting rod to prevent vibration thereof when arranged in a set position.

1,423,509. SLIDING-DOOR LOCK. FRANK ANDRUSYSZYN, Revloc, Pa., assignor of one-fourth to Wasyl Klymko, Nanty Glo, Pa., and one-fourth to Anna Senczak, Revloc, Pa. Filed Dec. 1, 1921. Serial No. 519,174. 5 Claims. (Cl. 70—31.)

3. In combination with a sliding door having a transversely swinging bolt connected thereto provided with oppositely extending shoulders, a sliding locking plate adapted to engage one of said shoulders, a member stationary with respect to said door and adapted to engage the other of said shoulders, said last named shoulder being engageable with said stationary member when the door is closed and releasable therefrom upon slight further movement of the door in the direction of its closing movement, means to move said locking plate to disengage the same from the first named shoulder of said bolt,

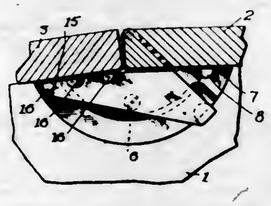


said locking plate and said stationary member having openings adapted to be alined by adjustment of the locking plate for admitting said bolt, and means to yieldingly urge the bolt outwardly through said openings upon alinement of said openings and such further movement of the door in the direction of its closing movement.

1,423,510. METHOD OF CONDUCTING THE AMMONIA-SODA PROCESS. EDWARD E. ARNOLD, Coventry, and PALMER ST. CLAIR, Jr., Providence, R. I., assignors to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 11, 1920. Serial No. 365,087. 9 Claims. (Cl. 23—22.)

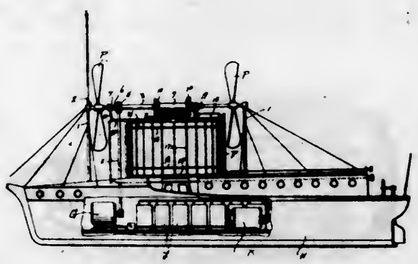
8. The improvement in the ammonia soda process which comprises expanding a compressed gas in proximity to but separated from a body of ammoniated brine to absorb the heat generated by the reactions resulting in the production of sodium bicarbonate.

1,423,511. ROUTING TOOL. JAMES N. BAKER, Brooklyn, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed July 31, 1918. Serial No. 247,471. 3 Claims. (Cl. 90—12.)



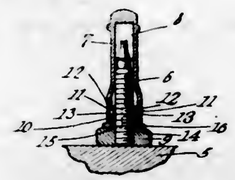
1. In a routing tool, the combination with a tool carrier, means for driving the carrier, a fan driven by the carrier, driving means for producing a current of air, and enclosed connections leading from the fan to the working end of the tool whereby an air current is directed to the tool point and the point kept free from chips.

1,423,512. TRANSMISSION AND MOTOR OIL. WALTER K. BOILEAU, Baltimore, Md., assignor to Pittsburgh Oil Refining Corporation, a Corporation of Delaware. Filed June 5, 1922. Serial No. 566,151. 2 Claims. (Cl. 87—9.)



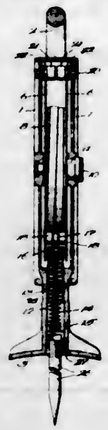
1. An oil for the lubrication of the cylinders, bearings, transmission and the fabric linings of transmission and brake bands of internal combustion engines having the planetary type of transmission used in propelling automobiles and the like, consisting of petroleum oil of the consistency ordinarily used for the lubrication of the cylinders of internal combustion engines, combined with 2 to 12% neutral wool fat.

1,423,513. COMBINED HINGE AND STOP FOR DESK LIDS AND THE LIKE. CHARLES A. BROWN, Gardner, Mass., assignor, by mesne assignments, to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 20, 1919. Serial No. 339,407. 2 Claims. (Cl. 16—191.)



2. A hinge for the movable lid of a desk, said hinge having a stationary element bearing against the desk side, with its edge removed or offset therefrom, and a movable element secured to said lid and providing a portion embracing the offset edge of said stationary element, said portion cooperating with a stop on said stationary element to limit the opening movement of said lid, said movable element being removed from the plane of attachment of said stationary element, whereby to clear the attaching means of said stationary element.

1,423,514. POWER PLANT. WILLIAM PAUL BUTUSOV, Norfolk, Va. Filed Jan. 24, 1921. Serial No. 439,467. 2 Claims. (Cl. 170—10.)

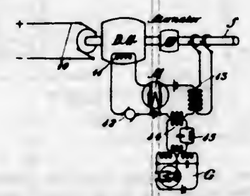


1. The combination with a movable body including a deck, an upstanding frame carried by the deck, the deck and frame having vertically opposed bearings, a wind driven element rotatably supported by said bearings, a shaft supported by the deck above the frame, a sleeve mounted upon the shaft for driven connection with the wind driven element, coacting means carried by the shaft and the sleeve for causing the shaft and sleeve to rotate in unison, said means including a member keyed to the shaft for rotation therewith and for movement lengthwise thereof, and means carried by the frame for imparting movement to the member lengthwise of the shaft.

1,423,515. DUST CAP. ALBERT B. CATTERALL, Ottumwa, Iowa. Filed Mar. 30, 1920. Serial No. 369,976. 1 Claim. (Cl. 152—12.)

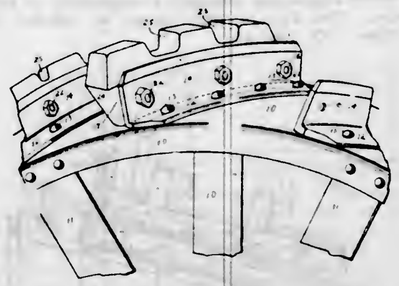
In combination with a valve stem, a securing nut positioned on the valve stem and having resilient upwardly extending fingers, said fingers having enlargements, said nut having an annular groove, a cap of a diameter to engage the valve stem, said cap having an enlarged lower portion providing a clearance for the fingers and having a flange formed at its end, said flange adapted to be fitted in the annular groove, said cap having a groove providing a shoulder disposed in spaced relation with the lower end of the cap, said shoulder adapted to cooperate with the enlargements of the fingers, for forcing the flange of the dust cap into the annular groove of the securing nut, and an annular shoulder formed adjacent to the base of the cap to restrict movement of the cap with respect to the securing nut.

1,423,[illegible]. TAPE REEL. CARL F. DIECKMANN, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 25, 1921. Serial No. 447,712. 7 Claims. (Cl. 242—99.)



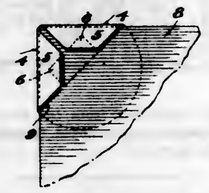
6. A tape reel having a frame, a reel journaled therein, the reel having cheek plates for confining the tape laterally, a member mounted in the frame and projecting radially inward between the cheek plates and a pair of friction elements mounted on said member, and adapted to engage the inner surface of said plate, said elements being spring pressed towards said plates for maintaining contact therewith and creating friction to prevent overthrow.

1,423,517. LAMINATED TALKING-MACHINE RECORD. VICTOR H. EMERSON, New York, N. Y., assignor to Emerson Phonograph Company, Inc., a Corporation of New York. Filed Sept. 27, 1920. Serial No. 413,100. 9 Claims. (Cl. 154—43.)



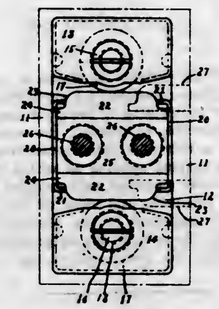
1. A talking machine record, including a base of relatively thin sheet material, an intermediate layer of fluxible bituminous material forming the principal bulk of the record, and a thin outer layer of record stock.

1,423,518. FREQUENCY REGULATOR. LLOYD ESPENSCHIED, Queens, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 11, 1920. Serial No. 388,305. 7 Claims. (Cl. 171—119.)



1. In a synchronizing system a mechanism undergoing a periodic cycle, means to generate an alternating current whose frequency is determined by the frequency of said cycle, means to generate an alternating current whose frequency is independently determined, means to produce a current proportional to the difference between said frequencies, and means responsive to said current for regulating the frequency of said periodic cycle.

1,423,519. DETACHABLE TREAD FOR TRACTOR WHEELS. EUGENE J. FARKAS, Detroit, Mich., assignor to Ford Motor Company, Highland Park, Mich., a Corporation of Delaware. Filed Jan. 13, 1921. Serial No. 436,889. 7 Claims. (Cl. 301—44.)

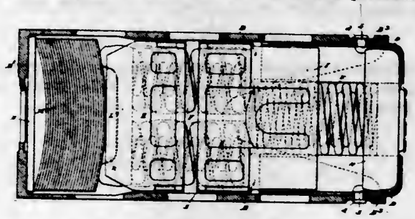


2. In a device of the class described a tractor wheel having a rim, a plurality of lugs secured thereto having blade portions extending from the rim, said blade portions having spaced openings therein, a supporting member of angular cross section having openings in one web thereof to register with the openings in said blade, attaching means removably mounted in said alined openings, diagonal brace members formed integral with the webs of the supporting member at the ends thereof and a somewhat resilient tread member vulcanized to said second web of the supporting member and provided with a plurality of channels therein whereby said tread member may be divided into a plurality of contact pads.

1,423,520. PAPER FASTENER. BENJAMIN H. FRIEDMAN, New York, N. Y. Filed Oct. 7, 1921. Serial No. 506,082. 3 Claims. (Cl. 24—67.)

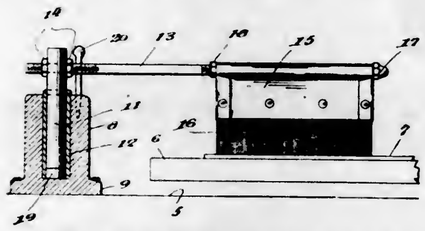
3. A paper fastener comprising a sheet metal plate having a pair of wings inwardly bent to overlie sheets of paper to be secured together, said wings having points doubled over to form portions on said wings of double thickness.

1,423,521. DOOR BUFFER. JOSEPH GALAMB, Detroit, Mich., assignor to Ford Motor Company, Highland Park, Mich., a Corporation of Delaware. Filed Jan. 3, 1921. Serial No. 434,631. 6 Claims. (Cl. 16—85.)



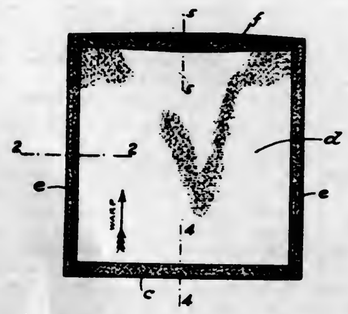
3. In a device of the class described, a supporting member adapted to be secured to a door frame comprising an intermediate portion and pockets formed at either end thereof, rollers mounted in said pockets adapted to project therefrom, a second assembly supporting member having flanges at either end thereof provided with ears at the ends of said flanges, contact members mounted between said flanges and provided with ears adapted to co-act with the first mentioned ears, and a compressible block mounted between said contact members and said flanges, whereby when said contact members are forced between said rollers said block may be compressed.

1,423,522. YIELDING RESISTANCE UNIT FOR CAR BUFFERS. RICHARD D. GALLAGHER, Jr., Flatbush, N. Y., assignor to Standard Coupler Company, New York, N. Y., a Corporation of New Jersey. Filed July 8, 1921. Serial No. 483,349. 8 Claims. (Cl. 213—64.)



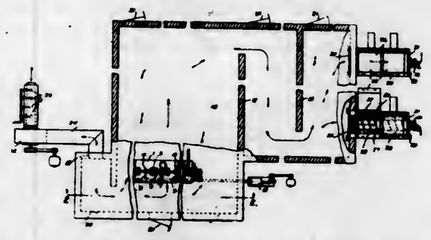
1. A self-contained resilient unit for car buffers, comprising a barrel open at one end, a series of followers movable longitudinally in the barrel and adapted to contact with each other, spring members normally holding the followers separated and of different yielding capacity whereby the followers will contact with each other successively, a dominant spring member for yieldingly resist-

ing the movement of the followers as a unit when brought together, and means connected with the barrel for partially closing the open end of the barrel and preventing



the escape of the followers from the barrel, the face of one of said followers being exposed through the partially closed end of the barrel.

1,423,523. BRUSH FOR TALKING MACHINES. THOMAS S. GROW, Allentown, Pa. Filed Apr. 7, 1921. Serial No. 459,432. 1 Claim. (Cl. 274—1.)

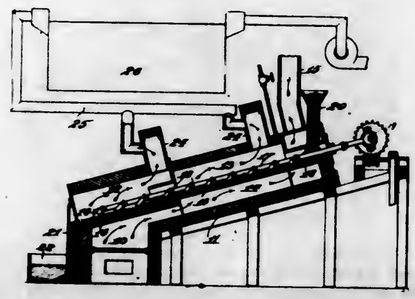


A brush device for talking machines of the disk type, employing a rotatable turntable for supporting the record disk; said device comprising a brush, a supporting arm for the brush adjustable to position the brush across the face of the disk, a rotatable spindle carrying the arm, a support having a bearing opening in which the spindle is loosely and removably mounted, said support being mounted alongside the turntable and clear of the same, and a member removably mounted in the bearing opening and positioned beneath the spindle for determining the elevation of the spindle, the lower end of the latter seating on said member.

1,423,524. WOVEN TUBULAR FABRIC. WILLIAM E. HILL, Philadelphia, and CARRODUS V. FIRTH, Ashbourne, Pa., assignors to Porter Brothers Textile Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 24, 1919. Serial No. 278,944. 1 Claim. (Cl. 139—72.)

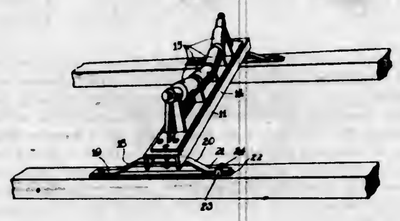
A one piece bag or pillow cover having a substantially broad border on the four edges thereof, the border and the central portion surrounded by the border being of different weaves, the central portion and the border along one edge being woven in two plies, while the borders along the other three edges are woven in a single ply, so that the four borders are substantially the same in appearance to form a bag open at one end and closed along the other three ends with a surrounding broad border, which is arranged to project outwardly from the pillow to form a projecting edge trimming on the four edges of the pillow when the cover is in place and the faces of the two ply border are secured to each other to close the open end of the cover.

1,423,525. PROCESS FOR TREATING RUBBER-CONTAINING LATEX. ERNEST HOPKINSON, New York, N. Y., assignor to General Rubber Company, a Corporation of New Jersey. Filed Jan. 16, 1920. Serial No. 351,945. 33 Claims. (Cl. 18—50.)



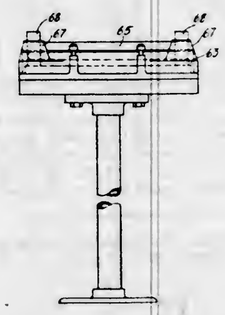
1. A process for treating latex or similar material which comprises subjecting finely divided latex to a drying gas, withdrawing moisture from the latex, precipitating solid particles of latex and compacting the particles.

1,423,526. PRODUCT OBTAINED FROM RUBBER-CONTAINING LATEX. ERNEST HOPKINSON, New York, N. Y., assignor to General Rubber Company, a Corporation of New Jersey. Filed Jan. 16, 1920. Serial No. 351,946. 16 Claims. (Cl. 18—50.)



1. A crude rubber derived from masses of latex dried in comminuted form and compacted.

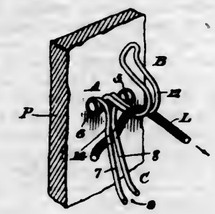
1,423,527. METHOD OR PROCESS OF DISTILLATION OF MATERIAL CARRYING A PERCENTAGE OF VOLATILE MATTER. GEORGE McD. JOHNS, St. Louis, Mo., assignor, by mesne assignments, to The Industrial Process Engineering Company, a Corporation of Delaware. Filed July 16, 1920. Serial No. 396,837. 10 Claims. (Cl. 196—21.)



1. The method of distilling oil-bearing shale and other materials to obtain the volatile content thereof which comprises feeding the material in a pulverized condition and in a continuous layer of substantially uniform thickness over and upon a stationary heated inclined plane.

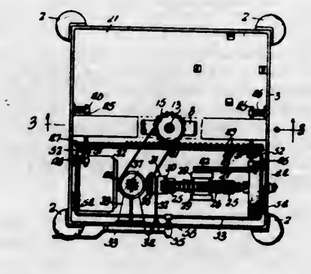
1,423,528. SELF-TRAINING BELT CONVEYER. MYRON A. KENDALL, Aurora, Ill., assignor to Stephens-Adamson Mfg. Co., Aurora, Ill., a Corporation of Illinois. Filed July 8, 1921. Serial No. 483,270. 9 Claims. (Cl. 74—51.)

1. In a belt conveyer, the combination with a traveling load carrying belt, of a transverse carrier for the belt and a spring yielding downwardly and forwardly with respect to the direction of movement of the belt supporting each end of the carrier.



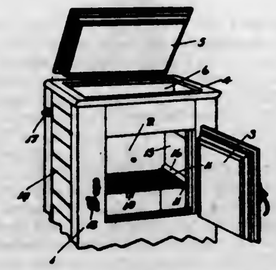
1,423,529. LEVEL INDICATOR FOR PLATFORMS. GEORGE W. KING, deceased, late of Marion, Ohio, by Sarah King, executrix, Marion, Ohio, and Charles B. King, Benjamin Jacoby, and Herbert E. Roush, Marion, Ohio, and Grant Holmes, Danville, Ill., assignors to The Marion Steam Shovel Co., Marion, Ohio. Original application filed June 2, 1917, Serial No. 172,355. Divided and this application filed Aug. 24, 1918. Serial No. 251,341. 3 Claims. (Cl. 33—206.)

1. A device to indicate the position of a tiltable platform comprising a shallow container for a fluid having a flat transparent top arranged parallel with the platform to cause the fluid in said container to form a chord-like line parallel with the axis about which said platform is tilted, and also having intersecting conduits containing a fluid and provided at their ends with vertical sockets and plungers mounted in said sockets and having parts adapted to project above the tops of the respective sockets.



1,423,530. CLOTHESLINE HANGER. FRED O. LAKE, Park Lane, Va. Filed Nov. 15, 1921. Serial No. 515,266. 3 Claims. (Cl. 24—131.)

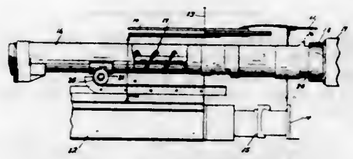
1. In clothes line supports, a base member comprising two eyelets, a line supporting member, and a line securing member bent to form a third point of support with the



eyelets when under tension and then to diverge from the plane of the support to form a wedging recess therewith.

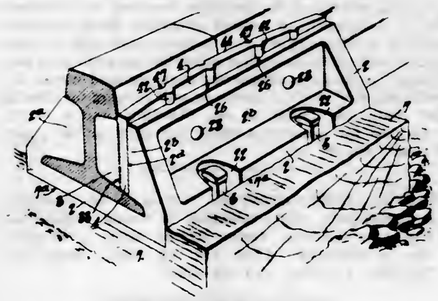
1,423,531. DRIVING MECHANISM FOR WASHING MACHINES. CHARLES C. LAMB, Chicago, Ill., assignor of one-half to Willard M. McEwen, Chicago, Ill. Filed Nov. 19, 1919. Serial No. 339,170. 4 Claims. (Cl. 74—50.)

1. In a gearing of the character described, the combination of a support, an upright operating shaft rotatably mounted in said support, two toothed wheels and a pulley fixed to said shaft, an endless chain having teeth part way around the same for alternately engaging said wheels for oscillating said shaft, a motor on said support for driving said chain and pulley in one direction, and a clutch mechanism for connecting either the chain or the pulley with said motor.



1,423,532. REFRIGERATOR. CHARLES H. LEONARD, Grand Rapids, Mich., assignor to Grand Rapids Refrigerator Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Apr. 16, 1919. Serial No. 291,408. 1 Claim. (Cl. 62—43.)

In a refrigerator, having an ice chamber, a coil formed of a plurality of parallel horizontal pipes connected together and located horizontally in the ice chamber a

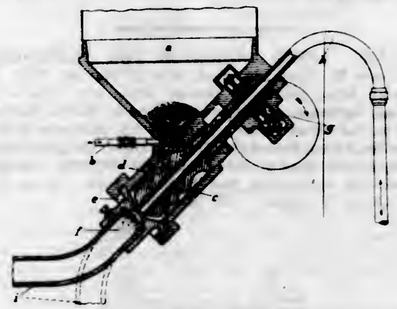


distance above the bottom of the chamber, a pipe supporting one end of the coil and having connection thereto whereby water entered into the pipe is carried to the coil, an outlet pipe connected to and leading from the coil through the front of the refrigerator, means at the front end of the outlet pipe to control the passage of water from the coil, means for supplying water to said supporting pipe from a point outside of the ice chamber, a cleat or block on which the opposite end of the coil rests, and a lining to the ice chamber lying vertically alongside of the cleat and of the coil, said lining having an inwardly struck portion coming over the ends of the coil, substantially as and for the purposes described.

1,423,533. LOCOMOTIVE STOKER. NATHAN M. LOWER, Pittsburgh, Pa., assignor to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed Apr. 7, 1920. Serial No. 371,909. 6 Claims. (Cl. 198—15.)

1. In a locomotive stoker, the combination with a locomotive and tender, a fuel conduit comprising a section fixedly mounted on the locomotive, and a section having a sliding and flexible connection with the first-named section, means for supporting the second-named section on the ender and permitting its longitudinal and lateral movement, and a stop for limiting the backward movement of such section.

1,423,534. RAIL CHAIR. CHARLES MALITCH, Hamilton, Ohio. Filed Apr. 18, 1922. Serial No. 554,641. 4 Claims. (Cl. 238—207.)

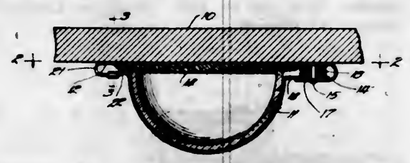


1. A combined rail chair and joint comprising a chair including a base adapted for being secured upon a rail tie, the said base having a seat, a pair of opposing rail ends whose base portions are received on the chair seat, the said chair having at each side a vertically extended longitudinal flange, one of the said flanges opposing the adjacent web faces at one side of the rail ends, a filler member at the other side of the webs of the rail ends, the said filler opposing its respective adjacent vertical chair flange, a wedge interposed between the said filler and the adjacent rail chair flange, and means for clamping the several parts in interlocked engagement, the said wedge member having its upper edge crowned from the ends toward the center whereby to present a top surface on the wedge adapted for being engaged by the flanges of passing car wheels when the said wedge works upwardly to bring the said upper edge in a plane of travel of the flanges of the car wheel.

1,423,535. BRACKET. FRANK P. MILLER, Meadville, Pa. Filed Dec. 16, 1919. Serial No. 345,430. 3 Claims. (Cl. 287—14.)

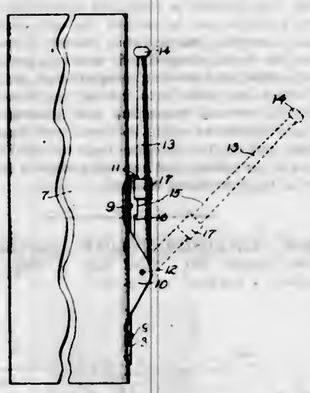
1. In a bracket, the combination of a mounting member and a yielding member; a joint between the members comprising joint plates with plane opposing surfaces, said plates being of resilient material; an interposed washer between the surfaces, said washer having a greater thickness at its outer periphery than at the center; and a connection between the plates at the axis of the joint, said connection springing the plate to effect a spring-pressed contact between the plates and washer at the periphery of the washer.

1,423,536. APPLIANCE FOR THROWING MORTAR FOR THE PLASTERING OF WALLS AND THE LIKE. THEODOR MOSER, Berlin-Grunewald, Germany. Filed Oct. 29, 1920. Serial No. 420,552. 2 Claims. (Cl. 72—130.)



1. Mortar throwing apparatus comprising a hopper, a casing into which the hopper discharges, a nozzle leading from the casing, a screw conveyer arranged for rotation in the casing and the flight of which decreases in pitch toward the discharge end of said conveyer, means to discharge compressed air through the conveyer and the said nozzle, and driving means for the conveyer.

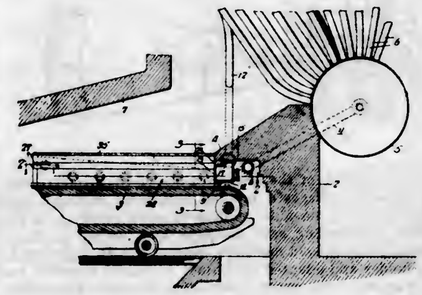
1,423,537. URINAL. GERHARD MÜLLER, Munich, Germany. Filed July 19, 1920. Serial No. 397,537. 3 Claims. (Cl. 128—295.)



1. A urinal comprising a receptacle having a neck, a tube having its inner end arranged in and secured to the neck, an attaching element secured to said tube, and an elastic truncated-conical sleeve arranged in said tube and having its outer, larger end secured around the outer end of said tube.

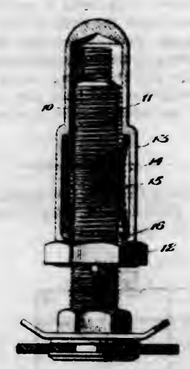
1,423,538. ASH RECEPTACLE. RUDOLPH OZABAL, Chicago, Ill. Filed Mar. 10, 1921. Serial No. 451,111. 2 Claims. (Cl. 131—51.)

2. An ash receptacle comprising a ring adapted to be secured to the under side of a table top or the like, a tray having an outwardly extending apertured lug, and means for pivotally securing the tray to the ring, the means comprising a U-shaped member formed integrally with the ring, the lug being interposed between the legs of the U-shaped member, a pin secured in the legs of the U-shaped member and passing through the aperture in the lug, and a spring disposed around the pin and interposed between one of the legs of the U-shaped member and the lug.



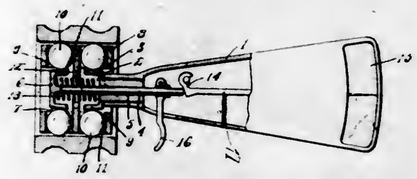
1,423,539. POCKETBOOK PROTECTOR. MARTIN J. PALMER, Chicago, Ill. Filed Sept. 3, 1921. Serial No. 498,510. 4 Claims. (Cl. 150—47.)

1. A protector for pocket books and the like comprising an elongated plate adapted to be secured to a book longitudinally thereon, said plate having at one of its ends a hook, an arm pivoted at one of its ends to the said plate below the hook thereon and having in its surface adjacent the hook a longitudinally disposed slot for the reception of said hook, and a sleeve slidably mounted on the arm and adapted for engagement with the hook.



2. A protector for pocket books and the like comprising an elongated plate adapted to be secured to a book longitudinally thereon, said plate having at one of its ends an outwardly disposed hook, a spring actuated arm pivoted at one of its ends to the said plate below the hook thereon and having in its surface adjacent the hook a longitudinally disposed slot for the reception of said hook, said arm also having a stop member located at a distance from the upper end of said slot, and a sleeve slidably mounted on the arm above said stop member and adapted for engagement with the hook.

1,423,540. LIQUID-COOLED CONDUIT FOR FURNACES. HERMAN A. POPPENHUSEN, Hammond, Ind., assignor to Green Engineering Company, East Chicago, Ind., a Corporation of Illinois. Filed Dec. 22, 1919. Serial No. 346,473. 10 Claims. (Cl. 122—292.)

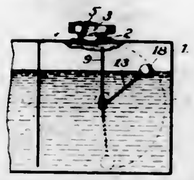


1. In a furnace, the combination with a combustion chamber and a grate therein, of a water-cooled conduit associated with one of the walls of said combustion chamber and having inlet and outlet openings, said conduit lying in direct contact with the fuel bed on the grate and having an enlarged portion projecting outward from the body portion of the conduit and forming a vapor collecting chamber in communication with said outlet, and means associated with said wall and extending in front of said enlarged portion to shield the same from the direct heat of the fuel bed.

1,423,541. VALVE-STEM CAP. EDWARD D. ROCKWELL, Bristol, Conn. Filed July 8, 1920. Serial No. 394,662. 3 Claims. (Cl. 152—12.)

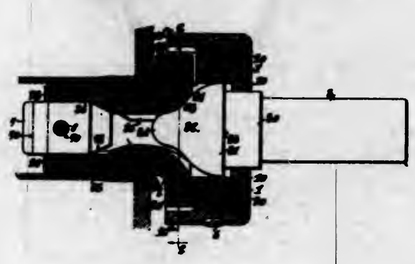
3. The combination of a valve stem cap for threaded valve stems, longitudinally spaced annular shoulders on the interior of the cap, and a transversely distorted spring composed of a series of spaced helically disposed coils held within the cap between said shoulders and adapted to interlock with the threads on the valve stem, said spring being of greater length than the distance between said shoulders and compressed between said shoulders whereby the spring and cap are frictionally secured together and rattling of the cap prevented, and said cap being rotatable on the stem independently of the spring.

1,423,542. BORE GAUGE. HUGH M. ROCKWELL, Bristol, Conn., assignor, by mesne assignments, to Standard Steel and Bearings Incorporated, Wilmington, Del., a Corporation of Delaware. Filed Dec. 1, 1919. Serial No. 341,771. 15 Claims. (Cl. 33—178.)



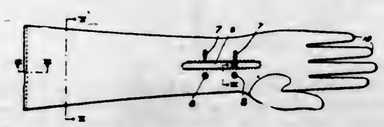
1. In a device of the character described, members having oppositely disposed tapered peripheral surfaces, said members being movable relative to each other, a holder loosely surrounding said members and having a rib extending between said members, contact elements carried by said holder and adapted to contact with said members and the material to be gaged, and indicator means operatively associated with said members.

1,423,543. HUSKING MITTEN. MICHAEL SAUTTER, Spokane, Wash. Filed Oct. 14, 1920. Serial No. 416,817. 2 Claims. (Cl. 2—102.)



1. A husking mitten comprising a textile base, a reinforcing strip disposed upon the back of said base along the edges thereof, a facing member covering the palm portion of said base, the edges of the base being disposed between the reinforcing strip and the facing, headed fastening devices inserted through the said base and the palm facing, and other headed fastening devices inserted through the reinforcing strip.

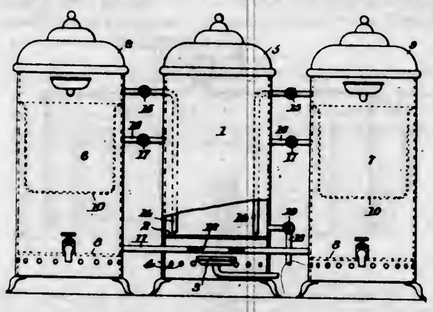
1,423,544. TANK GAUGE. WILFRED J. SCHAEDLER, Brooklyn, N. Y. Filed Jan. 12, 1921. Serial No. 436,690. 2 Claims. (Cl. 73—82.)



1. A liquid gauge comprising, in combination, a hollow head having a filling passage therethrough and adapted to be fixed in a filling opening in the top of a tank, an indicator portion carried by said head, a supporting rod depending from said head, a bracket fixed to the lower end of said supporting rod, a float member, a rod carrying said float member, said rod having a lateral portion journalled in said bracket about midway between the top and bottom of the tank so that said float member is adapted to swing through an angle of substantially 180 degrees, a vertical spindle journalled at its lower end in said bracket, a pointer fixed to the upper end of said spindle and working in the indicator portion of said head, and gears connecting said float-carrying rod and said vertical spindle.

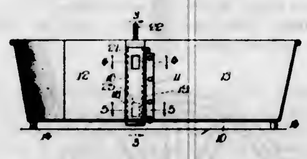
1,423,545. COMBINED TUBE EXPANDER AND BEADING TOOL. JOHN JAMES SMITH, Winnipeg, Manitoba, Canada. Filed Dec. 20, 1921. Serial No. 523,794. 6 Claims. (Cl. 153—80.)

1. In a combined tube expanding and beading tool, a cup-shaped body having an axial opening, a cage including a tubular shank insertable into the tube end to be worked, the said cage having a plurality of radially extended chambers that open from the bore of the shank through the peripheral face thereof, a combined expanding and beading element mounted, one in each of the said chambers in the cage, an expanding mandrel that extends through the axial openings in the cup-shaped body and engages the combined tube expanding and beading elements and adapted, as it is being forced lengthwise into the body portion and the cage to hold the several expanding and beading elements in working engagement with the tool, and means mounted upon and cooperative with the cage for regulating the set of the said expanding and beading elements to suit the diameter of the tube being worked.



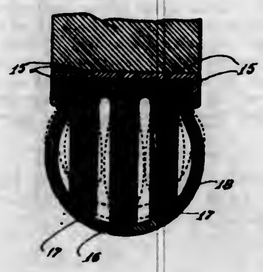
1,423,546. REVERSIBLE GLOVE. JEANNETTE LOWRIE SPERR, Trappe, Md. Filed Apr. 5, 1921. Serial No. 458,780. 4 Claims. (Cl. 2—9.)

1. A reversible glove, comprising inner and outer gloves fitting one within the other and united to form a single composite glove, the unfinished seams of the inner glove facing the unfinished seams of the outer glove whereby said single glove may be reversed and worn on the opposite hand.



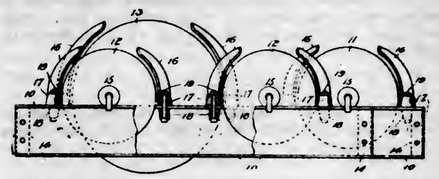
1,423,547. COFFEE URN. HENRY J. STROHBACH, New York, N. Y. Filed Dec. 9, 1921. Serial No. 521,164. 2 Claims. (Cl. 53—3.)

1. The combination with a boiler, of a burner for heating said boiler arranged a short distance below its bottom, of a percolator at one side of the boiler, and a conduit extending from the percolator to a point over the burner



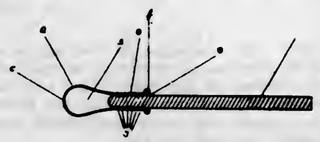
and spaced below the bottom of said boiler, whereby said burner heats said conduit as well as the entire bottom of said boiler.

1,423,548. DISHPAN. EDWARD GORDON TAYLOR, Madison, Wis. Filed Sept. 6, 1921. Serial No. 498,762. 6 Claims. (Cl. 141—11.)



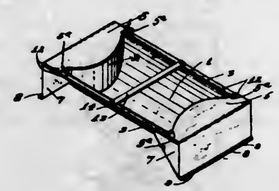
1. As a new article of manufacture, a dish pan having a transverse partition dividing the same into washing and rinsing compartments, a tubular valve casing mounted in said pan and formed with separate drain ports communicating with said washing and rinsing compartments respectively, and a hollow valve rotatable in said casing and opening at its lower end through the bottom of said pan, said valve having a drain port adapted to register with either drain port of said casing.

1,423,549. TIRE. JOHN J. P. WALSH, New York, N. Y. Filed June 2, 1920. Serial No. 385,923. 10 Claims. (Cl. 152—1.)



3. In a vehicle tire, comprising in combination, a plurality of individual flat resilient rings of varying outer diameters unyieldingly held together at their inner circumference, a normally closed annular slot provided in each of said rings, the outer diameters of the slots being smaller than the outer diameters of their respective rings, annular spaces provided between the individual slotted rings adapted to facilitate the spreading of the rings and the opening of the slots when pressure is applied.

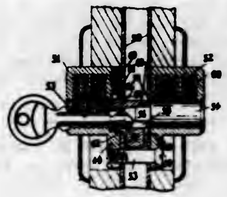
1,423,550. CROWN BLOCK CABLE GUARD. VICTOR W. ZILEN, Chattanooga, Tenn., assignor to Lucey Manufacturing Corporation, Chattanooga, Tenn., a Corporation of Tennessee. Filed Sept. 13, 1921. Serial No. 500,465. 7 Claims. (Cl. 254—190.)



1. In a crown block, the combination of spaced frame members, sheaves journaled on the frame members and positioned in said spaces, guards for each of said sheaves, said guards being movable toward and away from their respective sheaves to vary the distance between the sheaves and their respective guards.

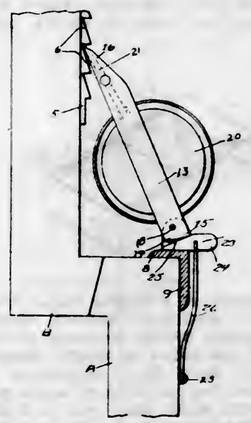
1,423,551. TOY ARROW. ADRIAN D. ADRIANCE, Brooklyn, N. Y. Filed Apr. 6, 1921, Serial No. 459,094. Renewed June 9, 1922. Serial No. 567,234. 1 Claim. (Cl. 102—26.)

A toy arrow comprising a flexible tubular, air filled tip, having an enlarged closed end and a contracted open end, a shaft having a grooved end firmly inserted in said contracted end and gripped thereby, and cement to fill said grooves, to assist in fastening said nipple to said shaft and to seal in the air.



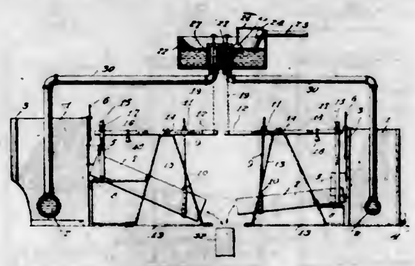
1,423,552. TROUGH. GEORGE G. BAYNE, Bushnell, Ill. Filed Feb. 24, 1920. Serial No. 360,554. 1 Claim. (Cl. 119—61.)

The combination of a feeding trough comprising an arcuate body of sheet metal and end closures integral therewith, a support therefor comprising an upright sheet metal piece at each end of the trough, triangular flanges on said upright sheets one at each end of each sheet, said flanges extending parallel to the length of the trough and having their upper edges bent to form fastening flanges extending toward the trough, the edges of said triangular flanges away from said upright pieces each extending obliquely upward and toward the other end of the trough, a foot flange on the lower end of each of said upright pieces extending away from the trough, a covering flange extending from the upper edge of each of said upright pieces toward the middle of the trough and covering the end closures, said covering flanges extending laterally as far as the planes of the triangular



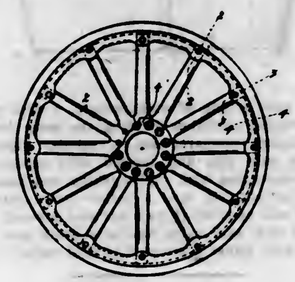
flanges, the lateral edges of the body of the trough having outwardly extending flanges given a thickness twice that of the body of the trough by being doubled upon themselves, said outwardly extending flanges entering between the cover flanges and the fastening flanges, fastening devices through the cover flanges, fastening flanges and outwardly extending flanges at each corner of the trough, and other fastening devices through the foot flanges at each end of the trough.

1,423,553. LOCK. ADOLF BOGS, Solingen, Germany. Filed Aug. 26, 1921. Serial No. 495,570. 14 Claims. (Cl. 70—46.)



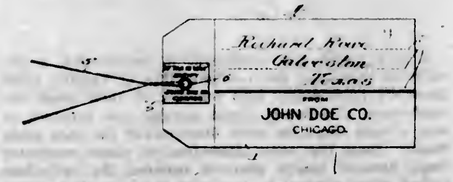
1. A safety lock comprising in combination a main lock, a key-bit remaining continuously therein and a cylinder lock mounted on each side of the main lock, the rotary cylinder of each side lock and the key-bit telescoping each other and having longitudinal, registering slots for jointly receiving the key.

1,423,554. COMBINED LOCK AND ALARM. ANDREW S. CUMMINGS, South Tacoma, Wash. Filed Mar. 28, 1921, Serial No. 456,074. Renewed Jan. 4, 1922. Serial No. 527,050. 5 Claims. (Cl. 116—16.)



1. A lock and alarm of the character described comprising a rack carried by a support, a pawl carried by a second support and adapted to engage the rack, an alarm carried by the pawl, and trigger means carried by the pawl for actuating the alarm, said trigger means being disposed in engagement with the rack.

1,423,555. PAPER-STOCK REGULATOR. LEMUEL B. DECKER, Kenogami, Quebec, Canada. Filed Jan. 27, 1921. Serial No. 440,465. 4 Claims. (Cl. 92—46.)

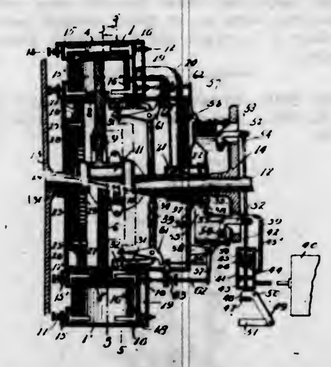


1. An apparatus of the character herein described, comprising means for automatically regulating the consistency and percentage of groundwood and sulphite stock used in the manufacture of paper.

1,423,556. WHEEL AND METHOD OF MAKING THE SAME. JOHN F. DODGE deceased, late of Detroit, Mich., by Matilda R. Dodge, Detroit, Mich., and Horace E. Dodge, Grosse Pointe, Mich., special administrators, assignors to Dodge Brothers, Detroit, Mich., a Corporation of Michigan. Filed Sept. 3, 1920. Serial No. 408,064. 3 Claims. (Cl. 29—87.)

1. The method of making a vehicle wheel having wooden spokes and a metal felloe, which consists in assembling in the wheel hub wooden spokes having ends encased in metal caps, successively presenting the ends of said caps to reducing means located at the desired uniform distance of said ends from the axis of rotation of said hub, whereby the seats for the metal felloe upon the metal caps are brought to uniform distances from the axis of rotation of the wheel, and then setting said metal felloe upon said metal seats.

1,423,557. SHIPPING TAG. ALFRED E. FISH, Chicago, Ill. Filed Apr. 2, 1920. Serial No. 370,627. 1 Claim. (Cl. 40—27.)



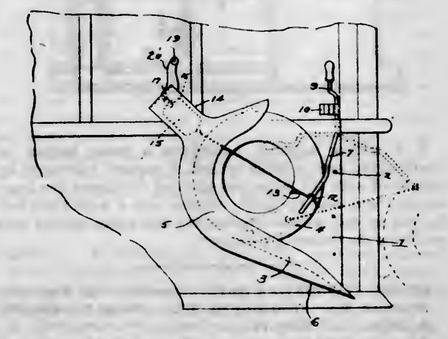
A shipping tag comprising a card and a piece of reenforcing material attached to the card and bearing identifying indicia, in combination with means for attaching the tag to the article to be shipped, said reenforcing material being secured to said card only at the outer portion of said material so as to permit it to separate from the card when drawn upon by the attaching means.

1,423,558. OIL-LEVEL INDICATING ATTACHMENT FOR CRANK CASES. ALEXIS F. GILLET, Omaha, Nebr., assignor to Jubilee Manufacturing Company, Omaha, Nebr., a Corporation. Filed Oct. 4, 1920. Serial No. 414,447. 1 Claim. (Cl. 73—120.)

In an oil-level indicating attachment for a crank case, a tube having a convexed terminal and a circular groove, a rod provided with indicating characters, a disc disposed transversely of and mounted on the end of said rod, a circular cap provided with curved prongs, said cap having a lesser diameter than the diameter of the disc and having its top in engagement with the rod and disc, said rod being adapted to have a movement inwardly to dispose its circular cap outwardly of the tube, the curved prongs of the cap moving upon the convexed terminal and engaging in the circular groove of said tube.

1,423,559. FLUID-PUMP MECHANISM. FREDERICK CHARLES GUERLICH, Stamford, Conn. Filed Dec. 1, 1919. Serial No. 341,680. 10 Claims. (Cl. 230—37.)

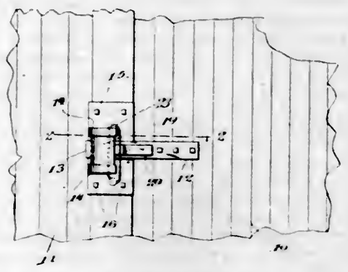
1. In a pump mechanism, the combination of a plurality of pairs of cylinders spaced at angles to one another equal to 360° divided by the total number of cylinders, pistons in said cylinders, piston rods rigidly connecting the pistons of each pair of cylinders, a crank-shaft having a crank-pin, and a connector rotatably mounted upon said crank-pin and having pivotal connections with said rigid piston rods, the angle between lines joining the axis of the crank-pin and any two adjacent pivotal connections being equal to twice the angle between two adjacent cylinders.



6. In a pump mechanism, the combination of a plurality of pairs of cylinders spaced at angles to one another equal to 360° divided by the total number of cylinders, pistons in said cylinders, piston rods rigidly connecting the pistons of each pair of cylinders, a crank-shaft having a crank-pin, a plurality of rigidly connected eccentrics equal in number to said piston rods and rotatably mounted on the crank-pin of said shaft and embraced by said rigid piston rods respectively, the centers of said eccentrics being displaced relatively to the axis of said crank by twice the angle between two adjacent cylinders and symmetrically arranged relatively to said crank, the distance between the centers of said eccentrics and said crank-pin being equal to the distance between the axis of said crank-pin and the axis of said shaft, regular inlet and outlet ports for said cylinders, supplemental outlet ports for said cylinders, an air chamber connected to said supplemental outlet ports, means for holding said regular outlet ports closed and opening said supplemental outlet ports successively to actuate said pump to charge said air chamber, and means for automatically closing the connection between said supplemental outlet ports and said chamber when the pressure in said chamber reaches a predetermined point.

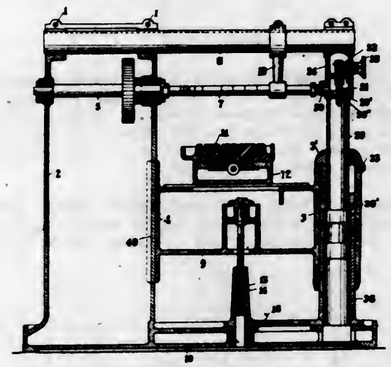
1,423,560. MILK BOTTLE. JOHN G. HALL, Toronto, Ontario, Canada. Filed Apr. 8, 1921. Serial No. 459,562. 1 Claim. (Cl. 215—31.)

A bottle having a rim surrounding its mouth the greater thickness than the body of the bottle, said rim being of substantially even thickness throughout its circumference and having a substantially vertical ticket receiving recess formed entirely therein, the mouth of the recess extending through the upper edge of the rim.



1,423,561. DEVICE FOR LAUNCHING RING LIFE BUOYS. SOPUS E. HANSEN, Seattle, Wash. Filed Mar. 25, 1922. Serial No. 546,871. 2 Claims. (Cl. 9—11.)

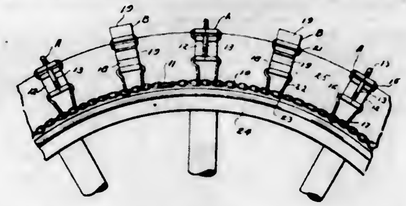
1. A ring buoy support including a housing for the buoy and an inclined trackway down which the buoy travels



when released, a housing forming part of the support and adapted to receive a water-tight casing, a device carried by the housing and adapted to be connected to a plug in said casing, and a lever adapted to exert a pull upon said casing when operated to release the buoy.

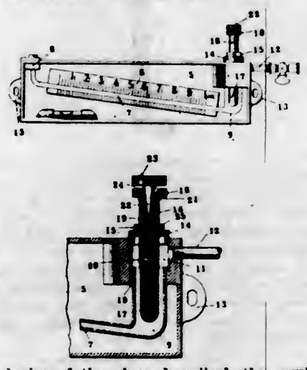
1,423,562. CAR-DOOR LOCK. NIKALAI HILL, Park Falls, Wis. Filed May 18, 1921. Serial No. 470,494. 2 Claims. (Cl. 292—205.)

1. A car door lock comprising a door carried hook, a device carried by the door frame and comprising parallel side members each having a pair of openings therethrough, a cam lever mounted between the side members, a pivot pin disposed through an opening of each side member and through the cam lever, said cam lever being arranged to engage the hook between the side members, the cam lever having a transverse opening arranged to align with the other openings of the side members to receive a seal ribbon therethrough.



1,423,563. RIGID MILLING MACHINE. OSCAR HOPPE, Rorschach, Switzerland, assignor to Richard A. Kempin, Rorschach, Switzerland. Filed Mar. 28, 1921. Serial No. 456,383. 8 Claims. (Cl. 90—18.)

1. A milling machine, comprising a frame having an overhanging arm, a guide column, a support telescopically connected with the latter and adapted to connect the overhanging arm and the guide column, and a work-table bed having an end portion overlapping the guide column and enclosing the connecting support.



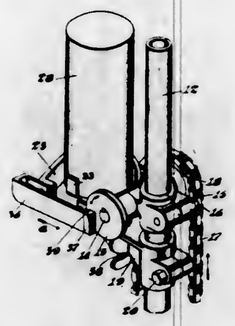
1,423,564. NONSKID CHAIN. MORRISON R. JOHNSON, Braymer, Mo. Filed July 21, 1921. Serial No. 486,339. 1 Claim. (Cl. 152—14.)

In a non-skid chain, the combination of side members, cross chains between the members respectively comprising a plurality of links each formed from a sheet metal blank folded upon itself to define overlapping portions providing an upstanding traction rib and bent at its ends to form pairs of companion hinge loops, and other links extending

through said pairs of loops pivotally connecting the first links with each other and with the side members as well as limiting the overlapping portions of the first links against spreading.

1,423,565. PRESSURE OR DRAFT GAUGE. WILLIAM KEMP, St. Louis, Mo. Filed Nov. 5, 1920. Serial No. 421,830. 4 Claims. (Cl. 73—31.)

1. In a device of the class described, the combination with a gauge glass having an integral upturned portion forming an oil well, of a regulator stem projecting into said well, supporting means for said stem, said stem being provided with an oil filling passage terminating intermediate of its length, and a removable plug in said oil passage.

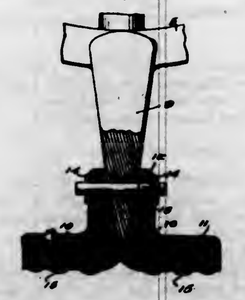


1,423,566. TOY. GUSTAVE A. KING, Chicago, Ill. Filed Jan. 4, 1921. Serial No. 434,992. 1 Claim. (Cl. 46—35.)

A figure toy comprising a plurality of separate sets of units which are detachably connected, one set of units

consisting of spheres and the other set consisting of double-ended pegs, the spheres having holes extending completely therethrough and intersecting each other at right angles, for insertion of the pegs thereinto, and the pegs having spherical enlargements intermediate their ends.

1,423,567. TOP GLUER. LEON E. LA BOMBARD, Chelsea, and MELVIN H. SIDEBOTHAM, Cliftondale, Mass., assignors to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed Feb. 6, 1920. Serial No. 356,703. 16 Claims. (Cl. 91—51.)

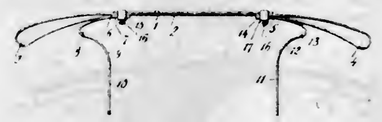


1. A device of the character described comprising a glue holder having a slotted end wall, means for continuously supplying a limited amount of glue to said holder, and a rotary applier a portion of which substantially fills the slot of said wall, means being provided for preventing glue from being carried out of the holder on the sides of the applier.

9. A device of the character described comprising a cup, a trough having a slot in one end wall, said trough communicating with the cup, a rotary disk partially located in and closely fitting said slot, and means for adjusting the relative vertical positions of the trough and disk to vary the space between the bottom of said slot and the periphery of the disk.

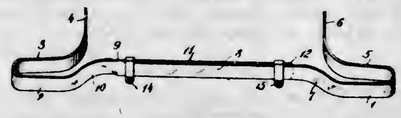
15. A device of the character described comprising a glue holder having a slotted wall provided with scrapers along the margins of the slot, and a rotary applier a portion of which substantially fills said slot.

1,423,568. TRACTION LUG. WILLIAM LEVY, Paterson, N. J. Filed Feb. 18, 1922. Serial No. 537,626. 6 Claims. (Cl. 301—44.)



6. An attachment for vehicle wheels comprising a substantially radial lug secured to the wheel at one side thereof, said lug being tapered to decrease in thickness outwardly of the wheel and being provided with an opening, a pin mounted in said opening, and a pair of traction members each having a portion engaging one of the tapered sides of said lug, the lug engaging portions of said traction members being provided with slots arranged substantially radially of the wheel and adapted to receive the ends of said pin.

1,423,569. WALL BOARD AND PLASTER COMPOSITION ADAPTED THERETO. JAMES A. LOCKHART, Buffalo, N. Y., assignor to Pitho Plastic Board Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Apr. 8, 1921. Serial No. 459,737. 5 Claims. (Cl. 106—34.)

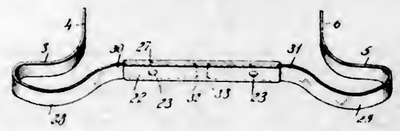


1. Plaster composition for wall board comprising plaster of Paris, lime and shredded wood fibres.

1,423,570. RESILIENT FRONT BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Jan. 16, 1920. Serial No. 351,818. Renewed Jan. 26, 1922. Serial No. 532,032. 9 Claims. (Cl. 293—55.)

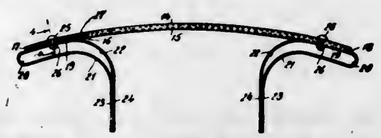
2. The automobile buffer comprising a resilient buffer front formed of tempered spring steel strip having considerably greater vertical width than thickness and comprising a reenforced central impact receiving portion and end loop portions formed by bending such spring strip back upon itself and securing the ends of such spring strip close to the strip forming the ends of said central impact receiving portion and attaching members cooperating with said end loops and connected to said buffer front.

1,423,571. AUTOMOBILE BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Feb. 28, 1921, Serial No. 448,500. Renewed Jan. 26, 1922. Serial No. 532,033. 7 Claims. (Cl. 293—55.)



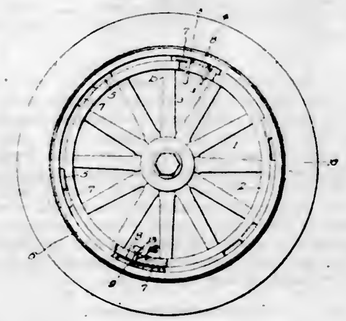
1. The automobile buffer consisting of two integral spring steel strips having greater vertical width than thickness and each comprising an attaching member and intermediate end loop in substantially the same horizontal plane and an impact receiving buffer front member adjustably arranged in overlapping reinforcing position adjacent the central part of the buffer, said strips being similarly upwardly arched between the connected end loops to form superimposed contact portions extending considerably above said end loops and attaching members, and clamping members to adjustably connect the contact portions of said buffer strips.

1,423,572. AUTOMOBILE BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed May 21, 1921, Serial No. 471,373. Renewed Jan. 26, 1922. Serial No. 532,034. 8 Claims. (Cl. 293—55.)



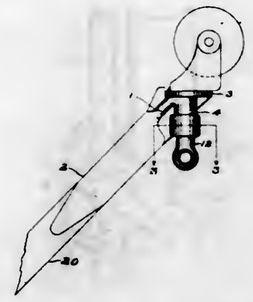
2. The automobile buffer comprising two integral spring steel strips having greater vertical width than thickness and each comprising an attaching member and interme-

diate end loop and an impact receiving buffer front member having a connecting portion arranged substantially in line with the corresponding connecting portion of the other strip adjacent the central part of the buffer, and connecting means connecting said connecting portions and forming substantially superimposed reenforced members



to strengthen this central contact part of the buffer, said impact receiving members being similarly upwardly bent between their end loops and connecting portions to form superimposed central contact portions vertically displaced with respect to said end loops and attaching members.

1,423,573. RESILIENT BUFFER. GEORGE ALBERT LYON, Philadelphia, Pa. Filed Feb. 24, 1920. Serial No. 360,585. Renewed Feb. 8, 1922. Serial No. 535,095. 14 Claims. (Cl. 293—55.)



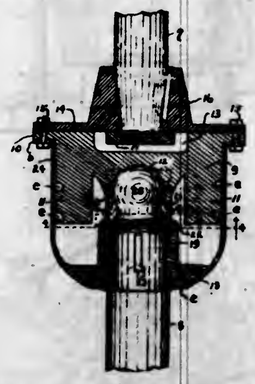
5. The resilient automobile buffer comprising two resilient strip end loop attaching elements, each having an attaching portion adapted to be secured to an automobile frame member and having an outwardly extending buffer end loop and an adjacent connector portion and intermediate resilient portions, and a resilient buffer front member cooperating with the connector portions of said attaching elements and adapted to extend adjacent said end loops and cooperating connecting devices detachably connecting said buffer front member with said attaching elements.

1,423,574. VEHICLE WHEEL. ALEXANDER MAILHIOT, Thorold, Ontario, Canada. Filed Nov. 5, 1921. Serial No. 513,071. 1 Claim. (Cl. 301—17.)

In a device as herein set forth, a wheel having a rim provided with spaced peripheral grooves and having notches from one of the sides thereof entering the grooves and one of the walls of each notch being in a line with one of the end walls of each groove, and a tire carrying rim having lugs designed to be passed through the notches and turned on the wheel rim to be received in the grooves thereof, blocks in the notches in contacting engagement with one end of the lugs, and means for securing the blocks in such position, spring means carried by the blocks contacting the inner walls of the grooves for partly projecting the blocks through the notches, and means for locking the blocks when fully received in the notches.

1,423,575. TROLLEY-ALIGNING HARP. SAMUEL S. MATTHES, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Sept. 3, 1921. Serial No. 498,228. 18 Claims. (Cl. 191—60.1.)

2. An aligning collector comprising a body member for attachment to a support, a member comprising means for mounting a collector and a stem for mounting the member on the body, means on the stem to rotate therewith to engage means rotatably mounted on the stem when the stem is rotated in one direction and to engage other means rotatably mounted on the stem when the stem is rotated in the other direction, and stop means to prevent the rotation of each of the two rotatable means in one but opposite direction and yielding means engaging the two rotatable means acting to rotate them in opposite direction.



1,423,576. TOWING VESSELS. THOMAS SPENCER MILLER, South Orange, N. J. Original application filed Mar. 22, 1918, Serial No. 223,931. Divided and this application filed Nov. 10, 1920. Serial No. 422,990. 13 Claims. (Cl. 114—235.)

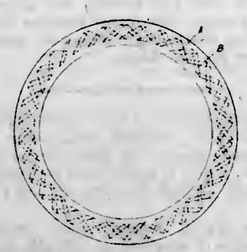
1. In combination, a towing vessel and a towed vessel, a hawser connecting said vessels, a line connected to said hawser at an intermediate point, and a yielding and recovering means connected to said line.

1,423,577. UNIVERSAL JOINT. WILLIAM C. MORTON, Omaha, Nebr., assignor of one-third to Joseph P. Condon and one-third to Ira O. Morton, both of Omaha, Nebr. Filed May 24, 1920. Serial No. 383,915. 1 Claim. (Cl. 64—96.)

A universal joint for drive and driven shafts, comprising a spherical head on the end of one shaft, a sleeve fitted over said shaft inwardly of the head and having cooperating means on the shaft to prevent end thrust thereof in either direction, said sleeve having a saucer-like flange and arms extending from the sleeve in a direction substantially parallel with the axis of both shafts and having facets disposed at substantially right angles and with rounded outer surfaces, provided with spaced notches therein, a block composed having a cylindrical portion with an inner annular wall extending about the spherical head and provided with a socket within the wall conforming and turning relatively to the head, said block having arms lying outwardly of the annular wall and extending between the first mentioned arms, said latter arms also having right angularly disposed facets parallel with opposed facets of the first mentioned arms and being further formed with substantially rounded outer surfaces having notches therein, coil springs lying

between the arms and having their ends engaged upon exposed facets, said springs having hooks extending into the notches of the respective arms, said block having a flange projecting outwardly at its edge portion, a disc fitting against the rear portion of the block and secured to said flange and provided with a sleeve fitted over the other shaft and secured to turn therewith, and a casing having a cylindrical portion fitting about said arms and upon the rounded surfaces thereof, and having a flange secured against the flange on said block, said casing also formed with a rounded end portion bearing against the saucer like flange, and having an opening to receive the shaft.

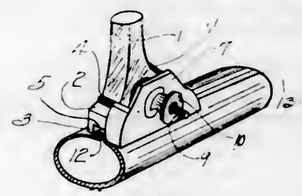
1,423,578. TWO-CYCLE INTERNAL-COMBUSTION ENGINE. ARTHUR G. L. NEIGHBOUR and HARRY C. W. NEIGHBOUR, Brighton, Victoria, Australia. Filed July 23, 1918. Serial No. 246,289. 7 Claims. (Cl. 123—73.)



1. A two-cycle engine comprising a cylinder, a conical boss projecting inwardly and axially from the cylinder and ignition means in said conical boss, an annular combustion chamber of curved cross-section centrally disposed around said conical boss and having a maximum diameter greater than the cylinder diameter, the annular wall of the combustion chamber being inclined inwardly to the cylinder wall, a transfer port and a transfer passage in the wall of the cylinder, an annular series of exhaust openings in said cylinder wall, a hinged door and a detachable gas-tight cover permitting access to said transfer passage, a detachable casing enclosing said exhaust openings, an exhaust outlet in said detachable casing, a piston in said cylinder, a conical extension on said piston, a port at the side of said piston, a central hole in the apex of said conical extension, a passage connecting the said hole and the said port, and one or more packing rings in the piston between the exhaust openings and the transfer port when the piston is at the end of its power stroke, substantially as described.

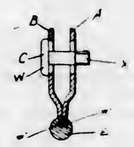
1,423,579. CARBURETOR. CHARLES A. NORLANDER, Greenville, Ill., assignor of one-half to Charles E. Davidson, Greenville, Ill. Filed May 9, 1921. Serial No. 467,867. 6 Claims. (Cl. 48—180.)

1. In a carburetor the combination with a casing having an air inlet and a fuel outlet, of a diaphragm in the path of the air passing from the inlet to the outlet, a gas conducting tube within the casing, means movable with the diaphragm and normally engaging the end of the tube to close the gas outlet of the tube, an inner gas conducting tube having an outlet, and means within the inner gas conducting tube and movable with the diaphragm for regulating the flow of gas from the inner tube to the outer tube.



1,423,580. RESILIENT CORE FOR MOTOR TIRES. GEORGE ARTHUR HOWARD ROBBINS and STANLEY FERDINAND ERIC EINSIEDEL, Brisbane, Queensland, Australia. Filed Apr. 27, 1921. Serial No. 464,922. 1 Claim. (Cl. 152—5.)

An improved resilient core for motor tires composed of elastic material having a round base and provided with

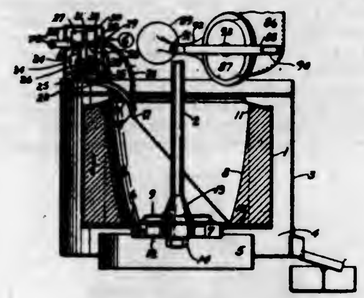


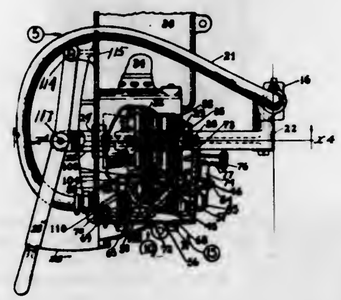
two interior endless and uninterrupted zig-zag air passages whereby constant air circulation is maintained and a uniform resiliency attained throughout the tire.

1,423,581. SEAM-SETTING TOOL. HENRY F. G. SCHUSKE, St. Joseph, Mo. Filed Dec. 9, 1920. Serial No. 429,325. 1 Claim. (Cl. 113—111.)

A seam setting tool, comprising a head and shank; a fixed jaw depending from one edge of the head; guide grooves cut inwardly and downwardly across the ends of the head; a combined jaw and set slidingly mounted in said guide grooves and moving opposite the fixed jaw; an ear extended up from the movable jaw; and a bolt extended from the head through said ear as means for adjusting the jaws.

1,423,582. MEANS FOR THE SUSPENSION OF ELECTRIC CONTACT WIRES. MARCO SEMENZA, Milan, Italy. Filed July 21, 1921. Serial No. 486,562. 3 Claims. (Cl. 191—42.)

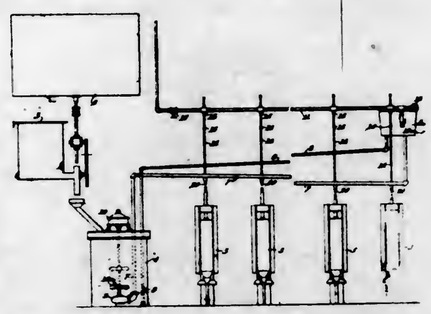




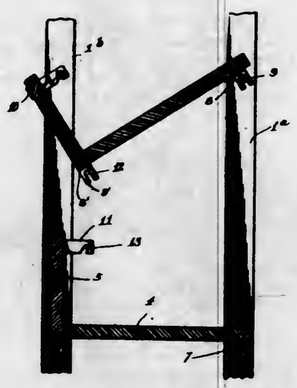
1. A contact-wire holding device comprising a pair of elastic plates fulcruming on each other and forming tongs, the lower ends of the plates being adapted to engage the contact wire when the upper ends of the plates are pressed together to a predetermined point, said elastic plates being placed under tension by further movement of the upper ends of the plates toward each other; and a locking pin having heads at a fixed distance and engageable with said plates while the latter are under tension, for holding said plates together under tension, said locking pin serving as a means for receiving a supporting device for the tongs.

1,423,583. METHOD OF AND MEANS FOR WASHING CENTRIFUGALS. ROBERT ALEXANDER STEPS, Los Angeles, Calif., assignor to Sugar Machinery Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 7, 1920. Serial No. 350,046. 58 Claims. (Cl. 210—67.)

12. In the art of washing sugar centrifugals, the method set forth of sweeping a vertically thin elongated spray of wash water substantially from top to bottom and from bottom to top of said centrifugal.

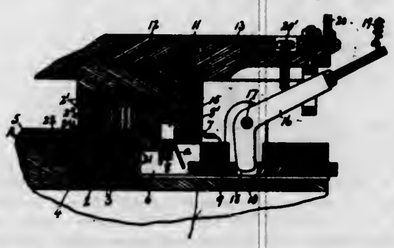


16. The combination with a centrifugal basket and means to revolve the basket; of an oscillating nozzle adapted to deliver water to the walls of the cavity of the centrifugals in the basket; and means to oscillate the



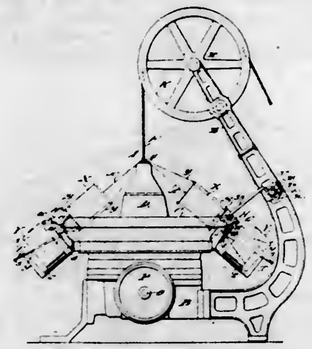
nozzle at a different speed varying at different levels in proportion to the thickness of the mass of sugar at such levels.

1,423,584. APPARATUS FOR ELECTROLYZING SOLUTIONS. KENNETH E. STUART, Niagara Falls, N. Y., assignor to Hooker Electrochemical Company, New York, N. Y., a Corporation of New York. Filed Jan. 28, 1921. Serial No. 440,740. 10 Claims. (Cl. 204—5.)



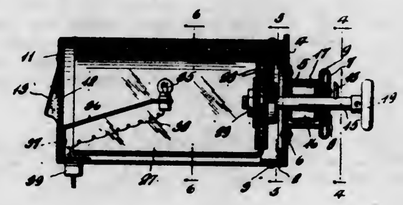
1. In a system for feeding a liquid to a container, the combination with a pipe and an orifice for dispensing liquid therefrom, said pipe and orifice constituting a continuous conduit, of means independent of said conduit and the flow of liquid therethrough for passing a cleaning fluid through the said orifice.

1,423,585. DISPLAY RACK. GEORGE A. TAYLOR, Weehawken, N. J., assignor to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 27, 1921. Serial No. 464,894. 7 Claims. (Cl. 211—14.)



1. In a display rack, the combination of upright members, securing devices extending from the same at spaced intervals, and shelves adapted to extend between adjacent upright members, having bottom portions and back portions extending upwardly from the rear edges thereof, said shelf back and bottom portions having securing devices thereon adapted to coact with said first named securing devices, to support said shelves in horizontal position or in inclined position from back to rear, as desired.

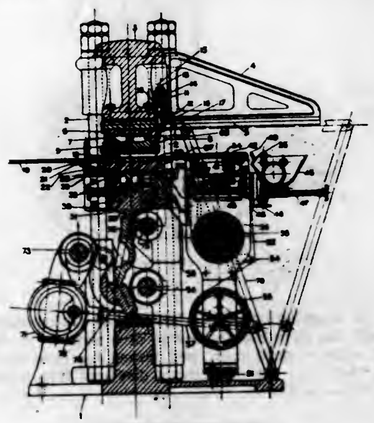
1,423,586. MACHINE FOR MAKING CHAPLETS. ROBERT P. THRONE, Syracuse, N. Y. Filed Nov. 5, 1919. Serial No. 335,918. 4 Claims. (Cl. 153—13.)



1. In a machine of the character described, the combination of a supporting bed having a female punching die, a forming-die and a horizontal longitudinally extending guide, all arranged in sequence along the bed, the female punching die being provided with a group of parallel vertical openings and a guide-way extending horizontally across said openings for receiving the work, a plunger movable vertically toward and from the supporting bed and provided with a male punching die and a forming-die arranged in sequence lengthwise of the bed, the male punching die having a group of punches vertically alined with the openings in the female die and movable across the work guide as the plunger is lowered, said female punching die and the openings therein extending above the work guide to form guides for the punches, the supporting bed and plunger being provided with cooperating bearing members in a vertical plane between the punching dies and said forming-dies, a supplemental plunger slidable in the first named horizontal guide to and from a position beneath the forming-die on the bed and toward and from the female die, and means actuated by the first named plunger when moved toward the bed for moving the supplemental plunger toward the female die.

1,423,587. YARN RETRIEVER FOR BRAIDING OR SIMILAR MACHINES. SIMON W. WARDWELL, Providence, R. I.; Carl V. J. Christensen, Edwin C. Smith, Arthur A. Armington, and Willard W. Bardsley executors of said Simon W. Wardwell, deceased. Filed Oct. 9, 1919. Serial No. 329,454. 12 Claims. (Cl. 96—5.)

1. In combination with a braiding or similar machine, a guide for directing the course of a yarn as it travels in a predetermined path, and means for retrieving the yarn when it escapes or becomes displaced from its guide, said means acting to replace the yarn in the guide.

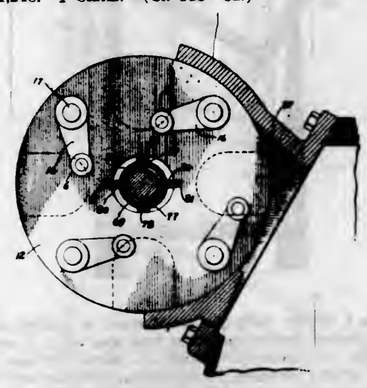


1,423,588. DIRECTION INDICATOR. JAMES WALTER WHEELER, Jr., Chattanooga, Tenn. Filed Apr. 3, 1922. Serial No. 549,135. 1 Claim. (Cl. 116—43.)

A direction indicator comprising a hollow cylindrical housing having end walls, a secondary housing concentrically located with relation to one of said walls, the outer end of said secondary housing and the corresponding end wall of said housing having aligned bearing openings therein, an operating shaft received through said bearing openings, anti-frictional bearing means arranged in said secondary housing engaging portions of said operating shaft, a hollow translucent drum fixedly mounted upon the inner end of said shaft and arranged within the housing having signalling matter presented upon its peripheral surface, said signalling matter being arranged in duplicate and disposed at diametrically opposite points thereon adapted to be simultaneously displayed through diametrically arranged windows in the side walls of the housing, an arcuate element fixedly mounted upon the

inner end of said shaft within the housing having a plurality of seats formed in one marginal portion thereof, a spring pressed arm pivoted at one end to the inner side of the housing and carrying a roller in its free end engageable with said seats, a light source supported within the housing and extending into said drum, a dial secured to the outer end of the secondary housing having indicia presented upon its face and an indicator carried upon the adjacent portion of the operating shaft cooperable with said dial.

1,423,589. DIE PRESS FOR PRINTING AND EMBOSSING. FREDERICK WILLIAM WOOD, Ashton-under-Lyne, England, assignor to Woods Die Press Improvements Company, Limited, London, England, a Company of Great Britain. Filed May 3, 1920. Serial No. 378,674. 6 Claims. (Cl. 101—165.)



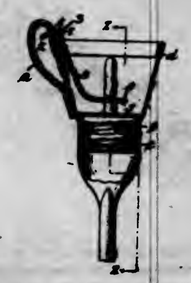
1. In a die press for use in printing from engraved plates or dies on paper or other materials, in combination a die acting face downwards and reciprocating in the plane of the die, inker and wiper devices with an interposed scraper immediately above the front edge of the ink reservoir and close to the rear edge of the wiper and means for operating said inker, scraper and wiper devices in unison so that for the operative stroke of the die the inking roller is not brought into contact with the die until after the forward edge of the die has passed its inking position.

1,423,590. GARMENT FASTENER. WALTER ZIMMERMAN, Kansas City, Kans. Filed Sept. 6, 1921. Serial No. 498,816. 2 Claims. (Cl. 22—224.)

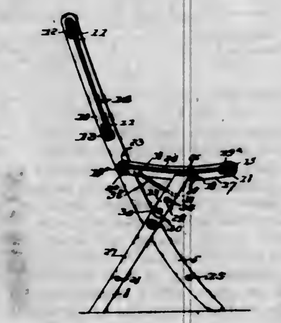
1. As a new article of manufacture, a garment fastener socket member to receive a headed complementary member, said socket member consisting of stamped-up sheet metal forming a ring-shaped portion, a socket integral with the ring-shaped portion and having a slot in its edge and a slot in its end communicating with the first named slot, the width of the end slot being less than the diameter of the socket and the metal cut therefrom being integral with the ring to provide a tongue integral with and projecting from the ring-shaped portion to align with the end slot, the free end of the tongue being adjacent to the center of the end wall of the socket whereby the headed portion to be received therein will be held in intimate contact therewith.

1,423,591. APPARATUS FOR SEALING CONTAINERS. NEILS P. BACH, Millburn, N. J., assignor to Perfect Vacuum Canning Company, New York, N. Y., a Corporation of Maine. Filed Feb. 25, 1920. Serial No. 361,248. 1 Claim. (Cl. 113—82.)

In apparatus of the class described, the combination of a vacuumizing chamber, a port therein, a rotary inlet valve controlling said port, a seat for said valve, a shaft carrying said valve, said valve having movement radially of said shaft and held to its seat in the port by atmospheric pressure.



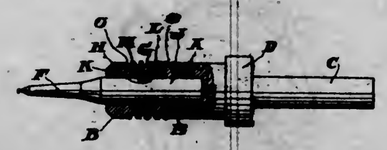
1,423,592. CLOSURE. FREDERIC E. BALDWIN, Philadelphia, Pa. Filed Jan. 10, 1922. Serial No. 528,216. 6 Claims. (Cl. 215—49.)



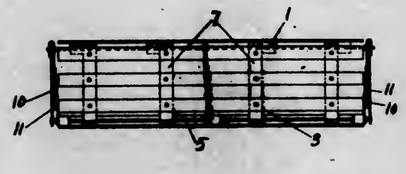
1. A closure having in combination a tapering socket of glass, a glass thread on the inside of the socket, a moulded glass plug having means adapted to loosely engage the thread, the plug being free for endwise movement provided by clearance between said means and thread, the wall of the plug where the mould seams occur being of such diameter as will provide space between the seams and the thread and to prevent the mould seams interfering with the closing action, a readily deformable gasket circular in cross-section, and a seat for the gasket adapted to compress the gasket toward the center of the closure, the gasket being capable of further compression by endwise pressure on the plug after the closure has been fully completed by screwing and said gasket adapted for the embedment of the mould seam therein.

1,423,598. HOLDER FOR HOT-WATER-BOTTLE STOPPERS. FREDERIC E. BALDWIN, Philadelphia, Pa. Filed Jan. 31, 1922. Serial No. 533,071. 1 Claim. (Cl. 215—99.)

An articulated holder for hot water bottle or bag stoppers comprising in combination a yoke adapted for insertion through a bag handle and consisting of a bar having at its ends angularly disposed arms provided with hinge elements, and a keeper for loosely embracing the neck of the stopper and comprising a split ring or ring section having at the sides of the split angularly disposed extensions provided at their ends with hinge elements and adapted to be sprung onto the neck and into engagement with the first mentioned hinge elements, substantially as described.

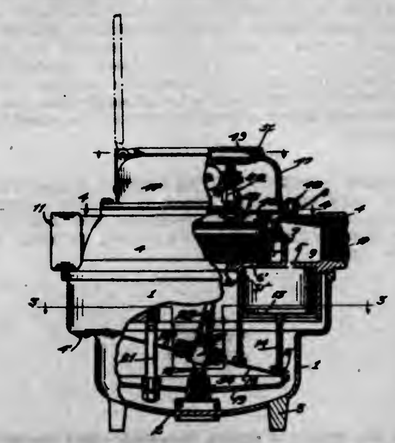


1,423,594. FOLDING CHAIR. HARRY E. BARROWS, Sheboygan, Wis., assignor to Dillingham Manufacturing Company, Sheboygan, Wis., a Corporation of Wisconsin. Filed Nov. 16, 1921. Serial No. 515,545. 5 Claims. (Cl. 155—143.)



2. A folding chair of the character described comprising front and hind legs, a seat movably connected to the front legs, and arms mounted between and extending beyond the hind legs for supporting the seat independently of the hind legs.

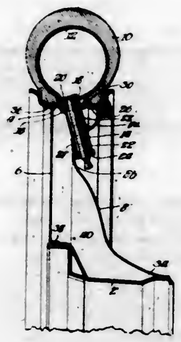
1,423,595. PIN RETAINER FOR TOOL HOLDERS. LEWIS C. BAYLES, Boston, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 28, 1921. Serial No. 473,417. 8 Claims. (Cl. 279—97.)



1. A device for removably retaining a tool in a holder, comprising in combination a holder having a hollow socket portion, a tool having a shank fitting said socket, a removable transverse pin loosely engaging both the holder and tool shank, and a longitudinally displaceable retaining member having a plurality of individually and longitudinally displaceable portions upon the periphery of the holder for holding said pin in position, provision being afforded for inserting and withdrawing the pin through the retaining member by longitudinally displacing parts of said retaining member.

1,423,596. FOLDING CRATE. ARTHUR H. BLANKMOR, St. Louis, Mo. Filed Sept. 20, 1919, Serial No. 325,152. Renewed May 18, 1922. Serial No. 562,034. 11 Claims. (Cl. 217—47.)

1. A folding crate, including collapsible end frames, each of the latter including two stepped, parallel, spaced and similarly positioned end braces, and parallel slats extended between and pivotally attached to the steps of said end braces, so that the ends of the slats upon one side of the crate will fall outwardly of one of the end braces, and inwardly of the other of the end braces.



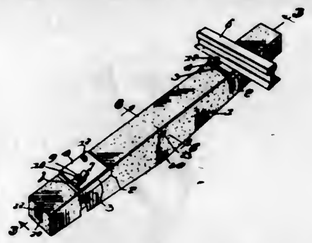
1,423,597. METER. HOSMER BLUM, San Francisco, Calif., assignor of one-half to Bryon C. Jay, Los Angeles, Calif. Filed June 17, 1919. Serial No. 304,774. 6 Claims. (Cl. 73—30.)

1. A meter comprising a casing provided on its interior with a chamber having a fluid inlet passage and formed with top and bottom walls, said top wall provided with an outlet opening and said bottom wall provided with a plurality of ports successively through which the fluid admitted under pressure into said chamber passes in opposite directions, and said casing provided with a fluid outlet passage communicating with said chamber through said opening in the chamber top wall, a ported disk valve movably mounted within said chamber and formed with a solid periphery and resting on said chamber bottom wall, a packing associated with the opposite face of said valve and cooperating with the chamber top wall, a plurality of cylinders associated with the underside of said chamber bottom wall, one cooperating with each of said ports, a piston within each cylinder, means cooperating with said pistons

for operating said valve within said chamber to successively position said ports successively in communication with said inlet passage and said outlet passage, and a register operated by the movement of said pistons.

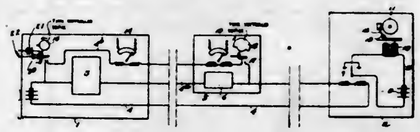
1,423,598. METAL DISK WHEEL. JAMES A. CHARTER, Chicago, Ill. Filed Mar. 17, 1922. Serial No. 544,445. 7 Claims. (Cl. 301—63.)

1. A hollow metal wheel comprising a tire supporting rim carried from a hub by two separated metallic disks, the front disk having adjacent to the rim an annular groove so as to allow a straight inner tube valve stem which passes through a point approximately midway between the disks to extend diagonally through said front disk at a point in the side thereof, whereby the outer end of such a valve stem is free to receive conventional forms of valve nut and air chuck on an air supply hose, and yet is free from danger of being curbed while the wheel is in operation.



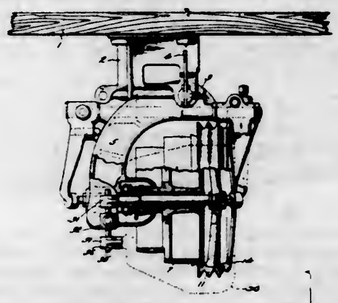
1,423,599. HOSE-SUPPORTER BUTTON AND METHOD OF MAKING SAME. LEWIS D. CHAISTIS, Nichols, Conn., assignor to Albert Oppenheim, New York, N. Y. Filed June 17, 1921. Serial No. 478,281. 6 Claims. (Cl. 29—148.)

1. The method of making clasp-studs which consists in forming the stud comprising a base, a shank and a substantially circular head from a wire blank with the head upturned at an acute angle to the shank, then slipping a tubular collet over the head and onto the shank, and then bending the head down to hold the collet in place.



1,423,600. CEMENT TIE AND RAIL FASTENER. ADAM L. CRANE, Fort Mill, S. C. Filed Feb. 18, 1922. Serial No. 537,551. 3 Claims. (Cl. 238—91.)

1. In a tie, a plastic tie body, wherein its central portion is relatively thick and has its under surface tapered or inclined upwardly from said relatively thick portion to the ends of the tie, upper and lower reinforcing tie rods embedded in the tie body, the lower reinforcing tie rods conforming to the contour of the bottom of the tie, upper and lower transverse reinforcing plates or bars, the upper bar overlying the longitudinal-reinforcing rods, the lower bar underlying the lower longitudinal reinforcing rods, verti-



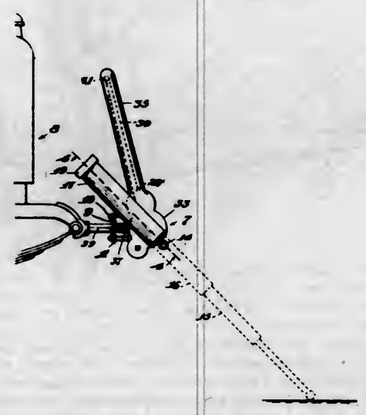
cal rods connecting the transverse bars, rails to rest upon the tie, which is provided with cushioning supports for the rails, and means for fastening the rails in position.

1,423,601. DETECTOR FOR ALARM SYSTEMS. FRANKLIN E. CRAWFORD, Winchester, Mass., assignor to Bankers Electric Protective Association, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 12, 1918. Serial No. 249,375. 5 Claims. (Cl. 177—314.)

1. In an electrical burglar alarm system, a guarded structure, an alarm station, an electrical circuit for controlling actuation of the alarm at said station, said circuit comprising two paths at the guarded structure, one a door circuit controlled by the door and the other a supplementary circuit excluding the door, means to control the supplementary circuit at said guarded structure, a detector station distant from said guarded structure, said supplementary circuit passing through said detector station, and mechanism at said station for controlling the supplementary circuit independently of said controlling means at said guarded structure, and a second guarded structure containing the control mechanism at the detector station.

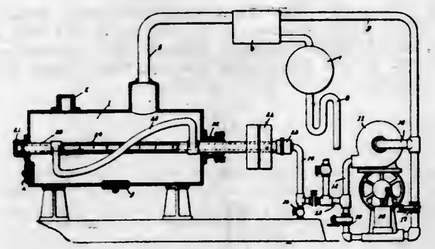
1,423,602. DRESS GUARD. ALBERT H. DE VOE, Westfield, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Original application filed Apr. 1, 1918, Serial No. 225,935. Divided and this application filed Oct. 30, 1918. Serial No. 260,251. 11 Claims. (Cl. 74—56.)

1. In a power-transmitting device, a bracket, a hanger adjustably suspended from said bracket, driving and



driven pulleys supported by said hanger, and a dress-guard mounted in said hanger to swing outwardly about a vertical axis to afford access to said pulleys.

1,423,603. PENCIL. WILLIAM P. DE WITT, Somerville, and DAVID J. LA FRANCE, Cambridge, Mass., assignors, by mesne assignments, to De Witt-La France Co., Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 2, 1919. Serial No. 327,839. 5 Claims. (Cl. 120—18.)



5. In a magazine pencil the combination of a tubular magazine having a circumferential groove; a tubular casing surrounding the magazine and having a rim engaging the circumferential groove of the magazine to permit rotation of the parts relatively to each other; a cap for the magazine covering the juncture of the magazine with the casing and effective to rotate the magazine; a lead guide co-axial with the casing and the magazine; an ejector in line with the lead guide; and means for translating rotary movement of the magazine into longitudinl movement of the ejector.

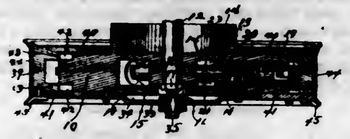
1,423,604. BUMPER-BAR FENDER. WILLIAM W. EDWARDS, Los Angeles, Calif. Filed Jan. 17, 1921. Serial No. 437,753. 6 Claims. (Cl. 293—25.)

1. In a vehicle fender, a frame embodying telescopic side portions, each of which comprises a plurality of tubes adapted to be telescoped together, a series of helical springs arranged in each tube adapted to act on the adjacent tubes, said springs being compressed when the tubes are in their telescoped position, means for holding the tubes telescoped in opposition to the springs adapted to be released, and a fender carried by said telescoping members adapted to be moved into operative position on extension of said telescoping members.

1,423,605. METHOD OF MAKING DRY SOLUBLE LIME-SULPHUR COMPOSITION. EDWARD H. FRENCH, Columbus, Ohio. Filed Aug. 11, 1919. Serial No. 316,615. 4 Claims. (Cl. 23—13.)

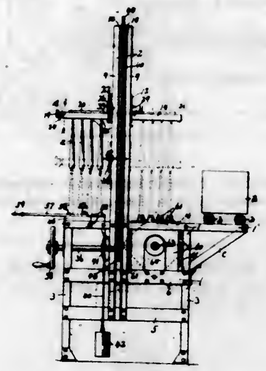
1. The method of preparing soluble lime-sulphur which consists in evaporating a lime-sulphur solution in an atmosphere of nonoxidizing gas.

1,423,606. HAIRPIN. THOMAS GREGORY, Cleveland, Ohio. Filed Aug. 25, 1921. Serial No. 495,242. 2 Claims. (Cl. 132—51.)



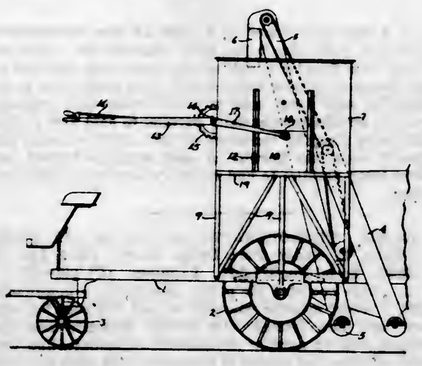
2. A hair pin formed of a piece of wire substantially U-shaped, said wire being split adjacent the upper end of one arm forming a pair of members, said members being extended to form loops spaced from each other in the plane of said arms, said members being then extended to form an arm substantially parallel to said first portion and being pivotally connected to each other adjacent said spaced loops, the portion of said members beyond said pivot being parallel to and normally contacting with each other.

1,423,607. TIRE-OPERATED MULTIPLE AIR PUMP. DANIEL F. GROAT, Fort Dodge, Iowa. Filed Apr. 17, 1920. Serial No. 374,561. 7 Claims. (Cl. 230—31.)



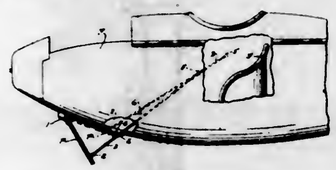
1. A tire operated air pump, comprising a non-tubular axle, a wheel member mounted on and for rotation with said axle and formed with radial cylinders and also formed with an annular air chamber communicating with said cylinders and devoid of communication with said axle, valves controlling the communication between said chamber and cylinders, pistons mounted for reciprocation in said cylinders and adapted to discharge air to said cham-

ber, means for returning said pistons from the compression strokes thereof, and a rim loosely mounted on said



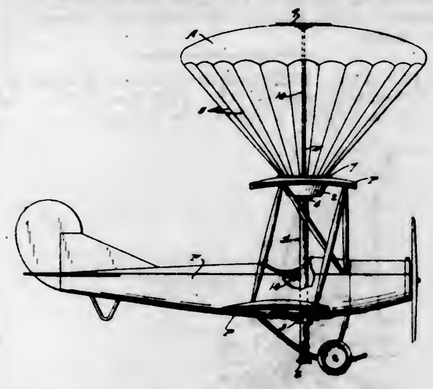
wheel member and adapted successively to engage and produce compression strokes of said pistons.

1,423,608. CANDLE-MAKING MACHINE. ROBERT GROSSMANN, Syracuse, N. Y., assignor to The Will & Baumer Candle Company, Syracuse, N. Y., a Corporation of New York. Filed Apr. 13, 1922. Serial No. 552,200. 12 Claims. (Cl. 18—27.)



1. In a candle making machine, the combination of a candle cutting device having a multiplicity of cutters, a candle carrier having means for supporting a multiplicity of candles in alinements with the cutters, means for operating the carrier to bring the candles into position to be cut by the cutting device, and means for operating the cutters into cutting engagement with the candles.

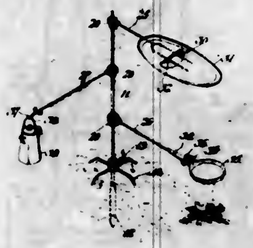
1,423,609. GRAIN CARRIER. ORRIN B. HALL, Oatville, Kans. Filed Aug. 1, 1921. Serial No. 488,920. 2 Claims. (Cl. 198—12.)



1. In combination with a combined grain harvester and separator including a framework, elevator and bull wheel; a grain tank arranged beneath the outlet of said elevator and supported above the bull wheel by frame elements; a downwardly and outwardly sloping floor for said tank, and a gate, normally closed, arranged in the outer wall of said tank in a plane parallel to but beyond the plane of the outer face of the bull wheel.

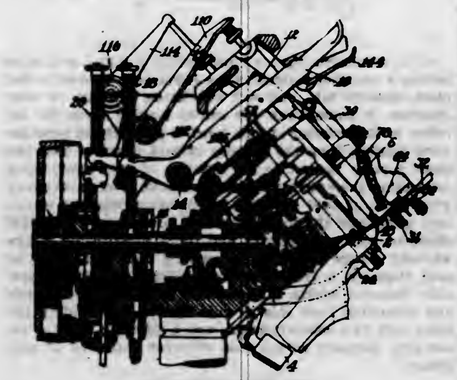
1,423,610. AEROPLANE. JOHN HAYES, Belle Vernon, Pa. Filed Feb. 15, 1922. Serial No. 536,723. 2 Claims. (Cl. 244—29.)

2. In combination with the nose portion of the fuselage of an aeroplane, the bottom wall of the fuselage being provided with an opening, a plane underlying said nose portion, means for hingedly connecting the forward marginal portion of the plane to the fuselage for swinging movement toward or from the fuselage, and a rod operatively engaged with the rear marginal portion of the plane and extending within the fuselage through the opening in the bottom wall thereof, said rod providing means within the fuselage for swinging the plane toward or from the bottom of the fuselage, said rod having a shoulder contacting with the bottom wall of the fuselage adjacent the slot when the plane has been moved away from the fuselage, said rod being movable within the opening to disengage the shoulder from the bottom wall of the fuselage, said opening being of a size to permit the shoulder when disengaged to pass therethrough.



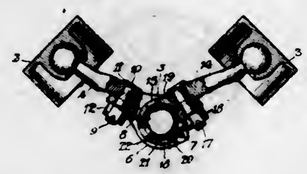
1,423,611. AEROPLANE. JOHN HAYES, Belle Vernon, Pa. Filed Feb. 15, 1922. Serial No. 536,724. 3 Claims. (Cl. 244—21.)

2. In combination with the fuselage of an aeroplane and a supporting plane therefor, said plane being provided with an opening, a parachute, flexible means for connecting said parachute to the portion of the plane defining the opening, said parachute when collapsed being insertable through the opening in the plane, a rod secured to the central portion of the parachute, a tubular standard carried by the fuselage and extending from the plane through the pit of the fuselage, said rod being telescopically engaged within the standard, means placed under tension when the rod is forced inwardly of the standard to force



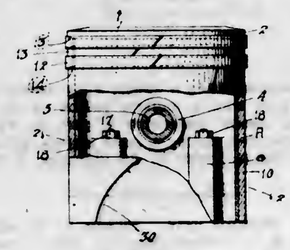
the rod and parachute outwardly through the opening in the plane, a sliding bolt carried by the standard, and means for constantly urging said bolt inwardly of the standard, the rod having a shoulder with which the bolt engages when the rod is moved inwardly of the standard.

1,423,612. CAMP UTENSIL. HAROLD H. JEWETT, Puente, Calif. Filed May 6, 1919. Serial No. 295,203. 1 Claim. (Cl. 126—30.)



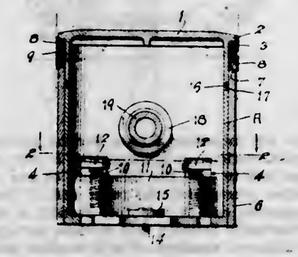
A camp utensil comprising a stake having a pointed end arranged to enter the ground, a spider on said stake having outwardly extending pivotally mounted legs arranged to engage the ground, a series of collars slidably mounted on said stake, means for fixing said collars in adjusted position on said stake, a head rotatably mounted on each collar, an arm mounted in each head extending outwardly therefrom, and means for securing said arms in said heads to prevent turning of the arms in the heads.

1,423,613. MACHINE FOR WORKING UPPERS OVER LASTS. BERNHARDT JORGENSEN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 25, 1918. Serial No. 264,038. 38 Claims. (Cl. 12—10.)



1. A machine for working an upper over a last and securing it to an insole by adhesion having, in combination, upper pulling means, means for bending the margin of the upper inwardly over the insole, said bending means being mounted for inward movement lightly along the surface of said margin without substantial pressure against the insole, and additional means constructed and arranged to engage the inwardly bent margin of the upper and to press it into adhering relation to the insole while the margin is thus lightly held by the bending means.

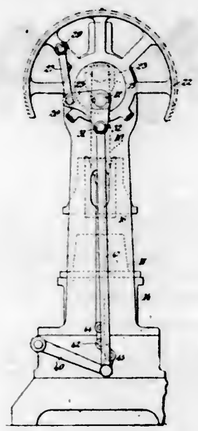
1,423,614. CONNECTING ROD FOR DRILLS, ETC. HENRY J. KINMAN, Cleveland, Ohio, assignor to Chicago Pneumatic Tool Company, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 14, 1919. Serial No. 325,902. 7 Claims. (Cl. 74—17.)



1. Connecting means between the crank shaft and pistons of a multiple cylinder engine consisting of two connecting rods, and a bushing cooperating with said rods and having a perforated projecting portion, the inner or bearing end of one of the rods having an opening to receive such projecting portion.

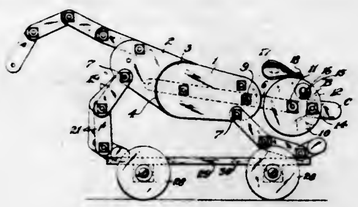
1,423,615. PISTON. HERMAN KISTNER, Elizabeth, N. J. Filed June 7, 1921. Serial No. 475,663. 12 Claims. (Cl. 74—108.)

1. A piston including a body having outwardly opening recesses in the walls thereof, a sleeve slidable on said body exteriorly thereof, and means arranged within said recesses for securing said body to said sleeve.



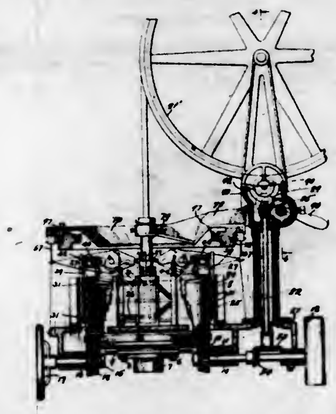
1,423,616. PISTON. HERMAN KISTNER, Elizabeth, N. J. Filed June 7, 1921. Serial No. 475,664. 8 Claims. (Cl. 74—108.)

1. A piston including a body having a plurality of lugs thereon, a sleeve slidable on said body exteriorly



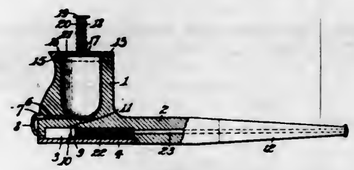
thereof, members adapted to be detachably connected to said lugs, and means carried by said members for securing said sleeve on said body.

1,423,617. PRESS. WILLIAM KLOCKE, Woodhaven, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed May 15, 1920. Serial No. 381,777. 8 Claims. (Cl. 113—38.)



1. A press comprising a punch, a die, means for driving said punch with a uniform motion on its working stroke, said means comprising a part to which said punch is connected, having a crank motion, whereby said punch has definite limits to the extremes of its movement.

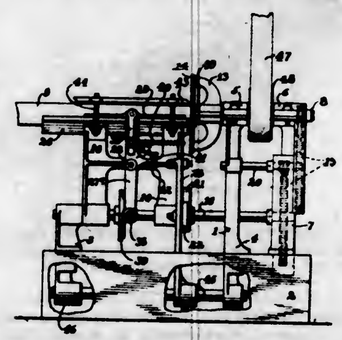
1,423,618. FIGURE TOY. JOSEPH C. LACKEY, Long Branch, N. J. Filed Mar. 2, 1921. Serial No. 449,084. 11 Claims. (Cl. 46—45.)



1. A figure toy including a body portion formed of a pair of parallel sections each comprising a pair of members arranged end to end, the inner end of one member of each section overlapping the inner end of the member at the opposite end of the other section, a strip arranged longitudinally between said sections movable with one pair of adjacent members of said sections and overlapping the joints between said members, and pivotal means extending through the said strip and the inner ends of the members at opposite ends of said sections.

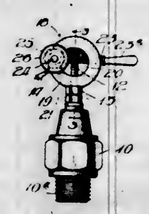
1,423,619. LOOM. EVARTS G. LOOMIS, Newark, N. J., assignor to The Okonite Company, Passaic, N. J., a Corporation of New Jersey. Filed July 23, 1921. Serial No. 486,987. 28 Claims. (Cl. 139—7.)

1. In a loom for weaving tubular fabric, tension fingers cooperating with the wrap threads, a pivoted bearing for each finger, and locking mechanism for locking a finger out of operative position.



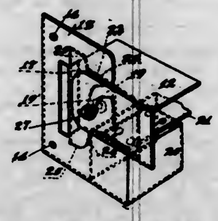
1,423,620. TOBACCO PIPE. JOHN MEGAROS, Wheeling, W. Va. Filed June 24, 1920. Serial No. 391,328. 4 Claims. (Cl. 131—12.)

4. In a tobacco pipe, a bowl having a stem, said bowl having a chamber formed in the lower part thereof, a flat plate slidable into and out of closing relation to said chamber, a passageway for smoke leading from the interior to the exterior of said bowl, a plurality of passageways leading from the interior of said chamber near the front portion thereof to the exterior of said bowl, tubes connecting the exterior openings of said bowl passageway with those of said chamber passageways whereby smoke may pass from the interior of said bowl to and into said chamber, said passageways and tubes constituting means whereby smoke is cooled in passing from said bowl to said chamber, a frame having a fabric covering removably disposed within said chamber intermediate its ends and extending from side to side thereof for dividing the same into two compartments, and a filtering packing removably disposed within said chamber rearward of said frame.



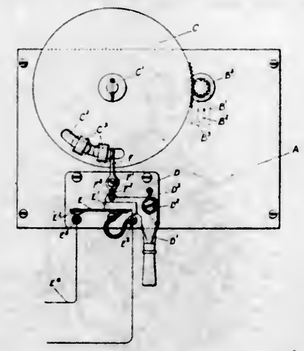
1,423,621. HEEL LOG CUTTING MACHINE. JOHN E. MITCHELL and DENNIS PARKS, St. Louis, Mo. Filed July 19, 1920. Serial No. 397,490. 12 Claims. (Cl. 143—52.)

1. In a heel log cutting machine, the combination of a frame, a shaft mounted to rotate therein, a spider carried by the end of the shaft, a cutter attached to the spider having a central opening formed with a cutting edge located with the center of the opening substantially on the axis of the shaft, movable log supporting means mounted on the frame for holding the heel log with its end projecting into the opening, and



means for imparting a lateral rocking movement to the log supporting means to move the log against the edge of the cutter, and thereby sever a lift from the log, the said spider operating to permit the severed lift to fall after the same has been severed.

1,423,622. SPARK-TESTING DEVICE FOR GASOLINE ENGINES. WILLIAM P. MOTT, Chicago, Ill. Filed Mar. 29, 1919. Serial No. 286,097. 5 Claims. (Cl. 175—183.)



2. The combination with a threaded terminal, of an insulating member having a threaded engagement with said terminal, said insulating member having an aperture therethrough into which said terminal is adapted to project, a switch blade mounted on said insulating member and adapted to contact with said terminal within said aperture, and means for connecting said switch blade in a circuit.

1,423,623. BED-RAIL FASTENER. ALEXANDER S. PUTNAM, Los Angeles, Calif. Filed Oct. 1, 1921. Serial No. 504,556. 3 Claims. (Cl. 5—55.)

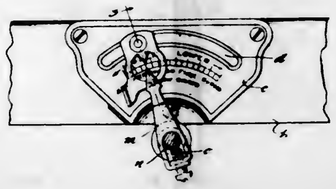
2. In a bed rail fastener, a corner post, a plate, having a portion seated in a slot in said post, means for securing said plate to said post, a flange projecting laterally from said plate and bearing against the outer face of the post, there being an inverted L-shaped slot formed in the outer portion of said plate, a side rail, a plate secured to the end of said side rail, and a rivet seated in said plate and side rail and adapted to occupy the slot in the first mentioned plate.

1,423,624. LIMIT SWITCH FOR ELECTRIC-DRIVEN HOISTS. ROY E. RICE, Bucyrus, Ohio, assignor to Roberts & Schaefer Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 16, 1919. Serial No. 318,018. 8 Claims. (Cl. 200—47.)

1. A limit switch for electric hoists comprising a switch element adapted normally to be in operative position, yielding means adapted to move it into inoperative position, a member, pivoted in unstable equilibrium, adapted to resist said yielding means, and means for tripping said member after a predetermined excursion of said hoist.

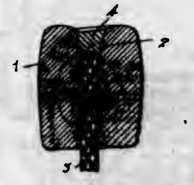
1,423,625. WELL-CLEANING DEVICE. FRANK JASPER ROGERS, Independence, Kans. Filed May 24, 1920. Serial No. 383,619. 8 Claims. (Cl. 166—18.)

1. A well cleaning device comprising a tubular member, a rod connected to the tubular member, a plurality of flexible arms connected to said rod, the free ends of which have a tendency to expand outwardly, a yoke



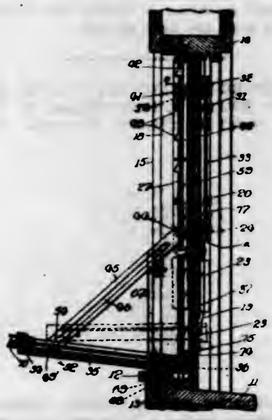
slidable with respect to the tubular member, and means carried by the yoke for engaging the free ends of the flexible arms when the yoke is at the limit of one movement with respect to said tubular member and for releasing the free ends of said arms to permit them to expand when the yoke is at the limit of its movement in an opposite direction.

1,423,626. **FASTENER-SETTING MACHINE.** WALTER SHAW, deceased, late of Dedham, Mass., by Helen A. Shaw, executrix, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 30, 1918. Serial No. 260,363. 22 Claims. (Cl. 218—15.)



8. In a machine for setting compound fasteners, a member having a tapering hole of fixed dimensions, and two cooperative setting tools one of which is arranged to carry one of the component parts of a compound fastener through said tapering hole to the setting locality, said hole being adapted to correct the position of such fastener part relatively to its carrying tool without materially resisting the advancement of said part.

1,423,627. **BURNER REGULATOR.** ALVIN G. SHERMAN, Detroit, Mich., assignor to Detroit Vapor Stove Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 27, 1922. Serial No. 539,436. 8 Claims. (Cl. 116—125.)

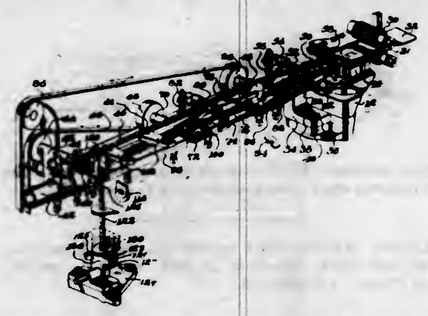


2. In a gas or vapor stove, the combination of a valve regulating the fuel feed, a handle connected with the valve, a pointer arm connected with the handle, a dial provided with indications to show the valve opening, and a slidable arrow fixable along said indications to fix the point of desirable valve opening.

1,423,628. **TUBE TOOTH AND CROWN.** AMOS H. SIBLEY, Shipbottom, and GEORGE L. VAN ALLEN, Newark, N. J., assignors to General Dental Mfg. Co., a Corporation of New Jersey. Filed Oct. 8, 1921. Serial No. 506,238. 7 Claims. (Cl. 32—30.)

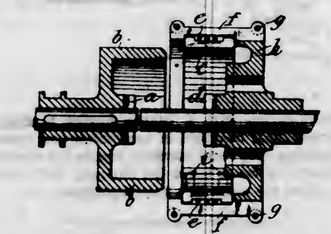
1. A tube tooth or crown having the walls of the opening therein roughened in lines extending circumferentially and longitudinally of said opening.

1,423,629. **WINDOW.** JOSEPH SIROFSKE, Lafayette, Ind., assignor of one-fourth to Joseph Held, West Lafayette, Ind., and one-fourth to Christ Held, Lafayette, Ind. Filed May 2, 1919. Serial No. 294,161. 14 Claims. (Cl. 20—42.)



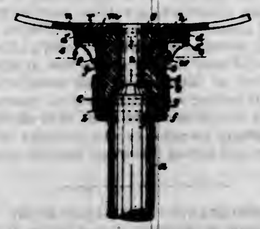
1. In a window structure, the combination of a frame, said frame having vertical channels in its opposite sides, a window sash in said frame, pins extending from the lower corners of said sash into said channels, a pin extending from one side of said sash into the adjacent channel and which pin is above the pin in the adjacent lower corner, a supporting bar slidably engaging at its upper end in said last named channel and at its lower end engaging said upper pin, and means whereby said upper pin may be withdrawn from its channel to release the sash for swinging movement away from the vertical plane, said bar supporting said sash in such position.

1,423,630. **BLANK-HANDLING MECHANISM.** RALPH C. SIMMONS, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 18, 1918. Serial No. 212,502. 27 Claims. (Cl. 164—22.)



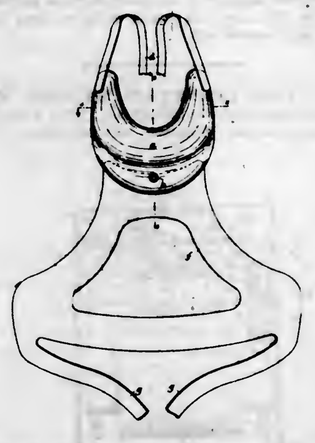
1. In a mechanism for stacking blanks, the combination of a portable, elongated holder member of non-circular cross section constructed and arranged to enter a non-circular aperture in a blank, means for receiving a blank having a non-circular aperture, turning it in its own plane until the longer axis of its aperture becomes parallel to the longer dimension of the cross section of said holder member, conveying it to said member and

stringing it thereon, and means for detachably supporting said member in blank receiving relation to the con-



veying means, whereby said member with a stack of blanks strung thereon may be removed and transported without disturbing the relation of the blanks to each other.

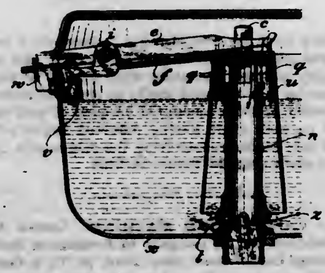
1,423,631. **DOG CLUTCH.** WALTER SKAIFE, London, England. Filed Nov. 13, 1919. Serial No. 337,719. 6 Claims. (Cl. 192—53.)



1. A clutch of the type herein referred to, comprising two rotary co-axial members provided with companion dog members one of which is adapted to be moved axially into the other, an annular friction clutch member comprising a plurality of segments carried by and adapted to rotate with one of said co-axial members and to act frictionally against the other co-axial member when one of such members is forced into the other and spring means holding said segments together.

1,423,632. **STEERING-WHEEL LOCK FOR VEHICLES.** HENRY LUND SMITH, Paterson, N. J. Filed Sept. 21, 1920. Serial No. 411,723. 2 Claims. (Cl. 70—129.)

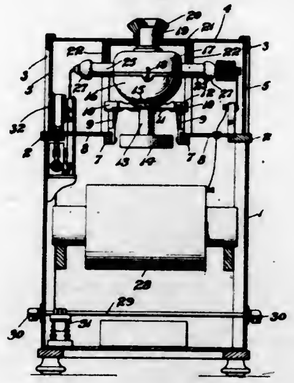
1. In combination, a vehicle steering-post member having a lateral bearing flange, a steering wheel revolubly seated on the flange, a clutch member having a clutching portion forming a spline-connection with the flange and being movable up and down on said steering-post member into and out of locking engagement with the wheel, and means to hold the clutch member in its elevated position.



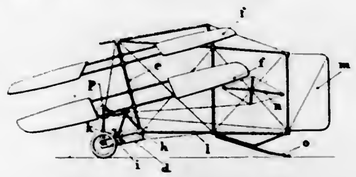
1,423,633. **SWIMMING HARNESS.** HENRY LUND SMITH, Paterson, N. J. Filed June 7, 1921. Serial No. 475,655. 1 Claim. (Cl. 9—17.)

Swimming harness including an elongated member tapered toward both ends and having its mid-portion flattened and adapted to bear flat against the wearer's throat and up against his lower jaw and girdling means attached to said ends of the member and also to the lowest part of its said mid-portion and adapted to extend around the wearer to hold said member flat against his throat.

1,423,634. **FLUSHING APPARATUS.** LEO SOLHEID, Duesseldorf, Germany. Filed Feb. 3, 1922. Serial No. 538,883. 4 Claims. (Cl. 4—5.)



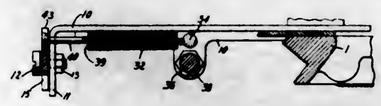
1. In a flushing apparatus of the character set forth, in combination with a siphon bell including a central stand-



pipe presenting top and bottom ports, and means for operating said siphon bell, an aerating device for at will preventing air rarefaction within said siphon bell, and said aerating device adapted to be operated by a movement of said siphon bell operating means different from that for operating said siphon bell.

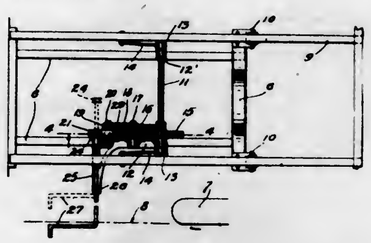
1,423,635. X-RAY CABINET AND MACHINE. WILLIAM H. THWAITES, Grand Rapids, Mich. Filed Jan. 3, 1921. Serial No. 434,448. 9 Claims. (Cl. 250—34.)

1. In combination, a cabinet having a horizontally located cylindrical upper portion formed with a transverse slot between its ends, a tube holding housing mounted to turn about a horizontal axis within said upper portion of the cabinet, said housing having a neck projecting therefrom through said slot, and an X-ray tube mounted horizontally within the housing.



1,423,636. FLYING MACHINE. TRAJAN VUIA, Garches, France, assignor to Caius Brediceanu, Paris, France. Filed Oct. 19, 1920. Serial No. 417,943. 2 Claims. (Cl. (Cl. 244—19.)

1. A flying machine, comprising a framework, a pair of shafts at the opposite ends of said framework, said shafts being slightly inclined forwardly with respect to the vertical, means for rotating said shafts in opposite directions, and a plurality of blades mounted on each of said shafts, the blades on each shaft having different angles of incidence, and said blades constituting the sole means of propelling and sustaining the flying machine.



1,423,637. CALCULATING MACHINE. OSCAR WOODWARD, Babylon, N. Y., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed June 9, 1921. Serial No. 476,198. 12 Claims. (Cl. 235—59.)

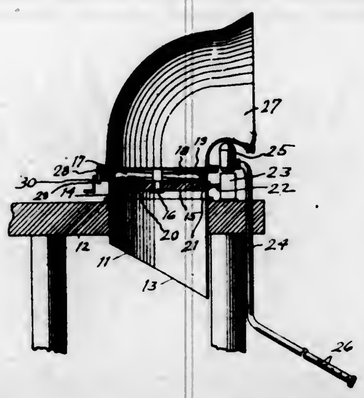
2 The combination of a totaliser truck having individual freedom in its runway and a tendency to move forward from its normal position when carrying totalizers, a type-

writer carriage, and an intervening adjustable connection for opposing the tendency of the truck to move forward.

1,423,638. MECHANICAL HOIST. FRANK E. ACKERMAN, St. Paul, Minn. Filed Aug. 25, 1921. Serial No. 495,191. 10 Claims. (Cl. 298—19.)

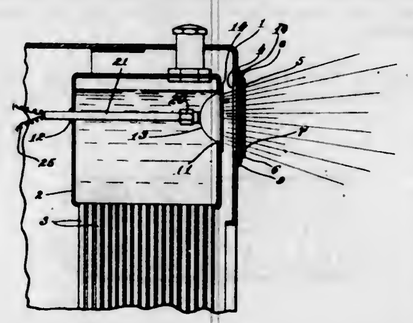
1. The combination with a vehicle having a dumping body, of a crank-shaft mounted on the vehicle and connected to the dumping body, and common means for operating the crank shaft to raise or lower the dumping body and for positively locking the same in a raised position.

1,423,639. SLIDE FOR THE STRAPS OF GARMENTS. CARL E. ANDERSON, East Orange, N. J., assignor to Eastern Tool & Manufacturing Company, Bloomfield, N. J. Filed Aug. 3, 1921. Serial No. 489,455. 3 Claims. (Cl. 24—200.)



1. A slide for the straps of garments comprising a square wire forming an end strand, a top strand, a second end strand, a bottom strand which extends back to the point of beginning and around which the first mentioned end of the wire is wound, a strand extending upward and then transversely across between the top and bottom strands to form a central strand, at least one of said strands other than the end strands having separated portions thereof offset at right angles to the plane of the slide, said off-set portions being substantially parallel to the portions from which they are off-set and joined thereto by angular shoulders.

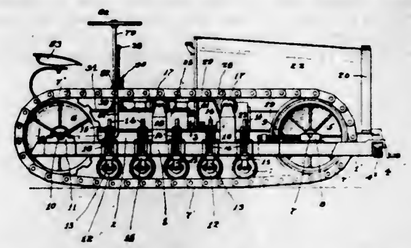
1,423,640. AUTOMATIC SURF-BREAKING APPARATUS. HERNDON O. BARLOW, Los Angeles, Calif. Filed May 5, 1921. Serial No. 466,890. 4 Claims. (Cl. 61—6.)



1. In a surf-breaking apparatus, the combination with an air compressor, of a delivery tube extending therefrom and beneath the water and having a series of discharge apertures, a tubular base member mounted on the wharf and having an open end beneath the wharf, a tubular sec-

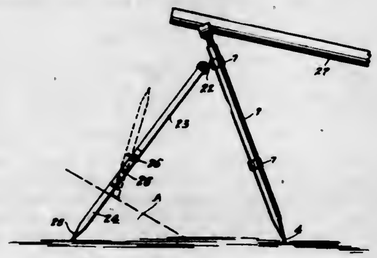
tion on the base member, a transverse brace in the tubular section, a wind-wheel journalled in the brace member,

a funnel to direct the wind to the wind-wheel, a countershaft to drive the air compressor, and a pinion on the countershaft in engagement with the wind-wheel.



1,423,641. ILLUMINATED MARKER. EDWARD H. BAUSMAN, Baltimore, Md. Filed Dec. 24, 1921. Serial No. 524,648. 3 Claims. (Cl. 40—132.)

2. In combination with an automobile radiator having a shell and a tank, a cup in the front of the tank having a lamp socket, a lamp bulb therein, a conduit leading to the socket, and a transparent plate having a legend thereon seated in the shell in front of the cup.



1,423,642. TRACTOR DRIVING AND MECHANISM THEREFOR. CARROLL N. BEAL and FAY C. BEAL, San Francisco, Calif. Filed Mar. 8, 1920. Serial No. 364,175. 4 Claims. (Cl. 180—9.2.)

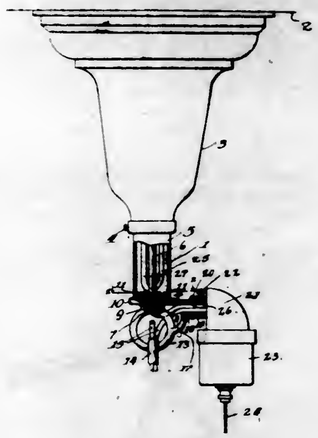
1. A tractor including a frame, supporting and drive members carried thereby and arranged at opposite sides of said tractor, a power plant including a motor, a drive shaft associated therewith, a main clutch connecting the motor and drive shaft, a pair of independent variable speed power transmissions driven by said drive shaft through said main clutch, a driving connection between said power transmissions and the driven members at opposite sides of the tractor, a secondary clutch in each of said driving connections, a lever associated with each clutch, said levers arranged with their free ends overlap-

ping, and a single control member associated with said levers and capable of operation to selectively release said secondary clutch.

1,423,643. CHUTE SUPPORT. GEORGE BUCHAN, Sr., Mansfield, Ohio. Filed July 18, 1921. Serial No. 485,560. 2 Claims. (Cl. 248—2.)

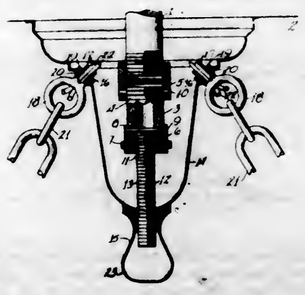
1. In a coal chute support, tubular standards connected in spaced and parallel relation to each other, bars telescopically fitted within the tubular standards, a member connected to the telescopic members, a member pivoted to the connecting member to swing in a horizontal plane, cross braces connecting the standards in parallel relation, vertical bearings fitted to said braces, a bar attached to the cross connecting member and slidably fitted in said bearings.

1,423,644. HAIR SLIDE. OLGA EMILY BULEY, London, England. Filed Aug. 16, 1920. Serial No. 403,833. 9 Claims. (Cl. 132—22.)



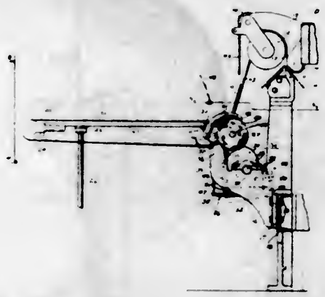
1. A combined hair slide and veil holder comprising a body portion, having means for securing the same to the hair, and at least one member adapted to be protruded from or retracted into the body portion and serving to secure the veil thereto.

1,423,645. SWITCH-SUPPORTING ATTACHMENT FOR ELECTRIC FIXTURES. FRANK LOWELL BUTLER, Chicago, Ill. Filed Apr. 25, 1921. Serial No. 464,090. 2 Claims. (Cl. 240—123.)



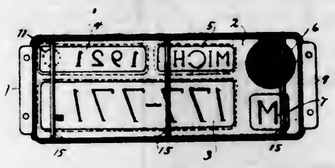
1. In an electric fixture, a stem comprising a vertically disposed rod supported at its upper end and threaded at its lower end, a tubular member arranged to encircle the rod, and means engaging with the rod at the lower end

thereof and contacting with the tubular member at its lower end for supporting the latter, said means comprising a flanged body portion provided with a threaded opening arranged to engage the threaded rod and formed with a lateral extension adapted for connection with a switch and with a loop portion adapted for connection



with means for supporting an element to depend therefrom, said body portion being formed with an opening therethrough adapted to guide an electrical conducting wire into the tubular member, and said lateral extension being formed with a bore for guiding an electrical conducting wire into the switch.

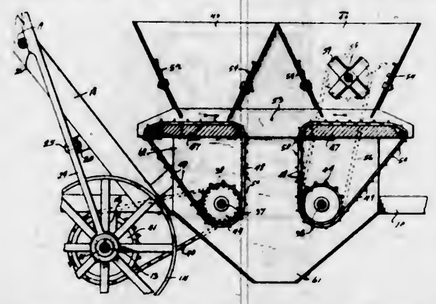
1,423,646. ELECTRIC FIXTURE. FRANK LOWELL BUTLER, Chicago, Ill. Original application filed Nov. 12, 1920, Serial No. 423,636. Divided and this application filed Sept. 2, 1921. Serial No. 498,125. 1 Claim. (Cl. 240—85.)



In an electric fixture, a coupling adapted to be secured to a fixed support, an exteriorly threaded insulating tubular member screwed into said coupling, a pin projected transversely through said coupling and tube, a cap having an interiorly threaded cylindrical portion adapted to receive the free end of said tube, a second pin projected transversely through said cap and said tube, whereby said cap and said coupling will turn as a unit, said cap having a threaded bore therein, and a threaded canopy supporting rod screwed into said bore, said rod being adapted to abut said second named pin.

1,423,647. DELIVERY MECHANISM FOR SIGNATURE-STITCHING MACHINES. MARTIN CHRISTENSEN, Racine, Wis., assignor to Christensen Machine Company, Racine, Wis., a Corporation of Wisconsin. Filed June 3, 1920. Serial No. 386,236. 4 Claims. (Cl. 271—87.)

1. In apparatus of the class described, the combination of a frame including a horizontally extending portion having its inner end position adjacent the discharge end of a stitching machine or the like, rollers journaled in the inner and outer ends of said horizontal frame portion, a belt on said rollers, a shaft journaled in said frame, a feed finger mounted on said shaft, a bell crank fixed on said shaft, a drive shaft, a cam on said drive shaft, means to maintain one arm of said bell crank in operative engagement with said cam, a ratchet associated with one of said rollers, and a pawl carried by the other arm of said bell crank and adapted to engage said ratchet, whereby said belt is intermittently advanced and said feed finger is simultaneously oscillated, for the purpose specified.



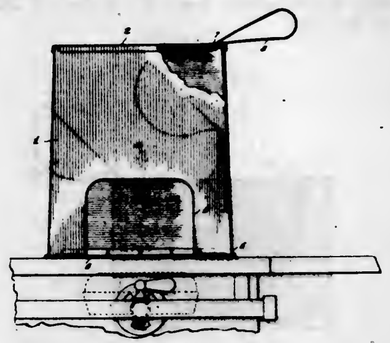
1,423,648. TAIL LIGHT AND NUMBER PLATE. RALPH S. CROSHAW, Grand Rapids, Mich. Filed Feb. 28, 1921. Serial No. 448,393. 2 Claims. (Cl. 40—133.)

1. In combination with a combined tail light and license number signal, an enclosing case having a curved reflecting back wall, an electric light bulb mounted within the case, a removable front plate mounted upon the case and having symbol openings therethrough, several detachable signal panels having symbol openings formed therethrough, said detachable panels connected with, and illuminated through the front plate, and readily detachable therefrom.

1,423,649. FERTILIZER DISTRIBUTER. DAVID C. DANIEL, Apex, N. C., assignor of one-half to Sylvester Brown Shepherd, Raleigh, N. C. Filed June 26, 1920. Serial No. 392,028. 1 Claim. (Cl. 198—52.)

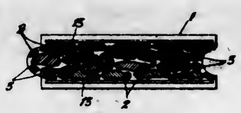
A fertilizer distributer comprising a portable frame, aligned hoppers supported therein, said hoppers having common sides formed with parallel lower ends forming a common guide channel, guide members spaced apart longitudinally in said channel and transversely filling the same, a guide roller at the outer end of each guide member, conveyor chains operating over the guide members and rollers, a discharge chute common to both hoppers and having its discharge opening vertically aligned with the space intermediate the adjacent ends of said guide members, spaced shafts journaled in the frame and extending across the chute, gears connecting the shafts,

sprockets on said shafts engaged with the chains and means for driving one of said shafts, said conveyer chains operating in opposite directions whereby the fertilizer from the hoppers is mixed before being discharged from the chute.



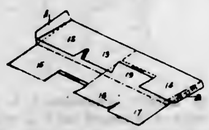
1,423,650. OIL BURNER. JOSEPH O. DECUIR, Houston, Tex. Filed May 11, 1920. Serial No. 380,623. 1 Claim. (Cl. 158—75.)

An oil burner including a tubular casing, a T-connection to which the same is anchored, a fuel pipe arranged concentrically therein and spaced therefrom forming a chamber, said fuel pipe being anchored to said connection, means for admitting fuel into said pipe, means for admitting steam into said chamber, a nozzle, formed with a bell-shaped discharge passageway and fitted within the discharge end of the casing formed with an annular shoulder which abuts against the adjacent end of the casing, forming a tight joint therewith, an elongated nipple formed integrally with said nozzle and anchored to said fuel pipe, said nozzle and nipple each having a circular row of ports through which steam may be discharged from said chamber through said nozzle.



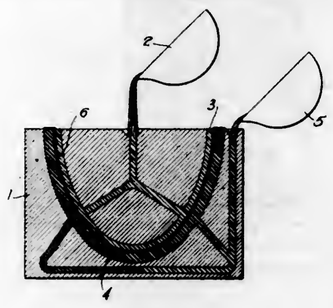
1,423,651. HEATING DRUM. CHARLES A. DE JACO, Newport, Ky. Filed Apr. 12, 1921. Serial No. 460,843. 2 Claims. (Cl. 126—95.)

1. A heating drum comprising a rectangular sheet metal structure adapted to be applied in an inverted position over a gas stove burner, provided with a flat top and opposing side walls tapering toward each other from



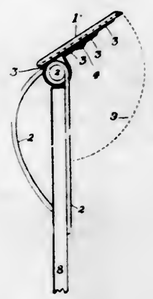
the base, and one wall thereof having an opening therethrough at the lower portion from the base edge.

1,423,652. PLATE FOR RESISTING FLAME AND CUTTING TOOLS. RALPH S. EDMONDSON, Elizabeth, N. J., assignor to American Abrasive Metals Company, a Corporation of New York. Filed Aug. 18, 1921. Serial No. 493,268. 8 Claims. (Cl. 109—1.)



1. As an article of manufacture a slab or plate for use where combined powers of resistance to heat and cutting tools are required, which slab or plate is composed of a cast metal matrix in which is embedded a layer of particles of fused magnesia, and a layer of particles of fused aluminum oxide.

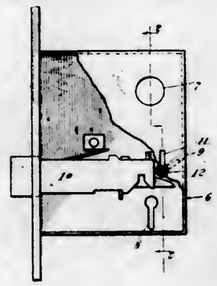
1,423,653. ENVELOPE. HENRY J. EICKOFF, Hamilton, Ontario, Canada. Filed May 13, 1922. Serial No. 560,759. 3 Claims. (Cl. 229—68.)



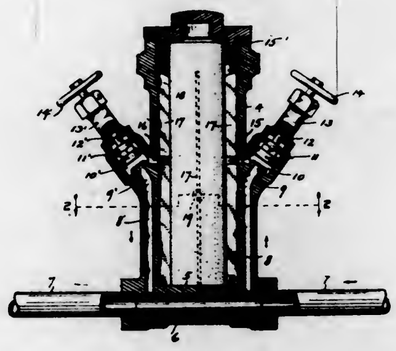
1. In a device of the class described, a rectangular blank having a plurality of opposed transverse cuts extending from the opposed longitudinal edges thereof and constituting flaps which when said blank is folded on longitudinal lines are adapted to interlock in staggered relation and gummed to contacting surfaces, said blank having tongues on opposite ends, the body subsequently to being longitudinally folded being folded on a central transverse line, one of said tongues being folded over the edge of an adjacent section and gummed to the opposite side thereof forming a correspondence pocket, the other tongue being folded over the latter tongue and inserted between an outer section of the body and an adjacent inner section thereof, and sealing wax fused between said tongue and said adjacent inner section.

1,423,654. CASTING PROCESS. GODFREY ENGEL, Sr., Brooklyn, N. Y., assignor to Buffalo Foundry & Machine Co., Buffalo, N. Y., a Corporation of New York. Filed Nov. 2, 1920. Serial No. 421,241. 1 Claim. (Cl. 22—201.)

The herein disclosed process of casting a containing vessel which comprises casting a relatively thick outer layer of the external shape of the vessel and subsequently casting a thinner inner layer of the internal shape of the vessel within the thicker outer layer and permitting the inner thinner layer to cool before the outer thicker layer so as to cause the latter to shrink onto the former.



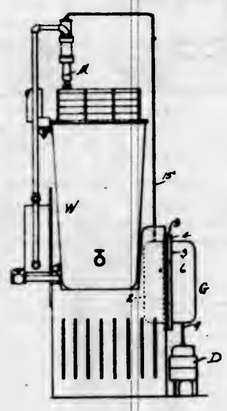
1,423,655. PRICE-TAG HOLDER. LOUIS E. ERICSON, San Diego, Calif., assignor to W. S. Rench, San Diego, Calif. Filed Oct. 24, 1921. Serial No. 509,877. 3 Claims. (Cl. 40—11.)



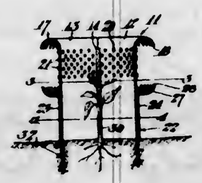
3. A price tag holder, comprising a clamp formed of spring wire with a forward and a rear leg so that said legs engage a support, and a coil joining the legs, a strap mounted on the coil of said clamp and frictionally engaging the coil so that it may be adjusted in the vertical plane and remain set, said strap being formed with a detent hole or lug and a pivot, and a tag holding plate formed with detent holes or lugs corresponding with the detent hole or lug of said strap and mounted on the pivot of said strap so that it may be turned thereon for lateral angular adjustment.

1,423,656. LOCK. ANDREW J. FALLON, Chicago, Ill. Filed Feb. 1, 1917. Serial No. 145,836. 3 Claims. (Cl. 70—14.)

2. A latch bolt and a casing, the outer and inner sides of which casing are each provided with a key-hole located in parallel planes and in directly reversed positions and adapted for one and the same key for locking and unlocking the bolt from the outside and for securing the bolt in its locked position from the inside by the direct contact of the key therewith.



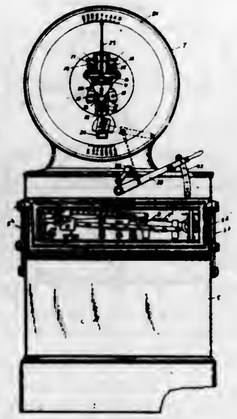
1,423,657. WATER SOFTENER. CHARLES B. HAINES, Indianapolis, Ind. Filed Aug. 10, 1921. Serial No. 491,250. 3 Claims. (Cl. 210—36.)



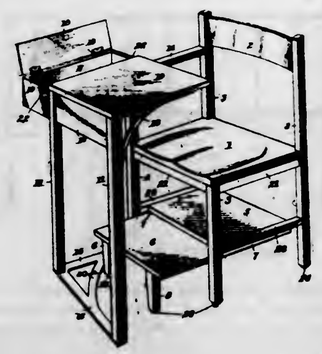
3. The combination with a water supply pipe, of a receptacle containing a substance in stick form to be acted on by flowing water, longitudinal ribs on the inner wall of the receptacle to space the stick from the said walls, a water passage from the supply pipe to a space in the receptacle, another water passage from another space in the receptacle to the water supply pipe, and valve means in each of said water passages to control the flow of water therethrough.

1,423,658. OZONE GENERATOR. HARRY BUXTON HARTMAN, Scottdale, Pa., assignor to Electric Water Steriliser and Ozone Company, Scottdale, Pa., a Corporation of Pennsylvania. Filed Jan. 24, 1920. Serial No. 353,858. 8 Claims. (Cl. 204—32.)

1. An ozone generator comprising a casing consisting of relatively separable sections provided with vertically disposed radial ribs and centrally arranged chamber-forming members, a generating unit consisting of spaced dielectric members and an intermediate electrode arranged between said sections and the dielectrics being provided with openings, and a terminal plug arranged in one of the chambers and electrically connecting with the electrode of the generating unit at the central portion thereof.



1,423,659. PLANT PROTECTOR. NELS H. HASSEL, Los Angeles, Calif. Filed May 31, 1921. Serial No. 473,588. 4 Claims. (Cl. 47—39.)

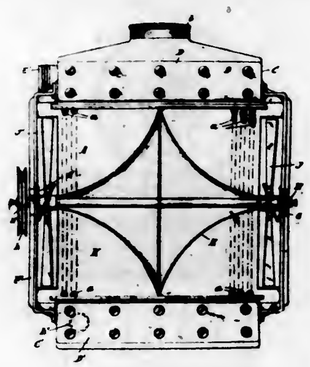


1. A plant protector comprising a circular casing open at each end, said casing being formed of two parts slidably connected; an outwardly and downwardly extending circular flange on the upper end of said casing; a series of teeth formed on the edge of said flange; a series of spurs formed on said casing under said flange; a circular sleeve on said casing formed of two parts slidably connected; an annular cup formed on the upper end of said sleeve; and a series of teeth formed in the edge of said cup.

1,423,660. WEIGHING SCALE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed May 10, 1916. Serial No. 96,511. 39 Claims. (Cl. 265—62.)

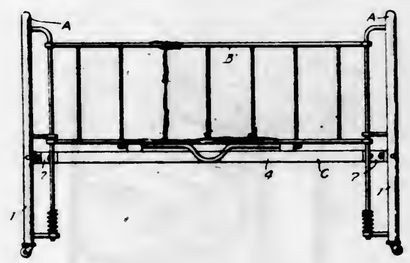
1. In a scale, beam scale mechanism, pendulum weighing mechanism, and a detachable link adjustable in length for connecting said mechanisms to operate the pendulum mechanism from the beam mechanism when desired.

1,423,661. DESK AND CHAIR. OLIVE GRACE HENDERSON, Detroit, Mich. Filed Dec. 1, 1921. Serial No. 519,185. 2 Claims. (Cl. 155—128.)



1. The combination with a chair, of a desk arranged in front of the same, one of the front legs of the chair being extended upwardly to support one of the adjacent corners of the desk, supporting means reaching to the floor from both of the remote corners of the desk, and a substantially L-shaped brace to extend along the floor and connect the bottom of said supporting means with the lower end of the leg having said upward extension.

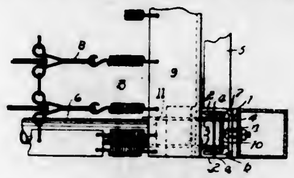
1,423,662. RADIATOR FOR VEHICLES. EDWARD R. HEWITT, Midvale, N. J. Filed Apr. 10, 1919. Serial No. 288,906. 8 Claims. (Cl. 257—126.)



1. In a power vehicle, an engine cooling apparatus comprising two radiating sections laterally disposed, a medial

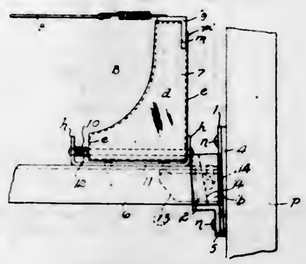
fan shaft and two oppositely pitched fans on said shaft, a stationary deflector intermediate said fans cooperating

with said radiating sections whereby either fan propels air to be deflected by the stationary deflector to the radiating section.



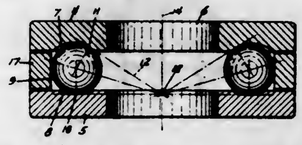
1,423,663. CRIB. ALEXANDER IZEN, St. Louis, Mo., assignor to Smith & Davis Mfg. Co., St. St. Louis, Mo., a Corporation of Missouri. Filed July 15, 1921. Serial No. 484,965. 1 Claim. (Cl. 5—58.)

In combination with a bed having end members provided with posts, pins projecting inwardly from said posts, a bed-bottom having corner-pieces projecting outwardly therefrom at an angle of substantially forty-five degrees, said corner-pieces comprising two metallic members bent substantially L-shaped, the legs of each L being connected by a neck, said L-shaped members being secured together at their necks so as to provide oppositely disposed forks, one of said forks engaging the corner of the bed-bottom and secured thereto, the other being adapted to embrace a bed-post, and one side of the last mentioned fork being provided with an inclined slot for receiving one of the aforesaid pins for supporting the bed-bottom.



1,423,664. BED CORNER. ALEXANDER IZEN, St. Louis, Mo., assignor to Smith & Davis Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed Sept. 24, 1921. Serial No. 502,877. 2 Claims. (Cl. —55.)

1. In combination with a bed-post and side rail adapted to be secured thereto, a plate secured to the post and inclined thereto, said plate being provided with a pair of inwardly projecting arms having oppositely disposed downwardly inclined surfaces in opposing relation

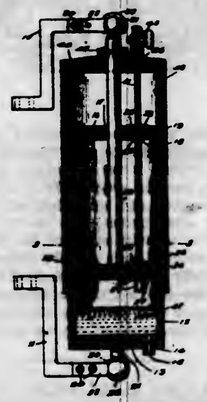


to the plate, and a bracket on the side rail adapted to be wedged between said surfaces.

1,423,665. BED CORNER. ALEXANDER IZEN, St. Louis, Mo., assignor to Smith & Davis Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed Sept. 24, 1921. Serial No. 502,878. 2 Claims. (Cl. 5—63.)

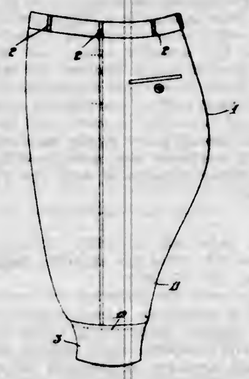
1. In combination with a bedstead and bed-bottom adapted to be secured thereto, said bed-bottom being provided with side-rails and end rails, a bracket pivotally mounted on each end of a side rail and capable of longitudinal movement relative to the side rail, said bracket having a slotted connection with one end of an end rail, and means for securing the bracket to a bed-post.

1,423,666. BALL BEARING. LOUIS LANGHAAR, Cincinnati, Ohio. Filed June 26, 1920. Serial No. 391,938. 4 Claims. (Cl. 64—49.)



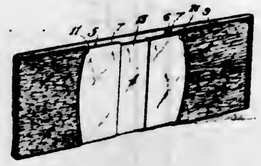
4. A ball thrust bearing comprising a row of balls, two opposed ball races each having a single spot of contact with each ball and at least one of said races having a ball track of curved cross section, and means for restraining the balls to travel on said races with their axes and the common tangents to said balls and races converging towards a point in the axis of the bearing at one side of a plane passing diametrically through the balls on opposite sides of said axis of the bearing.

1,423,667. SHOCK ABSORBER. EMMETT SYLVESTER LEHR, Salt Creek, Wyo. Filed Nov. 18, 1920. Serial No. 424,926. 7 Claims. (Cl. 188—88.)



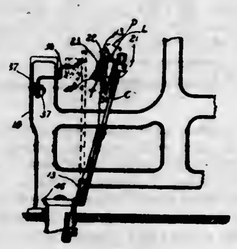
1. In a shock absorber of the character described, a bracket adapted to be secured to the vehicle body, a bracket adapted to be secured to the axle or the like, a cylinder having a lower cylinder head and an upper cylinder head provided with a piston rod opening and with

another opening having a valve seat, means for universally connecting said cylinder to said axle bracket, a piston reciprocable in said cylinder and having an opening therethrough provided with a valve seat, a piston rod for the piston, means for universally connecting the piston rod to the vehicle body bracket, a pressure operated valve cooperable with the valve seat of the piston and provided with an opening and having an elongated tubular valve stem adapted to coact with the lower head of the cylinder to positively operate said valve, a second pressure operated valve cooperable with the valve seat of the upper cylinder head and having an opening therethrough and a tubular valve stem, a stand pipe extending through the openings of said valves and their tubular valve stems to the atmosphere, a hand-cock controlling said stand pipe, and a cylindrical casing having a closed end secured to the piston rod at its upper end slidably enclosing said cylinder.



7. In a shock absorber of the character described, a cylinder, a piston reciprocable in said cylinder and having an opening therethrough provided with a valve seat, a pressure operated valve cooperable with the valve seat, a stand pipe extending through said pressure operated valve, and means for controlling communication of said stand pipe with the atmosphere.

1,423,668. KNICKERS. PHILIP LEIKEN, Brooklyn, N. Y., assignor to Peerless Smoking Jacket Company, New York, N. Y., a Corporation of New York. Filed Oct. 21, 1921. Serial No. 509,393. 1 Claim. (Cl. 2—122.)

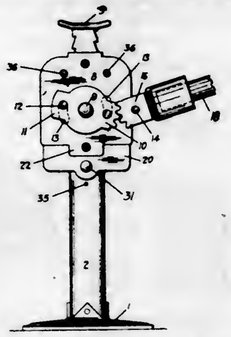


As an article of outer wearing apparel, a knickerbocker of woven material, each leg thereof being provided with a cuff extending substantially below said leg and comprising a continuous length of elastic tubular knitted material doubled back upon itself to form a folded edge, the two ends being permanently secured to the said leg.

1,423,669. BILL FOLD. CHARLES L'ENFANT, New York, N. Y. Filed Aug. 20, 1921. Serial No. 493,779. 7 Claims. (Cl. 150—38.)

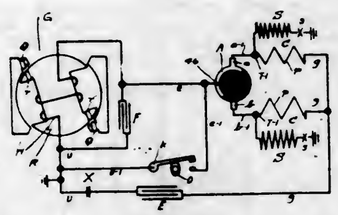
1. A bill fold comprising body walls, one of said walls consisting of two sections disposed in alignment and having their inner opposed ends spaced apart and means permanently connecting the opposed ends of said wall sections to each other and foldable upon itself when said wall sections are moved into parallel relation to each other, said connecting means during the folding thereof permitting of the relative longitudinal movement of said wall sections toward and from each other with respect to said connecting means.

1,423,670. BOBBIN STRIPPER FOR AUTOMATIC LOOMS. JAMES T. MALLOY, Lowell, Mass., assignor, by direct and mesne assignments, of one-half to John J. Henderson, Dracut, Mass., and one-half to Samuel B. Haines, Brookline, Mass. Filed Mar. 13, 1920. Serial No. 365,516. 8 Claims. (Cl. 139—85.)



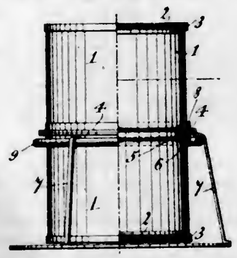
1. The combination with a weft replenishing loom having a frame, a breast beam, and a lay beam with a bobbin passage, of a trap comprising side bars pivoted to the lay beam and a cross bar connecting them, leaving a bobbin passage between, such cross bar and part of the side bars being located in the lay beam bobbin passage, a spring adapted to keep the trap normally closed, and a dagger attached to the frame in such position that it will so engage the trap as to open it during part of the period of the lay beam's movement to and from the breast beam.

1,423,671. QUICK-ACTION DOUBLE-GEAR JACK. ALEXANDER W. MARR, Canton, Ohio. Filed Oct. 8, 1920. Serial No. 415,620. 12 Claims. (Cl. 254—109.)



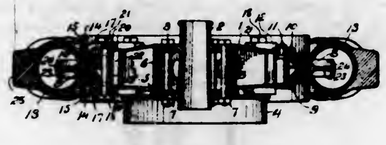
1. In a jack, the combination with a tubular standard, of a lifting bar therein having ratchet teeth on two opposite sides, the teeth on one side of said bar being disposed in zig-zag relation to the teeth on the other side of said bar, lifting elements for alternately engaging the

teeth on said bar, and reduction gear means for imparting an alternate up and down movement to said lifting



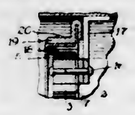
elements to raise the lifting bar, said reduction gear means and the zigzag disposed teeth on the lifting bar co-operating to lift a heavy load.

1,423,672. MAGNETO-IGNITION SYSTEM FOR INTERNAL-COMBUSTION ENGINES. JOHN LEWIS MILTON, Cleveland, Ohio, assignor, by mesne assignments, to The Teagle Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 18, 1913, Serial No. 749,173. Renewed Dec. 16, 1920. Serial No. 431,096. 9 Claims. (Cl. 123—148.)



1. In an ignition generator, the combination with opposite field magnet poles and an armature operatively mounted between the poles, of a cover plate fitting between the said poles, a condenser and a spark gap structure, the said cover plate, condenser and spark gap structure forming a self-contained unit adapted to be assembled before the cover plate is mounted in the generator.

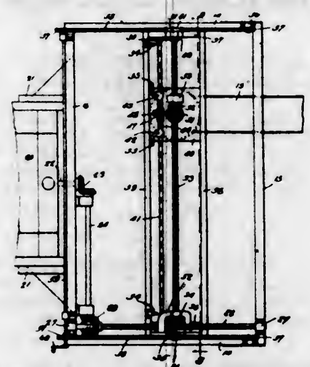
1,423,673. METAL CASK, DRUM, OR THE LIKE. SIDNEY CLARK MOUNT, Southall, England. Filed May 9, 1921. Serial No. 468,065. 4 Claims. (Cl. 220—8.)



4. A metal cask comprising separable parts, internal jointing means therefor containing a medium having a relatively low melting point and external mechanical jointing means adjacent to the internal jointing means said external means being adapted to be supported by a tripod having a Bunsen ring by which heat can be applied externally to the barrel to melt the medium of the internal jointing means in order to make and break the same, substantially as described.

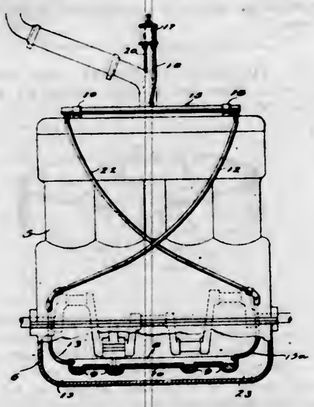
1,423,674. VEHICLE WHEEL. SWENEY MUNSON, Fowler, Colo. Filed Oct. 17, 1921. Serial No. 508,328. 9 Claims. (Cl. 152—10.)

1. In a vehicle wheel, a rim having an annular peripheral tire bearing surface, an inflatable tire having a longitudinally divided inner periphery and into which the rim extends, the tire when inflated being out of contact with said surface, and when deflated, being arranged to bear against said surface, two clamping rings which respectively press opposite sides of the tire against opposite sides of the rim, each of said rings having a relatively wide laterally extending horizontal annular portion against which the deflated tire is adapted to bear, and means for clamping said clamping rings against the tire and against said rim, substantially as set forth.



1,423,675. GEAR HOUSING. JOSEPH A. NEATHAMMER, Alhambra, Ill. Filed June 11, 1921. Serial No. 476,933. 1 Claim. (Cl. 74—7.)

A gear housing for use with a train of gears wherein one of the gears is fixed on a driven member for rotating the same, said housing comprising a stationary disc and a rotatable disc arranged axially and disposed in substantially parallel spaced relation, the opposed faces of said discs having interfitting annular flanges arranged to form a peripheral wall for said housing, said rotatable disc being adapted to be fixed to rotate with said driven member, and an arcuate guard rigidly mounted on the upper part of said stationary disc, said guard being formed to have interfitting engagement with the rim of said rotatable disc.



1,423,676. MANURE LOADER. ROMIE J. NEWCOMB, Baltimore, Md. Filed Apr. 19, 1921. Serial No. 462,630. 6 Claims. (Cl. 37—27.)

1. An apparatus for gathering and conveying material, comprising a supporting frame, movable gathering and conveying elements connected to travel together, a support for said elements, rails slidably supporting said support and arranged transversely of the supporting frame, supporting means for the rails carried by the supporting frame and movable in the direction of the length thereof, operating means for the supporting means, a feed screw carried by the supporting means and having reversely arranged threads, feed nuts carried by the aforesaid support and alternately engageable with the

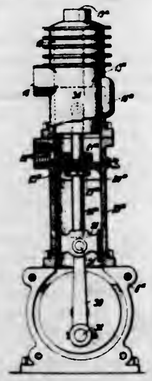
respective threads of the feed screw, operating means for the feed-screw, and means for operating the gathering and conveying elements.

1,423,677. INTERNAL-COMBUSTION ENGINE. ALBERT E. NICHOLLS, Wilson Creek, Wash. Filed May 17, 1921. Serial No. 470,346. 5 Claims. (Cl. 184—13.)

1. The combination with an internal combustion engine having a crank case, of a horizontally arranged longitudinally extending manifold secured to the upper portion of the engine and extending for the major portion of the length of the engine, oil distributing pipes having their upper terminal portions extended into the terminal portions of said manifold and terminating above the lower wall of the interior of the manifold thereby providing an oil reserved space extending for the entire length of the manifold, said oil distributing pipes being crossed and having their lower terminal portions connected to said crank case.

1,423,678. BROOM HOLDER. JOHN LEE OEFINGER, Denver, Colo. Filed July 9, 1921. Serial No. 483,561. 1 Claim. (Cl. 24—249.)

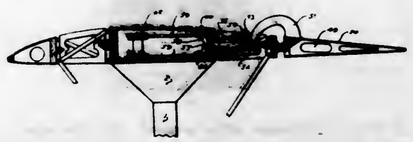
A broom holder consisting of a support which is reversely bent intermediate its ends to form an eye for the support of a ring, one end of said support having a threaded portion, the other end being coiled about the threaded end just above the threaded portion thereof and



a wire ring having one end of the wire formed into an eyelet connected to the eye of said support.

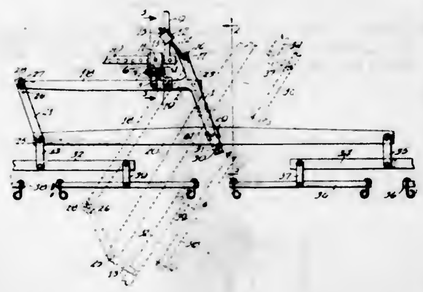
1,423,679. DRAIN VALVE. STEVE PAVITCHICH, Woodriver, Ill. Filed Feb. 4, 1922. Serial No. 534,124. 3 Claims. (Cl. 182—14.)

1. The combination with a sewer pipe having an internal shoulder near its inlet end, of a tubular member extending downwardly into the sewer pipe, a flange on the upper end of said tubular member seated on the shoulder within the sewer pipe, a web extending across the upper end of said tubular member, a rod extending downwardly through said tubular member beyond the lower end of said member and having its upper end rigid with said web, a cage rigid with said flange and extending downwardly beyond the lower end of said tubular member, a valve element within said cage, and a tube within said valve element and opening through the upper end thereof and receiving the lower end of said rod and permitting said valve element to move upwardly to contact with the lower end of said tubular member.



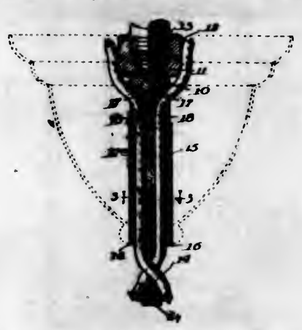
1,423,680. INTERNAL-COMBUSTION ENGINE. FRANK L. H. PFEIL, Philadelphia, Pa. Filed Mar. 12, 1920. Serial No. 365,272. 3 Claims. (Cl. 123—74.)

1. The combination with a two-cycle internal combustion engine having a piston rod, cross head, and connect-



ing rod, of a structure adapted to be interposed between the explosive cylinder and the crank case of said engine, said structure including a hollow cylinder section with a partition located inwardly from one end thereof to provide a space between said end and the partition, said partition having a stuffing box through which the piston rod of the engine can extend for attachment to said cross head, said cylinder section having a guideway for said cross head and located between said partition and the opposite end of said cylinder section whereby the cross head can be connected to the connecting rod leading outward from the crank case, said first end of the cylinder section having a portion for attachment to the explosive cylinder of the engine whereby said space will form a compression chamber for the gas to permit compression of the latter during the movement of the piston in the explosive cylinder, the opposite end of said cylinder section having a portion for attachment to the crank case; substantially as described.

1,423,681. AIRPLANE. GEORGE B. POST, Ogdensburg, N. Y., assignor to Huff, Daland & Company, Inc., Ogdensburg, N. Y., a Corporation of Delaware. Filed Mar. 25, 1921. Serial No. 455,578. 18 Claims. (Cl. 244—12.)



1. In a flying machine, a supporting plane comprising a fixed portion, an adjustable portion, an intermediate portion between the other portions, and adjusting connections including rigid elements extending through the intermediate portion and connecting the first mentioned portions, whereby the depth between the chord and supporting surface may be varied.

1,423,682. FOUR-HORSE EQUALIZER. JOHN ROBSON, Anita, Iowa. Filed May 20, 1921. Serial No. 471,039. 4 Claims. (Cl. 278—8.)

1. A device of the character described comprising a draft bar having a straight body portion adapted to be adjustably connected at one end with a vertical tongue, and an integral lateral extension adapted for connection with the outer end of the vertical tongue, a slide slidably mounted on said draw bar, a draft equalizing frame pivotally mounted on said slide member, and means associated with one end of said equalizing frame and said slide member for moving said slide member back and forward on said draw bar as said draft equalizer is pivoted as in turning the vehicle.

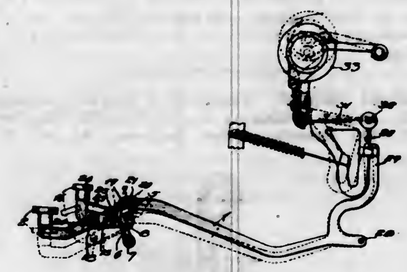
1,423,683. STEM FOR ELECTRIC-LIGHTING FIXTURES. ELIAS ROCKOFF, Chicago, Ill., assignor of one-half to Bernard Rockoff, Chicago, Ill. Filed July 6, 1920. Serial No. 394,206. 7 Claims. (Cl. 240—85.)

1. A lighting fixture stem, one end of which is provided with means for securing said stem in position, the opposite end having a pair of apertures which are separated by a wall which extends from said end to adjacent the opposite end of the stem, grooves arranged upon the opposite sides of the wall which separates said apertures, the opposite sides of said wall providing one face of each of said grooves, a supporting member projecting from the opposite end of said stem whereby another supporting member may be secured to the stem, said last mentioned supporting member being arranged in substantial alignment with said wall between the apertures provided at the lowermost end of the stem.

1,423,684. TROUSERS SUPPORT. ABEL ROSE, Cleveland, Ohio. Filed Feb. 4, 1921. Serial No. 442,420. 2 Claims. (Cl. 241—9.)

1. In a trousers support, the combination with a pair of trousers provided with a waistband, and a series of attaching devices extending along and detachably connected to the marginal edges of said waistband and provided with depending hooks; of a trousers supporting belt comprising two side sections adapted to be arranged within said waistband and provided on their outer portions with loops adapted to receive the hooks of said fastening devices.

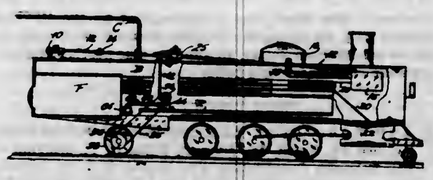
1,423,685. CURTAIN-WINDOW LIGHT. JOHN B. SCHAAF, Cincinnati, Ohio, assignor of one-half to Charles Arbogast, Cincinnati, Ohio. Filed July 9, 1920. Serial No. 394,931. 1 Claim. (Cl. 296—145.)



In a device of the class described, a base frame of substantially semi-circular cross section, adapted to surround a curtain opening, means integral therewith for removably fastening a window light therewithin against the concave side of said base frame and against its inner periphery, a clamping frame providing a semi-tubular and a flat clamping portion placed in opposition to the said base frame, the

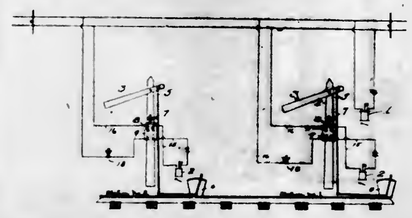
concurrent peripheral edges of the two frames acting to clamp the said transparent material, and a means integral with the base frame for attaching the same about the opening and for clamping the two frames together.

1,423,686. ELECTROTINNING. LOUIS SCHULTE, Chicago, Ill. Filed July 12, 1920. Serial No. 395,682. 5 Claims. (Cl. 204—17.)



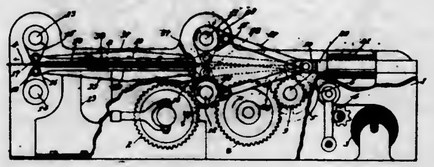
1. The method of making a plating electrolyte comprising the making of a solution of caustic potash in water, adding dilute hydrofluoric acid thereto until an acid reaction is obtained, diluting the resulting solution with water, and dissolving metallic tin in said solution by means of an electric current.

1,423,687. TYPEWRITER ATTACHMENT. JOHN M. SCHULTZ, Chicago, Ill., assignor, by direct and mesne assignments, to John S. Chenneour, Chicago, Ill. Filed July 9, 1919. Serial No. 309,708. 2 Claims. (Cl. 197—80.)



1. In a typewriting machine, a platen shift lever having a pin projecting from one side thereof, a rocking lock lever pivotally mounted on said shift lever having an integral extension projecting at right angles thereto, a finger key connected with said lever, a pivoted latch lever, said right angle extension portion of the lock lever being adapted to normally prevent locking cooperation between said pin and pivoted latch lever, but adapted upon the actuation of said lever to be moved rearwardly from said pin slidably on the upper portion of the latch lever to a position to permit a portion of the latch to ride over and engage said pin, said angle extension of said lock lever directly engaging the upper surface of the latch lever when the same cooperates with the pin to hold the latch lever in locked position.

1,423,688. STEAM DRIFTER MECHANISM FOR LOCOMOTIVES. FREDERICK B. STARLE, Denver, Colo. Filed June 11, 1920. Serial No. 388,232. 2 Claims. (Cl. 121—137.)

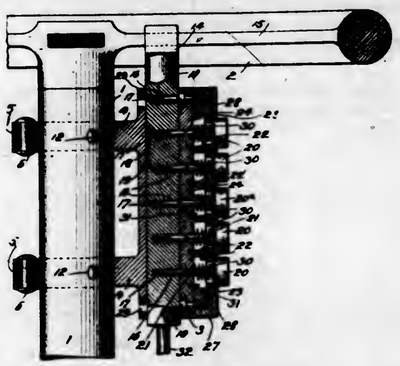


1. In a drifter lubricator for locomotives having a live steam conduit adapted to be connected with the cylinders of a locomotive, a pressure controlled valve in said conduit, and a source of compressed air, means operated by a moving part of said locomotive, when the latter is running, for intermittently transferring air from said compressed air source to said valve, said means comprising a cylinder, a reciprocating piston therein, a crank and connecting rod for reciprocating said piston, an annular pocket in said piston, an intake and an outlet pipe entering said cylinder and so located that the pocket engages alternately with first one and then the other whereby air is intermittently transferred from the intake pipe to the outlet pipe.

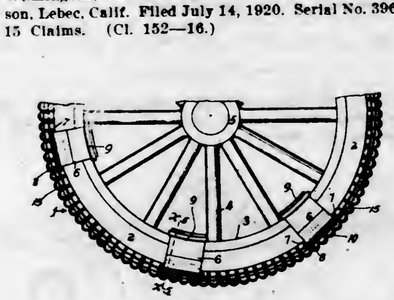
1,423,689. SIGNAL DEVICE FOR RAILWAY TRAIN-ORDER SEMAPHORES. HARRY A. SHLIN, Reading, Pa. Filed Jan. 7, 1921. Serial No. 435,614. 1 Claim. (Cl. 246—3.)

In a signal device for railway rain order semaphores, a hand actuated semaphore, an electric switch operatively connected with the semaphore, an inside circuit and an outside circuit, both of which are connected with the switch, whereby indications on both circuits may be given simultaneously, and a circuit breaker in the outside circuit, whereby the outside circuit may be deenergized while the inside circuit is left at the indication originally given.

1,423,690. ROTARY PUNCH. JOHN Q. SHERMAN, Dayton, Ohio. Filed Jan. 5, 1920. Serial No. 349,372. 9 Claims. (Cl. 164—90.)



1. In a rotary punch, the combination with operating mechanism, of a single pair of punch bar elements extending lengthwise of a web of paper to be punched, the one bar carrying an extended number of longitudinally arranged punches, and the other bar provided with a similar number of longitudinally arranged matching holes for the punches, and means actuated by the operating mechanism for moving said bars toward and away from each other through a rotary path while maintaining them in parallel with relation to each other and means for controlling the amount of material fed between said bars, whereby the holes shall be punched in spaced series for the several punching operations.

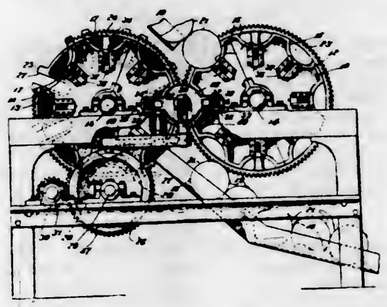


1,423,691. LOCK FOR AUTOMOBILES. JACOB SOKOLOV, Detroit, Mich., assignor to Defiance Combination Auto Lock Corporation, Detroit, Mich., a Corporation of Michigan. Filed Mar. 27, 1920. Serial No. 369,435. 11 Claims. (Cl. 70—54.)

1. In a lock, the combination with a bolt provided with a spring pressed tumbler, of a depressible key provided with a stem adapted to cooperate with said tumbler to release the bolt, said key being rotatable about its stem to

a predetermined angular position for releasing said bolt when depressed, cooperating members adapted for limiting the depression of the key, and means for adjusting the relation between said cooperating members, whereby the angular position of the key when depressed for releasing said bolt may be varied.

1,423,692. TIRE PROTECTOR. GEORGE W. SOMMERVILLE, Wilmington, Calif., assignor of one-half to Towal Nelson, Lebec, Calif. Filed July 14, 1920. Serial No. 396,080. 15 Claims. (Cl. 152—16.)



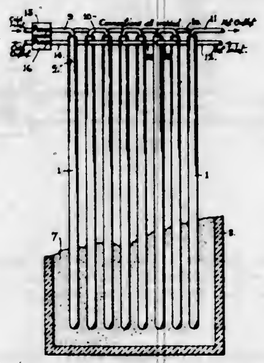
13. A tire protector composed of canvas strips sewed transversely to form pockets and arranged side by side in annular form to fit a wheel; said pockets having looped cord sections therein radial to the annulus thus formed; means to fasten the corded strips together and a cementing and protecting composition in said strips and cord sections.

1,423,693. MACHINE FOR APPLYING EARS TO PAILS. WILLIAM SPAIN, Riverside, Ill., assignor of one-half to Corn Products Refining Company, Argo, Ill., a Corporation of New Jersey. Filed Aug. 9, 1920. Serial No. 402,406. 22 Claims. (Cl. 113—1.)

1. In apparatus for applying handle-receiving ears to pails, the combination with a support for a pail body adapted to support said body in a position to receive an ear, of an ear-retaining device adapted to normally hold an ear out of contact with said pail body, and mechanism for producing relative movement as between said support and ear-retaining device to position said ear against the pail body.

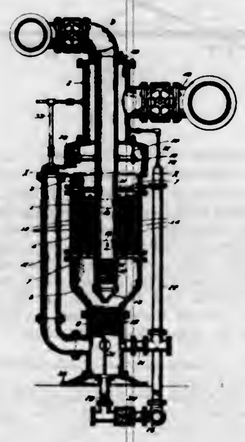
4. In apparatus for applying handle-receiving ears to pails, the combination with a conveyor adapted to support a pail body together with its previously applied cover rim in a predetermined position, of ear-positioning devices adapted to move ears into contact with opposite sides of the pail body while the pail body is in said predetermined position and maintain said contact until the ears are attached to said body, and means for producing relative

movement as between said pail body and ears while the ears are held in contact with said body whereby the ends of said ears are forced between the wall and cover rim of the pail.



1,423,694. WHEEL. FREDERICK S. STAFFORD, Chicago, Ill., assignor to Henry G. Saal, Chicago, Ill. Filed Dec. 5, 1919. Serial No. 342,642. 5 Claims. (Cl. 301—37.)

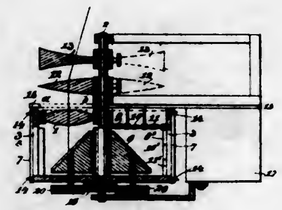
1. A wheel having a tire, spokes, and a hub which has a flange and a circular clamping plate between which hub elements the inner ends of the wheel spokes are disposed, and bolts that clamp said hub elements against the spokes; in combination with a disc substantially covering a face portion of the wheel that is surrounded by the tire and formed with an outwardly bulging annular swell near the wheel hub that surrounds an annular disc portion and covers ends of the aforesaid bolts.



1,423,695. HEAT EXCHANGER OR CONDENSER. PALMER ST. CLAIR, Jr., Niagara Falls, N. Y., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Oct. 9, 1919. Serial No. 329,466. 2 Claims. (Cl. 257—246.)

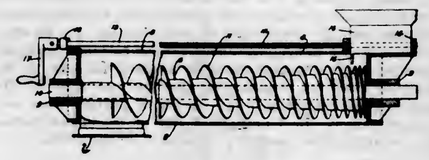
1. In an apparatus for exchanging heat between fluids, a plurality of heat exchanging devices connected in series and each comprising an inner tube or heat conductive material provided with a twisted ribbon-like element for dividing the interior thereof into winding conduits, a spirally wrapped strand upon the outer surface of said tubular member, a second tubular member covering said strand and co-acting therewith to form with said strand and first named member an exterior winding conduit, means for

connecting the said interior conduits, and means for connecting the said exterior conduits whereby a flow of liquid may be maintained in both conduits throughout the several heat exchanging devices.



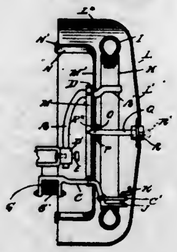
1,423,696. APPARATUS FOR AND PROCESS OF PURIFYING GAS. ARTHUR L. STEVENS, Chicago, Ill. Filed Sept. 22, 1919. Serial No. 325,442. 16 Claims. (Cl. 183—121.)

1. A gas purifying apparatus comprising in combination a reservoir for containing a purifying liquid, a by-pass pipe connected with said reservoir at an upper and lower level, a gas supply conduit discharging into said reservoir at an intermediate level, a grate in said reservoir above the discharge end of said supply pipe, a body of small objects of a configuration to provide voids between them supported by said grate for subdividing the gas into minute streams, and a gas discharge conduit connected with said reservoir for conducting away the cleaned gas.



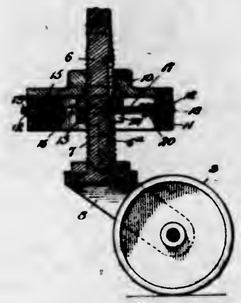
1,423,697. CINEMATOGRAPH. JAN SZCZEPANIK, Tarnow, Poland. Filed June 28, 1920. Serial No. 392,446. 4 Claims. (Cl. 88—168.)

1. In a cinematograph, a plurality of cameras symmetrically arranged about a common axis, a drum for a film band having a wall penetrable by light concentric with said axis, the plane of the objectives of the cameras being at an angle to said axis and said wall, and reflecting elements in the angle between said objectives and said wall,



a film band on said drum, said plurality of cameras and said film band being movable, the one with respect to the other about said axis, and means to successively open and close the objectives of the cameras.

1,423,698. FEEDING DEVICE. FRANK S. THURSTON, Chicago, Ill. Filed Sept. 14, 1920. Serial No. 410,244. 2 Claims. (Cl. 198—213.)



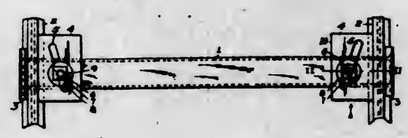
1. In a feeding device, a tubular housing, bearings supported at the ends of the housing, said housing having an opening formed in the upper surface thereof and having a discharge opening formed at one end thereof, a spiral conveyor operating within the tubular housing, a threaded shaft operating above the opening, a receiving hopper movable along the threaded shaft for accurately distributing material within the housing and means carried by the hopper for preventing material fed to the housing from being thrown therefrom.

1,423,699. TIRE CARRIER. HARRY B. TUTTLE, Jeannette, Pa. Filed Nov. 10, 1919. Serial No. 337,079. 8 Claims. (Cl. 224—29.)

6. In a device of the character described, the combination with a spare tire carrier member having a cover member with a rim portion for surrounding the tire, of a plurality of bracket members secured to a vehicle and interiorly engaging said rim portion to support the cover member, and means carried by said brackets within said cover member providing a support for the tire.

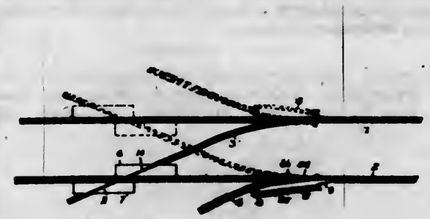
1,423,700. LOCKING MEANS FOR CASTER PINTLES. GEORGE F. VAN METER, Indianapolis, Ind., assignor to United States Caster Co., Incorporated, Indianapolis, Ind. Filed Sept. 12, 1921. Serial No. 500,087. 1 Claim. (Cl. 16—19.)

In a caster, the combination of a shank, a hanger secured thereto, a roller secured to the hanger, a slot provided longitudinally in the threaded portion of the shank, and a bearing threaded on the shank and adapted to move upwardly and downwardly on the shank, a cup shape portion formed on the bearing and an inner flange formed on the lower end of the bearing, an aperture formed in the flange, apertures formed in the cup-shaped portion, and a locking element adapted to seat in the apertures of the cup-shaped portion and also in the aperture of the flange, and having a portion that normally seats in the longitudinal slot of the shank, means for retaining the portion in the slot of the shank.



1,423,701. NAPKIN-DISPENSING DEVICE. CLAY R. VINSON, Tulsa, Okla. Filed June 6, 1921. Serial No. 475,271. 6 Claims. (Cl. 211—82.)

1. In a device of the character described, the combination of a horizontal support, an angular supporting member secured to one edge of said support and projecting both above and below the same, means for suspending a roll of material from the lower projecting portion of said member, a cover member applied to said supporting member and having means cooperating with the upper projecting portion of the latter to clamp the material while a portion is being torn therefrom, and guiding means between the source of material and said clamping means and including means for preventing rearward movement of the material after a portion has been torn therefrom.



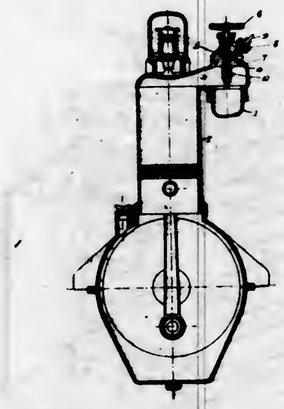
1,423,702. RAILWAY TIE AND SECURING DEVICE. SAMUEL WALLWORK, Sommerville, Pa. Filed Apr. 18, 1922. Serial No. 554,475. 5 Claims. (Cl. 238—347.)

1. The combination with a flanged rail and a metal tie having a perforation adjacent the flange of the rail, of a clamping plate of wrought metal having a cam slot over said perforation and lying at an angle to the line of the rail with its edge lying over the flange of the rail, and a

headed locking member extending through said perforation and slot and clamping the plate so that the plate is sprung or bent and applies yielding pressure to the rail.

1,423,703. SWITCH CONSTRUCTION. SAMUEL WALLWORK, Summerville, Pa. Filed Apr. 18, 1922. Serial No. 554,476. 5 Claims. (Cl. 238—12.)

1. The combination with a main line track, of a switch point device comprising a channel with upwardly extending flanges, a pivot at the rear end thereof, and a tongue secured between said flanges and having its forward end bevelled and adapted to lie over the rail of the main line track when the device is in closed position, the sides of said tongue being spaced away from said flanges so that a groove is provided for the wheel flanges on each side of the tongue and the parts on the opposite sides of the center line of the device being similar so that it may be used on either side of the track.



1,423,704. METHOD OF STERILIZING AIR. ALBERT WOLFF, Berlin, Germany. Filed Nov. 3, 1920. Serial No. 421,589. 1 Claim. (Cl. 183—117.)

The method of sterilizing air which consists in washing air on the counter-flow principle and in the finest possible state of distribution with a stable watery solution rich in ozone, renewing the percentage of ozone in the said washing liquid after use and using it anew for washing air.

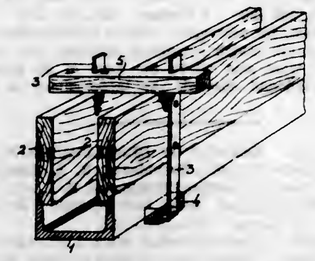
1,423,705. INTERNAL-COMBUSTION AND HOT-AIR ENGINE. ALBERTO BAGNULO, Turin, Italy. Filed Sept. 23, 1919. Serial No. 325,670. 2 Claims. (Cl. 123—31.)

1. In a heavy oil, four stroke cycle, internal combustion engine, the combination with the engine cylinder; of a vaporising and combustion chamber arranged laterally of the cylinder and in constant communication therewith, and a fuel feeding device above the vaporising chamber and discharging vertically, said device comprising a fuel regulating valve and an automatic ball valve controlling

the fuel supply to the regulating valve, arranged to feed fuel to the vaporiser during the exhaust and suction

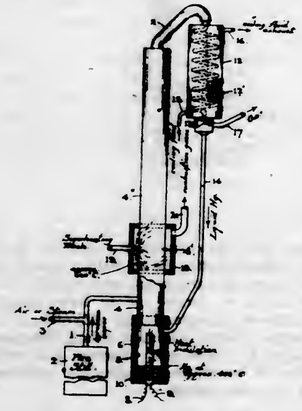
strokes of the engine when the pressure within the engine cylinder becomes less than the fuel pressure.

1,423,706. ANIMAL POKE. PHILIP BARNEY, Dollard, Manitoba, Canada. Filed Mar. 8, 1920. Serial No. 364,106. 4 Claims. (Cl. 119—142.)



1. In an animal poke, the combination with a neck attaching part and a pair of upwardly extending diverging prongs carried by the neck part, of a pair of forwardly positioned members attached to the neck part and adapted to span the forehead of the animal and a nose part connected to the latter members and terminating in a piercing hooked end.

1,423,707. SOUND BOX. HENRY BERMAN, Ossining, N. Y., assignor of one-half to Emil Erik, Ossining, N. Y. Filed July 2, 1921. Serial No. 482,121. 4 Claims. (Cl. 274—35.)



1. In combination in a phonograph, a reproducer having a metallic diaphragm, a flange integral with said diaphragm, and a wire enclosed by said flange, said wire having outwardly bent ends.

1,423,708. MOLD FOR CONCRETE BEAMS. SIGURD BRUUN, Fredericksberg, Denmark. Filed Mar. 23, 1921. Serial No. 455,515. 1 Claim. (Cl. 25—121.)

Mold for molding concrete beams of an ⊥-shaped section consisting of a U-shaped section iron, serving as mold for the head of the concrete beam to be molded, boards, forming the sides of the mold, adapted to be fitted on the edges of the flanges of said section iron, and means for holding the said members of the mold together and in a proper relative position to each other.

1,423,709. PROCESS FOR PRODUCING GASOLINE AND THE LIKE. JOHN COLLINS CLANCY, Niagara Falls, N. Y., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed July 31, 1919. Serial No. 314,434. 15 Claims. (Cl. 196—26.)

1. The process of cracking hydrocarbons, which comprises subjecting a hydrocarbon oil, while in vaporous condition, to the catalytic action of mercury vapor.

1,423,710. PROCESS OF DESULPHURIZING OIL. JOHN COLLINS CLANCY, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed July 8, 1920. Serial No. 394,818. 19 Claims. (Cl. 196—26.)

1. The process of purifying mineral oil, which comprises, treating a mass of said oil with liquid anhydrous ammonia to cause the sulfur present in said oil to combine with said ammonia to form an ammonia-sulfur compound and separating said compound from the oil.

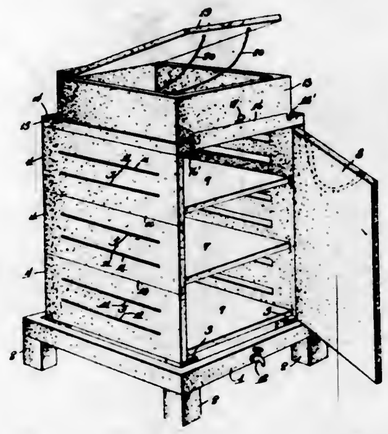
10. In a process of purifying mineral oil to step which comprises reacting upon said oil with ammonia in the presence of a catalyst to cause the sulfur present in the oil to combine with the ammonia.

1,423,711. PROCESS FOR OBTAINING SULPHUR COMPOUNDS FROM MINERAL OILS AND THE LIKE. JOHN COLLINS CLANCY, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed July 14, 1920. Serial No. 396,220. 16 Claims. (Cl. 23—13.)

1. A process for recovering sulphur from sulphur bearing mineral oil, which comprises effecting the removal of sulphur from said oil in the form of an ammonia-sulphur compound through the intermediacy of liquid ammonia.

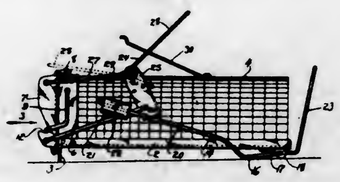
1,423,712. METHOD OF DESULPHURIZING OIL. JOHN COLLINS CLANCY, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed July 17, 1920. Serial No. 397,056. 8 Claims. (Cl. 196—26.)

1. A process of desulphurizing mineral oil, which comprises treating a heated mass of said oil with ammonia vapor and steam.



1,423,713. DETACHABLE BIT FOR DRILLS. HILTON HENRY DES ROCHES, Butte, Mont., assignor of one-half to Michael J. Scott, Butte, Mont. Filed June 6, 1920. Serial No. 386,690. 12 Claims. (Cl. 255—64.)

1. A drill or drill bit comprising a body or shank and a detachable cutting portion or bit fitting closely the end of said shank across the transverse end surface, the meeting surfaces being so formed as to have tongue and tongue and groove engagement at different transverse angles preventing relative lateral or rotary movement and causing a tight fit under end pressure and releasable locking means for preventing longitudinal movement of the bit away from the shank.

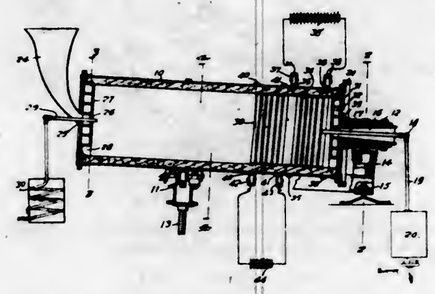


1,423,714. MILK OR CREAM CABINET. WILLIAM P. FRY, Marble Falls, Tex. Filed Oct. 25, 1920. Serial No. 419,404. 1 Claim. (Cl. 45—134.)

A cooling cabinet of the character described comprising a supporting basin, a series of superposed compartments mounted upon each other, the upper marginal edge of each compartment being provided with a beveled edge, the lower marginal edge of each compartment having a beveled flange adapted to fit the beveled edge of the adjacent compartment, the said walls of each compartment being equipped with angular slots extending downwardly from the inside walls of the compartment, the inner terminals of the said angular slot being considerably wider than the outer terminals which open on the outer surfaces of the said walls whereby air may pass freely into the said compartment but water flowing downwardly over the surface of the walls will be excluded from the said compartment, and a reservoir mounted upon the top of the uppermost compartment and provided with a trough around its side, the front flange of the trough being higher than the other

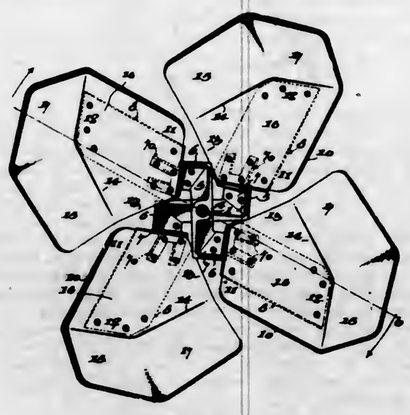
flanges thereof whereby water will flow only over the side and rear flanges and be permitted to flow down the side and rear walls of the said compartment.

1,423,715. ANIMAL TRAP. JOHN A. HEDBERG, Denver, Colo., assignor to The South Side Manufacturing Company, Denver, Colo., a Firm composed of Elmo E. Ridgley and John A. Hedberg. Filed Aug. 6, 1921. Serial No. 490,297. 8 Claims. (Cl. 43—61.)



8. An animal trap comprising a lever, a tiltable platform supported at one end on an arm of the lever, a counterpoise on the other arm of the lever, a cage above the platform, having an entrance, a gate adapted to close said entrance, and mechanism to hold the gate in an open position and to allow of closing movement of the same, including a rocker-lever connected with the gate and composed of foldably connected members, a catch loosely engaging with an arm of the rocker lever, and a trigger on the supporting lever, engaging with the catch.

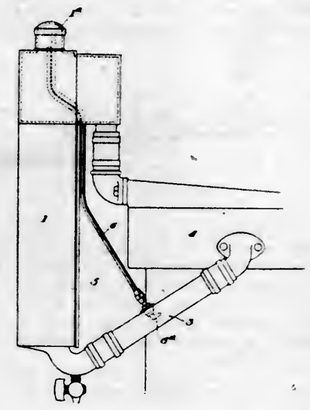
1,423,716. PROCESS OF DISTILLING SHALE. EDWARD E. HEDGES, New York, N. Y. Filed June 13, 1921, Serial No. 477,293. Renewed Apr. 8, 1922. Serial No. 550,795. 6 Claims. (Cl. 196—21.)



1. The process of distilling oil bearing shale, consisting in introducing raw shale into one end of an elongated retort, moving the shale along the retort under constant agitation, maintaining heat within said retort varying from a temperature to drive off the most volatile ingredients at the end of introduction to a temperature to decompose water in the presence of carbon at the opposite

end, conducting the released gases backwardly through progressively cooler areas, introducing steam into contact with the heated fixing carbon residuum at the hotter

end, commingling the gases released by decomposition with the released volatile gases, and discharging the spent shale residuum from said hotter end.



1,423,717. CURRENT MOTOR. ELIAS STANLEY HICKS, Yakima, Wash. Filed Mar. 29, 1919. Serial No. 285,970. Renewed Feb. 11, 1922. Serial No. 535,946. 5 Claims. (Cl. 170—170.)

1. A current motor comprising a shaft adapted to be projected in the direction of the current, a pair of paddles transversely mounted with respect to the shaft, a pair of supporting spokes or members fixedly attached to and projected radially from the shaft, the outer end of each supporting spoke including a bearing face disposed at an obtuse angle in a direction transverse to the shaft to the flow of the current, one of the aforesaid paddles being attached to each of the said bearing faces, the bearing face for one paddle being inclined at right angles in the same direction to the bearing face for the other paddle.

1,423,718. INTERNAL-COMBUSTION ENGINE. NORMAN ISACHSON, Albion, Idaho. Filed June 1, 1921. Serial No. 474,087. 3 Claims. (Cl. 123—175.)

3. In combination with an internal combustion engine and its radiator having connecting flow and return pipes, said radiator having a water overflow pipe, a steam pipe having one end connected with the interior of the radiator above the upper end of the overflow pipe, and its

other end connected to inject steam into the pipe which conveys water from the radiator to the engine.

1,423,719. STABLE FOAM FOR PREVENTING THE EVAPORATION OF STORED LIQUIDS. JAMES M. JENNINGS, Elizabeth, N. J., assignor to Standard Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed Nov. 22, 1920. Serial No. 425,848. 9 Claims. (Cl. 23—11.)

1. A stable foam for preventing evaporation of volatile constituents of a liquid having as its base an aqueous solution containing 25% of glue, 10% of glycerine, 2% of ferrous sulfate, and a minute proportion of a preservative.

1,423,720. FOAM COVERING FOR PREVENTING THE EVAPORATION OF STORED LIQUIDS. JAMES M. JENNINGS, Elizabeth, N. J., assignor to Standard Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 24, 1921. Serial No. 472,297. 12 Claims. (Cl. 23—11.)

9. A substantially permanent fluent foam having as its continuous phase a liquid comprising less than 15% of water, glycerine and a body-forming material.

1,423,721. FOAM COVERING FOR PREVENTING THE EVAPORATION OF STORED LIQUIDS. JAMES M. JENNINGS, Elizabeth, N. J., assignor to Standard Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed Oct. 26, 1921. Serial No. 510,627. 13 Claims. (Cl. 23—11.)

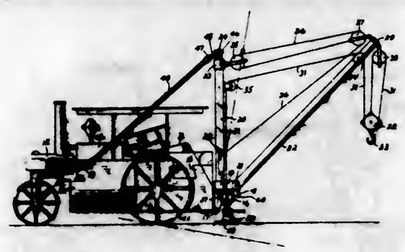
1. A liquid for producing stable foams comprising from 40 to 81% of glucose, from 6 to 12% of water, from 5 to 10% of glue and a small proportion of a setting agent.

1,423,722. SCREW DRIVER. JAMES E. MCCAFFERTY, Newark, N. J. Filed Dec. 30, 1920. Serial No. 434,009. 1 Claim. (Cl. 145—76.)

A screw driver comprising a blade, a handle associated with said blade so as to be capable of rotary and longitudinal movement relatively thereto, a positive clutch member fixed to said blade, a positive clutch member fixed to said handle, said clutch members be-

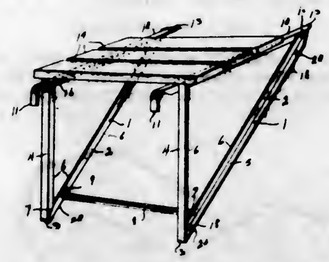
ing arranged to make a positive clutch connection with each other as they are made to engage each other by the exertion of a longitudinal thrust upon the handle, resilient means for holding said ratchet members out of operative relation, means to retain the handle and blade operatively associated, said last named means being operable at will to permit disengagement of the clutch mem-

bers by the influence of said resilient means or to lock the clutch members in engagement with each other against the action of said resilient means and comprising a cap rotatable on the handle and the blade and longitudinally slidable on the handle and having a bayonet slot, and a laterally projecting pin fixed to the handle and engaging in said slot, said cap engaging the clutch member of the blade.



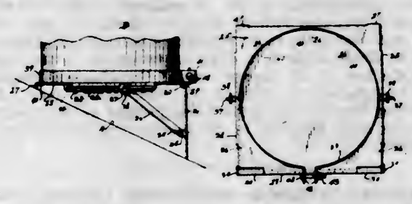
1,423,723. ADJUSTABLE WRENCH. WILLIAM ALEXANDER MARTIN, Commercial Cross, Prince Edward Island, Canada. Filed Dec. 10, 1921. Serial No. 521,416. 3 Claims. (Cl. 81—139.)

1. An adjustable wrench comprising a shank, formed with a shoulder provided with a recess, a serrated member slidably mounted in the shank, and formed with a pin engaging the recess, a handle pivotally attached to one end of the shank, and to the serrated member, a jaw formed integral with the opposite end of the shank, an adjustable jaw slidably mounted on the shank, an arm on the adjustable jaw extending along the serrated member, a pawl pivotally mounted on the arm, and formed with a lip on one side of its fulcrum, and a wedge point on the opposite side, a slotted arm carried by the pawl engaging the shank, and serrated member, and resilient means on the arm designed to force the wedge pointed pawl in engagement with the serrations.



1,423,724. DERRICK ATTACHMENT FOR ROAD ROLLERS. JOSEPH MASCETTI, Torrington, Conn., assignor to Mascetti & Holley, Torrington, Conn., a Copartnership consisting of Joseph Mascetti and Irving B. Holley. Filed Oct. 27, 1920. Serial No. 419,860. 14 Claims. (Cl. 212—59.)

1. In a vehicle-derrick the combination of a mast, a mast bearing connected to the vehicle, stiff legs connected to said mast and extending therefrom to said vehicle at points spaced apart, connections at the vehicle and



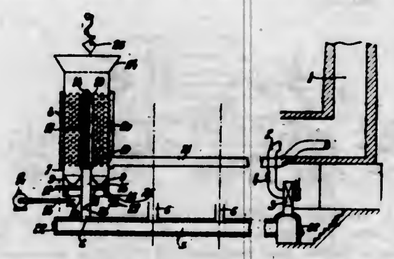
of the stiff legs, and means for independently adjusting and holding the ends in adjusted position.

1,423,725. LADDER PLATFORM AND ROOF JACK. CARL J. MOHR and URBAN J. MOHR, Dayton, Ohio. Filed Nov. 1, 1920. Serial No. 421,021. 3 Claims. (Cl. 304—34.)

1. As an article of manufacture, a ladder platform and roof jack comprising angle bars adapted to assume substantially horizontal positions with their lateral flanges facing toward each other, certain corresponding ends of the bars having means to engage the rung of a ladder, angle braces composed of angle bars and having their corresponding ends secured to the vertical flanges of the horizontal angle bars, said angle braces extending downwardly and having their lateral flanges extending outwardly in opposite directions, and a transverse brace connecting the angle braces, spacing them substantially equal to the distance between the side rails of a ladder, whereby the outward lateral flanges of certain arms of the angle braces may overlie and engage the side rails of the ladder.

1,423,726. PAINT-BUCKET HOLDER. CARL J. MOHR and URBAN J. MOHR, Dayton, Ohio. Filed Sept. 10, 1921. Serial No. 499,665. 3 Claims. (Cl. 248—41.)

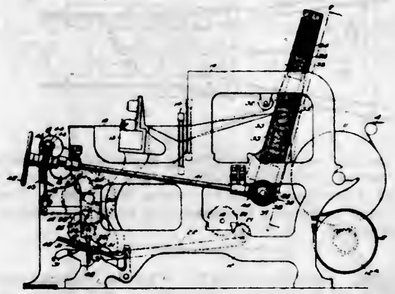
1. A device of the character described comprising a base plate provided with supporting legs, means for supporting, a receptacle upon the base plate consisting of a contractible band provided with clamping means for



effecting contraction about a receptacle placed within the confines of the band, and connecting means between the band and the base plate, said connecting means being at that portion of the band most remote from the clamping means whereby to permit the contraction and expansion.

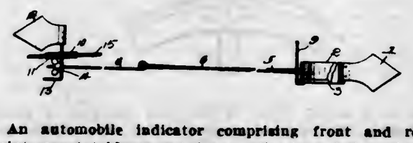
1,423,727. DANGER SIGNAL. WILLIAM F. MORAN, Frederick, Md. Filed Feb. 6, 1922. Serial No. 534,499. 3 Claims. (Cl. 116—116.)

3. In combination with the apparatus described in claim 2, a vertical slidable plate member mounted on the casing and adjustable to extend partially over and regulate the size of the wind opening.



1,423,728. MEANS FOR CONTINUOUS PREDRYING OF FUEL. OTTO NORDSTRÖM, Matfors, and ARNE MÖRCK, Sundsvall, Sweden. Filed Nov. 10, 1920. Serial No. 423,146. 2 Claims. (Cl. 34—24.)

1. A fuel drying apparatus including a tower having a perforated wall, a tower-shaped trellis-work centrally arranged in said tower, means for introducing a current of hot gases at the bottom of said trellis-work, means for supplying wet fuel at the top of said tower, a rotary conical bottom in said tower, spirally arranged ribs on the upper surface of said conical bottom to cut away the lowermost layer of the mass dried and feed same out from the tower, and a gas collecting chamber surrounding the perforated tower.

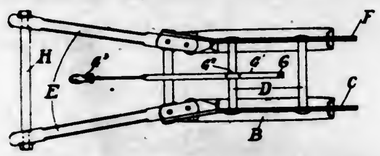


1,423,729. WARP TAKE-UP AND TENSIONING MECHANISM FOR LOOMS. SEWALL K. OLIVER, Columbia, S. C. Filed Mar. 14, 1921. Serial No. 451,977. 16 Claims. (Cl. 139—81.)

2. In a slack take up device for looms, the combination with the warp delivering and shed forming mechanisms, of normally inoperative means for taking up and tensioning the slack warp threads intermediate the warp delivering and shed forming mechanisms, and connections for positively actuating said take up and tensioning means,

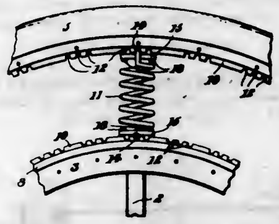
said actuating connections being manually operable and independent of the warp delivering mechanism, whereby the slack warp threads may be placed under a tension independently of the warp delivering mechanism.

1,423,730. ACCESSORY FOR AUTOMOBILES. GEORGE D. ORR, Cincinnati, Ohio. Filed Feb. 16, 1921. Serial No. 445,554. 1 Claim. (Cl. 116—47.)



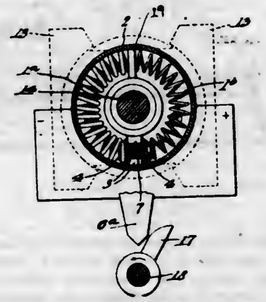
An automobile indicator comprising front and rear pointers rotatably mounted upon the top of the vehicle, the front pointer being mounted upon a wire extending down through the top and bent forwardly to form an operating handle, said wire having laterally extending ears to which are attached rearwardly extending rods, said rods being connected to the rear pointer by means of crossed wires, whereby the two pointers are caused to move in unison.

1,423,731. MOTOR VEHICLE. ALDEN E. OSBORN, New York, N. Y. Filed Feb. 21, 1921. Serial No. 446,917. 6 Claims. (Cl. 180—26.)



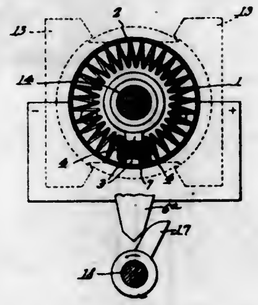
1. In a motor vehicle, the combination of a traction wheel, a support for said wheel about which said wheel can rotate, an axle on which said support is pivotally mounted, a propelling motor, means for transmitting the rotation of said motor to said traction wheel, means for supporting said motor connecting with said wheel support, and means for steadying said motor having a pivotal connection with the supporting means thereof above said traction wheel and with the pivot's axis substantially in line with the axis of said support's pivotal mounting.

1,423,732. ICE CONVEYER. LELAND F. PIXLEY, Afton, N. Y. Filed Sept. 7, 1920. Serial No. 408,768. 6 Claims. (Cl. 280—23.)



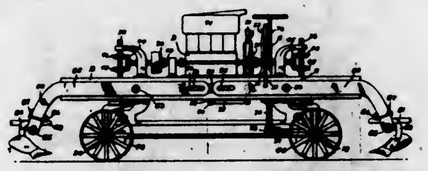
1. An ice conveyer comprising a plurality of runners each having a relatively wide base, and a longitudinal rib having a sharpened edge to receive and support a cake of ice and to prevent the same from shifting laterally of the conveyer.

1,423,733. SPRING WHEEL. WLADYSLAW PIERNIKOWSKI and STANISLAW GRUDZINSKI, Philadelphia, Pa. Filed Mar. 8, 1922. Serial No. 542,035. 4 Claims. (Cl. 152—8.)



4. In a spring wheel of the type described, a spoke supported felly, a band secured to the felly, a rim surrounding the felly and spaced therefrom, flexible side sheets extending between the felly and rim, opposed circumferentially extending ribs formed on the felly band and rim, said ribs having spaced sets of transverse grooves formed therein, coil springs interposed between the felly band and rim and each carrying at opposite ends an angle arm positioned in an adjacent groove and a clamping block having a groove formed in the inner face thereof receiving the adjacent spring angle arm and anchored to the adjacent rib.

1,423,734. OSCILLATOR FOR MAGNETOS. HARLIE O. PUTT, Elkhart, Ind. Filed Dec. 9, 1919. Serial No. 343,542. 6 Claims. (Cl. 123—149.)

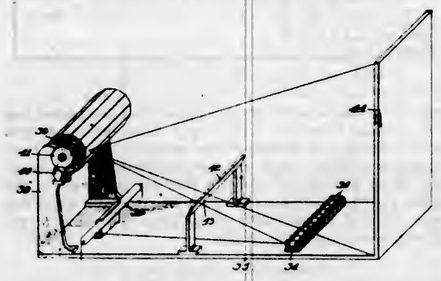


1. In a device of the class described, the combination of an annular housing, resilient means mounted in the housing, a disc for an oscillator, said disc having a stud in operative engagement with the spring means, and a slotted stop through which the aforesaid stud is freely movable.

1,423,735. OSCILLATOR FOR MAGNETOS. HARLIE O. PUTT, Elkhart, Ind. Original application filed Dec. 9, 1919, Serial No. 343,542. Divided and this application filed Feb. 20, 1922. Serial No. 538,008. 1 Claim. (Cl. 123—149.)

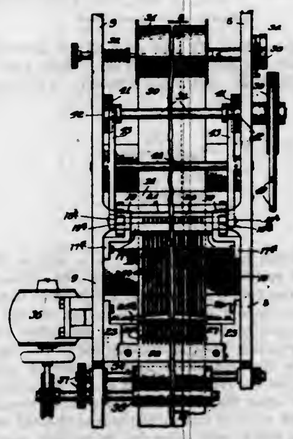
An oscillating mechanism for a magneto or other electric current generator, the mechanism comprising a pair of oscillating members, a coiled spring connected at its ends to said members, an arm operatively connected with the magneto shaft and adapted to move either member from its normal position against the tension of said spring, whereby the actuated member will impart an accelerated return movement to said arm under the action of the tensioned spring, and means for holding either member against movement during the operation of the other member.

1,423,736. TRACTOR AND PLOWING ATTACHMENT THEREFOR. PHILIP ADAM REINHOLD, Akron, Ohio. Filed May 21, 1920. Serial No. 383,223. 4 Claims. (Cl. 180—50.)



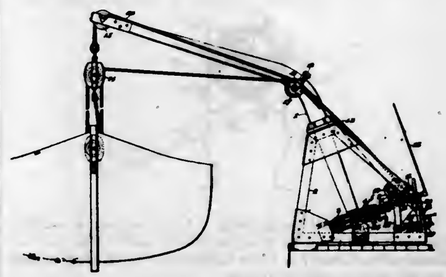
1. A tractor comprising a longitudinally extending frame, axle, housings carried by the frame adjacent to the terminals thereof, and arranged for swinging movement, drive axles rotatably mounted in said housings, vertically disposed rotatable and slidable counter shafts carried by the frame and arranged on opposite sides of the power plant, means operatively connecting the lower terminal of the counter shaft with the drive axle, bevelled gear wheels carried by the terminals of the drive shaft of the power plant, pairs of spaced bevelled gear wheels carried by the counter shaft, and means for simultaneously raising and lowering said counter shaft for bringing one of the pairs of gear wheels on said counter shaft in engagement with the bevelled gears on said drive shaft of the power plant.

1,423,737. ART OF TRANSMITTING PICTURES AND THE LIKE. HENRY K. SANDELL, Chicago, Ill., assignor to Herbert S. Mills, Chicago, Ill. Filed Sept. 10, 1919. Serial No. 322,815. 11 Claims. (Cl. 178—6.)



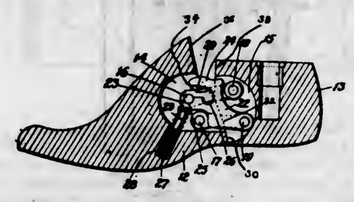
11. In combination, a transmitting device comprising a plurality of light responsive devices capable of producing

energy impulses, means for projecting rays of light to form a picture, a movable mirror adapted to receive rays of light from said picture, means for moving said mirror to successively reflect light rays from definite limited areas of the picture upon the light responsive devices, and an opaque screen interposed between the prism and the light responsive devices, said screen being provided with a slot adapted to limit the area reflected upon said devices, means for separately transmitting the impulses from the individual light responsive devices, and receiving means, said receiving means comprising a screen, a plurality of electro-magnets, mirrors mounted upon the armatures of said electro-magnets, a movable mirror adapted to receive



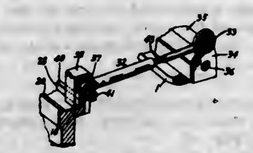
light rays reflected from said mirrors and to reflect said light rays upon definite areas of said screen in succession, an opaque screen mounted between the electro-magnet mirrors and the movable mirror, said screen being provided with a slot and normally obstructing the passage of said rays, means for projecting light rays against the electro-magnet mirrors, and means for separately receiving the energy impulses transmitted from the definite light responsive device of the transmitting device, and for transmitting said impulses to the individual electro-magnets of the receiving means to thereby actuate the electro-magnet mirrors to project light rays through the slot in the screen against the movable mirror.

1,423,738. SHEET-PERFORATING MACHINE. HENRY K. SANDELL, Chicago, Ill., assignor to Herbert S. Mills, Chicago, Ill. Filed Dec. 6, 1920. Serial No. 428,539. 9 Claims. (Cl. 164—113.)



1. In a sheet-perforating machine, the combination with reciprocating punches, of actuating mechanism therefor including reciprocating means engaging the punches to positively advance and retract them, a lever fulcrumed between its ends and operatively connected at one end with said means, and a drive-shaft carrying an eccentric having an arm with which the opposite lever-end is pivotally connected for reciprocating said means.

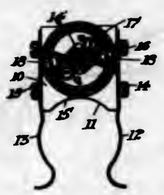
1,423,739. AUTOMATICALLY-BRAKED DAVIT. ANE P. SCHAT, The Hague, Netherlands. Filed Feb. 1, 1921. Serial No. 441,618. 36 Claims. (Cl. 1—22.)



14. In a device of the character described, a davit adapted to swing outboard under the influence of its load; braking mechanism for the davit including a bellcrank lever for applying the brakes; a flexible member adapted at one end to support the load suspended from the davit, and operatively connected at its other end to said bellcrank lever, whereby to apply the brakes to the davit in proportion to the weight of the load; a loaded lever also connected with said bellcrank lever to additionally apply the brakes to the davit; and manually operated means for counteracting the influence of the load and of the loaded lever upon the braking mechanism.

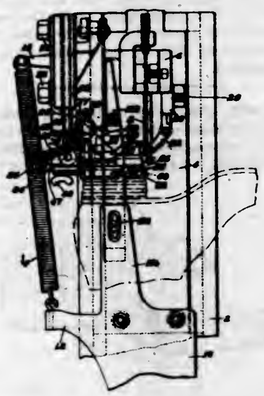
1,423,740. LAST. JOHN CARL SCHELTER, Rochester, N. Y., assignor to Fits-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Dec. 21, 1918. Serial No. 267,757. 7 Claims. (Cl. 12—136.)

1. A hinge-last having a hinge pin and a member engaging therewith for positively locking the last in extended condition and impositively locking it in collapsed position.



1,423,741. CALCULATING MACHINE. GEORGE A. SEIB, Ilion, N. Y., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed June 11, 1921. Serial No. 476,767. 11 Claims. (Cl. 235—59.)

1. In a computing machine, the combination of a carriage, a totaliser truck, means for connecting the truck to

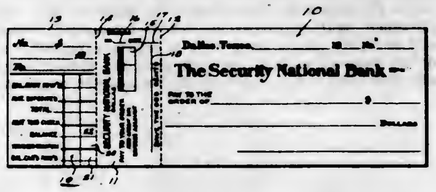


move with the carriage but enabling the truck to have a limited movement relatively to the carriage transversely of the line of travel of the truck, bearing rollers which guide the truck, and non-elastic links intermediate said carriage and truck.

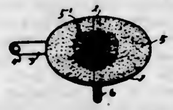
1,423,742. HEATER UNIT. HARRY A. SILVERMAN, New York, N. Y. Filed May 5, 1921. Serial No. 467,059. 7 Claims. (Cl. 219—63.)

1. A heater unit comprising a block having a surface adapted to conform to a surface of a body to be heated, means for securing the block to the body to be heated, and a device for heating the block.

1,423,743. HEEL-BREASTING MACHINE. RALPH C. SIMMONS, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 20, 1919. Serial No. 305,583. 15 Claims. (Cl. 12—47.)



1. In a machine of the class described, the combination of a reciprocating knife, a shoe support, a tread plate, and means arranged to engage the central portion only of the breast end of the toplift on each side of the longitudinal median line of a heel located against the tread plate.



14. In a machine of the class described, a knife stop for engaging the shoe shank comprising a stem arranged for vertical adjustment, a foot pivoted to the stem, and a screw threaded through the stem and having its end arranged to engage a surface of the foot at one side of its pivot adjustment of the screw causing angular movement of said foot in the longitudinal median plane of the shoe.

1,423,744. BANK CHECK AND STUB. DON L. STERLING, Dallas, Tex. Filed May 28, 1921. Serial No. 473,559. 3 Claims. (Cl. 283—58.)

1. A sheet of paper having spaced transverse lines upon which the same is adapted to be torn, said lines forming a check, a saving coupon, and a stub; said check being provided with the usual check form; said stub having data provided thereon including a line designated balance brought forward, a line designated amount deposited, a line beneath the last named line designated total, a line beneath the last named line designated amount of this check, a line beneath the last named line designated balance, a line beneath the last named line designated savings coupon, and a line beneath the last named line designated balance carried forward; said coupon being provided with data indicating in substance the name of the same bank occurring upon the check, a space designated for the reception of an amount of money, a line for the name of the payer and instructions to deposit the amount appearing upon the stub to the credit of the savings account of the depositor who signs the coupon.

1,423,745. POWDER PUFF. MABEL W. WILLSON and ANDREW E. WILLSON, Grand Rapids, Mich. Filed Oct. 18, 1921. Serial No. 508,554. 5 Claims. (Cl. 132—78.5.)

1. In a powder puff, two pieces of fabric each having one plain surface and one fluffy surface, each of said pieces of fabric centrally folded with the plain surfaces outward and the folded edges stitched together in such a manner that the puff may be folded with both pairs of fluffy surfaces contacting and protected, or may be opened so one pair of said surfaces may be exposed and made to form a fluffy surface for the storage and application of powder.

1,423,746. LOCKING MEANS FOR NUTS, BOLTS, AND THE LIKE. HAROLD BATCHELOR, Jersey City, N. J. Filed Apr. 8, 1919. Serial No. 288,554. 4 Claims. (Cl. 151—25.)

1. In a device for locking a nut to a bolt or the like, comprising a resilient angular element, one corner of the nut being formed with a groove in substantial parallelism with the axis thereof providing a seat for one leg of said element, opposed edges of said groove extending over said leg so as to retain it therein, the free end of the leg having an outwardly directed offset portion coacting with said edges to control the free movement of the leg relatively to said seat, the other leg of the angular element reaching the bolt slantingly so as to engage the thread thereof on either side, the free end of said other leg biting into said thread when in advance of the seat, and admitting of being brought past a radial position by excessive pressure so as to oppose rotation in the reverse direction.

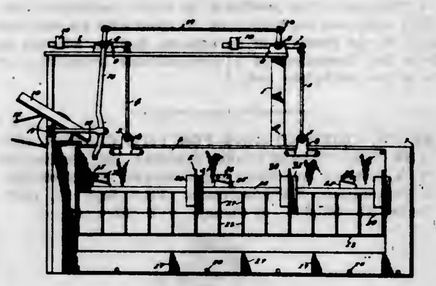
1,423,747. METHOD OF MAKING PRESSED-STEEL VEHICLE WHEELS. DAVID H. BELLAMORE, New York, N. Y., and THOMAS I. S. BOAK, East Orange, N. J., assignors, by direct and mesne assignments, to Steel Wheel Corporation, a Corporation of New York. Filed Sept. 15, 1919. Serial No. 323,836. 12 Claims. (Cl. 29—150.)

1. The method of making a disc wheel which consists in manipulating blanks of normalized alloy steel between dies to impart the desired shape thereto, thereafter hardening and tempering the resulting parts and assembling them to form the wheel.

1,423,748. SECTIONAL INNER STRIP FOR AUTOMOBILE TIRES. WOLF BERMAN, New York, N. Y. Filed Jan. 19, 1922. Serial No. 530,462. 2 Claims. (Cl. 152—5.)

1. A combination of a containing-strip which fits into automobile tires in connection with two supporting-strips, one cushion-strip and one plug-strip, all of which fit within the containing-strip and are of special designs, each part containing air-channels which furnish yieldability, and all parts fitting snugly and securely within one another, and functioning as one unit.

1,423,749. GARMENT-SUPPORTING DEVICE. ELIZABETH BOWLER, Westport, S. Dak. Filed Apr. 19, 1921. Serial No. 462,511. 2 Claims. (Cl. 241—12.)

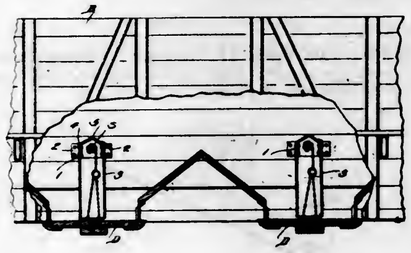


1. A device of the class described, including a pair of side clasps having approximately horisontal loops to receive shoulder straps of a garment and provided with depending portions having slots, inclined relative to said loops, a member provided with means for securing it to the clothing of the wearer and flexible means extending from the said member to the said clasps and secured in the inclined slots thereof.

1,423,750. PILOT-LIGHT BURNER. JULIUS BROMBACHER, Los Angeles, Calif. Filed Nov. 19, 1921. Serial No. 516,460. 5 Claims. (Cl. 158—115.)

5. A pilot light burner comprising a gas supply pipe having an internal shoulder, and a square bar loosely resting on the shoulder of, and extending beyond the end of, said pipe.

1,423,751. ORE-SEPARATING DEVICE. WILLIAM SHERMAN BROWN, Wallace, Idaho. Filed Apr. 17, 1920. Serial No. 374,689. 2 Claims. (Cl. 83—80.)

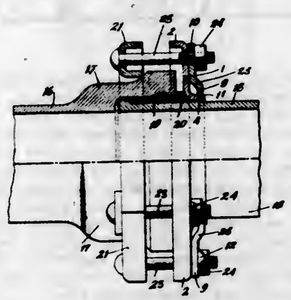


1. A sizing apparatus for ore comprising a tank having a plurality of partitions defining compartments, a basket within the tank and having upper and lower series of parallel spaced transversely extending slats and a screen held between the slats, pairs of cups attached to opposite sides of certain of said slats, one cup of each pair having its lower end open and spaced above the screen, the other cup having its lower end open and in contact with the screen, said slats notched to provide communication between the cups of each pair, and vertically adjustable gates having openings adapted for registration with said notches, said cups extending above the upper edge of said slats and constituting guides for said gates.

1,423,752. WINDING SHAFT AND CHAIN GUARD FOR DUMP CARS. OLIVER L. BURFORD and HUBERT DE BARDELEBEN, Ensley, Ala. Filed June 16, 1921. Serial No. 478,119. 1 Claim. (Cl. 105—292.)

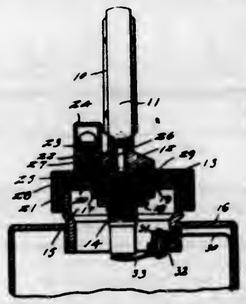
The combination with a dump car having bottom closures movable vertically into and out of a closed position, a winding shaft extending through the car over the closures and chains wound upon the shaft and extending downwardly therefrom and connected with the closures; of an inverted channel-shaped guard extending through the car and extending above and upon opposite sides of the shaft, said guard being connected at its ends with the

walls of the car body, depending hollow arms connected with the guard and extending downwardly therefrom and positioned about the depending portions of said chains,



said channel-shaped guard being formed with inspection openings over said depending hollow arms, and hinged closures for said openings.

1,423,753. METHOD OF PRODUCING ACTIVE METHYLENE BODIES. CARNIS B. CARTER and ALBERT E. COXE, Pittsburgh, Pa., assignors, by mesne assignments, to S. Karpen & Bros., a Corporation of West Virginia. Filed Aug. 27, 1920. Serial No. 406,435. 11 Claims. (Cl. 23—24.)

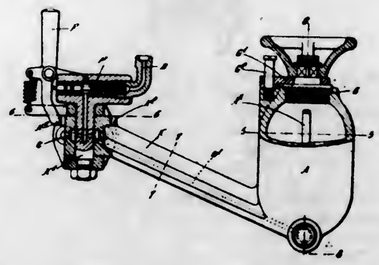


1. The method of producing an active methylene body which comprises reacting upon ethylene with an ozonized agent in the presence of an aqueous medium adapted to favor the formation of a preponderant proportion of the active methylene body.

1,423,754. DIVIDED RING FOR PIPE CLAMPS AND THE LIKE. JAMES CLARK, Bradford, Pa., assignor to S. R. Dresser Manufacturing Company, Bradford, Pa., a Corporation of Pennsylvania. Filed Sept. 27, 1921. Serial No. 503,666. 5 Claims. (Cl. 285—142.)

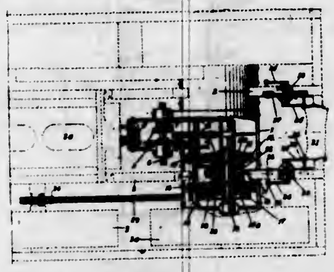
1. A divided ring for pipe clamps and the like, comprising an annular plate member provided with bolt holes, said ring being formed in sections, the lines of separation between the ends of adjacent sections passing through bolt holes, said ring sections being provided adjacent to their inner edges with locking apertures and a bridge plate connecting said sections, each provided with means for connecting it with the plate member on opposite sides of the line of separation between adjacent sections and having its inner edge provided with locking fingers for engaging the locking apertures of the ring sections on opposite sides of said lines of separation.

1,423,755. ELECTRICALLY-LIGHTED MOTOR METER. CLARENCE HORTON CRAFT, Uniontown, Pa., assignor of one-third to Harmer D. Hutchinson, Uniontown, Pa., and one-third to John Q. Adams, Uniontown, Pa. Filed Aug. 25, 1921. Serial No. 495,188. 4 Claims. (Cl. 240—2.)



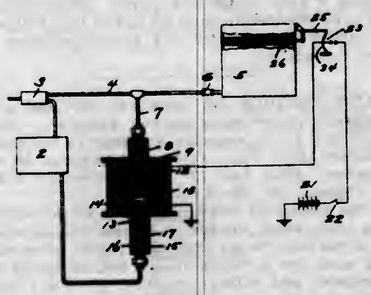
1. The combination with an automobile radiator, its closing cap, and a heat registering device disposed on and insulated from the cap, of an electrical lighting bulb above the cap to light the registering device, in electrical connection with the said registering device and with the cap, and an electrical contact member within the radiator engageable by a portion of the said heat registering device when the cap is in place on the radiator.

1,423,756. ELECTRIC HAIR CLIPPER. LEONCIO DAVID, Washington, D. C. Filed Feb. 20, 1922. Serial No. 538,013. 1 Claim. (Cl. 30—1.)



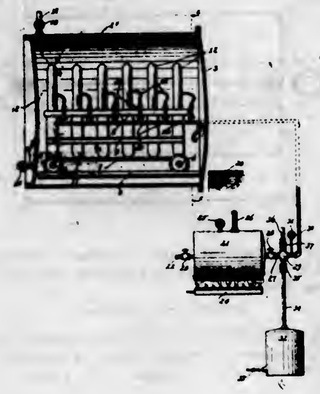
A hair clipper comprising a pair of juxtaposed blades secured together for relative longitudinal movement, one of said blades having inturned flanges, a drive shaft journaled in said flanges, a drive cam on said shaft, means on the other of said blades engaged by said cam, whereby said last mentioned blade is reciprocated when said shaft is rotated.

1,423,757. ORDNANCE. ARTHUR TREVOR DAWSON, Westminster, London, and JAMES HORNE, Barrow-in-Furness, England, assignors to Vickers Limited, Westminster, England. Original application filed Sept. 4, 1920, Serial No. 408,320. Divided and this application filed Oct. 25, 1921. Serial No. 510,391. 3 Claims. (Cl. 89—1.)



2. For use with ordnance, a device for spraying a substance into the bore of the gun, said device comprising in combination an arm pivoted to the rear part of the gun, a container for the said substance and an injector nozzle and a spraying nozzle all carried by said arm so as to be capable of being brought by movement of said arm from the inoperative or housed position in which they are out of the way of the breech mechanism, into the operative or spraying position with said spraying nozzle directed into the gun, means for locking the arm in either of its two positions and means for ensuring that the spraying device shall not be caused to operate until said arm occupies the position with the spraying nozzle directed into the gun.

1,423,758. DRIVING MECHANISM FOR TRACTORS. JOSEPH C. F. DICK, Stockton, Calif. Filed July 12, 1920. Serial No. 395,442. 6 Claims. (Cl. 180—17.)



1. A driving mechanism for tractors comprising a drive shaft, drive wheels, an independent axle for each such wheel keyed thereto and parallel to the shaft, a faced member on the axle turned by the shaft in the opposite direction thereto, another faced member on the axle turned by said shaft in the same direction, thereas, both said members being turnable on the axle, friction discs on the axle on each of the faced members and adapted to bear thereagainst and held against turning on the axle, and means for causing either at a time of the faced members to be gripped between the corresponding discs.

1,423,759. APPARATUS FOR CONTROLLING THE FLOW OF WATER TO BOILERS. JOHN A. DOBLE, San Francisco, Calif., assignor to Doble Laboratories, San Francisco, Calif., a Corporation of California. Filed May 15, 1918. Serial No. 234,769. 3 Claims. (Cl. 103—97.)

1. An apparatus for controlling the temperature within a steam generator comprising means for introducing a liquid into the generator and a by-pass for the liquid, characterized by the fact that the by-pass is opened or closed solely by variations in the temperature of the steam whereby this temperature is kept within definite limits.

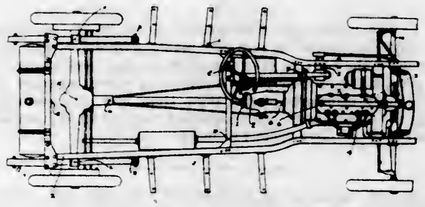
1,423,760. METHOD OF VULCANIZING PNEUMATIC TUBES. WALTER L. FAIRCHILD, New York, N. Y. Filed Sept. 3, 1920. Serial No. 408,017. 3 Claims. (Cl 18—53.)

1. The method of vulcanizing rubber tubes consisting in encasing them in suitable molds and subjecting the same to the heat of steam applied to them externally in a closed steam chest, and applying gaseous pressure to the tubes interiorly at the same time, and then connecting the interiors of the vulcanized tubes with a vacuum tank to free them from the molds.

1,423,761. MOLD FOR PNEUMATIC TUBES AND SIMILAR ARTICLES. WALTER L. FAIRCHILD, New York, N. Y. Filed Sept. 3, 1920. Serial No. 408,018. 8 Claims. (Cl. 18—38.)

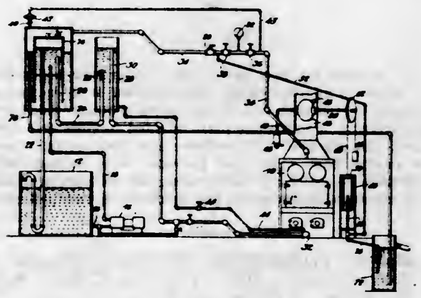
1. A mold for pneumatic tubes comprising a plurality of members adapted to be fitted together so as to provide a tubular structure, one of said parts being provided with an aperture, a removable plate adapted to close said aperture, the edges of said aperture and plate being beveled to engage each other and provided with corresponding openings to receive a valve stem, and detachable means for maintaining the plate and aperture in engagement.

1,423,762. CLOTHESLINE SUPPORT. CHARLES F. FRANSEN, Chaska, Minn. Filed Aug. 1, 1921. Serial No. 488,840. 3 Claims. (Cl. 68—3.)



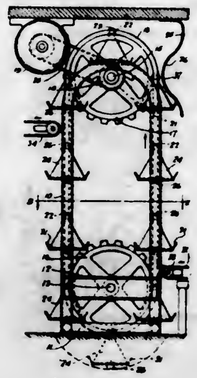
1. A clothes line support comprising laterally spaced line-supporting bars having means for attachment to supporting posts or the like and provided on their opposing faces with longitudinally spaced line guides, a line-tight-

ening device on one of said bars, two main lines attached to one of said bars and passed back and forth over the



guides on the two bars, and a common tightening line attached to the inner ends of said main lines and to said tightening device.

1,423,763. IDENTIFICATION AND CODING SYSTEM. JOHN F. GELNAW, Cleveland, Ohio. Filed May 5, 1921. Serial No. 466,968. 9 Claims. (Cl. 40—2.)



1. The herein described method of identifying articles, which consists in charting positions of identification upon said article, assigning a plurality of such positions individual to the article or class of articles, semi-permanently applying an identifying mark to the article in each of said positions, and making record thereof, substantially as set forth.

1,423,764. OIL-FIRED STEAM BOILER. BENJAMIN GREENFIELD, Bartlesville, Okla., assignor, by mesne assignments, to Doherty Research Company. Filed Mar. 12, 1920. Serial No. 365,367. 12 Claims. (Cl. 158—36.)

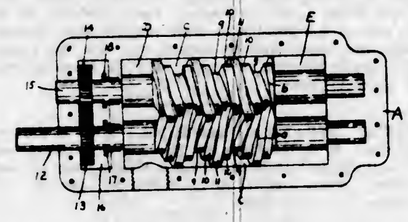
1. A combustion regulator for oil fired boilers which comprises a closed feed tank for oil, means for admitting fluid under pressure to said tank, means governed by the steam pressure in said boiler for permitting the escape of fluid from said tank, and means governed by the fluid pressure existing in said feed tank for controlling the draft to said furnace.

1,423,765. LOADING AND UNLOADING APPARATUS. CHARLES B. HASTINGS, New York, N. Y. Filed Apr. 14, 1921. Serial No. 461,240. 3 Claims. (Cl. 198—154.)

2. A conveyor comprising a plurality of vertically movable buckets having transversely barred bottoms, endless means for supporting and moving said buckets, discharging and receiving platforms associated with the buckets for disposing objects upon and removing said objects from the buckets, and a shifting comb disposed intermediate the upper and lower ends of the upper run of the endless means for shifting the objects from the discharging to the receiving side of said buckets.

1,423,766. METHOD OF TREATING SLUDGE ACIDS. INGENUIN HECHENBLEIKNER and THOMAS C. OLIVER, Charlotte, N. C., assignors to Chemical Construction Company, New York, N. Y., a Corporation of North Carolina. Filed Jan. 25, 1922. Serial No. 531,604. 20 Claims. (Cl. 23—1.)

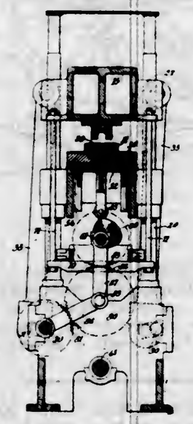
10. The steps in the method of treating sludge acids or separated sludge acids which consist in heating and agitating a weak sludge acid thereby concentrating the same to an intermediate strength and in then heating the said partially concentrated acid without agitation at a higher temperature.



1,423,767. METHOD OF TREATING SLUDGE ACIDS. INGENUIN HECHENBLEIKNER and THOMAS C. OLIVER, Charlotte, N. C., assignors to Chemical Construction Company, New York, N. Y., a Corporation of North Carolina. Filed Jan. 25, 1922. Serial No. 531,605. 13 Claims. (Cl. 23—1.)

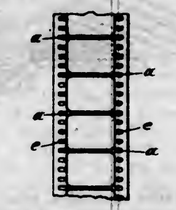
1. The method of treating sludge acids or separated sludge acids which consists in heating and agitating a body of the acid thereby effecting a partial concentration of the same and in then heating a body of the partially concentrated acid without agitation effecting a further concentration thereof.

1,423,768. PUMP. WILLIAM S. HOLDAWAY, Salt Lake City, Utah. Filed Apr. 25, 1921. Serial No. 464,278. 2 Claims. (Cl. 103—44.)



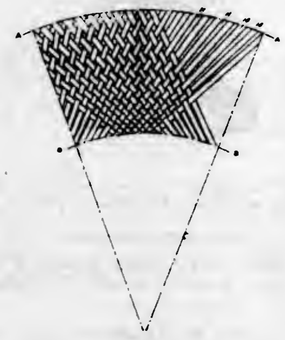
2. A pump comprising a casing having a one piece bottom and a three piece top and with its interior divided

to form a gear case on one end and two intersecting screw chambers in the other portion; parallel shafts mounted for rotation within said casing; screws having intermesh-



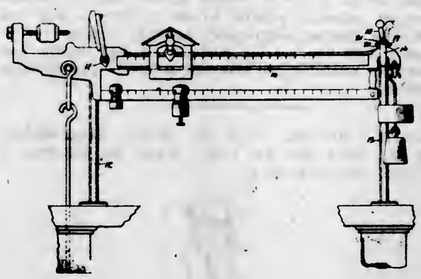
ing stepped threads on said shafts and rotatable therewith; an inlet and outlet chamber at the ends of said screws; and means for rotating said shafts synchronously.

1,423,769. PRESS. WILLIAM KLOCKE, New York, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed May 25, 1920. Serial No. 384,224. 11 Claims. (Cl. 113—38.)



5. A press comprising a reciprocatory slide adapted to carry a blank holder or the like, a reciprocatory punch slide, and a cam adapted to actuate said blank holder slide, said cam being mounted to move with said punch slide, and means for rotating said cam during the movement of said punch slide.

1,423,770. CINEMATOGRAPHIC FILM. STANISLAUS KUCHARSKI, Charlottenburg, near Berlin, Germany, assignor to Richard A. Hansemann, Berlin, Germany. Filed Oct. 1, 1919. Serial No. 327,831. 3 Claims. (Cl. 88—19.5.)

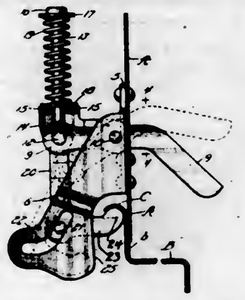


1. A film bearing a series of pictures provided with a number of holes near each edge for each picture one of which is larger than the others in a direction transverse to the length of the film but of the same dimensions in the longitudinal direction of the film.

1,423,771. PNEUMATIC-TIRE CASING. NELSON W. MCLEOD, New York, N. Y. Filed Jan. 15, 1920. Serial No. 351,712. 3 Claims. (Cl. 152—13.)

1. A pneumatic tire casing having a woven fabric strip extending lengthwise of the tread with the threads of the fabric diagonally crossing the center line of the tread and anchored at the beads, the weave of the fabric being sufficiently loose at the tread to permit the threads to come together and fill the space at the bead without material flattening or compacting.

1,423,772. AUTOMATIC LATCH FOR SCALE BEAMS. JOSEPH J. MAGRADY, Chicago, Ill. Filed Dec. 12, 1921. Serial No. 521,807. 4 Claims. (Cl. 265—55.)



1. The combination with a scale beam, of a latch member supported adjacent thereto, having means engageable by the scale beam to automatically shift the latch member into effective position when the scale beam rises.

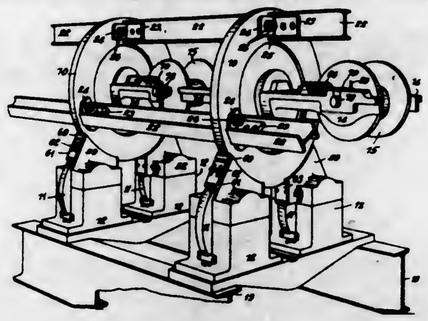
1,423,773. FASTENING DEVICE FOR AUTOMOBILE HOODS. FRED MATHEWS, Chicago, Ill. Filed Dec. 1, 1919. Serial No. 341,646. 3 Claims. (Cl. 292—113.)

1. The combination with a section of the hood of an automobile, and the body part thereof, of a handle having a fixed pivot connected to the inside of said section, a vertically reciprocal L-shaped latch, pivotally connected to the inner end of said handle, lugs projecting from the inner side of said section having slots extending at an angle to the direction of length of the vertical portion

of said latch, and pivotal members projecting from the angle of said latch that extend into said slots, and direct

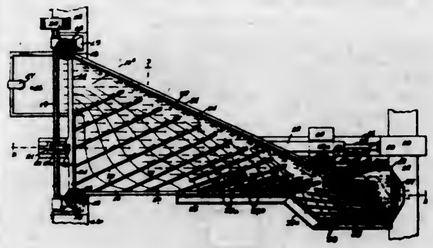
the movement of said latch to lock with said body part in one position and unlock therefrom in another position.

1,423,774. VISE. JOHN J. MOORE, Batavia, N. Y. Filed Mar. 11, 1920. Serial No. 364,956. 10 Claims. (Cl. 81—41.)



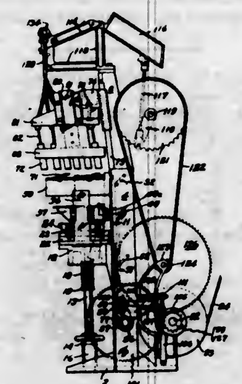
1. The combination with a vise having a bearing surface; of a saddle upon which the vise is mounted, said saddle having a pair of convex opposed bearing surfaces arranged angularly relative to one another, a base and said vise having counterpart bearing surfaces to cooperate with the bearing surfaces of said saddle, and means for retaining the vise and saddle in any adjusted position.

1,423,775. SPADE. EMIL W. MUNDT, Bernardsville, N. J. Filed May 24, 1920. Serial No. 383,786. 1 Claim. (Cl. 294—60.)



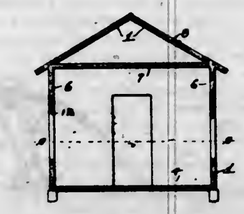
A spade, comprising the blade having its upper edge cut away at a point intermediate the side edges of the blade to form a recess, the remaining portions of the upper edge of the blade being curved and bent at right angles, and said bent portion again bent upon itself to define a curved, heel engaging reinforced upper edge for the blade, a pair of concave plates applied, one to each side of the blade with their concave sides directed toward each other and in registration with the recess, and a handle entering said recess and the space between said concave plates.

1,423,776. STRANDING MACHINE. MAX MORRISON, Trenton, N. J., assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Aug. 2, 1921. Serial No. 489,322. 11 Claims. (Cl. 117—48.)



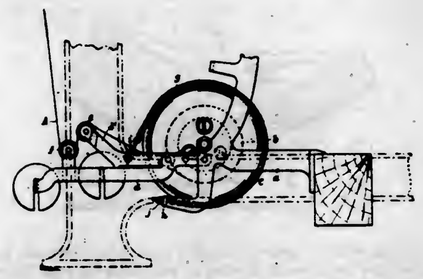
1. In a machine of the class described, a flyer including at least three cradle supporting discs joined to each other by discontinuous connecting members so as to permit the removal of one or more of the discs for replacement or repair without the necessity of dismantling the entire flyer.

1,423,777. CONCENTRATING TABLE AND METHOD. VICTOR F. NEWMAN and MERTON W. LOOMIS, Red Cliff, Colo. Filed Nov. 23, 1920. Serial No. 426,055. 36 Claims. (Cl. 83—88.)



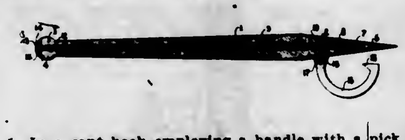
1. In a concentrating apparatus, means to stratify the material without wash water, and clarifying means by which the stratified material is received from the first means.

1,423,778. BOX-NAILING MACHINE. ELMER C. NORTHRUP, San Francisco, Calif. Filed Nov. 11, 1919. Serial No. 337,245. 10 Claims. (Cl. 4—15.)



7. In a box nailing machine, a table, a pair of posts adjustably spaced on said table, a ledge slidably mounted on each post, means for vertically adjusting the ledge upon the post, means for supporting the box slidably mounted on said ledges, a lever pivoted on each ledge operatively engaging the supporting means thereon, means connecting said levers for unifying their operation, a spring connected to each supporting means for extending it into operative position, and automatically operated means for actuating said levers to retract said supporting means into inoperative positions.

1,423,779. CONCRETE BUILDING STRUCTURE. JAMES PARTEE, Santa Cruz, Calif. Filed Jan. 25, 1921. Serial No. 439,821. 1 Claim. (Cl. 72—1.)



A concrete structure comprising a metallic frame work, reinforcing wires arranged in set formation so that its members are substantially parallel to the members of the frame work and a metallic reticulum stretched between adjacent members of the frame work allowing door and window openings to be cut into the same, concrete applied to said reticulum and embedding the reinforcing wires to form the walls, floor and roof of the structure, and door and window frames molded from concrete and secured in the openings provided therefor to receive suitable door and window casings.

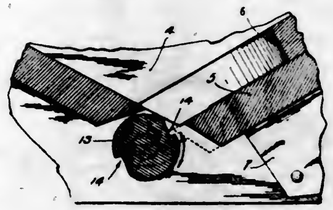
1,423,780. FRICTION BAND FOR LET-OFF MECHANISM. CORNELIUS H. SLINGER, Hawthorne, N. J. Filed Oct. 2, 1920. Serial No. 414,319. 3 Claims. (Cl. 188—259.)

3. A friction band for a let-off mechanism of substantially the kind described consisting of a flexible helix of hard material having its coils each immovable longitudinally of the helix.

1,423,781. UNBREAKABLE CANT HOOK. JOHN WILLIAM STOLLE, Ashland, Me., assignor of one-third to Frank F. Stolle, Redding, Conn. Filed Oct. 10, 1921. Serial No. 506,906. 6 Claims. (Cl. 294—17.)

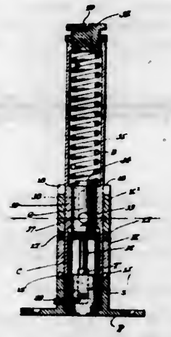
1. In a cant hook employing a handle with a pick and a pivoted hook, a reinforcing rod passed longitudinally through the handle and formed integral with the pick, said rod being held from movement longitudinally of the handle.

1,423,782. SHOE-BUTTONING DEVICE. JOSEPH SZIGETHY, Himlerville, Ky. Filed Apr. 15, 1922. Serial No. 552,954. 5 Claims. (Cl. 24—40.)



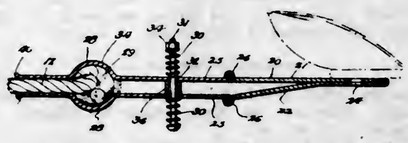
1. A button hook comprising a U-shaped frame, a bar arranged for swinging and sliding movement in said frame, and a compound hook member on said bar.

1,423,783. FEED ROLLER. PATRICK H. VAUGHN, Morris, Minn. Filed Dec. 20, 1919. Serial No. 346,326. 4 Claims. (Cl. 83—44.)



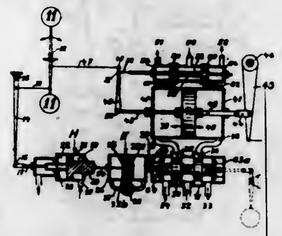
1. In a grain feeding device comprising a hopper having converging sides with an opening therebetween at their lower and adjacent ends, a feed roller having a smooth feeding surface interrupted by spaced pockets therein

comprising a radial side and a side extending substantially normal thereto rearwardly to the smooth surface, the ends of the hopper sides being beveled backwardly at an acute angle to their inside surface and the roller being disposed



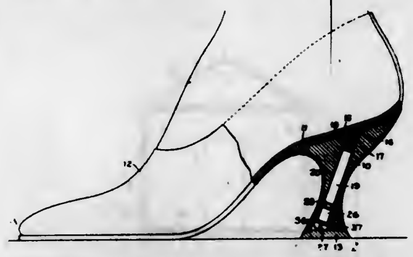
therebetween to leave a constant open space between the same and the smooth surface of the roller through which the material is fed which space is enlarged when the pockets come into alinement with the edges of the hopper sides.

1,423,784. HINGE CHECK. GEORGE VUILLE, Shelby, Ohio. Filed Mar. 2, 1921. Serial No. 449,024. 8 Claims. (Cl. 16—55.)



2. A hinge check comprising, a barrel, a rotatable cam and a reciprocating cam sustained on the barrel, a fluid container within the barrel, cylinders sustained within the container, ports and channels formed in the cylinders at and above the lower ends of the latter, pistons working within the cylinders, a plunger exteriorly of the container and operatively connected to the pistons, a spring for urging the plunger downwardly, and a pin carried by the plunger and operatively connected to the reciprocating cam in a manner to urge the cam downwardly with respect to the rotatable cam.

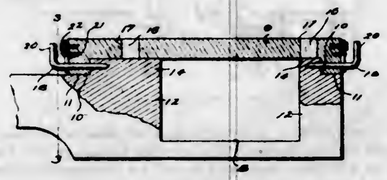
1,423,785. TRACTOR COUPLING. ADOLPH WILDE, Bellflower, Ill. Filed Apr. 1, 1922. Serial No. 548,779. 3 Claims. (Cl. 24—115.)



1. A plow rope coupling device for tractors comprising a bracket, a pair of arms horizontally hinged to said bracket and having their intermediate portions formed with sockets adapted for the reception of the knot formed on one end of the plow rope, said arms being provided with aligned openings, a bolt passed through said openings, coil springs mounted on said bolt on opposite sides of said arms and constituting a means to urge the arms together whereby to securely engage the knot on the rope, and a nut threaded on said bolt and constituting a means whereby to regulate the tension of said springs.

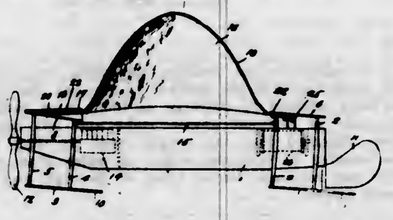
1,423,786. SERVO-MOTOR-CONTROLLING MECHANISM. HEINRICH ZOELLY and ANTON GAGG, Zurich, Switzerland. Filed Mar. 16, 1921. Serial No. 452,736. 6 Claims. (Cl. 114—126.)

1. A governing device for a servomotor adapted to regulate working conditions of a contrivance, comprising an auxiliary organ the position of which is dependent on the working conditions to be regulated, a controlling member for the servomotor, means operatively connecting said controlling member to said auxiliary organ and adapted to effect a displacement of said controlling member out of its mid position as soon as the velocity with which the auxiliary organ is moved in one or the other direction exceeds a certain limit and being further adapted to keep said controlling member out of its mid position as long as said velocity is exceeded, and means adapted to return said controlling member to its mid position when said velocity limit is no longer exceeded.



1,423,787. HEEL FASTENER. LESTER CRAF, Brooklyn, N. Y. Filed Dec. 22, 1920. Serial No. 432,527. 1 Claim. (Cl. 36—42.)

Means for detachably securing heels to footwear, said means comprising a plate adapted to engage the inner face of the sole of the footwear, a lug carried by said plate and adapted to project through the sole of the footwear, a screw-threaded member pivotally secured to said lug, a second screw-threaded member circular in cross-sectional form and adapted to receive the first-mentioned screw-threaded member, and means for securing said last-mentioned screw-threaded member in the heel of the footwear, said securing means comprising a hub member having a reduced screw-threaded extremity provided with oppositely disposed grooves, a U-shaped wire adapted to enclose the end of said reduced extremity and

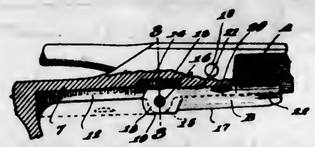


lie in said grooves, and a removable cap having a screw-threaded recess adapted to receive the reduced screw-threaded extremity of the hub member to secure said U-shaped wire therein in such a manner as to permit of its free ends engaging the internal threads of the circular screw-threaded member, as and for the purpose set forth.

1,423,788. CONNECTING ROD. FRANK ALVIN DREHER, Dover, Ohio. Filed Sept. 19, 1921. Serial No. 501,627. 5 Claims. (Cl. 287—93.)

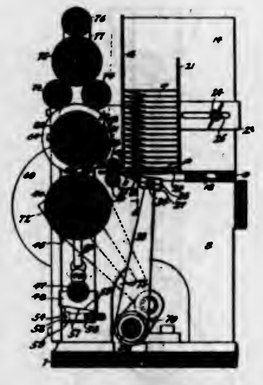
1. A connecting rod comprising a head having an opening and end walls at the ends of the opening, a retaining strap extending over said opening and having its end portions provided with lugs engaging the end walls of said opening, said lugs and the end walls of said opening being provided with aligned openings, locking pins extending through said aligned openings and having notches, and springs connected to said strap and engaged in said notches whereby to prevent the accidental withdrawal of said pins.

1,423,789. ATTACHMENT FOR AEROPLANES. ANTON F. ERICKSON, Phillipsburg, Pa. Filed Oct. 25, 1920. Serial No. 419,335. 3 Claims. (Cl. 244—21.)



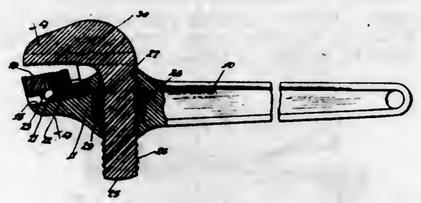
1. In a device of the class described, an aeroplane; a curtain connected at one end to the aeroplane, the other end of the curtain being formed into a roll; a flexible element connected to the last specified end of the curtain and rolled in with the curtain; a drum journaled on the aeroplane, the flexible element being connected to the drum; means for driving the drum; and mechanism under the control of an operator for rendering the drum responsive to said means, thereby to effect an unrolling of the curtain.

1,423,790. VEGETABLE-STEM REMOVER AND CRUSHER. ALEXANDER FLIS, Milwaukee, Wis. Filed Mar. 20, 1922. Serial No. 544,985. 8 Claims. (Cl. 146—5.)



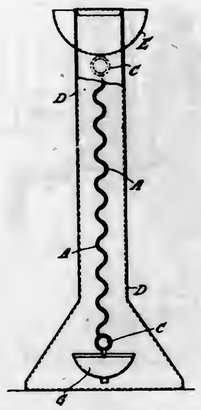
1. In a machine of the class described, a screw, a cutter member extending along adjacent said screw, and means for rotating said screw and cutter member in opposite directions, said cutter member being in the form of a bar of polygonal cross section.

1,423,791. STITCH CLIPPER FOR SCISSORS. CARY FRANCISCO, Porterville, Calif. Filed June 22, 1920. Serial No. 390,757. 2 Claims. (Cl. 30—13.)



1. In combination, a pair of scissors having a longitudinally extending groove formed in the outer edge of one shank of one of its blades, a pair of depending ears formed on said shank intermediate the terminals of the groove, the inner wall of said groove having an inwardly extending notch positioned directly inwardly of said ears, a knife blade, a pivot pin connecting said knife blade to said ears, the shank of said knife blade having its edges arranged in parallel relation and flattened to form bearing bases, and an arcuate leaf spring having its terminals fitted in the opposite corners of said recessed portion and arranged to engage the flattened faces of the shank of the knife.

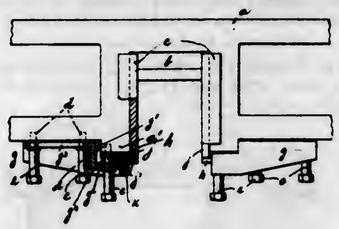
1,423,792. PRINTING PRESS. EDWARD J. GOWDY, Buffalo, N. Y. Filed May 22, 1919. Serial No. 298,889. 1 Claim. (Cl. 101—232.)



In a printing press, a printing roller journaled in normally fixed bearings, an impression roller co-operating with said printing roller and journaled in bearings which are movable toward and from the bearings of the printing roller, co-operating gear wheels connected with said printing and impression rollers and adapted to be engaged and disengaged upon moving said impression roller toward and from the printing roller and an article feed mechanism for delivering articles successively to said printing and impression rollers including a pair of co-operating feed rollers adapted to feed articles from a magazine to said printing and impression rollers, a pair of intermeshing gear wheels connected with said feed rollers, an intermediate gear wheel meshing with the gear wheel of one of said feed rollers and also with the gear wheel of said impression roller, and means for feeding the articles successively to said feed rollers and operating in time with said impression roller.

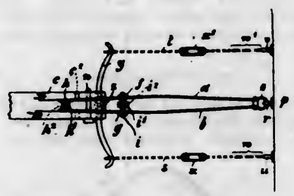
1,423,793. PIPE WRENCH. PAUL G. GREEN, Marshall, Mich. Filed Oct. 6, 1921. Serial No. 505,846. 2 Claims. (Cl. 81—165.)

1. In a wrench having a handle and a pair of gripping jaws extending approximately in longitudinal direction of said handle and with their gripping faces at a slight inclination to each other; one of said jaws being rigidly connected with said handle and the other jaw having transverse adjustment therewith, an element mounted to slide upon one of said jaws in parallel direction with the gripping side thereof and provided with a gripping surface, a cylindrical recess provided in said last named jaw, a compression spring lodged in said recess, a head on said element fitting said recess and abutting against said spring.



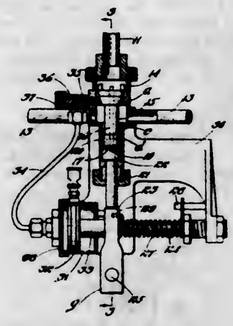
1,423,794. HEAT-EXCHANGE DEVICE FOR TREATING MILK, WORTS, AND THE LIKE. MAX GRUBENMANN, Zurich, Switzerland, assignor to Aluminum-Schweisswerk A.-G., Schlieren, Switzerland. Filed July 5, 1921. Serial No. 482,511. 1 Claim. (Cl. 257—187.)

In a heat exchange device, the combination of a pair of corrugated metal sheets, wires of the same metal fitting between the corrugations at opposite edges of the sheets, the sheets and the wires being welded together, and pipes welded to the other edges of the sheets and having in them orifices communicating with the space between the sheets.



1,423,795. TOOL FOR FACILTATING THE ADJUSTMENT OF THE DRIVING SHOES OF LOCOMOTIVES. CARL GUGGENBUEHLER, Newark, N. J. Filed Sept. 27, 1920. Serial No. 413,205. 1 Claim. (Cl. 29—84.)

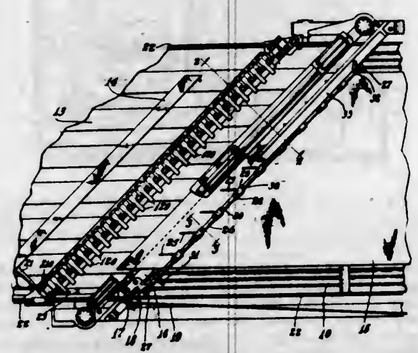
A tool for facilitating the adjustment of the driving shoes of locomotives, said tool including a block having an offset portion to conform with and bear against the lower surface of the bearing frame, and which has openings for the free passage of the bolts projecting from the said frame, a longitudinally slidable member mounted in



said offset portion, a vertical member removably engaged in said slidable member and serving to engage the lower edge of a driving shoe, and means for temporarily clamping said tool to the bearing frame.

1,423,796. CAR COUPLING. FRIEDRICH WILHELM HERMANN HAMANN, Hamburg, Germany. Filed Dec. 14, 1920. Serial No. 430,745. 2 Claims. (Cl. 280—33.44.)

1. An adjustable car coupling comprising two coupler rods connected with one another at one end, the other end being adapted to converge at their outer surfaces adjustably at different angles, right and left handed screws threaded into the coupler rods at their free ends adapted to vary the angle, at which these ends of the rods converge, central heads on the right and left handed screws.



1,423,797. DRIFTING VALVE. JOHN H. HANLON, Somerville, Mass. Filed Oct. 24, 1917. Serial No. 198,217. 12 Claims. (Cl. 121—137.)

1. In a device of the character described, a casing containing a main valve, a main valve, connections from the boiler to the casing and from the casing to the cylinders of the locomotive and connections being controlled by

said main valve, a trip cylinder operatively connected with said main valve, steam connections from the main vave to the trip cylinder and throttle operated means for opening the main valve by the closing movement of the throttle.

1,423,798. FABRIC-CUTTING APPARATUS. JAMES F. HENNESSY, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 26, 1920. Serial No. 353,915. 8 Claims. (Cl. 164—48.)

1. In sheet-cutting apparatus, the combination of intermittently-acting sheet-feeding grippers, means for severing transverse strips from the end of the sheet, and sheet-recoil arresting means comprising a transverse series of sheet-operated, independently pivoted automatic checking devices individually operative to permit free passage of the sheet during its feeding movement and positively to grip the same due to an initial retracting movement thereof when the feeding grippers are released.

1,423,799. METHOD OF MAKING DICYANDIAMIDE. HARRY C. HETHERINGTON and JOSEPH M. BRAHAM, Washington, D. C. Filed June 28, 1921. Serial No. 481,058. 7 Claims. (Cl. 23—21.)

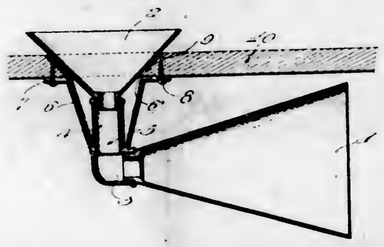
5. A process for the preparation of dicyandiamide, including extracting lime-nitrogen with water, filtering the extract, adding to the filtered extract sufficient sulphuric acid to combine with one-half the calcium in the extract, removing the calcium sulphate, adding to the remaining solution sulphuric acid in finely divided streams, removing the resulting calcium sulphate and recovering the dicyandiamide.

1,423,800. DRYING APPARATUS. RHUEL BRYANT HIBBARD, DENTON J. WATROUS, and JOHN G. BASSETTE, Groton, N. Y., assignors to Airdry Corporation, Groton, N. Y., a Corporation of New York. Filed Feb. 18, 1921. Serial No. 446,113. 22 Claims. (Cl. 34—26.)

1. A drying apparatus comprising a motor and heater box adapted to be embedded in a wall, a detachable face plate attached to said box and provided with a vertical slot, means for rotatably supporting a motor and heater element in said box, said element being provided with a discharge nozzle extending forwardly through the slot in said face plate and adapted to be moved up and down in said slot to position the nozzle, a switch box adapted to be embedded in a wall, a face plate detachably secured at the front of said switch box, a switch-operating element mounted on said face plate, a circuit-controlling switch within the switch box and connected to the operating ele-

ment, and circuit wires connected to the switch mechanism in the switch box and to the motor and heater element in the motor and heater box.

1,423,801. SPINNING, DOUBLING, AND TWISTING MACHINE. ROBERT E. HIKES, New York, N. Y., assignor to New Jersey Silk Machinery Company, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 9, 1921. Serial No. 490,868. 7 Claims. (Cl. 117—28.)



1. In combination, a spindle, a support therefor, a pair of spindles, a pair of supports for said pair of spindles pivoted concentrically with the first support, a driving belt arranged between the first spindle and the pair of spindles, and means to move the pair of supports back and forth together in reverse directions to cause the spindles to grip the belt or clear the same.

1,423,802. EAR TRUMPET FOR TRUCK DRIVERS. ERNEST W. HOFSTATTER, Nyack, N. Y. Filed Oct. 14, 1920. Serial No. 416,823. 2 Claims. (Cl. 181—27.)

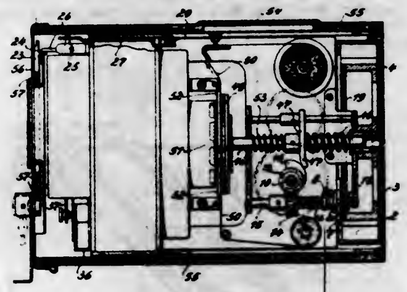
1. An ear trumpet for truck drivers comprising a sound receiving horn, a sound emitting horn, a hollow elbow to whose ends said horns are secured with their discharge

ends at right angles to each other, and means carried by said elbow for attaching the entire device to a motor truck

with said receiving horn opening rearwardly outside of the truck and said emitting horn opening toward one of the driver's ears.

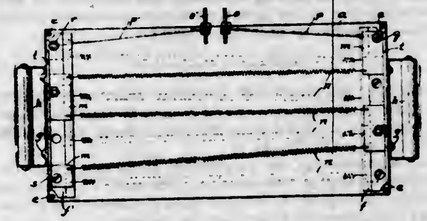
1,423,803. WRENCH. GEORGE D. ILLIG, Depew, N. Y. Filed Aug. 9, 1921. Serial No. 490,875. 8 Claims. (Cl. 81—165.)

1. In a wrench, the combination of two sheet metal portions secured together forming the handle and head of the wrench, a movable jaw, an adjusting nut, a metal insert member arranged between said sheet metal portions and forming therewith guide means for said movable jaw, and a bearing for said adjusting screw in said metal insert member.



1,423,804. DRAWER ATTACHMENT FOR BEDS. CARL KONTOROWITZ, Rochester, N. Y. Filed July 20, 1921. Serial No. 486,161. 4 Claims. (Cl. 5—41.)

1. A drawer attachment for a bed having side rails, comprising a top plate arranged beneath the bed and having a pair of spaced parallel strips provided with L-shaped attaching brackets engaging one of the side rails, rods connected to said strips and having attaching brackets engaged with the other side rail, and a drawer slidably carried by said top plate.

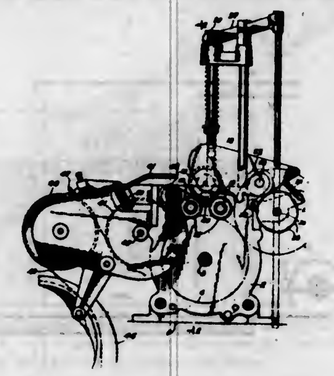


1,423,805. TIME RECORDER. GUSTAV KRUM, Duisburg-Beeck, Germany. Filed June 30, 1920. Serial No. 393,215. 4 Claims. (Cl. 234—36.)

1. Time recorder of the character set forth, comprising in combination with an enclosing case and a lid therefor, a rotary drum, a series of pockets forming the rim of said drum, means normally preventing rotation of said pocketed drum, means adapted to be inserted into said pockets for temporarily releasing said drum and means for advancing the latter during such temporary release the width of a

pocket, a clock work, time recording means driven by said clock work and actuated by said drum advancing means during the rotary advance of said drum, time record canceling means operating on unauthorized opening of said case lid, and means for arresting said clock work upon the recorder being repeatedly shaken.

1,423,806. ELECTRIC HEATING DEVICE. WILLIAM F. LESZELTER, Elizabethtown, Pa., assignor, by mesne assignments, to Earl M. Miller, Elizabethtown, Pa. Filed Sept. 3, 1921. Serial No. 498,262. 5 Claims. (Cl. 219—19.)

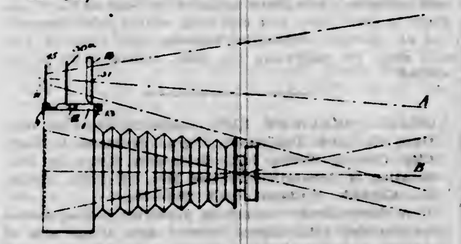


1. An electric heating device comprising, in combination, a body, oppositely disposed supports secured within the body, bus bars secured to the top and bottom of said supports, resistance elements extending between said supports in contact with said bus bars on the top and bottom of said supports respectively, and means serving to secure a bus bar on the top and bottom of one of said supports and adapted to transmit current through said support from one of said last mentioned bus bars to the other.

1,423,807. BALL-WINDING MACHINE. EVARTS G. LOOMIS, Newark, N. J. Filed Jan. 6, 1921. Serial No. 435,430. 19 Claims. (Cl. 242—3.)

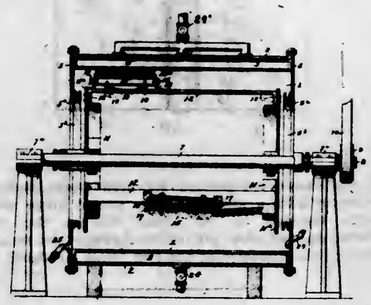
6. In a machine of the class described, the combination of means for driving a ball or core from a plurality of points to rotate the same about a horizontal axis, means

for driving the ball or core from a plurality of other points to rotate the same about a vertical axis, and controlling



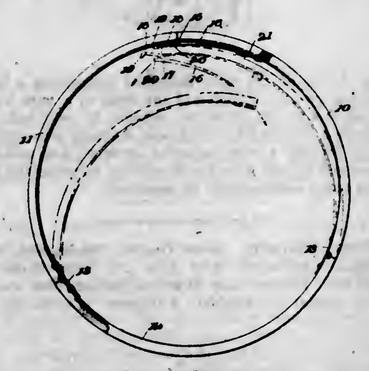
means for the ball driving mechanism to vary the rate and direction of rotation of the ball or core about the vertical axis with respect to its rotation about a horizontal axis.

1,423,808. MANIFOLDING SHEET. FRANK R. MCCLUSKY, Canfield, Ohio. Filed May 4, 1920. Serial No. 378,855. 4 Claims. (Cl. 282—27.)



1. A manifolding sheet divided by lines of weakening into a plurality of substantially equal sections, a line parallel with the bottom of said sheet and located through all of said sections, said sheet being provided with printed forms above said line on alternate sections on the obverse side, and on the remaining sections on the reverse side of the sheet, the first and second sections having similar printed forms below said line and arranged to receive a carbon sheet therebetween, the remaining sections having different printed forms below said line and arranged to be filled in at different later intervals, one of the intermediate sections having a printed form upon each side of the sheet, the remainder of said sections being provided with carbon surfaces upon their backs extending down to said line, whereby at a single writing the first and second sections are filled out above and below said line and the remaining sections are filled out above the line only.

1,423,809. PHOTOGRAPHIC-VIEW FINDER. PAUL J. MARKS and WALTER O. MARKS, Rochester, N. Y. Filed Dec. 12, 1921. Serial No. 521,638. 16 Claims. (Cl. 33—64.)

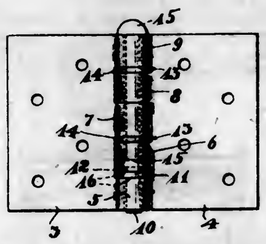


1. In a finder, the combination of a base member, a clamping member thereon, a supporting member slidably mounted on said base member, a plurality of sighting devices supported thereon, a clamping member on said supporting member, and resilient means for moving said clamping members into engagement with a camera.

1,423,810. METHOD OF PRODUCING A CONDENSED-MILK PRODUCT. HOWARD S. MELLOTT, Morenci, Mich., assignor to The By-Products Recovery Co., Toledo, Ohio, a Corporation of Ohio. Filed Apr. 11, 1916. Serial No. 90,393. 6 Claims. (Cl. 127—9.)

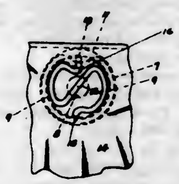
1. The method of treating milk to produce a condensed product consisting in subjecting the milk for a short period of time to a disrupting temperature, permitting the generated vapors to escape during the treatment, and finally subjecting the product while in its heated state to the action of a cooling agent.

1,423,811. COLLAPSIBLE RIM. WILLIAM E. MILLER, Savannah, Ga. Filed Apr. 1, 1919. Serial No. 286,711. 7 Claims. (Cl. 301—33.)



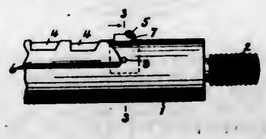
1. A collapsible wheel rim including a split rim body provided in one end portion thereof with an opening, a connecting lever swingingly mounted upon the opposite end portion of said rim body and movable to engage in said opening and connect the ends of the rim body, overlying the outer face of said first-mentioned end portion of the rim body and confronting the inner face of said second-mentioned end portion of the rim body, and means carried by the lever to oppose inward movement of the first-mentioned rim end away from the lever.

1,423,812. HINGE. JOHN R. MOODY, Los Angeles, Calif. Filed Oct. 24, 1921. Serial No. 509,993. 7 Claims. (Cl. 16—168.)



7. In a hinge, two oppositely arranged hinge members, each of the hinge members having knuckles normally spaced

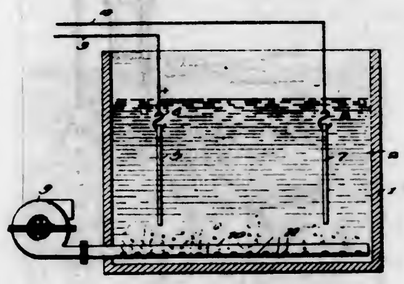
when in engagement, a short engaging pin fitting into one knuckle of the one hinge member an dhaving a shouldered portion to rest on the first-named knuckle and having furthermore a short engaging end projecting be-



yond the shouldered portion for preliminary and slight engagement with a knuckle of the second hinge member, washers inserted in the space between the several knuckles, and another pin to fit through the remaining portion of the knuckles of the two hinge members.

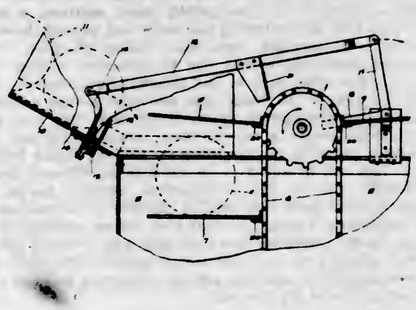
1,423,813. GARMENT FASTENER. ROBERT J. MULVEY, Chicago, Ill. Filed July 12, 1920. Serial No. 395,598. 5 Claims. (Cl. 24—88.)

1. A device of the class described comprising a body; a securing member therefor in the form of a wire having one end secured in operative relation to said body, the free portion of said wire being bent laterally into tortuous form to provide a large engaging surface; and means at the free end of said wire for detachably securing the same to said body, substantially as described.



1,423,814. BROACH. JOHN OAKLEY, Springfield, Mass. Original application filed June 25, 1918, Serial No. 241,748. Divided and this application filed Oct. 6, 1920. Serial No. 415,010. 8 Claims. (Cl. 90—33.)

1. A broach comprising a shank provided with a row of teeth, and further provided with a detachable guiding member in advance of said teeth.

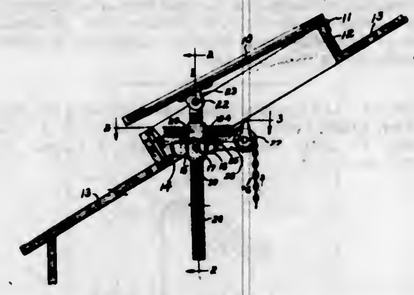


1,423,815. ELECTROPLATING PROCESS. NELSON V. PARK, Niles, Mich. Filed July 6, 1921. Serial No. 482,769. 2 Claims. (Cl. 204—11.)

1. The herein described process of electroplating which consists in introducing downwardly directed currents of air differing in pressure by means of a nozzle having openings of various diameters therein into an electrolyte containing cell having an anode and a cathode element im-

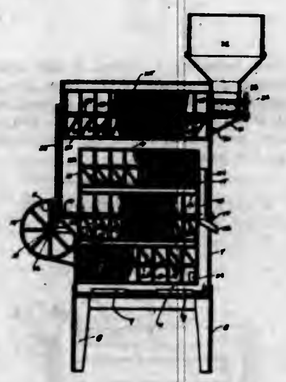
mersed therein whereby the currents of air will agitate the electrolyte and effect the continuous washing of metal from the anode for transfer to the cathode.

1,423,816. CAN-WASHING MACHINE. WALTER H. PAULSON, Chicago, Ill., assignor to Harry D. Lathrop, Chicago, Ill. Original application filed May 22, 1920. Serial No. 383,333. Divided and this application filed May 22, 1920. Serial No. 383,334. 4 Claims. (Cl. 198—26.)



1. Apparatus of the class described comprising a conveyor; an inclined support leading to said conveyor; an oscillating shaft mounted under said support adjacent said conveyor; two stops mounted on said shaft at an angle to each other and operating within said support; and an operative connection between said conveyor and said shaft for oscillating the same, substantially as described.

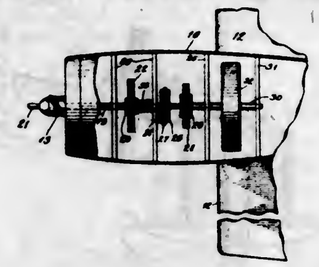
1,423,817. SKYLIGHT LIFT. ADOLPH G. PITZ and OTTO X. SAUR, Bridgeport, Conn., assignors to Park City Cornice Works, Inc., Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 17, 1921. Serial No. 452,912. 4 Claims. (Cl. 268—20.)



1. A closure device comprising a bracket having spaced arms provided with aligned recesses open at one side of the arms, a rocker pivotally mounted in said recesses, a lifting screw, a pulley carried by the rocker and having threaded engagement with said screw for moving the

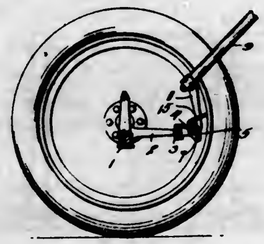
latter, a flexible operating member cooperating with said pulley, a pair of guides for said operating member car-

ried by said rocker, and a locking member extending over the pulley and engaging under the arms of the bracket to prevent removal of the pulley and screw.



1,423,818. COFFEE ROASTER. NATHANIEL B. POST, Chicago, Ill. Filed Nov. 17, 1920, Serial No. 424,598. Renewed June 5, 1922. Serial No. 565,895. 11 Claims. (Cl. 34—5.)

6. A roaster comprising a plurality of revolving roasting chambers provided with openings whereby the material is delivered from each chamber to the next successive chamber; a plurality of substantially transverse partitions in each of said chambers dividing the same into a plurality of chambers, each partition being provided with a transfer opening and an inclined deflector for transferring the material through each chamber in one direction, and through successive chambers in opposite directons; and means for heating said chambers, substantially as described.



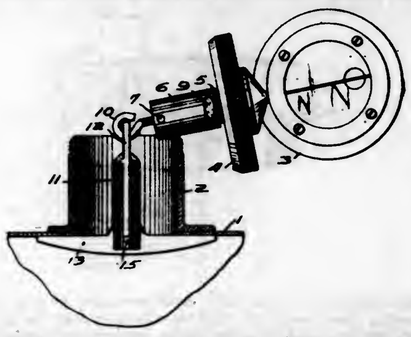
1,423,819. TOY. JACOB SHAPIRO and HARRY SHAPIRO, New York, N. Y. Filed Apr. 14, 1920. Serial No. 373,691. 1 Claim. (Cl. 46—45.)

A toy having a shaped body, front and rear traction wheels supported therefrom, and a driving mechanism mounted in the forward portion of the toy and adapted to hold the latter well balanced, said driving mechanism comprising a main shaft, a counter-shaft, means for operating said main shaft, means for transmitting motion from said main shaft to said counter-shaft, resilient means disposed on said main shaft for disposing said transmission means in operative relation, an energising shaft having an inertia wheel mounted thereon, means on said counter shaft for driving said front traction wheels from said main shaft and means for transmitting motion from said counter shaft to said energising shaft whereby the

operation of the main shaft simultaneously operates said inertia wheel and front traction wheels so that the latter are self-propelled when the toy is disposed for operation.

1,423,820. ANTILOCK DEVICE FOR STEERING GEARS. WILLIAM F. STAGGERS, Mannington, W. Va. Filed Aug. 15, 1921. Serial No. 492,421. 2 Claims. (Cl. 280—89.)

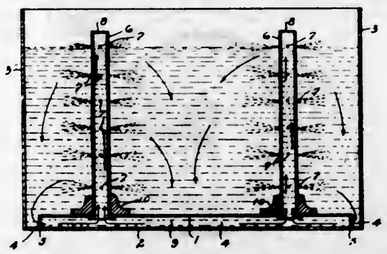
1. A device for preventing the steering wheel of an automobile of the type described from turning to a point likely to cause it to pass over a dead center, consisting of a stop frame having sides suitably spaced from the steering arm to limit its movement beyond a predetermined degree, said means being positioned on the cap of the ball socket which the steering arm engages.



1,423,821. COATING OR SEALING COMPOSITION. MORTIMER I. STRAUSS, Cleveland, Ohio. Original application filed May 18, 1917, Serial No. 169,451. Divided and this application filed Jan. 31, 1921. Serial No. 441,511. 3 Claims. (Cl. 134—26.)

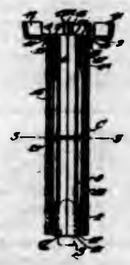
3. A composition of matter which is impervious to and unaffected by gasoline, oils and the like and which remains substantially permanently pliable or flexible when applied in coatings or layers, said composition comprising an alcoholic solution of the precipitated product of a caustic soda solution of shellac and sulphuric acid combined in homogeneous form with a fibrous inorganic body material.

1,423,822. MOTOR-METER LOCK. LEE L. WINTERS, Ann Arbor, Mich. Filed Dec. 13, 1920. Serial No. 430,133. 6 Claims. (Cl. 220—24.)



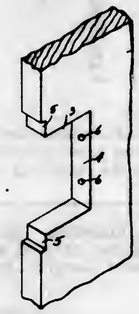
5. In an automobile motor meter lock, a shell adapted to be connected to the motor meter and to extend into the neck of the radiator of the automobile, and having slots located at the lower end of the shell and on opposite sides of the shell, a cross bar pivotally connected to the lower end of the shell and located in the slots, the cross bar having an ear extending into the shell and movable in the slots, the ear having a circular recess, a ball rota-

table in the shell in all directions and substantially fitting the shell and the recess and for locking the cross



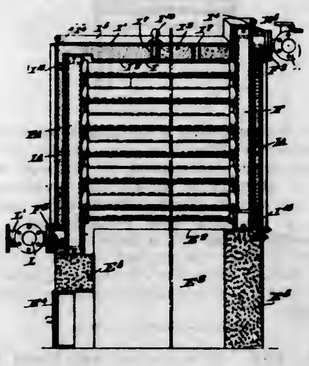
bar from movements relative to the shell, the cross bar being pivoted to the shell at a point below the ear.

1,423,823. WASHBOILER ATTACHMENT. JOHN T. WOOD, East St. Louis, Ill. Filed Apr. 28, 1921. Serial No. 465,098. 1 Claim. (Cl. 68—30.)



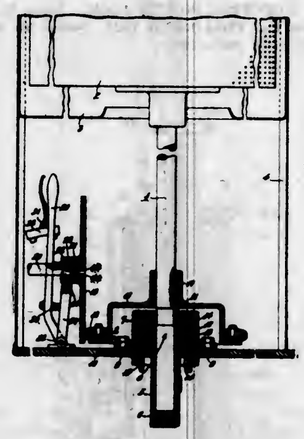
A wash-boiler attachment, composed of a rectangular false-bottom member having a series of vertical perforated tubes rising from its upper surface, and provided with straight downwardly-extending outwardly-flared marginal flanges between the adjacent ends of which at each corner of said member are V-shaped water-inlet openings; and combined weights and braces surrounding the lower portions of said tubes and securely fastened to the said rectangular false-bottom member.

1,423,824. COP OR BOBBIN HOLDER. EDWARD ADELL, Orange, Mass., and CARL A. BRINK, Cranston, R. I., assignors to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 13, 1920. Serial No. 409,898. 9 Claims. (Cl. 242—121.)



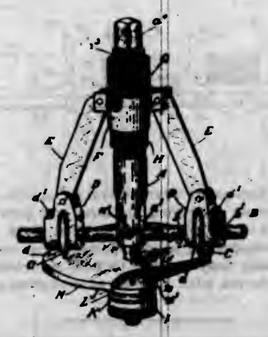
7. A cop- or bobbin-holder comprising a cylindrical sleeve having longitudinal slits forming ribs which are bowed outwardly to adapt them to act as spring elements to engage the interior of the cop-tube, and an inner tube arranged concentrically within the outer sleeve extending throughout its length and provided with an annular abutment adapted to serve as a stop-rest for the spring-members to limit the extent of their contraction to prevent impairment of their resiliency.

1,423,825. DOOR LOCK AND METHOD OF APPLYING THE SAME. WILLIAM ANDERSON, Newark, N. J. Filed May 19, 1921. Serial No. 470,877. 1 Claim. (Cl. 70—16.)



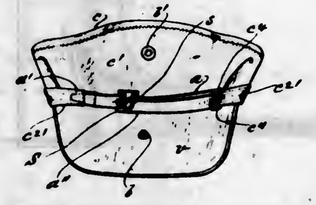
A door lock including a casing, a face plate carried thereby, anchoring pins projecting from the rear wall of said casing, in combination with a door recessed to receive said lock casing and face plate, and escutcheon plates disposed across said recess and secured to the door for enclosing the lock casing.

1,423,826. WASTE-HEAT ECONOMIZER. JOHN E. BELL, Brooklyn, N. Y. Filed Oct. 8, 1918. Serial No. 257,408. 5 Claims. (Cl. 122—421.)



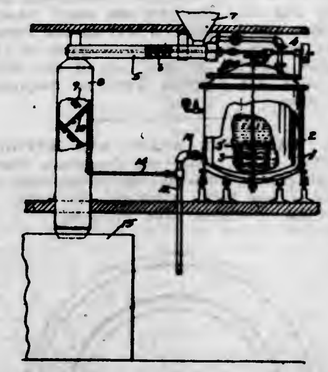
1. A horisontal economiser having side walls formed of long and narrow headers set vertically and in contact with each other to form solid unbroken side walls, in combination with vertical rows of horisontal water tubes connecting oppositely disposed vertical header so as to form with said headers a series of economiser sections, a heat insulating top wall supported on the tops of the vertical headers and means for supplying water to the headers on one side of each section and for carrying off the heated water from the opposite headers.

1,423,827. EXTRACTOR. DANA H. BENJAMIN, Cleveland Heights, and ARTHUR R. CURTIS, Cleveland, Ohio, assignors to Solomon D. Guggenheim, Cleveland Heights, Ohio. Filed June 8, 1918. Serial No. 238,928. 2 Claims. (Cl. 74—26.)



1. In an extractor, the combination of a stationary frame, an extractor spindle, cushioning devices between said spindle and frame adapted to permit and resiliently resist oscillation of said spindle about a center, said devices being disposed symmetrically around and above and below said center, a friction driven member carried by said spindle and rotatable upon a vertical axis and having a driving surface symmetrical with respect to a horisontal plane through said center, and a friction driving disc rotatable on a horisontal axis and contacting said driven member in said plane, whereby oscillation of said spindle about said center does not disturb the driving relation.

1,423,828. CIRCLE-CUTTING TOOL. MAURICE A. BUTTERFIELD, Lowell, Mass. Filed Feb. 9, 1921. Serial No. 443,660. 3 Claims. (Cl. 164—82.)

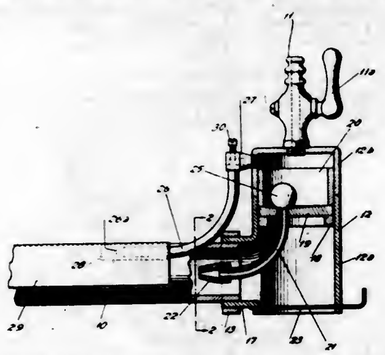


1. In a tool for cutting circular work from sheet material, the combination of a stock, cutters carried by said stock through a circle, by a single revolution of said stock, said stock being screw-threaded; a nut turning on said stock, on the opposite side of said work, from said cutters, washers loosely surrounding said stock between said nut and said work, a ball-cage surrounding said stock between said washers, and anti-friction balls carried by said cage and pressing against said washers.

1,423,829. CAP. JULIUS CARLSON, Brooklyn, N. Y. Filed Dec. 17, 1921. Serial No. 523,128. 2 Claims. (Cl. 2—106.)

1. A cap of the character designated, formed with a crown band having its ends free and forming integral frontal flaps, and adjustive means connecting the otherwise free ends of said flaps, consisting of a copulative strap rigidly attached to the end of one flap, a loop on the end of the other flap, said copulative strap extending through said loop on the end of the other flap, and a slidable buckle on the main strand of said copulative strap, and snap button connective means for detachably securing the free end of said copulative strap to said slidable buckle, substantially in the manner and for the purpose described.

1,423,830. RICE-PRESERVATION PROCESS. SANDER IVER CHRISTENSEN, Willows, Calif. Filed Sept. 19, 1921. Serial No. 501,760. 2 Claims. (Cl. 99—5.)

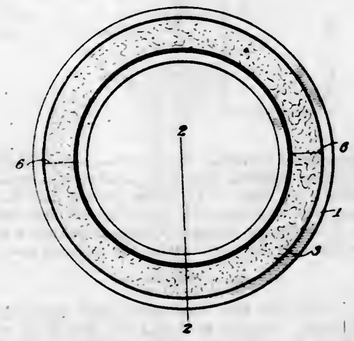


2. A process of treating rice which comprises agitating a body of rice, applying heat to a quantity of salt solution sufficient to cause it to steam, placing the rice in the steam from said solution, agitating the rice during the time it is passing through the steam ascending from said solution, and thereafter drying the steamed rice.

1,423,831. MEANS FOR CONTROLLING THE FLOW OF FLUIDS. CHARLES H. COCHRANE, New York, N. Y. Filed Mar. 17, 1921. Serial No. 453,007. 7 Claims. (Cl. 137—139.)

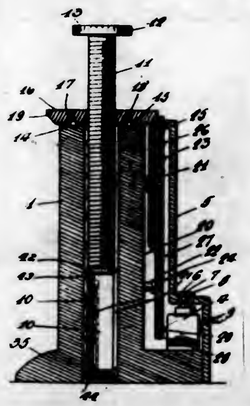
1. Apparatus for controlling the flow of fluids embody-

ing means controlled by the force of gravity when at rest and by vibratory movement imparted thereto when such



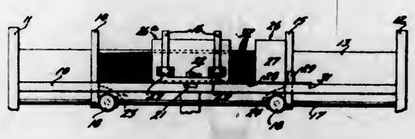
movement is sufficient to overcome the force of gravity by which it is normally controlled.

1,423,832. TONE MODIFIER FOR PHONOGRAPHS. FRED W. COOLEY, Minneapolis, Minn. Filed Apr. 4, 1921. Serial No. 458,432. 10 Claims. (Cl. 181—27.)



1. The combination with the tone arm of a sound reproducing machine, of concentric spaced tubes located where the sound waves will pass therethrough on their way from said tone arm into the sound chamber of said machine, and a connection between said tubes, said connection comprising a plurality of layers of yielding compressible material, at least one of the layers of material being of a different degree of compressibility than the other.

1,423,833. FASTENING MEANS AND METHOD OF APPLYING SAME. MAGRUDER CRAIGHEAD, Hartsdale, N. Y., assignor to Johns-Manville Incorporated, a Corporation of New York. Filed Mar. 24, 1920. Serial No. 368,255. 2 Claims. (Cl. 192—107.)



1. The combination of a base member having a ring-shaped groove with one wall under-cut, a second member conforming in curvature to the groove, and of a cross section similar to that of the groove but of slightly less width and a key adapted to fill the space between one wall of the base member and the opposing wall of the second member when the second member rests on the bottom of said groove.

1,423,834. ELECTRIC POWER JACK. JOHN M. CRUM, Johnstown, Pa. Filed Oct. 20, 1921. Serial No. 509,094. 6 Claims. (Cl. 254—103.)

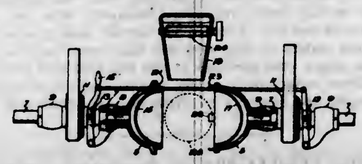
1. An electric power jack comprising a body portion, spaced laterally extending wing portions formed integral therewith, a jack screw operable in said body, a nut or follower carried by said screw means for preventing said screw from rotating, an electric motor positioned between said spaced wing portions, and means connecting said motor with said nut for operating the jack.

1,423,835. AUXILIARY SHEET GAUGE FOR PLATEN PRESSES. ABRAHAM DANZIGER, New York, N. Y. Filed Nov. 19, 1921. Serial No. 516,430. 7 Claims. (Cl. 271—61.)

1. An auxiliary gauge of the character specified, adapted to rest on a sheet delivering platform of a printing press equipped with sheet positioning gauges, with said auxiliary gauge comprising a body portion, and means associated with said body portion to hold said body portion in effective relation with any one of said gauges and said platform.

1,423,836. SMALL ARM COMPRISING A STRIKER SLIDING IN A BREECH BOLT. JOSEPH DECLAYE, Liege, Belgium. Filed Sept. 9, 1920. Serial No. 409,174. 7 Claims. (Cl. 42—69.)

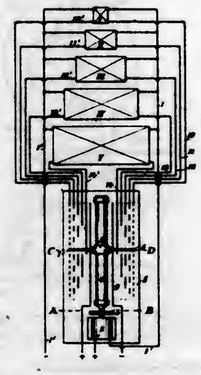
1. A small arm for rim fire cartridges, comprising a barrel, a receiver, a breech bolt, a striker sliding in said breech bolt, a firing pin actuated by said striker, and means for limiting the displacement of said striker during



the firing before the latter has accomplished its full travel in the breech bolt.

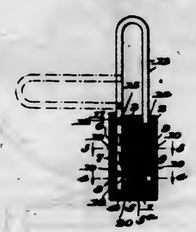
1,423,837. BALL. ISAAC DE GOWIN, New Haven, Conn., assignor to The Seamless Rubber Company, Inc., New Haven, Conn., a Corporation of Massachusetts. Filed Apr. 23, 1920. Serial No. 376,165. 4 Claims. (Cl. 154—16.)

2. A ball comprising a center and molded hemispherical felt sections secured thereover.



1,423,838. METHOD AND APPARATUS FOR COVERING BALLS. ISAAC DE GOWIN, New Haven, Conn., assignor to The Seamless Rubber Company, Inc., New Haven, Conn., a Corporation of Massachusetts. Filed May 12, 1920. Serial No. 380,882. 7 Claims. (Cl. 154—16.)

1. The method of covering balls comprising forming shell sections of felting fibers, supporting them externally, introducing a ball center between them and felting them about the same.

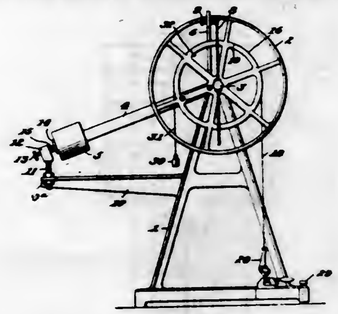


1,423,839. DEVICE FOR AUTOMATICALLY CONTROLLING THE OUTPUT OF ELECTRICAL PLANTS. MICHEL DOLOUKHANOFF, Charlottenburg, Germany. Filed Mar. 23, 1922. Serial No. 546,201. 5 Claims. (Cl. 171—119.)

1. Apparatus for automatically controlling electric plants, comprising transformers of different capacities arranged in parallel; a measuring device in series with the secondary circuit of said transformers; a double switch, one switch element being in circuit with the primary circuit and the other switch element in circuit with the sec-

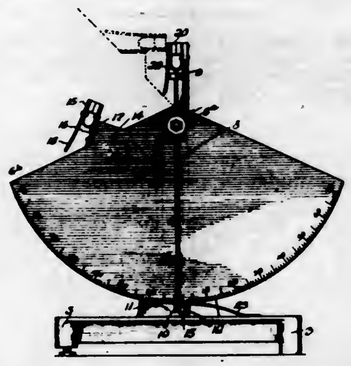
ondary circuit, said double switch comprising contacts in the path of the switch elements arranged to control the output from the transformers in any predetermined series and means operated by the measuring device for operating said switch in any predetermined series.

1,423,840. PERMUTATION PADLOCK. FREDERICK A. DURBIN, Evansville, Ind., assignor of one-half to Joseph F. Maday, Evansville, Ind. Filed May 18, 1921. Serial No. 470,635. 1 Claim. (Cl. 70—113.)



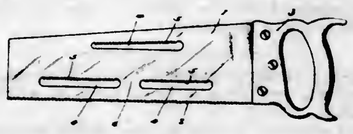
In a permutation padlock, the combination with a cylindrical body having enlarged heads at its ends and a longitudinally extending groove in its side, of a plurality of peripherally exposed annular tumblers each having an internal notch, said tumblers being rotatably mounted on said body between the heads thereof, and a shackle having a leg slidable in said groove and adapted to be locked by said tumblers, or released when their notches register with the groove aforesaid, said leg being provided with a lug at its inner end, there being provided in the body a pocket to loosely receive said lug and a shoulder overhanging said pocket, said pocket permitting the leg to be slid lengthwise of itself and the shoulder serving as a stop to engage the lug and prevent complete detachment of the shackle from the body, and peripherally exposed annular false tumblers associated with the locking tumblers but having no locking action on the shackle.

1,423,841. TEARING TESTER. ARMIN ELMENDORF, Madison, Wis. Filed Feb. 3, 1920. Serial No. 356,078. 7 Claims. (Cl. 265—17.)



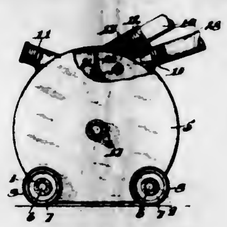
1. In a device of the kind described, means for testing the strength of material, comprising a wheel, a pendulum connected to said wheel, means for mounting the wheel to permit said wheel to turn and said pendulum to swing,

means adapted to hold the material to be tested, a connection between said wheel and said holding means, means to hold said pendulum means to release said pendulum allow-



ing the movement of said pendulum to tear the material to be tested, and indicator means adapted to co-operate with said wheel.

1,423,842. TEARING TESTER. ARMIN ELMENDORF, Chicago, Ill. Continuation of application Serial No. 356,078, filed Feb. 3, 1920. This application filed Aug. 31, 1920. Serial No. 407,165. 6 Claims. (Cl. 265—17.)



1. In a testing device, a frame, a pendulum mounted to rotate thereon, said pendulum being calibrated, a clamp attached to said pendulum, a second clamp attached to said frame and adapted to cooperate with said first clamp to hold material to be tested, and a pointer frictionally mounted on the hub of said pendulum and cooperating with said pendulum to measure the work done in tearing the material.

1,423,843. SAW. OLIVER D. ESHELMAN and WILLIAM F. BOAST, Casper, Wyo. Filed Jan. 17, 1921, Serial No. 437,803. Renewed June 9, 1922. Serial No. 567,192. 2 Claims. (Cl. 145—31.)

1. A saw blade provided with a plurality of slots disposed in staggered relation with respect to each other and each provided along one edge with teeth pointing in the same direction as the normal cutting teeth and their cutting edges running parallel with that of the normal cutting teeth.

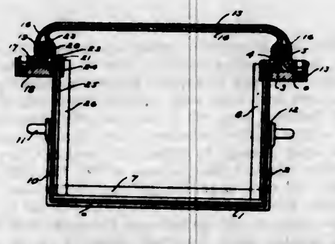
1,423,844. VEHICLE-WASHING MACHINE. MARTIN J. FENELON, Chicago, Ill. Filed Nov. 17, 1919. Serial No. 338,626. 4 Claims. (Cl. 15—24.)

1. A cleaning device comprising a housing; a hub rotatably mounted in said housing; cleaning members radially and adjustably mounted with respect to said hub; and separate means mounted on the opposite sides of said housing for directing fluid against either side of said members for rotating the same in either direction, substantially as described.

1,423,845. DISPENSING AND DISPLAY HOLDER FOR CONFECTIONERY. HERBERT D. FOSS, Brookline, Mass., assignor to H. D. Foss & Company, Inc., Cambridge, Mass., a Corporation of Massachusetts. Filed Mar. 25, 1922. Serial No. 546,582. 1 Claim. (Cl. 211—28.)

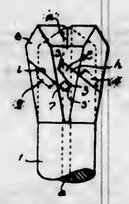
A dispensing and display holder comprising a casing composed of a bottom member, upright side members, and a front end member, closing the front end of the casing, the rear end being open, said members collectively forming a box holder proportioned to receive a relatively large candy box which is movable into and out of the casing through the open end thereof, the end and side members projecting above the space occupied by said box, and longitudinal upwardly facing rests, projecting inwardly from the side members below the upper edges thereof, and provided at their rear ends with stop ears, the said rests, the stop ears and the upper edge portions of the end and side members collectively constituting a tray-holder, adapted to support and display the contents of a tray removed from said box.

1,423,846. VEHICLE BRAKE. BERNHARD O. FREDERICK, Hibbing, Minn. Filed Mar. 1, 1921. Serial No. 448,750. 4 Claims. (Cl. 188—5.)



1. The combination with a vehicle having vertically suspended ground engaging shoes adjacent the wheels of said vehicle and means cooperatively engageable intermediate of the wheels and shoe whereby forward motion of the former may be employed in applying the latter as a brake, and means whereby the brake may be applied independently of the motion of the wheels.

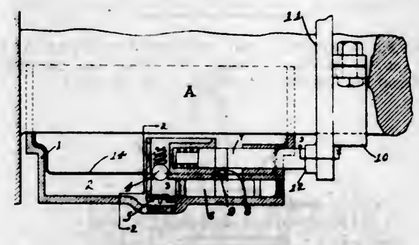
1,423,847. METHOD OF PRODUCING SILICON-MANGANESE-CHROME STEEL. GUNNAR GUSTAFSON, Avesta, AXEL AUGUST JUNGMARKER, Stockholm, and KARL ALBERT CASPERSSON, Engelsberg, Sweden. Filed Mar. 17, 1921. Serial No. 452,995. 1 Claim. (Cl. 75—45.)



The method of making open hearth steel which comprises producing basic open-hearth steel, adding thereto ferromanganese and then adding to the metal a previously melted decarburized alloy of ferro-chrome and ferro-silicon.

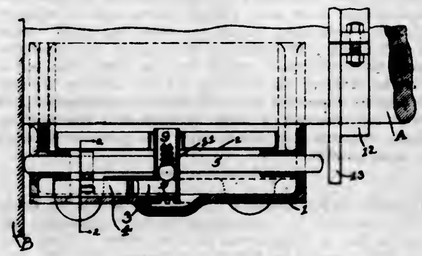
1,423,848. COFFIN. JOSEPH H. HARPER, Springfield, Ohio. Filed Jan. 27, 1921. Serial No. 440,433. 9 Claims. (Cl. 27—17.)

3. In a coffin, a bottom and sides, said sides being projected at their upper edges laterally, upwardly, downwardly and outwardly, a brace adjacent either of the sides projecting above the lateral projection of the side, a top composed of an inner and outer wall adapted to embrace between their lower edges the upwardly projecting portion of the sides and the internal brace, a reinforcing means adjacent the point of union of the top members and the sides, and means for positively fastening together said top, sides and reinforcing means.



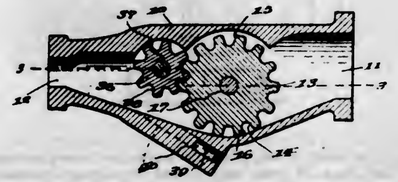
1,423,849. DRILL. ARTHUR L. HAWKESWORTH, Butte, Mont. Filed Nov. 21, 1921. Serial No. 516,783. 5 Claims. (Cl. 287—103.)

1. In combination with a drill bar or shank, a bit movable across the axis of the shank, said bit and drill bar each being provided with an inclined tapering tongue and groove disposed in superposed planes and complementary to the groove and tongue of the opposite member, said tongues and grooves being formed so as to wedge together with vertical pressure along the axis of the drill bar.



1,423,850. JOURNAL LUBRICATOR. JAMES J. HENNESSY, New York, N. Y. Filed Sept. 20, 1921. Serial No. 501,867. 1 Claim. (Cl. 64—24.)

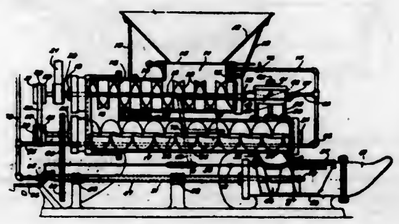
In combination, a railway car journal, a journal lubricator including a waste receptacle held in contact with said journal, a lubricant reservoir adjacent to said receptacle, a pump for feeding lubricant from said reservoir to waste in said receptacle, a pump actuating rod extending parallel with said journal exteriorly of said reservoir



and receptacle, a cam mounted on said journal and contacting with said rod to move the latter axially in one direction with each revolution of the journal, and means energized by such movement to return said rod to its original position.

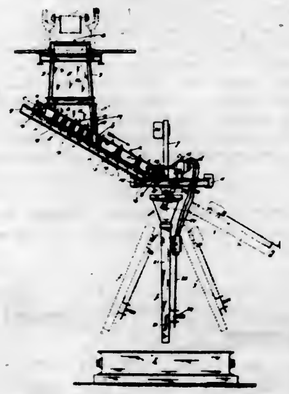
1,423,851. JOURNAL LUBRICATOR. JAMES J. HENNESSY, New York, N. Y. Filed Sept. 20, 1921. Serial No. 501,868. 1 Claim. (Cl. 64—24.)

In combination with the journal and hub of a car wheel, a collar adapted to be clamped to said journal at a point spaced from the wheel hub, a journal lubricator applied to said journal between the wheel hub and said collar, said lubricator comprising a lubricant reservoir and a pump for feeding lubricant from said reservoir to the journal, a pump operating rod extending through the opposite walls of said lubricator with its opposite ends respectively opposing the wheel hub and collar, and a connection between said rod and said pump.



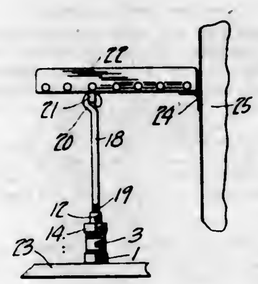
1,423,852. PUMP. KARL HERMAN, Chester, Pa. Filed May 2, 1921. Serial No. 466,274. 4 Claims. (Cl. 103—148.)

1. A pump comprising a casing, an impelling rotor mounted in the casing, the casing having inlet and outlet openings, a driving rotor operatively connected with the



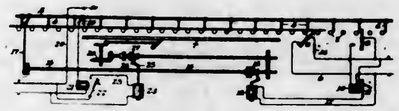
impelling rotor, means for admitting a motive fluid to the driving rotor, means for discharging the motive fluid from the driving rotor to the impelled fluid within the casing, and means actuated by the impelling rotor for preventing retrogression of the impelled fluid.

1,423,853. MIXING AND CONVEYING APPARATUS. CARL W. HODGSON, Chicago, Ill. Filed Jan. 24, 1921. Serial No. 439,450. 17 Claims. (Cl. 83—73.)



1. An apparatus of the character described embodying two chambers, one of the chambers discharging into the other, a combined mixer and conveyor in each of the chambers and embodying helicoids spaced in directions lengthwise of their axes, the proximate ends of adjacent helicoids overlapping, means for actuating them, means for delivering a dry mixture into one of the chambers, means for delivering a liquid into the other chamber, a receiving chamber for receiving the wet mixture, a delivery conduit connected with the last recited chamber, and means for directing a blast of fluid into the said receiving chamber for discharging the mixture through the said conduit.

1,423,854. SAND FEEDER. KARL S. HOWARD, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 16, 1918. Serial No. 267,074. 6 Claims. (Cl. 198—72.)

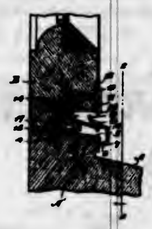


2. In a sand feeder, a supply hopper, a conveyor forming the floor of said hopper and extending outwardly therefrom, and a discharge chute at the end of said conveyor and formed in two sections, one section pivoted to swing in a vertical plane and the other section pivoted to said first-mentioned section to swing in a vertical plane at right angles to said first mentioned plane.

1,423,855. LOCOMOTIVE ENGINEER'S SEAT. OMAR JOHNSON, Laramie, Wyo. Filed Nov. 28, 1921. Serial No. 518,420. 1 Claim. (Cl. 155—51.)

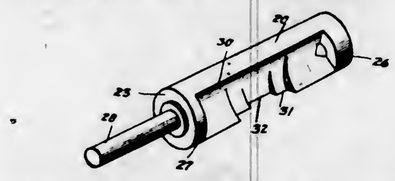
A seat for locomotive engineers, comprising a seat base, a seat hinged above the base to one side of the locomotive cab; and a resilient element mounted between the seat and seat base, said element consisting of an interiorly threaded base cap to rest inverted upon the seat base; a pipe nipple exteriorly threaded at each end, one end being adapted to engage the base cap, two nested coil springs adapted to compress within the pipe nipple, a plunger to seat upon the springs compressed in the pipe nipple, the lower end thereof being tubular to receive the upper ends of the springs and the upper end being a reduced tubular shank threaded interiorly, a top cap for setting over the shank of the plunger, same having a hole through which the shank passes and being threaded interiorly to engage the upper end of the pipe nipple, and an eye bolt to engage the plunger shank, the eye of the bolt being secured to the under side of the seat.

1,423,856. DELIVERY MECHANISM FOR ROLLING MILLS. ALFRED E. JUPP and ROXIE S. CROOKS, Youngstown, Ohio, assignors to The Youngstown Sheet & Tube Company, Youngstown, Ohio, a Corporation of Ohio. Filed Apr. 17, 1919. Serial No. 290,890. 9 Claims. (Cl. 198—21.)



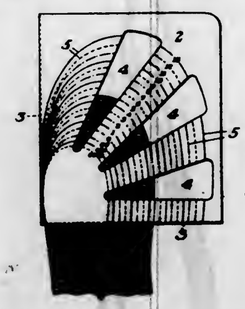
1. The combination with a cooling bed and its runway, of a push-off device for moving the hot workpieces from the runway to the cooling bed, and push-off controlling means on the runway actuated by but not materially checking the movement of the workpieces along the runway and operating upon engagement by a workpiece to start the push-off device, substantially as described.

1,423,857. WATERPROOFING DEVICE. GEORGE A. KAMPMANN, Brainerd, Minn. Filed Oct. 1, 1919. Serial No. 327,645. 5 Claims. (Cl. 20—69.)



1. As a part of a weatherstrip device, a member comprising a substantially flat web arranged to be secured against the outside of a closure and having its material extending inwardly from the lower edge of the web as

the upper wall of a pocket portion arranged to seat against material of the closure to which the member is attached,

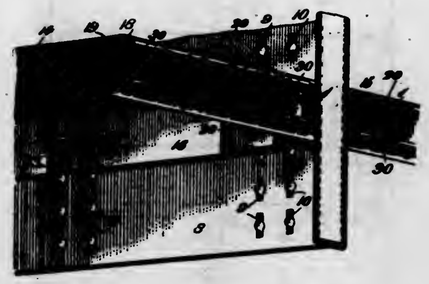


and having its material also extending outwardly and downwardly from the inner end of the pocket portion as the lower wall thereof.

1,423,858. THROTTLE VALVE. WALTER F. KASPER, Fairmont, Minn., assignor to Fairmont Gas Engine & Railway Motor Car Company, Fairmont, Minn., a Corporation of Minnesota. Filed Mar. 12, 1920. Serial No. 365,344. 6 Claims. (Cl. 123—59.)

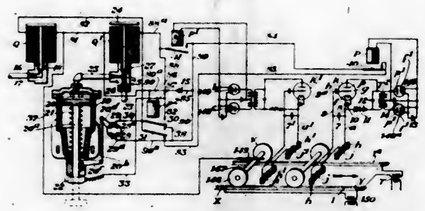
6. A throttle valve for a two cycle internal combustion engine, comprising a rotatable cylindrical valve having a segmental port along one side, said port having an arcuate bottom wall, and a plurality of ports progressively decreasing in length and increasing in depth from the opposite ends of the segmental port and formed in one side edge thereof, the bottom walls of the second ports, being arcuate and merging into the bottom wall of the first port in progressively spaced order from said side edge thereof.

1,423,859. HEEL GAUGE. JOHN S. LANSILL, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a Corporation of Pennsylvania. Filed Apr. 5, 1921. Serial No. 458,808. 10 Claims. (Cl. 33—3.)



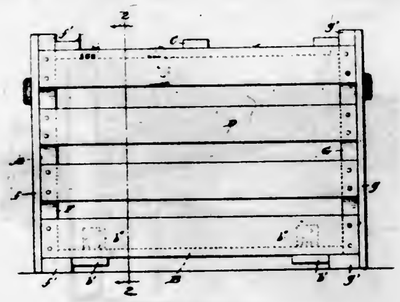
1. A gauge having a series of heel contour gauge or size lines or markings thereon, said lines or markings having a substantially common point of origin, substantially as described.

1,423,860. OIL-WELL PUMP. JOHN J. LARKIN, St. Louis, Mo., and ROBERT L. GORDON, Bartlesville, Okla., assignors to Bell Pump Company, Bartlesville, Okla., a Partnership composed of John J. Larkin, Robert L. Gordon, and A. W. Shulthis, Independence, Kans. Filed Sept. 1, 1921. Serial No. 497,570. 2 Claims. (Cl. 103—204.)



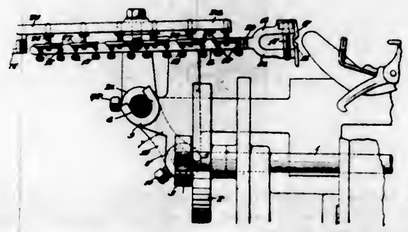
2. In an oil well, a pump device comprising a working barrel adapted to cooperate with the pump casing to form a pocket and provided with a standing valve seat at a substantial distance above the bottom of the pocket, a discharge chamber wall surrounding said barrel and extending into said pocket and provided with a toothed lower end which extends below said standing valve upon the down stroke of the pump.

1,423,861. LOCKING MECHANISM FOR SHELVING AND OTHER ARTICLES. ALBERT H. LEVENE, Philadelphia, Pa. Filed Oct. 2, 1919. Serial No. 327,904. 8 Claims. (Cl. 211—27.)



1. A shelving member having a double line of apertures, shelving members on opposite sides of said first shelving member, the side members each having an aperture to register with one line of apertures in the first shelving member, and locking devices to pass through registering apertures, the shelving member on one side being removable without affecting the locked condition of the member on the other side.

1,423,862. RAILWAY-TRAFFIC-CONTROLLING SYSTEM. LLOYD V. LEWIS, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Continuation of application Serial No. 230,424, filed Apr. 24, 1918. This application filed Dec. 31, 1920. Serial No. 434,319. 12 Claims. (Cl. 246—41.)



1. Railway traffic controlling apparatus comprising governing means on a train arranged normally to retard the train except when affected by energy received from the trackway, a portion of track equipped with means for supplying energy to the train and a portion of track not so equipped, electrical means adjacent the entrance end of the unequipped portion of the track for rendering said governing means ineffective to retard the train while the latter is passing through the unequipped portion of track, and mechanical means adjacent the exit end of said unequipped portion of track for restoring said governing means to its control of the train.

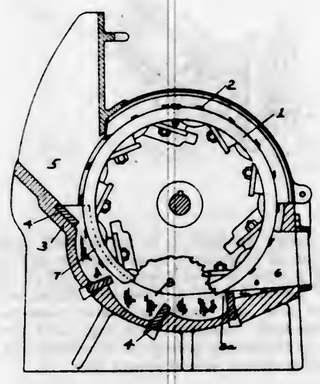
1,423,863. FOLDING CRATE. JOHN W. LUCABAUGH, near Hanover, Pa. Filed Sept. 16, 1921. Serial No. 501,128. 2 Claims. (Cl. 217—48.)

1. A folding crate including vertically pivoted side and end members in which one set of members is provided with pivot posts at their ends and the other set of members has horizontal pivot members extending over the ends of said posts, said pivot posts and members having complemental pivot recesses formed therein, pivot elements positioned between the ends of said pivot posts and the ends of said pivot members and extending into the recesses, and bottom and cover members for the crate.

1,423,864. COMBINED YARN CLEARER AND TENSION DEVICE. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed Apr. 1, 1921. Serial No. 457,728. 16 Claims. (Cl. 28—67.)

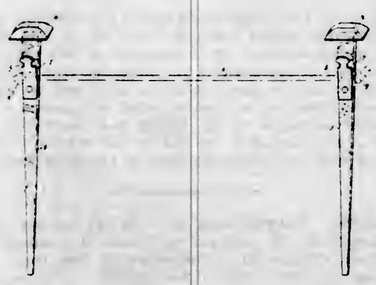
12. A combined yarn clearer and tension, comprising a plurality of pairs of horizontally disposed parallel knives, and a weighted disc resting on each pair of knives.

1,423,865. GARDEN TOOL. ARTHUR MILLER, Columbus, Ohio. Original application filed June 13, 1919, Serial No. 303,963. Divided and this application filed May 4, 1921. Serial No. 466,819. 5 Claims. (Cl. 55—39.)



5. A garden tool having a clip arranged to engage the blade of a hoe, said clip comprising rigid members bent to form approximately an angle of 90°, each of said members having a yielding member bent to form a resilient bight between it and its respective rigid member.

1,423,866. BONE RESECTOR. FRANK E. MILLER, New York, N. Y. Filed Apr. 24, 1918. Serial No. 230,421. Renewed Dec. 22, 1921. Serial No. 524,295. 5 Claims. (Cl. 128—318.)

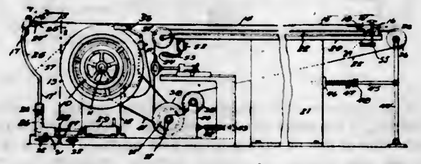


3. A resector comprising, a pair of blunt edged operating members; relatively pivotable necks for constraining said members to move in separated parallel planes; and a pair of manually operable handles for effecting the operative movement of said members.

1,423,867. CUTTING MACHINE. PHILIP S. MITTS and WILLIAM J. WINSTON, Saginaw, Mich., assignors to Mitts & Merrill, Saginaw, Mich., a Corporation of Michigan. Filed Dec. 27, 1921. Serial No. 525,204. 4 Claims. (Cl. 83—6.)

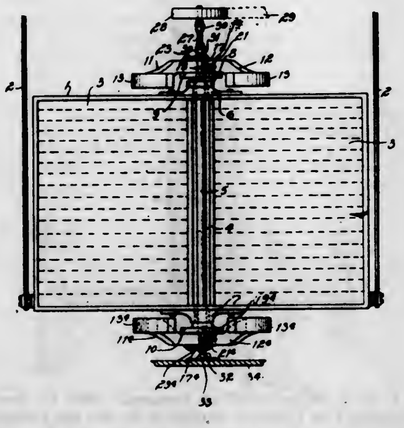
1. In a cutting machine including a casing having a knife-carrying drum rotatably mounted therein, stationary knives disposed around the lower periphery of the casing, an inlet at one side of the casing, and an outlet at the opposite side of the casing, a lateral retaining wall at each side of said casing, said wall extending from the inlet around the interior of the casing to the outlet, the distance between said walls slightly greater than the length of said drum, a scraping device carried by the rim of said drum and adapted to prevent material packing between the end of said rim and the face of said retaining wall.

1,423,868. LINE HOLDER. HENRY MONAHAN, Meriden, Conn. Filed Apr. 13, 1922. Serial No. 552,405. 3 Claims. (Cl. 24—115.)



1. A line holder, comprising a pin formed in one side with a notch, and a finger secured to the notched side of the pin and projecting upward beyond the upper end of the notch.

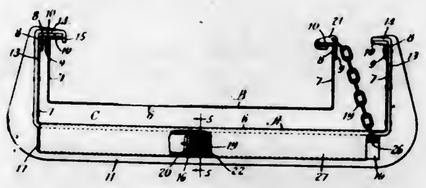
1,423,869. ATTACHMENT FOR TOBACCO PIPES. JOSEPH CARROLL MONMONIER, Catonsville, Md. Filed Mar. 18, 1921. Serial No. 453,249. 2 Claims. (Cl. 131—12.)



2. An attachment for tobacco pipes consisting of a wire coiled into a helix of oval form having laterally extended elastic fingers which bear against the wall of the bore, said attachment constituting a grate or grid adapted to rest on the bottom of the bowl cavity.

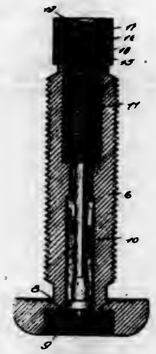
1,423,870. TIRE-MAKING MACHINE. FREDERIC C. MORTON, New Haven, Conn. Filed Oct. 7, 1918. Serial No. 257,227. 14 Claims. (Cl. 154—10.)

1. In a tire building machine, the combination of spaced stretching devices, means including dummy strips for connecting the ends of a strip of fabric to said spaced devices, and means to space said devices farther apart and thereby effect a stretching of the strip of fabric.



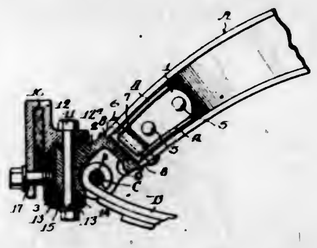
1,423,871. DRIVING MECHANISM FOR PRODUCING GYRATORY MOTION. BURTON NEAL, St. Louis, and GEORGE HOWARD HERRSAND, Kinloch, Mo. Filed Jan. 18, 1922. Serial No. 530,089. 4 Claims. (Cl. 74—14.)

1. Driving mechanism for producing a gyratory movement of a suspended body, comprising a driven shaft on



which said body is rotatably mounted, a plate fixedly secured on the end of said shaft, weighted arms pivotally mounted at one end on said plate eccentrically of said driven shaft and having geared relation at such pivoted ends, said weights being adapted to be thrown outward under the action of centrifugal force when said plate and driven shaft are rotated, a socket member movable by said arms simultaneously with and in the general direction of the movements of said weights, and a vertically disposed drive shaft having a driving connection at its lower end with said socket member for imparting rotation to said plates and the parts connected with and mounted thereon.

1,423,872. COAL CHUTE. ENOCH E. NEAL, Malden, Mass. Filed Mar. 23, 1921. Serial No. 454,825. 12 Claims. (Cl. 193—40.)



1. A device of the character described having, in combination, a plurality of chute sections, a tube fast to the underside of one of said sections and provided with a slot at one end thereof, a flexible member normally located within said tube, a portion thereof being adapted to be withdrawn therefrom and fastened within said slot, means located at the outer end of said flexible member adapted to be attached to another of said sections and means to pull said flexible member into said tube when the same is released from said last-mentioned section and removed from said slot.

1,423,873. VALVE DEVICE FOR PNEUMATIC TIRES. JOSEPH N. NEWSOM and HARRY E. HARDER, St. Louis, Mo., assignors to Newsom Valve Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 5, 1920. Serial No. 356,543. 4 Claims. (Cl. 152—12.)

1. In a device for filling pneumatic tires an element comprising an abutment adapted to fit into the housing of the tire valve for engagement with the stem of a chuck valve to positively open the chuck valve and to limit the depression of the stem of the tire valve.

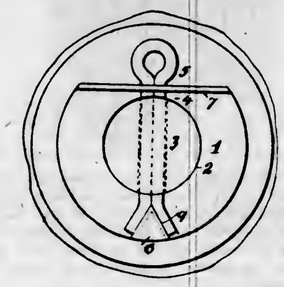
1,423,874. AUTOMOBILE BUMPER-ATTACHING HANGER. WILLIAM G. PANCOAST, Wilmette, and WILLIAM J. GROTENHUIS, Chicago, Ill., assignors, by mesne assignments, to Bifiex Products Company, a Corporation of Delaware. Filed Sept. 9, 1921. Serial No. 499,473. 7 Claims. (Cl. 293—55.)

4. A hanger adapted to be permanently connected to the end of an automobile frame member, and comprising a shank portion, a head beyond the end of said frame member provided with a forwardly facing and curved abutment face, and bumper attaching members adapted to be pivotally connected with said head through the medium of interfitting bosses and depressions, and a pivot bolt, and to engage said abutment face.

1,423,875. RIM TOOL. PETER R. PETERSON, Salt Lake City, Utah, assignor to Ideal Rim Tool Co., Jacksonville, Fla., a Corporation of Florida. Filed June 29, 1921. Serial No. 481,315. 3 Claims. (Cl. 157—1.)

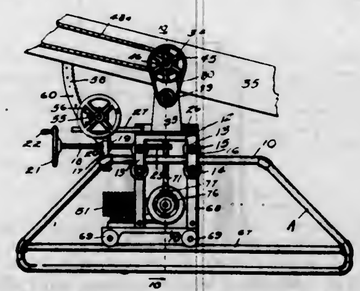
1. A rim tool, comprising a pair of rim engaging clamps, a lever for pivotal engagement on one of said clamps, and having a portion thereof adapted to bear against the inner face of one end of a rim while the clamp on which it is pivotally engaged holds the other end of the rim, coacting links pivoted together and to said clamps, a crank member journaled in one of the first mentioned links, and a link pivoted at one end to one of said first mentioned links and at the other end to the crank member.

1,423,876. POPPET VALVE. CARL PFANSTIEHL, Highland Park, Ill., assignor to Pfanstiehl Company, Inc., North Chicago, Ill., a Corporation of New York. Filed July 25, 1918. Serial No. 246,633. 1 Claim. (Cl. 123—188.)



An exhaust valve for internal combustion engines including a stem having two parts formed of metals having differing co-efficients of expansion, the union between the metals being so positioned between the ends of the stem as to provide a total stem expansion which, under the temperature at which the stem operates, substantially

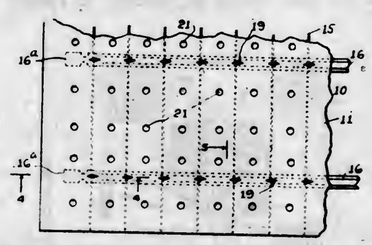
equals the expansion of the valve housing under the temperature at which it operates, whereby the clearance be-



tween the end of the valve stem and its tappet will not be materially altered through changes in temperature.

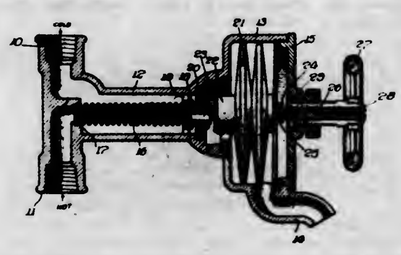
1,423,877. WASHER FOR MINE-CAR WHEELS. ROBERT F. PHILLIPS and LOUIS J. MCCLOSKEY, Pittsburgh, Pa., assignors to Phillips Mine & Mill Supply Co., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 30, 1922. Serial No. 532,723. 3 Claims. (Cl. 295—50.)

1. A washer for mine car axles, provided with a lug on its face adapted to fit between the limbs of the linch or cotter pin, by which the wheel is retained on the axle and to maintain such limbs in divergent relation and interlock the pin and washer, the washer being provided with means to prevent lateral movement in relation to the pin and axle.



1,423,878. LOADER DEVICE. LAURENS DAY POTTER and THOMAS CHARLES NOLAN, Emmetsburg, Iowa. Filed July 19, 1920. Serial No. 397,283. 13 Claims. (Cl. 198—118.)

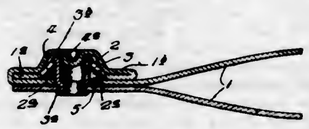
1. A loader device comprising a main frame, an auxiliary frame mounted thereon, a vertical shaft rotatably mounted in said auixilary frame, a conveyor frame mounted on said auxiliary frame for rotation about said vertical shaft as an axis, a conveyor member mounted in said conveyor frame, said conveyor member being so arranged that its center of gravity will at all times be substantially over said vertical shaft, an engine mounted on said auxiliary frame, and means for transmitting power to said conveyor member from said engine through said vertical shaft.



18. A loader device comprising a main frame, an auxiliary frame mounted thereon, a vertical shaft rotatably mounted in said auxiliary frame, a conveyor frame mounted on said auxiliary frame for pivotal movement around said vertical shaft, means whereby said conveyor frame will be held against any tendency to tip with relation to said auxiliary frame, said means including a sleeve surrounding the vertical shaft and passing through the auxiliary and conveyor frames, and lock nuts on the ends of said sleeve for holding the two frames securely together and still allow one of them to revolve freely in relation to the other, a horizontal shaft mounted in said conveyor frame, a conveyor member mounted thereon for pivotal movement in a vertical plane around said horizontal shaft as an axis, a supporting platform suspended below the auxiliary frame, an engine mounted thereon, and means operatively connecting the engine to the conveyor member through the said vertical and horizontal shafts, whereby motion may be transmitted thereto.

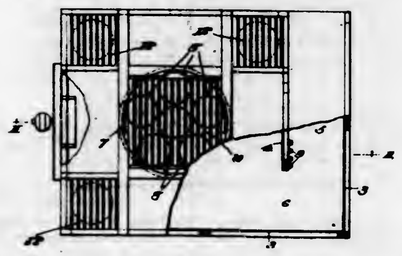
1,423,879. PLASTER SUPPORT FOR WALLS. STEPHEN J. POTTER, Syracuse, N. Y., assignor to Sheet Lathing Corporation, Syracuse, N. Y., a Corporation of New York. Filed Mar. 11, 1921. Serial No. 451,624. 4 Claims. (Cl. 72—116.)

1. A paper wall board comprising a strip of paper of laminated structure having transverse strengthening ribs spaced apart thereon and attached thereto, each rib being formed transversely into an arch through the greater part of its length, but flattened at the ends.



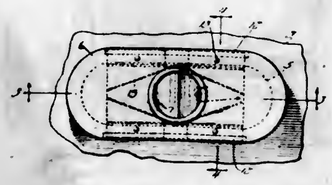
1,423,880. WATER MIXER. FRED W. POWERS, Chicago, Ill., assignor to The Powers Regulator Company, Chicago, Ill., a Corporation of Illinois. Filed June 13, 1919. Serial No. 303,871. 9 Claims. (Cl. 236—12.)

6. In a fluid controller, the combination of a casing having a rigid inlet tube and a telescopic tube arranged



within the rigid tube, seats at the terminal points of the rigid and telescopic tubes, a thermostat within the casing, and a valve member carried by the thermostat, said valve member being adapted to sequentially contact said seats, substantially as described.

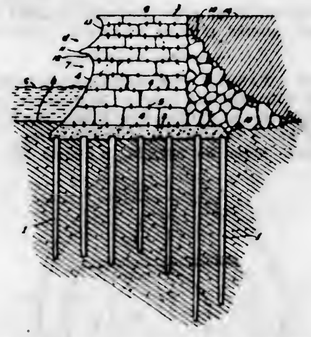
1,423,881. SEAL. HARRY R. ROGERS, Chicago, Ill., assignor to Chicago Car Seal Company, Chicago, Ill., a Corporation of Illinois. Filed June 18, 1921. Serial No. 478,560. 4 Claims. (Cl. 292—322.)



1. A seal comprising a shackle-strip, a locking stud carried by one end thereof, and a locking socket carried by the other end thereof, the metal of said strip being folded on itself so as to reverse the position of said socket and the double ply of metal thus formed being then folded on the adjoining portion of the strip, said adjoining portion being provided with a perforation to admit the locking stud to the socket, said stud and socket being located on opposite sides of the strip.

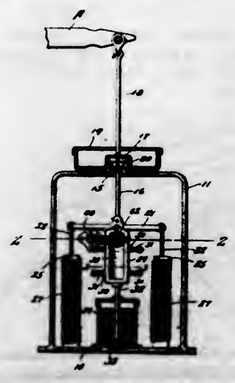
1,423,882. COLOR-MATCHING ROOM. GEORGE S. RADFORD, New York, N. Y., assignor, by mesne assignments, to Central Union Trust Company of New York, New York, N. Y., a Corporation of New York, trustee. Filed Nov. 23, 1921. Serial No. 517,265. 12 Claims. (Cl. 240—1.)

1. A color matching room comprising a matching chamber having an entrance for the user, a source of artificial daylight in said chamber, and a tubular light shield surrounding the artificial daylight source and of sufficient length to protect the eyes of the user.



1,423,883. BEE ESCAPE. HERBERT D. ROGERS, Lewistown, Ill. Filed May 8, 1920. Serial No. 379,693. 5 Claims. (Cl. 6—4.)

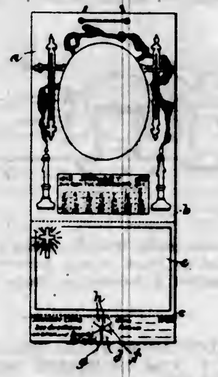
1. A bee escape comprising a sheet metal base plate, a channel member comprising bottom and side walls forming with said base plate a longitudinal passage open at one end, there being provided an inlet opening through said base plate and flanges along the edges of said channel members having flatwise contact with the marginal portions of said base plate, the edges of said flanges and base plate being crimped together.



3. A bee escape comprising a sheet metal base plate provided with inturned marginal edges along opposite sides thereof, and a channel shaped plate comprising bottom and side walls, the latter having integral marginal flanges, bearing along the edges of said base plate and secured thereto by the crimping of the inturned edges of the base plate over the edges of the flanges.

1,423,884. OCEAN PIER. ALLAN CYRUS RUSH, Los Angeles, Calif., assignor of one-half to Henry L. Miller, Glendale, Calif. Filed Feb. 10, 1920. Serial No. 357,681. 4 Claims. (Cl. 61—49.)

1. A pier wall having an outer face provided with a bead, said face sloping from its base upward and inward toward the bead and from the ridge of the bead downward to said upwardly and inwardly sloping face, the upper face of the bead sloping upwardly and inwardly and a guard extending outwardly to intercept the splash and slosh.



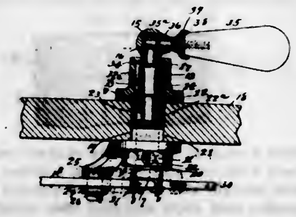
1,423,885. WEIGHT INDICATOR FOR SCALES. HENRY C. SCHAPER, St. Louis, Mo., assignor to The General Automatic Scale Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 24, 1920. Serial No. 360,571. 10 Claims. (Cl. 265—39.)

1. The combination with a weighing scale, of a vertically movable weight indicia bearing member connected to and adapted to be actuated by a movable part of the scale, a horizontally disposed lever connected to said

weight indicia member, means connected to said horizontal lever for yieldingly resisting the movement of said member in one direction, a screen, and means including a source of light and lenses for projecting the weight indicia onto said screen.

1,423,886. REMITTANCE REMINDER. HENRI M. STEWART, New York, N. Y. Filed June 8, 1921. Serial No. 476,106. 4 Claims. (Cl. 229—62.5.)

1. A new article of manufacture consisting of a remittance reminder formed of heavy paper stock including therein a main section having suitable matter impressed thereon, and a coin receiver section formed integrally with said main section, said paper stock having a weakened line extending across it whereby said coin receiver section is separable from said main section, said coin receiver section having an opening therein adapted to receive a coin and means adjacent said opening for retaining a coin therein.

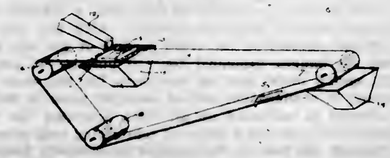


1,423,887. TRUCK LOADING AND UNLOADING MECHANISM. RICHARD F. STEWART, Briarcliff, N. Y. Filed Mar. 6, 1920. Serial No. 363,789. 10 Claims. (Cl. 214—81.)

1. The combination with a motor driven vehicle, of a scoop pivotally mounted thereon, and power driven means for moving said scoop on its pivotal axis from excavating position to a position in which the excavated material is dumped into said vehicle, said scoop moving means embodying ground engaging levers for initiating the raising of the scoop.

1,423,888. FLUSHING MECHANISM. OSCAR H. THELEN, Kenosha, Wis., assignor to Frost Manufacturing Company, Kenosha, Wis., a Corporation of Wisconsin. Filed Apr. 7, 1919. Serial No. 288,106. 10 Claims. (Cl. 4—5.)

1. In leverage mechanism, for closet tanks the combination with a fixed bearing, of a divided rock shaft journaled thereon, means cooperating with said fixed bearing for holding the shaft sections in fixed adjustment, a handle secured to one part of the shaft, said part adapted to

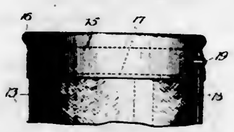


engage the other part of the shaft in longitudinally adjustable contact and transverse angular non-rotative engagement with each other and means whereby the rock shaft is held in the bearing.

1,423,889. POWER CABLE-REELING MECHANISM FOR SELF-PROPELLED MACHINES. JOHN S. TOWNSEND, Harvey, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Apr. 13, 1921. Serial No. 461,164. 4 Claims. (Cl. 191—12.)

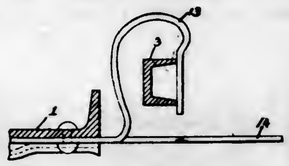
2. In mechanism of the class described, a rotatable shaft, a cable reel carried by the shaft, a support for the shaft, a cable connected to the reel leading through said support to the other side thereof, and a sleeve enclosing the shaft and cable at said support rotatable in said support, for the purposes set forth.

1,423,890. SAMPLING APPARATUS. ROBERT K. WARNER, West Haven, Conn. Filed July 15, 1920. Serial No. 396,433. 1 Claim. (Cl. 73—21.)



The combination with a delivery device and a receiver in line therewith and spaced therefrom, of a longitudinally-movable conveyor which carries material from the delivery device to the receiver, said conveyer formed with an opening of predetermined area for the passage through it of a sample of the material carried thereon.

1,423,891. GOLF BAG. JAMES S. WHITE, Chicago, Ill., assignor to Allied Golf Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 21, 1921. Serial No. 446,683. 1 Claim. (Cl. 150—1.5.)



In a golf bag in combination, a top comprising a ring, a strip of rawhide doubled about said ring, flexible body material secured between the portions of said rawhide, stays secured to said body portion and extending between

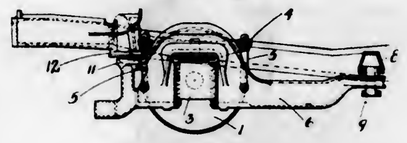
the portions of said rawhide, rivets passed through said rawhide and said stays, a bottom comprising an end member having a downward turned annular flange, a strip

of rawhide formed in an annular channel enclosing said flange, said body material extending between the annular flange and rawhide, and rivets passed through the rawhide and engaging said stays and said body material.

1,423,892. BRAKE-BEAM RELEASE AND SUPPORT. CHARLES HAINES WILLIAMS, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Original application filed July 15, 1920, Serial No. 396,438. Divided and this application filed June 16, 1921. Serial No. 478,137. 3 Claims. (Cl. 188—213.)

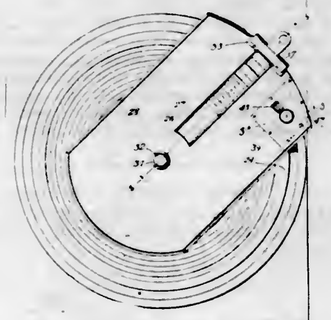
3. A third or fourth point support for brake beams comprising a member secured to the car truck and extending under the beam, and a retractive means integral with said support and engaging the beam to force it to a released position.

1,423,893. HIGHWAY ROAD. WILLIAM ERASTUS WILLIAMS, Chicago, Ill. Filed Aug. 11, 1920. Serial No. 402,864. 11 Claims. (Cl. 238—4.)



1. In a structure of the class described, a channel rail laid longitudinally with the roadway, with the web of the channel furnishing the tread surface of the rail and having its flanges expanded for the purpose of giving depth, saving metal and for apertures for the entry of concrete; in combination with a concrete mass in which the channel is embedded on all sides excepting the top surface of the web and a series of reinforcing rods extending through the web of the channel transversely binding the concrete on either side of the channel.

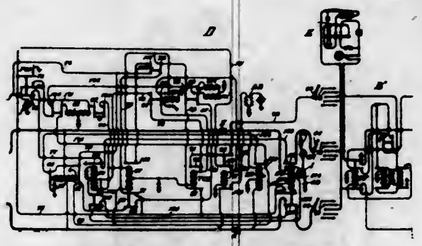
1,423,894. BUMPER FOR AUTOMOBILES. WILLIAM ERASTUS WILLIAMS, Wilmette, Ill. Filed Oct. 3, 1921. Serial No. 504,842. 9 Claims. (Cl. 293—55.)



5. In a bumper beam, the combination with two vertically spaced parallel bars having their bodies approximately in a vertical plane and their end portions rearwardly curved and united in a medial horizontal plane, of a third parallel bar lying in the rear of the vertical space between the front bars and connected at its ends with the corresponding ends of the front bars, the three bars being connected to each other and to the car frame members, with which they are in substantial alinement.

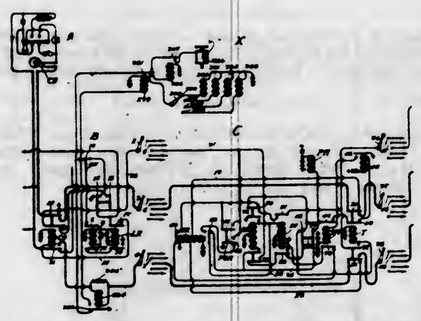
1,423,895. TRAILER TRUCK FOR LOCOMOTIVES. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed Jan. 14, 1922. Serial No. 529,227. 6 Claims. (Cl. 105—174.)

1. A locomotive trailer truck including a frame adapted to be supported by truck wheels between its ends and adapted to support a locomotive frame at both of its ends.



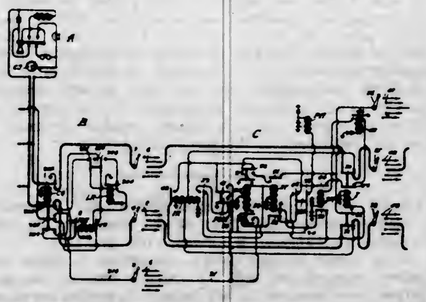
1,423,896. CALCULATING RULE. WILLIAM L. WYCKOFF, Brooklyn, N. Y. Filed Oct. 10, 1916. Serial No. 124,833. 6 Claims. (Cl. 235—84.)

1. In a device of the class described, the combination of a plurality of coaxial relatively movable circular scales, a scale coaxial with the first-mentioned scales and in fixed relation to one of the same, the graduations on said scale representing and bearing numbers between two integral powers of ten and being divided into equal parts, said numbers being divided into periods with those numbers on the same one of said equal parts having the same number of digits in the left hand period, and means for alining the graduations on the relatively movable scales.



1,423,897. CONNECTOR SWITCH. GEORGE A. YANOCHOWSKI, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 1, 1917. Serial No. 183,870. 34 Claims. (Cl. 179—18.)

1. A telephone system including a called subscriber's line, a connector switch for extending a connection to said called subscriber's line, a test circuit for said connector switch, a test control relay and a test relay for said connector switch, means for momentarily energizing said test control relay, contact control by said test control relay for connecting said test relay to a test contact of the called

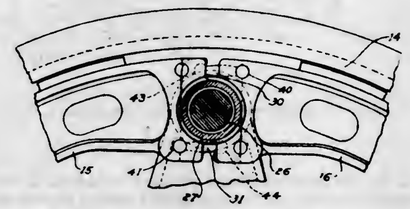


line, and means controlled by said test relay if said called line is busy to interrupt said test circuit.

1,423,898. AUTOMATIC TELEPHONE SYSTEM. GEORGE A. YANOCHOWSKI, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed June 6, 1918. Serial No. 238,461. 23 Claims. (Cl. 179—9.)

1. A telephone system including subscribers' telephone lines provided with calling devices, switching means controlled by said calling devices for interconnecting said subscribers' telephone lines, and recording devices including means for automatically and permanently recording the numbers called by the calling devices.

1,423,899. AUTOMATIC TELEPHONE SYSTEM. GEORGE A. YANOCHOWSKI, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed July 5, 1918. Serial No. 243,292. 21 Claims. (Cl. 179—18.)

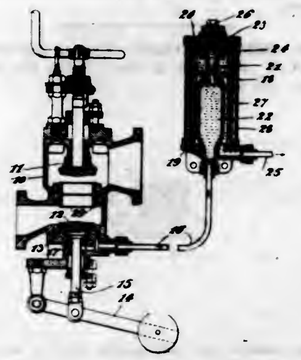


1. A telephone system including a trunking switch, a motor magnet for said trunking switch, a line relay for controlling said motor magnet, off-normal contacts for controlling the circuit of said line relay, a cut-off relay for said trunking switch, and a circuit for said cut-off relay including contacts of said line relay and contacts of said motor magnet.

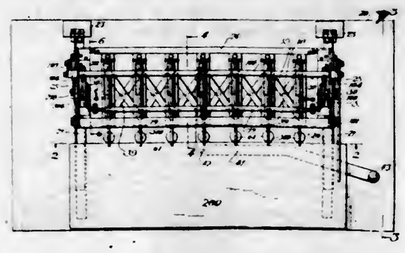
1,423,900. TENNIS RACKET. GEORGE AGUTTER, Forest Hills, N. Y. Filed Jan. 6, 1921. Serial No. 435,333. 5 Claims. (Cl. 46—24.)

1. In a racket, the combination with a wooden head frame and depending handle of a reenforcing metallic binding engaged with and surrounding the outer periphery of said head-frame, the ends of said binding being engaged with and secured to the sides of said handle, said binding having on its opposite sides inwardly extending marginal skirts overlapping the sides of said head frame, and a longitudinally extending centrally disposed depressed rib on the inner side of said binding, said rib being countersunk in the outer periphery of said head frame.

1,423,901. BRAKE MECHANISM. WALTER C. BAKER, Cleveland, Ohio, assignor to Standard Parts Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 21, 1919. Serial No. 284,083. 4 Claims. (Cl. 188—78.)



2. In brake mechanism, the combination of a brake drum, brake shoes each pivoted at one end and having their other ends in proximity, and means for separating said other ends of the brake shoes comprising a rotatable member having lever arms thereon and compression members cooperating with said lever arms and the ends of said brake shoes, each of said members being at all times substantially perpendicular to the line joining its point of contact with the brake shoe to the pivot point of the brake shoe.

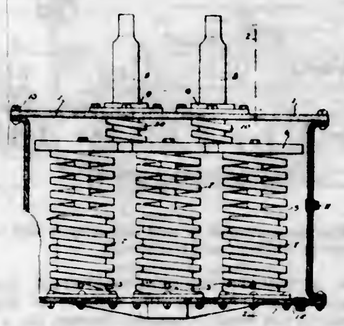


1,423,902. TESTING APPARATUS FOR INDICATING LEAKS. GUSTAV BAUER, Hamburg, and FRITZ KRAMER, Blankenese-Dockenhuden, near Hamburg, Germany. Filed Mar. 31, 1922. Serial No. 548,482. 5 Claims. (Cl. 137—77.)

1. A leak indicating apparatus for submarine fuel oil tanks maintained at sub-pressure, including a conduit for

connecting the tank to the apparatus for establishing and maintaining the sub-pressure, a valve for closing said conduit, a normally closed by-pass around said valve, and means in said by-pass for indicating the passage of water therethrough.

1,423,903. MARKING MACHINE. EMIL T. BENSON, Chicago, Ill. Filed Mar. 28, 1921. Serial No. 456,213. 9 Claims. (Cl. 33—190.)

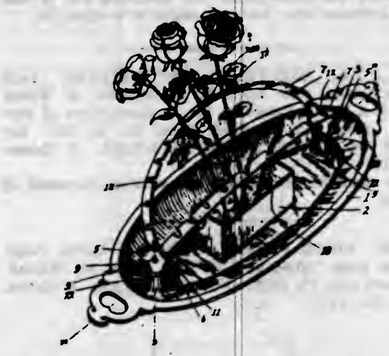


1. In a marking machine, a plurality of marking devices, means for equally spacing the marking devices through any predetermined distance within the range of the machine, each of the marking devices including a marking finger, a work-supporting table, the marking fingers normally lying to one side of the work-supporting table, and means for simultaneously moving the marking fingers over work supported on the work-supporting table and bringing the same into contact with such work.

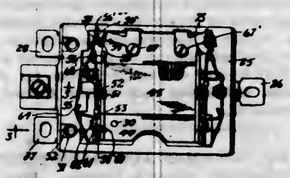
1,423,904. SHOCK ABSORBER. OGDEN F. BLYBURG, St. Joseph, Mich. Filed Feb. 16, 1921. Serial No. 445,278. 12 Claims. (Cl. 188—88.)

1. A shock absorber comprising a plunger, a chamber in which said plunger is arranged to reciprocate, forming a dash pot, and spring means held in place by the dash pot and adapted to yieldingly hold said plunger in normal position.

4. In a shock absorber, a housing to contain a liquid, a cylinder in said housing, a plunger in said cylinder, with a passage connecting the cylinder with the housing, so that the liquid flows back and forth between the housing and the chamber, a coil spring arranged for compression on the exterior surface of said cylinder, means connected to said plunger to bear upon said spring, so that the spring is compressed when the plunger expels the liquid from said chamber with clearance all around to prevent the spring from rubbing on the housing, a stuffing box on the housing, and a rod connected to said plunger to slide in said stuffing box.



1,423,905. IDENTIFICATION FENDER FOR VEHICLES. LEWIS P. BRADDY, San Francisco, Calif. Filed Jan. 4, 1922. Serial No. 526,980. 6 Claims. (Cl. 116—82.)

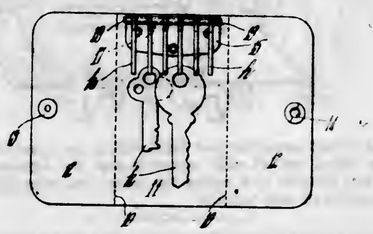


3. In a vehicle, in combination with a bumper bar yieldingly held with respect to the frame of the vehicle, of an identification plate holder fixed to said bumper bar, a movable retaining member pivotally connected to said holder and adapted to cooperate therewith in supporting an identification plate under normal conditions, means for sealing said retaining member in position, a cross-bar fixed to the frame of the vehicle at the rear of the bumper, and a releasing member fixed on said cross bar and adapted to engage said movable retaining member when movement is imparted to the bumper by force of impact, the engagement causing breakage of the seal and release of the identification plate.

1,423,906. FLOWER RECEPTACLE. JOSEPHINE BESTTSCHNEIDER, St. Paul, Minn. Filed Feb. 23, 1922. Serial No. 538,666. 9 Claims. (Cl. 47—18.)

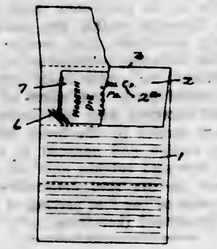
1. A flower holding device, comprising a liquid container, supports for bows on opposite sides of said container, bows mounted on said supports to incline outwardly to opposite sides thereof, said bows extending between said supports and adapted to loosely embrace the stems of flowers extending from said container to hold the stems in spaced order, the mounting of said bows including frictional pivotal connections, between the bows and said supports whereby to enable said bows to be swung toward each other and be frictionally held at various positions on said supports.

1,423,907. ELECTRIC CONTROLLING APPARATUS. FREDERIC H. BULLINGER, Yonkers, N. Y., assignor to Ward Leonard Electric Company, a Corporation of New York. Filed Aug. 18, 1917. Serial No. 186,863. 15 Claims. (Cl. 200—90.)



4. In a circuit controlling armature, a permeable member with an extension at one side, a resilient sheet metal member fastened to the permeable member and having an extension adjacent to the first mentioned extension and carrying a contact button, these two extensions having interengaging stops whereby the button may be moved over a definite limited range relatively to the permeable member, said sheet metal member having another extension on its opposite side adapted to be fastened to a fixed support and thus afford a hinge connection thereto for the permeable member and being further extended and bent around the permeable member and engaging the same to act as a retractile spring therefor.

1,423,908. ROBE FOR CHILDREN'S GOCARTS AND INVALID CHAIRS. EDITH RUSSELL CHURCH BURCHARD, Little Compton, R. I. Filed Apr. 6, 1922. Serial No. 550,249. 6 Claims. (Cl. 296—81.)

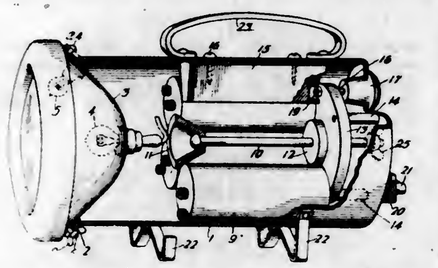


1. An adjustable robe having side openings substantially its whole length, combined with a foot-pocket made integral therewith, the upper edge of one of the portions of said robe forming a suitable case for the reception of a belt, and a belt for encircling the body contained in said case and freely removable therefrom.

1,423,909. KEY CASE. WARNER R. BUXTON, Longmeadow, Mass., assignor to Buxton, Incorporated, Springfield, Mass., a Corporation of Massachusetts. Filed May 20, 1920. Serial No. 382,866. 7 Claims. (Cl. 150—40.)

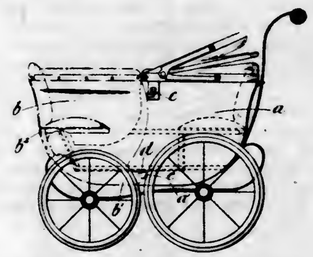
6. A case for keys and the like, comprising, a foldable supporting strip, a member secured thereto and affording a pivotal support, and a plurality of snap hooks pivotally supported from the latter in longitudinally spaced relation and for swinging movement into and out of the case in arc-like paths of substantially constant radius, each of said hooks comprising a member having one end so engaged with said support as to permit swinging movement and restrain radial movement of the hook relative thereto and having a part extending away from such end and at a distance therefrom bent backwardly upon itself and extending in substantially converging relation to said part until in abutment therewith, said backwardly bent portion being then bent away from said part and terminating at a short distance therefrom.

1,423,910. LETTER SHEET. HOWARD B. CAMPBELL, Erie, Pa. Filed Oct. 6, 1920. Serial No. 414,901. 11 Claims. (Cl. 120—74.)



4. A letter sheet having a letter head formed on the outer face of a fold extending downwardly from the top of the sheet and display matter arranged on the underside of the fold and at the top of the sheet next the fold whereby when the fold is turned back the matter on the fold continues on to the sheet.

1,423,911. PORTABLE ELECTRIC LANTERN. ALLEN D. CARDWELL, Rockville Center, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 27, 1920. Serial No. 384,534. 10 Claims. (Cl. 240—8.5.)



7. An electric lantern comprising a container having an open and a closed end, a battery mounted therein

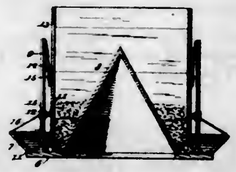
and spaced from the ends of said container, a headlight mounted within the open end of said container, and a tail light projecting through an opening formed in the closed

end of said container and fitted within the space between the closed end of said container and the adjacent side of the battery, and means for connecting said lights in circuit with said battery.

1,423,912. CONVERTIBLE PERAMBULATOR AND PUSH CHAIR. WALLACE ERNEST CARTER, Dover, England. Filed Apr. 10, 1922. Serial No. 551,350. 1 Claim. (Cl. 296—63.)

A convertible perambulator and push chair including in combination with the main body having a seat, a detachable foot section also having a seat adapted to rest on the front edge of the main body while the rearwardly projecting sides telescope within the main body, means for holding said detachable foot section in place consisting of catches including socketed parts carried by the main body adjacent the upper front edge thereof and hook portions carried by the rear edges of the detachable foot section and engaging with said socketed parts, and a transverse rod carried by the lower rear edge of the detachable foot section and adapted to engage beneath the main body, the said catches and rod cooperating to prevent the seat in the said detachable section from rocking on the edge of the foot section of the main body and becoming disengaged therefrom.

1,423,913. FUEL-SUPPLY APPARATUS FOR INTERNAL-COMBUSTION ENGINES. WILLIAM C. CARTER, St. Louis, Mo. Filed Dec. 16, 1918. Serial No. 266,908. 21 Claims. (Cl. 158—36.)



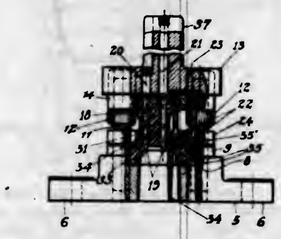
1. A fuel supply apparatus for internal combustion engines, comprising a diaphragm pump, a pipe communicating with the pressure chamber of the pump and with a means that creates pressure in said pipe intermittently, and automatic means for admitting air to said pipe to scavenge same when the engine is in operation.

1,423,914. ELECTRICAL ARC WELDING. JACK CHURCHWARD, New York, N. Y., assignor to Wilson Welder & Metals Company, Inc., a Corporation of New York. Filed Jan. 14, 1920, Serial No. 351,358. Renewed Feb. 3, 1922. Serial No. 533,981. 9 Claims. (Cl. 219—8.)

1. An electrode for electric arc welding composed of tungsten.

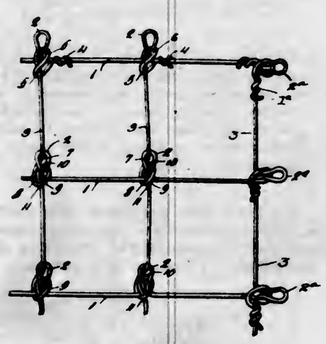
1,423,915. STOCK FEEDER. ARTHUR J. DAVIS, Cedar Rapids, Iowa. Filed Apr. 17, 1920, Serial No. 374,545. Renewed June 15, 1922. Serial No. 568,583. 4 Claims. (Cl. 119—53.)

1. In a stock-feeder, a continuous quadrangular trough, an inside pyramid to divert food thereto, standards adjacent to the corners of the pyramid, a magazine surrounding said pyramid and spaced away therefrom at the bottom, and flexible and adjustable means for suspending the magazine, connecting each corner thereof with an adjacent standard.



1,423,916. ONE-MAN AUTOMOBILE TOP. JAMES DAVIS, Gananoque, Ontario, Canada. Filed Apr. 18, 1921. Serial No. 462,293. 3 Claims. (Cl. 296—116.)

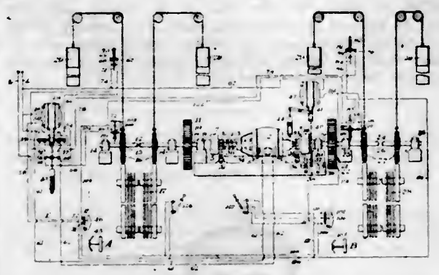
1. The combination with an automobile cover, of a back bow pivotally mounted at the lower end to an automobile, a bow pivotally mounted on the back bow intermediate of the length thereof, and formed with an internal apertured lug, a bracket on the said bow having lugs, a front bow having its inner end formed with a flanged extension, and T-shaped in cross section, levers connecting the flanged extension of the front bow to the said bracket lug, offset links pivotally mounted on one of the levers, the said links being provided with elongated slots, pins on the other lever engaging the slots, short bows carried by the links, and a pin on one of the levers designed to engage the apertured lug on the first said bow in collapsed position of the top.



1,423,917. PUNCH AND DIE SET. SIDNEY DIAMANT, New York, N. Y. Filed Apr. 23, 1921. Serial No. 464,045. 3 Claims. (Cl. 164—29.)

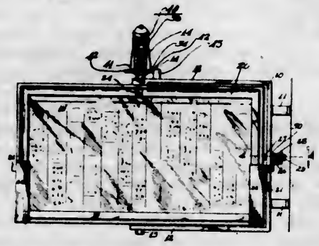
1. A punch and die set comprising a die holder, a die blank arranged upon said holder, a stripper plate adapted to be secured upon the die blank in superposed relation thereto, said die holder having spaced openings, a punch holder, liner pins carried by the punch holder and engaged in said spaced openings, a punch plate secured to the punch holder, a punch mounted in the punch plate and adapted to operate through the stripper plate, said stripper plate having a longitudinally extending recess in its bottom face through which the work piece is adapted to

be moved, an automatic stop lever pivotally mounted intermediate of its ends and having one end movable through the stripper plate and across said recess to limit the movement of the work piece in said recess and an adjustable screw carried by the punch holder to engage the other end of the lever and displace the same from its normal position to permit of the adjustment of the work piece in said recess.



1,423,918. BED-BOTTOM FABRIC. EDWARD DREFS, Milwaukie, Oreg. Filed Dec. 31, 1919. Serial No. 348,558. 1 Claim. (Cl. 245—8.)

A wire fabric embodying crossed wires, one of said wires being bent to provide a loop, a second wire threaded through the loop from one side thereof to the other to engage opposite sides of the loop, said second strand of wire being extended toward the mouth of the loop and bent to form a coil therearound, said second strand of wire being then extended over the first wire and through said coil between portions of the loop and coil to form a knot around the mouth of the loop to close the same.



1,423,919. AUTOMATIC GATE MECHANISM FOR ELEVATOR AND MINE SHAFTS. CHARLES DRUM, California, Pa. Filed Dec. 19, 1919. Serial No. 346,036. 14 Claims. (Cl. 187—52.)

6. An operating mechanism for a plurality of gates, for elevator cages, comprising a motor, means for driving one of said gates by the motor, means for driving another of said gates by the motor, circuit closing devices actuated by the cages for controlling the operation of the motor, means controlled by one of said circuit closing devices for operatively connecting the driving means for

one of said gates to the motor, and means for preventing the operation of said motor until after said connection has been made, substantially as described.

1,423,920. DEVICE FOR HOLDING ENGINEERS' TIME TABLES. VERN W. DUFF, Moberly, Mo. Filed Feb. 7, 1921. Serial No. 443,170. 6 Claims. (Cl. 40—105.)

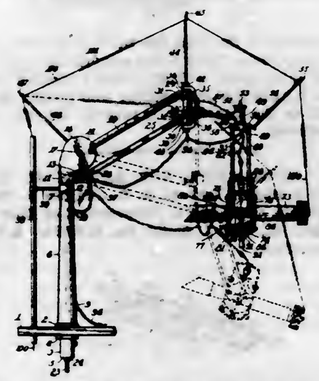
1. In a device of the class described, a bracket, a frame pivoted therein, one of said pivots comprising a pin rigidly secured to said frame, a lamp bracket pivoted on said pin, means for frictionally engaging said bracket and said pin so that as the said frame is rotated, the said bracket will be rotated.

1,423,921. MOLD GUIDE FOR ARTIFICIAL TEETH. CHARLES J. DUFFY, Yonkers, N. Y., assignor to The Dentists' Supply Company, a Corporation of New York. Filed Aug. 11, 1919. Serial No. 316,524. 5 Claims. (Cl. 211—34.)

2. The invention according to claim 1, wherein the detachable teeth supporting frames are hinged in parallel relation at a distance apart, so as to avoid direct contact but sufficiently close that the artificial teeth carried on the blocks of one supporting frame will overlap and rest upon the next adjacent supporting frame, whereby said teeth are fully exposed to inspection.

1,423,922. PROCESS FOR THE MANUFACTURE OF BRASS. PAUL DUTOIT, Lausanne, Switzerland, assignor of one-third to Alexis Boever, Lausanne, Switzerland. Filed Sept. 10, 1919. Serial No. 322,924. 3 Claims. (Cl. 75—1.)

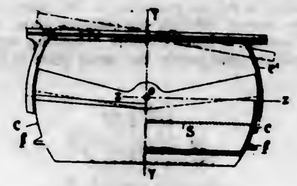
1. The hereinbefore described process of manufacturing brass from raw elements, consisting in raising the



temperature of a salt sufficiently to make the same a molten mass, and introducing into the molten mass of salt in relatively small quantities at a time the raw materials in order that the heat of the molten salt bath may be utilized in melting the metal, the density of the salt being intermediate that of the raw elements and the slags thereof, whereby the metal is retained in the bath and the slags rise to the surface thereof.

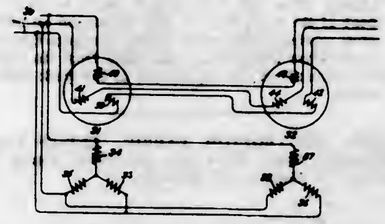
1,423,923. DIVING APPARATUS. JAMES CLENDENIN ECKERT, Jr., Stamford, Conn. Filed Apr. 28, 1921. Serial No. 465,306. 3 Claims. (Cl. 61—70.)

1. In a diving apparatus of the kind herein described, a valve adapted for use and connection with the flexible tubing between the floating air vessel and the diver, comprising a receptacle with two partitions having valves therein opening away from the inlet at the top which is adapted for connection with the floating air vessel, the bottom of said receptacle containing perforations and a side outlet between said two partitions.



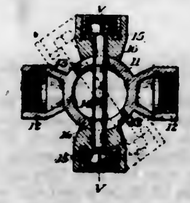
1,423,924. ADJUSTABLE X-RAY-TUBE HOLDER. EDWIN L. EDWARDS, Indianapolis, Ind., assignor to Edwards X-Ray Corporation, Indianapolis, Ind., a Corporation of Indiana. Filed Mar. 20, 1920. Serial No. 367,301. 15 Claims. (Cl. 250—34.)

1. An X-ray tube holder including an arm, a hanger head connected to the arm and having four pivots on one and the same horizontal plane thereon, four hanger rods connected to and extending downward from the pivots respectively, and an X-ray tube frame provided with four pivots on one and the same horizontal plane and supported by the lower portion of the hanger rods respectively.



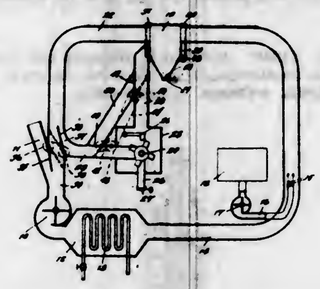
1,423,925. RECEIVER AND STENCH TRAP FOR SEWERS. JEANTY ETCHEBERRIGARAY, Biarritz, Basses-Pyrenees, France. Filed Mar. 30, 1921. Serial No. 456,932. 3 Claims. (Cl. 182—19.)

1. In a sewer mouth, a basin, a longitudinal partition in said basin, ears on the outer face of said basin adapted to be engaged in the masonry, a cover, also provided with a partition, said partitions being secured together by



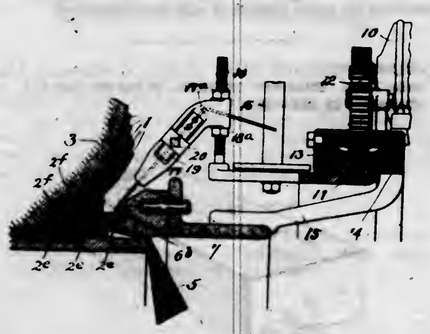
means of a bolt, and a perforated plate covering the sewer top.

1,423,926. VOLTAGE-REGULATING SYSTEM. GIUSEPPE FACCIOLI, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 31, 1921. Serial No. 497,232. 3 Claims. (Cl. 171—119.)



1. In combination, an alternating current circuit and voltage regulating means therefor comprising a plurality of induction regulators having interconnected windings and independently rotatable rotors so that voltages varying in magnitude and phase are produced in said circuit by varying the relative positions of the rotors of said induction regulators.

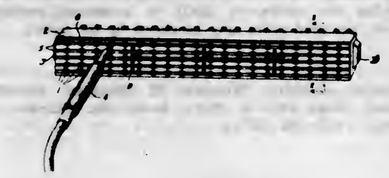
1,423,927. FITTING FOR RAILINGS AND THE LIKE. ANDREW FALK, Pittsburgh, Pa., assignor of three-tenths to Michael Pfaff, Homestead, Pa. Filed May 31, 1919. Serial No. 300,910. 4 Claims. (Cl. 287—54.)



1. An adjustable fitting device for inclined railings and the like, comprising a hollow body portion having a socket member integral therewith and having a slot for the attachment of an adjustable socket member, an adjustable socket member, and a T-shaped bolt extending from the adjustable socket member through the slot and having its head received in the hollow body portion, the head of the bolt being oblong and longer than the width of the slot, and the inside of the body portion at the sides of the slot being formed to engage the ends of the bolt head and prevent it being turned, substantially as described.

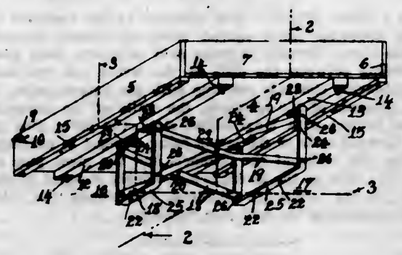
1,423,928. DRYING PROCESS AND APPARATUS. CROSBY FIELD, Washington, D. C., assignor to Chemical Machinery Corporation, New York, N. Y. Filed Jan. 21, 1919. Serial No. 272,287. 5 Claims. (Cl. 127—9.)

1. In a drying apparatus, a conduit, means for supplying a heated drying medium to said conduit, means for spraying the material to be dried into the drying medium, a primary collector for the dried material interposed in said conduit, a secondary collector connected to said conduit in spaced relation to the primary collector, and optionally operable means for either recirculating the drying medium through said conduit and the primary collector, but not through the secondary collector or for directing the drying medium through the secondary collector.



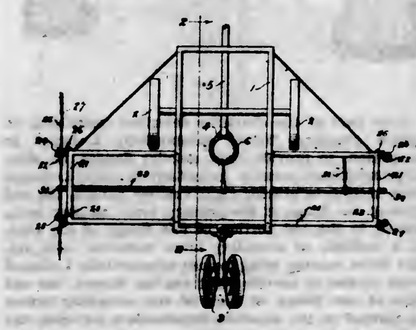
1,423,929. METHOD OF AND APPARATUS FOR FORMING A TIRE BEAD. WILLIAM G. FORDING, Cleveland, Ohio, assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed June 19, 1916. Serial No. 104,391. Renewed Mar. 20, 1922. Serial No. 545,345. 21 Claims. (Cl. 154—14.)

1. The method of forming a tire bead which comprises winding a plurality of turns or convolutions of bead-forming material in an annular space of a partially formed tire carcass while the latter is being built up on a tire-forming core.



1,423,930. TELEPHONE SWITCHBOARD APPARATUS. BRUCE FARIES, Bogota, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 28, 1920. Serial No. 406,982. 2 Claims. (Cl. 179—91.)

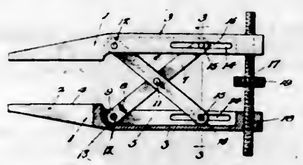
1. A test block comprising a plurality of parallel rows of conductive bars placed side by side, each conductive bar terminating at one end in a grooved contact face, and at the other end terminating in a lug adapted to receive conductor wiring; and a block of insulating material in which said bars are insulatingly imbedded said block being



provided with a groove for each row of conductive bars, said groove registering with the grooves in the contact faces of the said conductive bars in each such row.

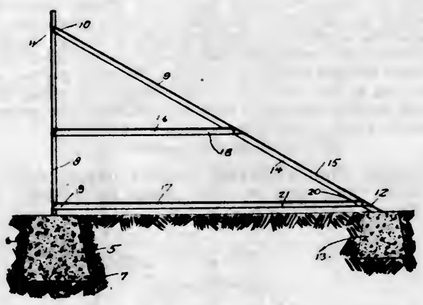
1,423,931. TRUCK ATTACHMENT FOR AUTOMOBILES. DANIEL J. FUHARR, Leanna Township, Logan County, Ill. Filed Feb. 23, 1922. Serial No. 538,727. 1 Claim. (Cl. 296—28.)

A truck attachment comprising a box-like body; two parallel longitudinal sills and two marginal longitudinal battens fixed on and strengthening the body; a relatively narrow leg comprising a horizontal member provided with holes to receive attaching bolts, and vertical members secured on one sill; a relatively wide leg comprising a horizontal member provided with holes to receive attaching bolts and vertical members secured on the other sill; crossed straight braces connecting one vertical member of each leg on one side; and crossed braces connecting the other vertical member of each leg and curved to accommodate a can or the like.



1,423,932. CORN PLANTER. PERRY I. GARNER, Eureka, Kans. Filed July 30, 1920. Serial No. 400,061. 1 Claim. (Cl. 221—121.)

In a planter, a seed box, a seed plate pivoted thereto, a spring for normally retaining said seed plate in a closed

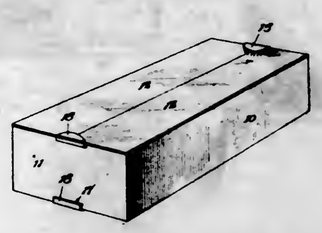


position, an oscillatory shaft, means connecting said shaft and said seed plate for operating the latter, and a coiled spring connected to the shaft and planter for returning the oscillatory shaft to a normal position whereby the seed plate may be closed by its spring.

1,423,933. CLAMP. WILLIAM C. HEATLIE, Beverly, Mass. Filed July 6, 1921. Serial No. 482,864. 1 Claim. (Cl. 144—297.)

In a clamp, a pair of jaw members having channels in their opposing sides, spaced pairs of crossed pivoted toggle levers disposed between said members, pivot pins extending between the ends of the levers and provided with bearing elements coacting with the bottom walls of the channels of the members, the walls of the channels being formed with longitudinal slots, the pivot pins at the forward ends of the levers being engaged in openings in the side walls of the channels and the pivot pins at the rear ends of the levers being slidably engaged in the slots in the respective channels, and means for relatively adjusting the said jaw members.

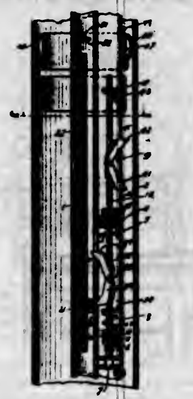
1,423,934. FENCEPOST. WILLIAM P. HECKLER, Napoleon, Ohio. Filed May 14, 1921. Serial No. 469,545. 1 Claim. (Cl. 189—31.4.)



A fence post of the character described comprising an elongated standard formed substantially L-shaped in cross section, to provide right angular flanges, an elongated primary brace member formed substantially L-shaped in cross section to provide right angular flanges, the end portion of one flange of the primary brace member being connected to the end portion of one flange of the standard, a multiple of secondary brace members, each secondary brace member being formed substantially L-shaped in cross section to provide right angular flanges, one end portion of one flange of each of the secondary braces being pivoted to the standard intermediate its ends, the opposite end of said flange of the secondary braces being beveled and detachably connected to the primary brace, the remaining flange of each of the secondary braces having one end thereof engaged with the remaining flange of the primary brace to prevent relative movement of the secondary braces and primary brace, said secondary braces being detachable from the primary brace to permit movement of the primary brace and secondary braces substantially into parallel relation with the standard.

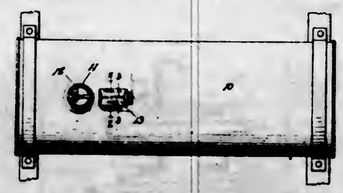
1,423,935. PUMP. RICHARD F. HOPKINS and ORIAN F. DEVOLLD, Bartlesville, Okla. Filed Oct. 24, 1921. Serial No. 509,931. 4 Claims. (Cl. 103—80.)

1. In a pump for oil wells, an outer casing, a working barrel arranged in the lower portion thereof, a traveling tube mounted therein, valves arranged in said barrel and tube, and a floating tube arranged in said casing and surrounding the upper portion of said working barrel.



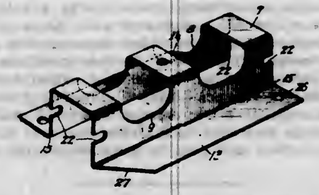
1,423,936. STORAGE FILE. SAMUEL C. HUFFMAN, Lincoln, Nebr. Filed Feb. 26, 1921. Serial No. 447,914. 3 Claims. (Cl. 229—47.)

1. A storage file including a box body having a closure flap and provided in a wall thereof with a slot, and a substantially U-shaped clip having one wing thereof extending through said slot and the other wing thereof overlying said flap securing the flap closed, the clip being freely removable bodily to release said flap.



1,423,937. TUBING BLEEDER. GEORGE C. IRONS, McKittrick, and ALBERT LARSON, Bakersfield, Calif. Filed Aug. 8, 1921. Serial No. 490,760. 4 Claims. (Cl. 103—60.)

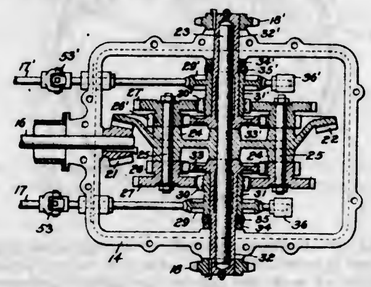
1. Valve actuating means, comprising a stationary element, a valve stem and sliding means mounted in opposite sides of the stationary element and means associated with the valve-stem adapted to be engaged by the sliding means



for actuating the valve and to be disengaged from the sliding means by the stationary element.

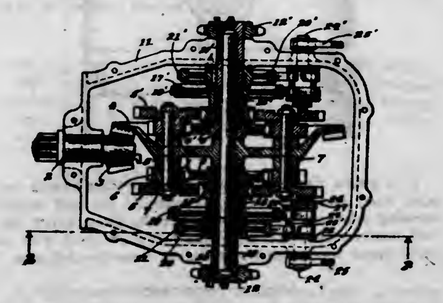
1,423,938. NUMBER PLATE FOR MOTOR-VEHICLE FUEL TANKS. NICHOLAS W. JACOBS, Stanton, Nebr. Filed May 6, 1921. Serial No. 467,443. 3 Claims. (Cl. 40—20.)

1. In a device of the character described, a plate, and fastening means coacting with the plate at one side thereof, the plate being provided with an opening entering through its opposite side whereby means may be introduced through the plate to coact with said fastening means for locking the plate upon the fastening means.



1,423,939. PLASTER-BOARD SUPPORT. MARVIN H. JESTER, Philadelphia, Pa. Filed Feb. 2, 1920. Serial No. 355,866. 10 Claims. (Cl. 72—122.)

1. A plaster board support comprising a series of clip members arranged in spaced relation, each provided with plaster board supporting clips, and a series of wire loops, each embracing two of said members to maintain the members in definite spaced relation.

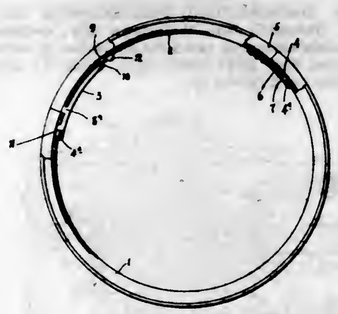


5. A plaster board support, comprising a channel-shaped member provided with laterally extending flanges, said flanges being free from the walls of said member throughout a portion of their length permitting said free portions to be folded upon the remaining portions into plaster board supporting position.

1,423,940. DIFFERENTIAL TRANSMISSION MECHANISM. GEORGE C. JETT, Watertown, Wis., assignor, by mesne assignments, of two-fifths to Walter H. Stiemke, Milwaukee, Wis. Filed June 8, 1918. Serial No. 238,977. 38 Claims. (Cl. 180—17.)

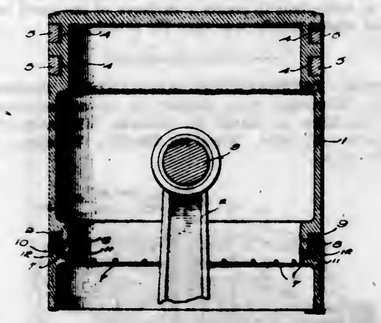
1. In a vehicle, the combination with a power plant and a pair of driven members, of a differential transmission comprising main and auxiliary drive mechanisms delivering power to said members and provided with means whereby said mechanisms are capable of being simultaneously or independently actuated to increase or decrease the common rate of speed of said driven members, when the vehicle is moving in a straight line, said auxiliary mechanism consisting of gearing sets adapted when independently actuated by said plant to create a variance in the speed ratios of said driven members to turn the vehicle.

1,423,941. DIFFERENTIAL MECHANISM. GEORGE C. JETT, Milwaukee, Wis., assignor, by mesne assignments, of two-fifths to Walter H. Stiemke, Milwaukee, Wis. Filed Oct. 31, 1918. Serial No. 260,581. 7 Claims. (Cl. 180—17.)



1. In a driving mechanism the combination of a driving means, a driven shaft, differential mechanism between said driving means and said driven shaft, including a rotatable member and means for controlling the rotation of said member, means for controlling the rotation of said shaft, and a single means for controlling both of said controlling means.

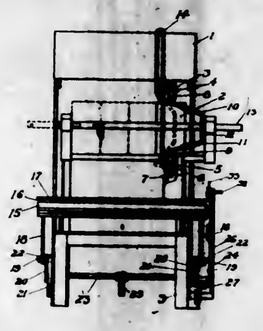
1,423,942. DEMOUNTABLE TIRE RIM. JOSEPH H. JONES, Cleburne, Tex. Filed Sept. 18, 1919. Serial No. 324,525. 1 Claim. (Cl. 301—31.)



A demountable tire rim, comprising a main circular portion, a segment, and a link member; said circular portion

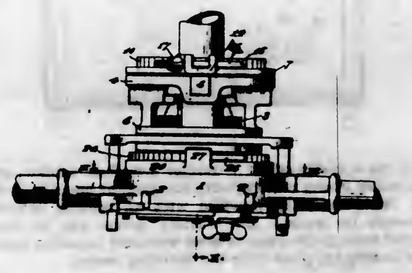
having a socket on each end with a lip overhanging the socket; said segment having an arm projecting from one end and provided with an angular flange adapted to be conformably received into and engage with one of said sockets on the circular portion; the opposite end of the segment

having a socket with an inwardly extending recess and a socket set inwardly therefrom; said link having angular projections on each end and an intermediate projection, said projections adapted to be conformably received into the sockets in the rim and segment and means for locking the link and segment in position.



1,423,943. PISTON RING. THOMAS B. JONES, Turlock, Calif. Filed May 25, 1921. Serial No. 472,833. 2 Claims. (Cl. 74—109.)

1. A piston ring comprising a body portion having parallel front and rear walls and parallel top and bottom forming relatively sharp corners at the inner upper edge and lower outer edge, said ring being provided with an outer upper beveled edge and a lower inner beveled edge.

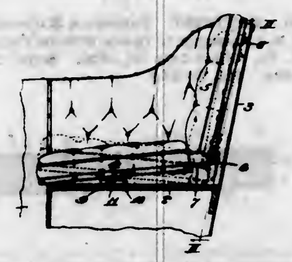


1,423,944. CAN-FILLING APPARATUS. WILLIAM L. JONES, Gallipolis, Ohio. Filed Jan. 23, 1918. Serial No. 213,302. 3 Claims. (Cl. 226—127.)

1. Apparatus for filling cans comprising a main reservoir, a plurality of intermediate feed tanks positioned directly below said reservoir, a delivery nozzle for each feed tank, a separate inlet nozzle connecting each intermediate tank with said reservoir, valves controlling the said nozzles whereby when one set of nozzles is closed the other set is open, and a vent pipe extending from each intermediate tank to a point above the highest liquid level in said main reservoir and having its inlet end terminating immediately below the delivery nozzle of each intermediate tank and of such construction in relation to said delivery nozzle that it will enter the receptacle to be filled, whereby the filling of said receptacle will finally bring about cutting off of the intermediate tank

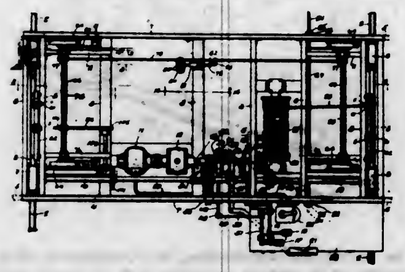
from the atmosphere which will be immediately followed by a complete cessation of flow to the said receptacle by the covering of the end of the said delivery nozzle.

1,423,945. DIESTOCK. JOSEPH KONIGSBERG, New York, N. Y., assignor to Lena Konigsberg, New York, N. Y. Filed Aug. 24, 1920. Serial No. 405,574. 7 Claims. (Cl. 10—123.)



4. The combination with a stock having a leader screw, of one centering device located at a distance from the cutting chasers, said device comprising a plurality of radially movable blocks having a common operating means, said means being controlled by a ratchet and pawl connection for maintaining said blocks in a relatively fixed position, and another centering device carried by the leader screw located in close proximity to the cutting chasers and between the first named device, said intermediate device comprising a plurality of swingingly movable arms having a common operating means, said means being controlled by a ratchet and pawl connection for maintaining said arms in a relatively fixed position.

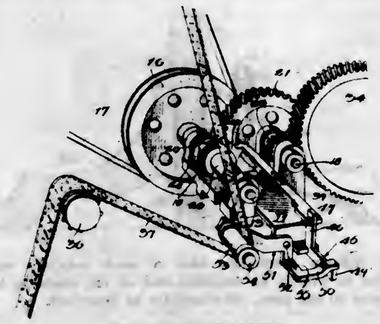
1,423,946. SHOCK ABSORBER. JOSEPH KONIGSBERG, New York, N. Y., assignor to Lena Konigsberg, New York, N. Y. Filed May 14, 1921. Serial No. 469,897. 2 Claims. (Cl. 155—6.)



1. In an automobile, fixed seat and back supports, a seat, a rocking connection between the bottom of the seat and the top of the support spacing the seat from the support, the engagement of front and back portions

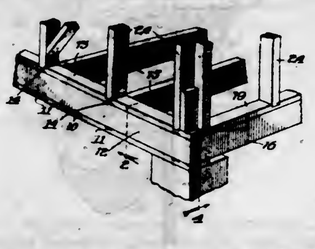
of the bottom of the seat with its support serving to limit the rocking movement of the seat, a back connected at its bottom to the back of the seat, and an antifriction

connection between the top of the back and its support whereby a combined rocking and vertically reciprocating movement is imparted to the back by the rocking of the seat.



1,423,947. POWER TRUCK. JULIUS KRAMER, FRED O. KUEHNS, Jr., and WALTER H. KOPPLIN, Chicago, Ill., assignors to Pullman Davenport and Upholstered Furniture Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 19, 1922. Serial No. 530,272. 8 Claims. (Cl. 105—177.)

1. A transfer truck having two sets of wheels arranged to travel on separate tracks respectively which are disposed at an angle, and means for adjusting the elevation of one of said sets of wheels relative to the car body, the said one set of wheels being mounted on vertically movable parallel axes, and links being provided for each of the movable axes, said links each having one end secured by a pivot which is stationary relative to the truck frame, and the other end being attached to the corresponding movable axis, and rotary lifting means arranged to coact between the movable ends of said links respectively and the frame of the truck.



1,423,948. AUTOMATIC STOP FOR MOVING-PICTURE MACHINES. JAMES BERNARD KERN, Cameron, W. Va. Filed Aug. 8, 1921. Serial No. 490,630. 8 Claims. (Cl. 88—17.)

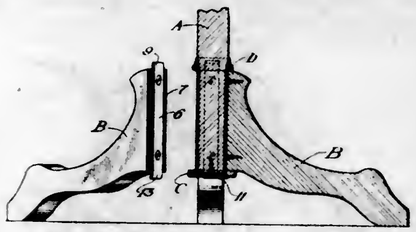
1. An automatic stop for motion picture machines comprising a shaft, a clutch section mounted thereon, a longitudinally movable arm having a fork engaging said clutch section, a bell crank engaged with said arm and a film engaging member detachably engaged with said

crank and adapted to swing the same on its pivot when the tension on the film exceeds a predetermined point.

1,423,949. BUILDING CONSTRUCTION. EDWARD A. LAUGHLIN, Port Arthur, Tex. Filed Feb. 2, 1921. Serial No. 441,724. 8 Claims. (Cl. 20—1.)

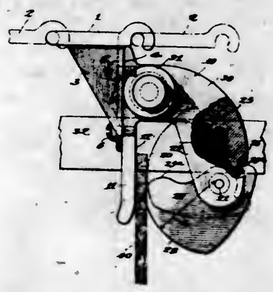
1. In a building construction, sills notched at regular intervals on their upper faces, plates notched at corresponding and registering regular intervals on their lower faces, and joists embraced at their ends in the respective pairs of notches thereof.

1,423,950. ANTIFRICTION BALL OR ROLLER BEARING. KARL OSKAR LJUNG, Stockholm, Sweden, assignor to Nordiska Kullager Aktiebolaget, Gottenborg, Sweden. Filed Nov. 3, 1919. Serial No. 335,460. 4 Claims. (Cl. 64—36.)



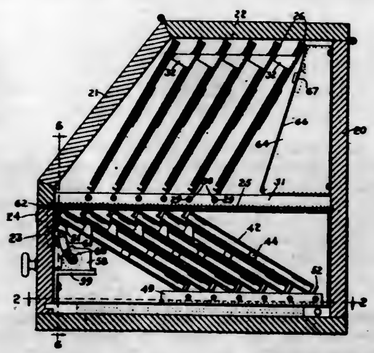
1. The combination with antifriction ball or roller bearing, of means for rendering said bearing resilient including a surrounding supporting ring provided with inwardly directed yielding flanges, said flanges sloping relatively to the side surfaces of the race ring so as to form hollow spaces between the flanges and the adjacent surfaces of the outer race ring.

1,423,951. PEDESTAL. JOHN LUETS, Chicago, Ill. Filed Oct. 22, 1921. Serial No. 509,667. 2 Claims. (Cl. 155—138.)



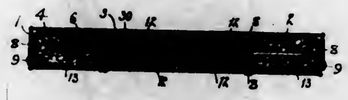
1. In combination, a recessed base, a lug, and a connection therebetween comprising a plate secured to the

leg and adapted to lie freely within the base recess, and two members carried by the base, one stationary and the



other slidable thereupon, each of said members being adapted to overlie an opposite end of the plate to lock the same to the base, substantially as described.

1,423,952. PAPER-CONVEYING MECHANISM. JAMES D. MCCRACKEN, Cincinnati, Ohio, assignor to The United States Playing Card Company, Norwood, Ohio, a Corporation of Ohio. Filed June 9, 1921. Serial No. 476,332. 7 Claims. (Cl. 271—79.)



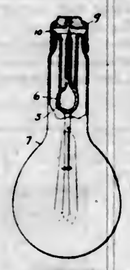
1. A unit carrier link, comprising a detachable link section, a housing detachably secured to said link section, and gravity-actuated clamping means carried by said housing.

1,423,953. CREDIT-ACCOUNT REGISTER. HAAKON A. MARTIN, Christiania, Norway, assignor to The National Cash Register Company, Dayton, Ohio. Filed Apr. 8, 1916, Serial No. 89,774. Renewed Sept. 26, 1919. Serial No. 326,557. 28 Claims. (Cl. 45—2.)

1. A filing device comprising two series of corresponding filing units movable independently of each other, locking means for rendering one of said series inaccessible, and the two series arranged whereby the inaccessible units are visible singly only when the corresponding accessible unit is exposed.

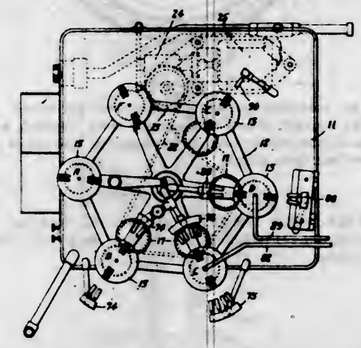
1,423,954. MATTRESS. FREDERICK MAUSANER, Collingswood, N. J., assignor to Henry Wilhelm Company, Pittsburgh, Pa. Filed July 10, 1920. Serial No. 395,824. 2 Claims. (Cl. 5—13.)

1. A mattress or the like comprising, a casing divided into sections each of which forming a compartment, said sections adapted to be arranged edge to edge, one of said compartments being a multiple of a smaller compartment, removable filling portions arranged in superimposed layers within each compartment, and said filling layers adapted to be interchangeable by placing the upper and lower filling layers of the smaller compartment in the same plane to form an upper or lower filling layer for the larger compartment and by placing an upper or lower filling layer of the larger compartment in different planes within the smaller compartment to form upper and lower filling layers.



1,423,955. AUTOMOBILE LOCK. STANLEY G. MILLER, Chatham, Ontario, Canada. Filed May 28, 1921. Serial No. 473,289. 1 Claim. (Cl. 70—128.)

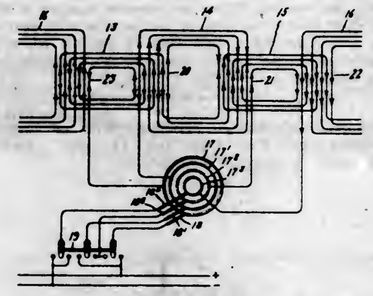
In a lock for automobiles, the combination with a support, of a padlock provided with a shank and a shackle, the latter adapted to embrace a controlling member of the automobile to be locked, a hinge operatively connecting the shank and the support, whereby the shank may assume a substantially perpendicular position adjacent the face of the support, a spring member substantially U-form having its transverse portions engaged with the shank and the extremities of its arms engaged with said support, the arms of the spring member having at their substantially intermediate portions spring coils operatively connected to the hinge pins of the hinge for holding the shank in a substantially perpendicular position adjacent the stationary part of the automobile, when the shackle of the padlock is disengaged from said controlling member.



1,423,956. TIPLESS INCANDESCENT LAMP AND SIMILAR ARTICLE. LOUIS EDWIN MITCHELL and ARTHUR JAMES WHITE, Cleveland, Ohio, assignors to General Electric Company, a Corporation of New York. Filed Mar. 20, 1919. Serial No. 283,801. 24 Claims. (Cl. 176—86.)

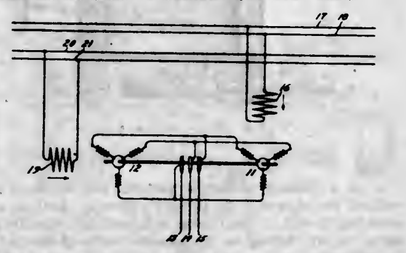
1. The method of glass working which comprises inserting a glass tube into another hollow glass body, applying heat to cause the formation of a solid glass mass closing off the tube and glass body and then forming a

passage extending entirely through said mass and communicating with the passage in said tube.



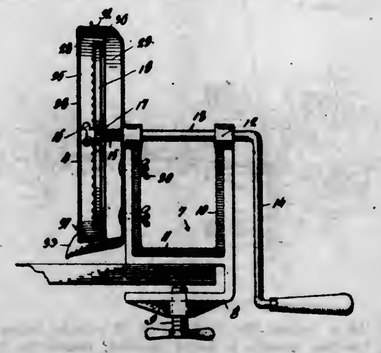
1,423,957. STEM-MAKING MACHINE. LOUIS EDWIN MITCHELL and ARTHUR JAMES WHITE, Cleveland, Ohio, assignors to General Electric Company, a Corporation of New York. Original application filed Mar. 20, 1919, Serial No. 283,801. Divided and this application filed June 24, 1920. Serial No. 391,503. 18 Claims. (Cl. 49—2.)

8. In a machine for making parts for lamps and similar articles, the combination of a rotatable carrier, a rotatable head thereon for supporting tipless stem parts comprising means for supporting a stem tube, means for supporting an exhaust tube within said stem tube, means for supporting leading-in wires between said exhaust tube and said stem tube and means for supporting a glass rod with an end thereof aligned with the ends of said stem tube and said exhaust tube, means for rotating said head, means for fusing the aforesaid parts at their aligned ends, means for clamping the fused mass thus produced to form a seal about the leading-in wires, means for fusing said tubes adjacent to said seal, and means for directing a flow of gas into the open end of said exhaust tube to expand and form an aperture in said fused portion.



1,423,958. DYNAMO-ELECTRIC MACHINE. ALBERT H. MITTAG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 29, 1920. Serial No. 369,483. 2 Claims. (Cl. 172—274.)

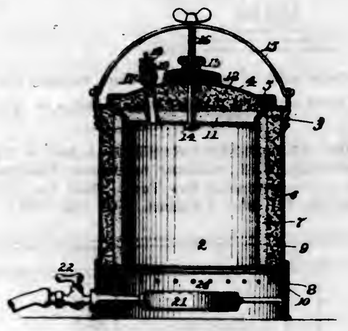
2. In a dynamo electric machine, a field member comprising a magnetic core n, distributed exciting winding adapted to be supplied from a source of direct current and arranged in slots in said core, each of said slots carrying conductors belonging to adjacent exciting windings, means for reversing the direction of current flow



in alternate pairs of exciting windings, whereby the number of poles produced may be made either n or $\frac{n}{2}$.

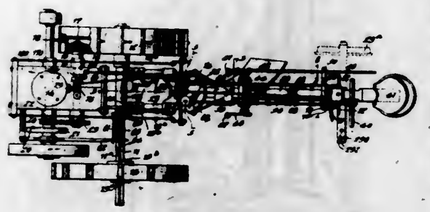
1,423,959. FREQUENCY CHANGER. ALBERT H. MITTAG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 29, 1920. Serial No. 377,695. 7 Claims. (Cl. 172—281.)

2. In a frequency changer, in combination, a pair of single phase induction motor elements comprising a pair of parallel connected secondary members, primary members cooperating therewith, said secondary members being relatively movable as a unit with respect to the primary members, means for supplying said primary members with dephased currents and taps from the connections of said secondary members for supplying an external load.



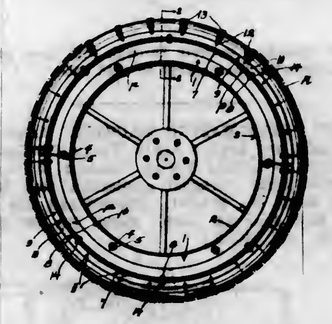
1,423,960. VEGETABLE CUTTER. ANDREY I. MOHNACS, Passaic, N. J. Filed Jan. 28, 1922. Serial No. 532,380. 2 Claims. (Cl. 146—11.)

2. A vegetable cutter comprising an attaching device including a bearing, a shaft journalled therein, a cutting



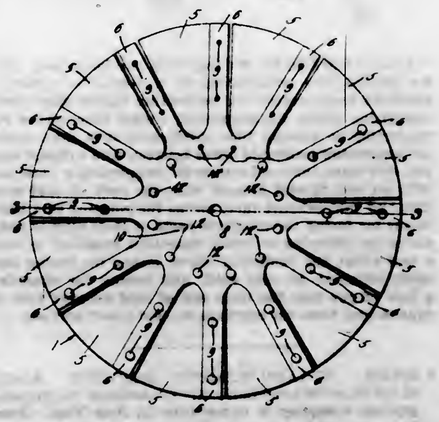
element carried by the shaft, a casing enclosing the cutting element and consisting of front and rear detachable concentrically arranged guards fitting one within the other, the rear guard having a central opening to fit upon the shaft and being secured to the attaching device, and one guard having a feed opening therein whereby the vegetables can be pressed into engagement with the cutting element.

1,423,961. COOKING UTENSIL. WILLIAM J. MURPHY, Philadelphia, Pa. Filed Oct. 14, 1918. Serial No. 258,003. 2 Claims. (Cl. 126—39.)



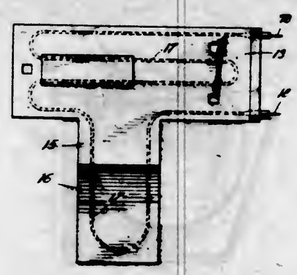
1. In a cooking utensil, a portable pot having a metal bottom unobstructed so as to be directly heated, a surrounding jacket of fixed form composed of refractory material tightly fitting to the outside walls of the pot, and an enclosing outer metal casing having a non-conducting packing extended about the refractory jacket, the said casing secured to the pot and mechanically holding the refractory jacket against downward displacement, combined with a hollow lid making a tight closure to the pot and also provided with heat non-conducting materials, and separate means carried by the pot to positively clamp the lid tightly in place, whereby a steam pressure may slowly build up within the pot after the same has been quickly heated and removed from the fire.

1,423,962. TRACTOR. FRED C. OLIN, Buffalo, N. Y. Filed May 15, 1920. Serial No. 381,620. 15 Claims. (Cl. 180—12.)



1. In a tractor, the combination of a main frame having traction wheels, a motor thereon, means for transmitting power from the motor to the traction wheels including a clutch, a supplemental frame pivotally connected to said main frame, and means for operating said clutch including an actuating member carried by the main frame and having its axis arranged eccentric to the pivot of said main frame and supplemental frame, said actuating member being capable of a rotary and sliding movement and controlled from said last-named frame, the axis of the pivotal connection between the main and supplemental frames and the axis of the actuating member being parallel and vertical.

1,423,963. ANTISKID DEVICE. THOMAS J. O'NEIL, Pittsburgh, Pa. Filed Nov. 25, 1921. Serial No. 517,562. 3 Claims. (Cl. 152—14.)



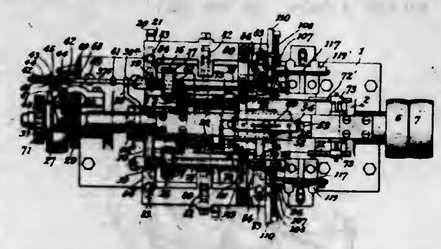
3. In combination with an automobile wheel, plates secured to said wheel at opposite sides thereof, arcuate strips detachably secured to said plates, and cross chains connecting said strips.

1,423,964. FAN WHEEL. RICHARD W. OSWALD, Pittsburgh, Pa. Filed July 13, 1921. Serial No. 484,475. 4 Claims. (Cl. 170—158.)

1. A fan wheel comprising like disks provided with arms and with blades projecting from the arms, the disks being placed together, to bring the arms into alinement; and means for connecting the disks.

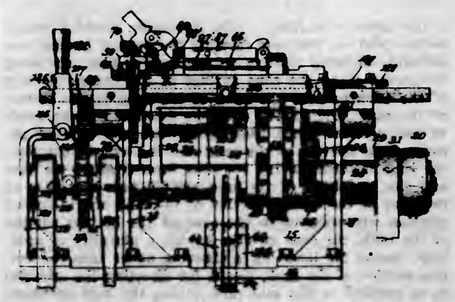
1,423,965. TRACK SWITCH. JASON PAGE, Evanston, Ill. Filed Dec. 24, 1921. Serial No. 524,572. 4 Claims. (Cl. 246—428.)

3. A slide plate for track switches comprising a body portion adapted to form a rail bearing, a lateral wing portion, and an electrical resistance element embedded therein and adapted to heat said slide plate.



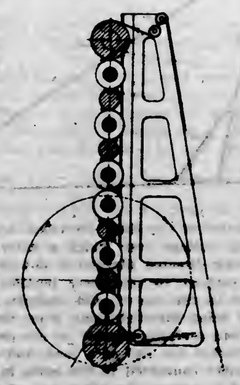
1,423,966. VALVE. NICHOLAS PALMAFFY, West Orange, N. J. Filed May 14, 1919. Serial No. 297,080. 3 Claims. (Cl. 251—27.)

1. In a valve, a casing having a bore terminating at one of its ends in an elongated valve seat and a laterally extending outlet passage communicating with said seat, and a hollow conical valve member normally held upon said seat solely by fluid pressure acting against the inner surfaces of the valve walls, the walls of said conical valve member being imperforate and spaced from said seat when the valve member is in open position to permit passage of the fluid into the outlet, said imperforate wall extending circumferentially over the end of the outlet passage and closing the same when the valve is in its normal position.



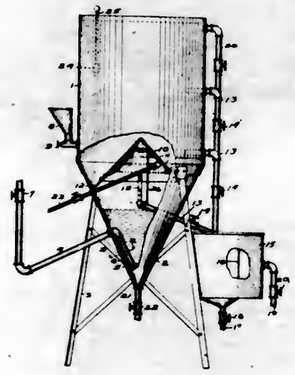
1,423,967. COMB-CUTTING MACHINE. HERMAN SCHELHAMMER, Whitestone Landing, N. Y., assignor to American Hard Rubber Co., New York, N. Y., a Corporation of New York. Filed July 1, 1921. Serial No. 481,767. 12 Claims. (Cl. 144—26.)

1. In a comb cutting machine, cutters for forming teeth in a comb blank, means for feeding said cutters longitudinally of said blank, and means for reversing the longitudinal feed of said cutters on the completion of the cutting operation comprising a reversing clutch, and



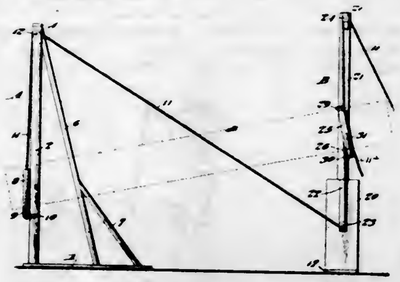
means operatively connecting said longitudinal feed means to said clutch.

1,423,968. COMB-CUTTING MACHINE. HERMAN SCHELHAMMER, Whitestone Landing, N. Y., assignor to American Hard Rubber Co., New York, N. Y., a Corporation of New York. Filed Sept. 7, 1921. Serial No. 499,001. 17 Claims. (Cl. 144—26.)



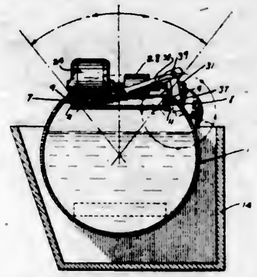
1. In a comb cutting machine, a cutter for cutting teeth in a comb blank, an oscillatory cutter carrying frame, a stop on said frame, and an H-shaped gauge plate arranged to allow said stop to clear the legs thereof during the cutting of said teeth, and to cause said legs to engage said stop for preventing further oscillation of said frames on the completion of the cutting operation.

1,423,969. MULTIPLE-ROLL SUPERCALENDER. CARL SCHURMANN, Dusseldorf, Germany. Filed Aug. 29, 1921. Serial No. 496,686. 3 Claims. (Cl. 92—73.)



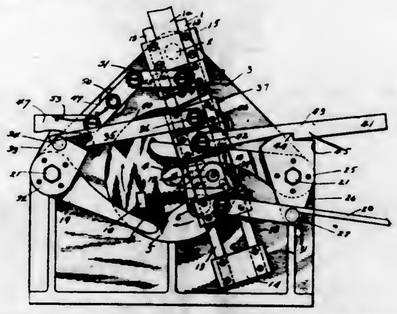
1. In a multiple roll calender an elastic terminal roll disposed below or at the top, or both below and at the top.

1,423,970. GASOLINE PURIFIER. WILLIAM J. SEDELBAUER, Toledo, Ohio. Filed Dec. 22, 1921. Serial No. 524,125. 1 Claim. (Cl. 210—58.)



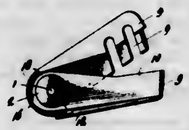
In a gasoline purifier, a tank having an inverted conical bottom portion, the cone forming the bottom having considerable altitude relative to its base, a pipe extending downward along the cone surface of the bottom portion of the tank to near the apex of the cone of the bottom of the tank, and having openings extending at an angle to the vertical plane passing through the axis of the cone of the bottom of the tank and the axis of the pipe, the cone member having its apex located above its base and the periphery of its base located near the base of the cone of the bottom portion of the tank and in spaced relation with respect to the cone of the bottom portion of the tank, the cone member having a plurality of openings, means for inserting a cleaning agent into the bottom portion of the tank, means for directing the material to be purified to the said pipe having the said openings, and means for drawing off the liquid at different levels.

1,423,971. HOISTING APPARATUS. CURTIS E. SMITH, St. Joseph, Mo. Filed Sept. 15, 1921. Serial No. 500,888. 6 Claims. (Cl. 254—139.)



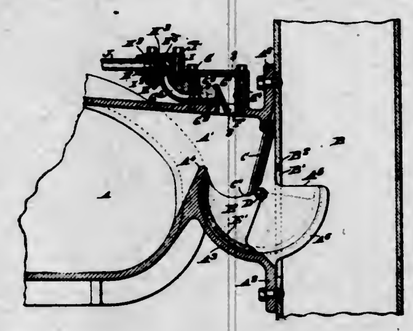
1. In a device of the class described, spaced supports provided with pulleys over which a cable is entrained, the cable being directed diagonally downward from the top of one support to the lower portion of the other support, then to the top of said support, the free ends of the cable being directed away from the tops of the supports, a load carrying member on one end of the cable adapted to engage one end of a load, and a second load carrying member connected to the cable intermediate its ends, adapted to engage the other end of the load, said cable moving both ends of the load simultaneously when one end of the load is moved in a predetermined direction.

1,423,972. WASHING MACHINE. ANDREW SORENSEN, Oakland, Calif. Filed June 16, 1921. Serial No. 477,966. 3 Claims. (Cl. 74—14.)



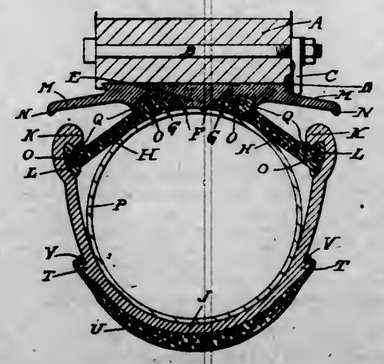
1. In a motor driven device a pivotally mounted element, a vertical arm secured thereto, a crank shaft mounted transversely to said arm, an operative connection between the crank shaft and the arm whereby a rocking motion is imparted to the latter, a spring latch for establishing and severing said connection and means for rotating the crank shaft.

1,423,973. MECHANICAL MOVEMENT. JAY C. STONE, Spokane, Wash. Filed Dec. 10, 1921. Serial No. 521,345. 5 Claims. (Cl. 74—14.)



1. The combination with a pivoted operating lever, a rotary driven shaft and crank disk and a crank arm pivoted on said disk, of a slidable member carried by said lever and pivoted to said arm, a pair of opposed bell crank levers adapted to alternately engage said slidable member, and means actuated by said lever for actuating said bell crank levers.

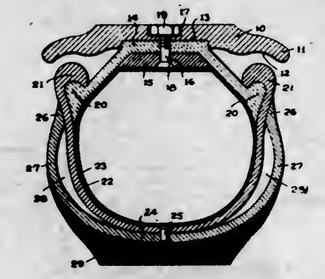
1,423,974. CHAIN LOCK. LEO J. WAND, Elizabeth, Ill. Filed Oct. 28, 1921. Serial No. 511,085. 5 Claims. (Cl. 24—241.)



1. In combination, a pivot, an inner section pivoted on the pivot, an outer section comprising a pair of spaced plates connected at one end and fulcrumed on the pivot at their other ends, a spring extension formed on one longitudinal edge of one of the plates so as to extend over the longitudinal edge of the other plate and a shoulder formed on the pivoted end of the inner section for engagement with the spring extension.

1,423,975. WATER SEAL FOR GAS RETORTS. ARTHUR W. WARNER, Media, Pa., assignor to The American Gas Company of New Jersey, Camden, N. J., a Corporation of New Jersey. Filed Nov. 2, 1918. Serial No. 260,839. 5 Claims. (Cl. 48—126.)

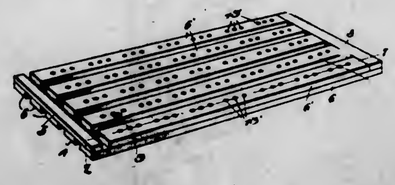
1. In combination with a gas retort and a standpipe, a downwardly inclined lateral conduit connecting the retort with the standpipe and so formed that liquids contained therein will flow freely into the standpipe, said conduit having a front wall extending down below the top of its rear wall and movable means operating to dam up liquid in the lower end of the inclined conduit to a height above the bottom of its front wall.



1,423,976. NONPUNCTURABLE TIRE. GEORGE A. WEBER, Stamford, Conn. Filed Feb. 21, 1919. Serial No. 278,384. 12 Claims. (Cl. 152—33.)

1. A tire having an outer metallic casing capable of enclosing a resilient medium, a rim having bearing portions adapted to cooperate with the substantially continuous inner edges of the casing if the resilient body should give way and permit contact between said bearing portions and edges, and resilient means for connecting the casing to the rim.

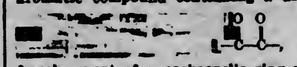
1,423,977. NONPUNCTURABLE TIRE. GEORGE A. WEBER, Stamford, Conn. Filed Nov. 7, 1919. Serial No. 336,489. 7 Claims. (Cl. 152—33.)



1. In a device of the class described, in combination, a rim, a metallic casing, a single unitary member interlocked with said casing for centering said casing upon said rim, said metallic casing and said member forming a substantially unbroken interior chamber, and a resilient medium mounted within said chamber formed by said casing and said member.

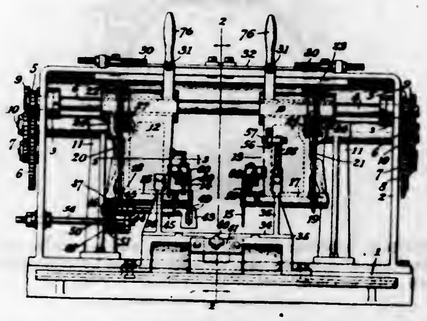
1,423,978. PROCESS OF PREPARING CATALYZING MATERIAL. EZECHIEL WEINTRAUB, New York, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 26, 1918. Serial No. 224,897. 3 Claims. (Cl. 23—28.)

3. The method of depositing nickel upon a fibrous support which consists in permeating said support with nickel carbonyl in the gaseous state under pressure less than atmospheric and then heating said carbonyl to the decomposition temperature.



1,423,979. SEED AND GROUND TESTER. JOSEPH BYRON WHITE, deceased, late of Clarion, Iowa, by Ida E. White, administratrix, Clarion, Iowa. Filed July 3, 1920. Serial No. 393,947. 3 Claims. (Cl. 47—30.)

1. A recording frame for use in testing seeds comprising an elongated strip provided at spaced points therealong with a plurality of series of openings, a second strip slidably mounted on the first named strip, said second strip being also provided with a plurality of series of openings, the series of openings of the second strip registering with the series of openings of the first strip when the second strip is moved in one direction.



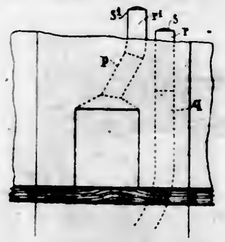
1,423,980. PRODUCTION OF DICARBOXYLIC ACIDS. ARTHUR G. WILLIAMS, Grantwood, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Mar. 22, 1921. Serial No. 454,479. 19 Claims. (Cl. 260—108.)

1. The process of producing a dicarboxylic acid from an aromatic compound containing a diketonic group,

forming part of a carbocyclic ring structure, which comprises dissolving the said compound in a suitable alkaline reducing solution, and oxidizing the solution.

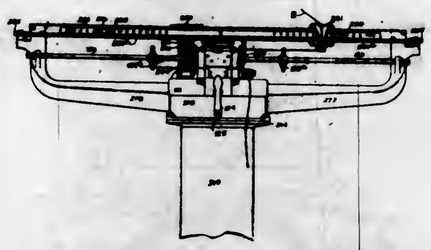
1,423,981. MACHINE FOR MAKING COMBS. CLAUDE E. WING, College Point, and HERMAN SCHELHAMMER, Whitestone Landing, N. Y., assignors to American Hard Rubber Co., New York, N. Y., a Corporation of New York. Filed Apr. 22, 1921. Serial No. 463,708. 13 Claims. (Cl. 144—26.)

1. A comb cutting machine comprising in combination a plurality of revolubie cutters, means for oscillating said cutters, and means for feeding said cutters simultaneously in opposite directions longitudinally of said machine.



1,423,982. SUPPORTING AND ACTUATING MEANS FOR AUTOMOBILE RADIATOR SHUTTERS. ARTHUR P. WOLFE, Lockport, N. Y., assignor to Harrison Radiator Corporation, a Corporation of New York. Filed Mar. 28, 1921. Serial No. 456,310. 10 Claims. (Cl. 189—62.)

2. A pivoting support for automobile radiator shutters comprising a pair of sheet metal strips having integral therewith a plurality of hollow pivot members, substantially as described.

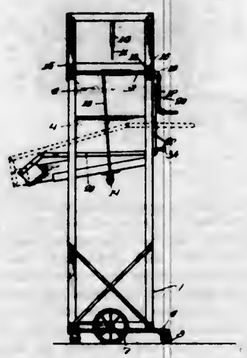


1,423,983. MOLDING OF CONCRETE PRODUCTS SUCH AS BLOCKS, PANELS, STRUCTURES, AND THE LIKE. JOHN WOOLCOCK, London, England, assignor to William John Stewart, London, England. Filed June 16, 1920. Serial No. 389,447. 8 Claims. (Cl. 25—128.)

2. Apparatus for molding pipes, drains, sewers and other conduits, comprising in combination a central contour determining member extensible by an axial pull to produce transverse contraction and a tubular covering member therefor constructed of rubber substance and extensible under tension.

8. A core for molding holes in concrete products and comprising a tube constructed throughout of rubber substance and adapted to be maintained at a determined size by a filling comprising a helical supporting coil which upon removal permit a sufficient contraction to provide for axial withdrawal of the core.

1,423,984. MACHINE FOR MAKING SHOE LACES AND THE LIKE. GEORGE H. ARMITAGE, Lincoln, R. I., assignor to United Lace & Braid Manufacturing Company, Auburn, in the town of Cranston, R. I., a Corporation of Rhode Island. Filed Sept. 20, 1918. Serial No. 254,991. 8 Claims. (Cl. 153—1.5.)



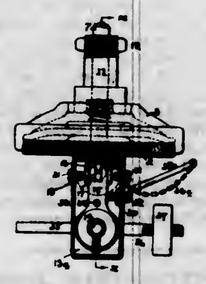
6. In a machine of the character described, the combination with tip applying mechanism, of means for feeding measured lengths of a continuous lace cord or the like to said mechanism comprising a reciprocating shuttle continuously engaging said cord or the like and means for operating said shuttle to cause it to deliver measured stretches of said cord or the like directly into position to be operated upon by said mechanism.

1,423,985. CEMENTING AND PROTECTING COMPOSITION. LAWRENCE E. BARRINGER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 18, 1919. Serial No. 338,909. 5 Claims. (Cl. 106—14.)

1. An electrical insulating composition capable of withstanding elevated temperature without damage, consisting largely of a silicate of an alkali metal and a lesser proportion of a natural resin.

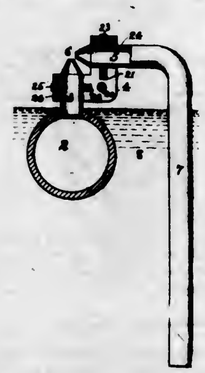
1,423,986. COAL-HANDLING DEVICE. HARRY D. BARTLETT, Chicago, Ill. Filed Feb. 21, 1921. Serial No. 446,560. 6 Claims. (Cl. 198—29.)

1. A device for handling coal comprising a supporting frame having a hopper slidably mounted therein, mechanism carried by said frame for vertically shifting said hopper, the bottom of said hopper being inclined to form a chute having an outlet at one side of said frame, a hinged gate mounted in said outlet and arranged to form a continuation of said chute, means for shifting said



gate into position to close said outlet, and a follower slidably arranged in said chute and connected to said gate so as to be actuated thereby.

1,423,987. SYSTEM OR METHOD OF FEEDING COMBUSTION ENGINES FOR AIRSHIPS. ARNO BORRNER, Scheveningen, Netherlands. Filed June 3, 1919. Serial No. 301,589. 1 Claim. (Cl. 244—1.)

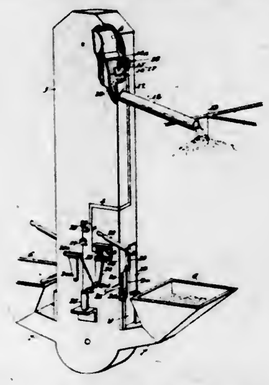


The method of feeding internal combustion engines for airships which consists in charging the combustion chambers of the engines with lifting gas drawn from the balloon and a compressed gas containing oxygen, the compressed gas containing the oxygen being obtained from a supply of the same on the balloon, the compressed gas being supplied in such quantities as to compensate by loss in weight the loss in buoyancy caused by the use of the lifting gas, substantially as set forth.

1,423,988. VALVE DEVICE. HERMAN C. BREHMER, Philadelphia, Pa., assignor to H. W. Butterworth and Son's Company, a Corporation of Pennsylvania. Filed Feb. 20, 1919. Serial No. 278,220. 10 Claims. (Cl. 137—139.)

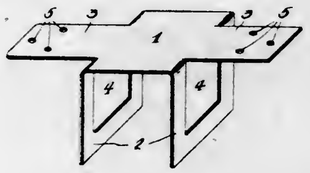
1. A valve device for motors, consisting of a main frame having two relatively fixed parts providing a space between them open to the atmosphere, one of said parts having a flat seating surface and a port therethrough, an adjustable bushing held in the other part of the main frame and having a seating surface and a port in said surface in alinement with the first mentioned port in the other part of the frame, said bushing extending to the outside of the frame whereby it may be adjusted when the valve is in operation, combined with a rock shaft journalled in the main frame, and a valve piece secured to the rock shaft adapted to be oscillated thereby, said valve piece unconfined and oscillating in the atmosphere and having its controlling portion made with opposite parallel surfaces of relatively small area having a transverse port extending from surface to surface adapted to come into alinement with the ports in the main frame and bushing, and also having one of its surfaces provided with an exhaust passage close to the port, whereby the valve piece oscillates transversely to and between the port of the frame and the port of the bushing and so as to bring its transverse port and exhaust passage alternately into operative position.

1,423,989. ATOMIZER. HERMAN C. BREHMER, Philadelphia, Pa., assignor to H. W. Butterworth & Son's Co., a Corporation of Pennsylvania. Filed July 31, 1919. Serial No. 314,583. 9 Claims. (Cl. 299—86.)



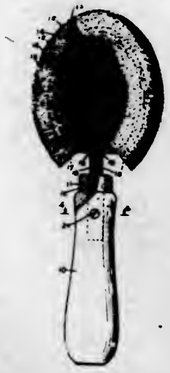
1. An atomizer consisting of a liquid holding tank, a vertical blast nozzle rigidly positioned in the tank, combined with an adjustable horizontal liquid supplying nozzle arranged at an angle to the blast nozzle and above the liquid level in the tank, said nozzles having conical ends so as to be capable of having the two nozzle apertures brought very close together under adjustment, said liquid nozzle having a downward pipe extending a substantial distance into the tank, a connecting frame adjustably secured upon the vertical blast nozzle so as to be raised or lowered in respect thereto and having an upwardly extending part for supporting the horizontal portion of the liquid supplying nozzle, and means for adjusting the liquid supplying nozzle upon the frame.

1,423,990. BIN-FILLING SHUT-OFF. MARTIN L. BREMER and ALVIN L. BREMER, Elberon, Iowa. Filed Nov. 7, 1921. Serial No. 513,516. 5 Claims. (Cl. 198—232.)



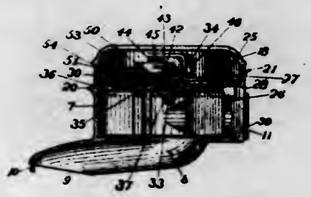
1. Combined with bin-filling mechanism, a switch-closer actuated by the rise of grain, a gate to regulate the flow of material to the bin-filler, means adapted to hold

the gate in open position, trip-mechanism to release the gate-holder, a magnet-actuated latch therefor, a source of



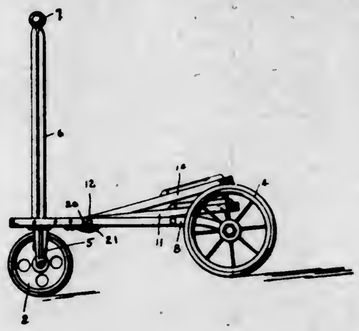
electrical energy, and a magnet in circuit therewith and with the switch.

1,423,991. SCREED HOLDER. GEORGE W. BROOKS, Topeka, Kans. Filed July 16, 1921. Serial No. 485,238. 7 Claims. (Cl. 72—101.)



1. A screed holder or clip embodying a body portion, a normally depending flange, and a normally outturned substantially horizontal flange adapted to be bent in a vertical position to engage a screed after the latter has been placed in position.

1,423,992. SOAP-HOLDING BRUSH. FREDERICK S. BROWN, Torrington, Conn. Filed July 2, 1921. Serial No. 482,042. 6 Claims. (Cl. 15—122.)

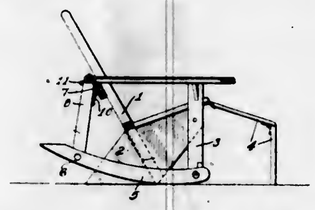


1. A device of the character described comprising a handle, a plurality of brush elements carried thereby and arranged side by side, and a soap container between the brush elements, said container having perforated walls.

1,423,993. SUCTION DUSTER. RAFAEL DIAS BUITRAGO, New York, N. Y. Filed Mar. 9, 1921. Serial No. 450,910. 2 Claims. (Cl. 230—11.)

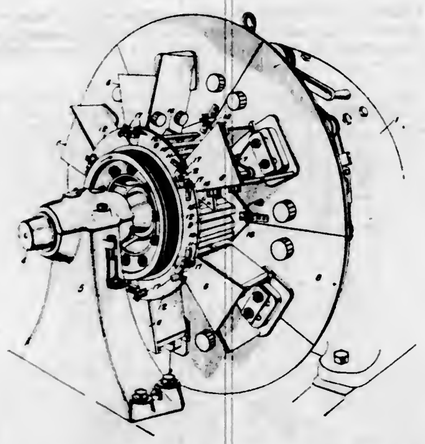
1. A manually held and operated suction duster comprising a two chambered casing adapted to be grasped by the hand, the suction chamber containing a suction fan, a shaft carrying the fan and extending into the other chamber, multiplying gears in the second chamber adapted to rotate said shaft, a fly wheel on said shaft, an operating lever extending exterior to the casing and adapted to be reciprocated by the muscles of the hand which grasps the casing, and a device by which the operating lever effects rotation of the multiplying gears, and the shaft flywheel, and suction fan.

1,423,994. SCOOTER CAR. WILLIAM BUNDE, Rochester, N. Y. Filed June 2, 1921. Serial No. 474,565. 3 Claims. (Cl. 208—33.)



1. In a scooter car the combination of a frame, a stationary platform mounted at one end of said frame, a pair of pedals mounted to swing in the other end of said frame, a steering fork mounted to rotate in said stationary platform, a wheel mounted on the end of said steering fork and supporting said stationary platform, a crank shaft mounted at the rear end of said frame, a wheel at each end of said crank shaft adapted to support the rear of said frame, connecting rods between the free end of each of said pedals and said crank shaft, each of said connecting rods having a loose fit with said pedals to permit a lost motion thereof, and means to throw said crank shaft past the dead center on the downward movement of said pedals.

1,423,995. CONVERTIBLE CHAIR. HORAY C. BUNNELL, Westport, N. Y. Filed Apr. 14, 1922. Serial No. 552,544. 2 Claims. (Cl. 155—73.)

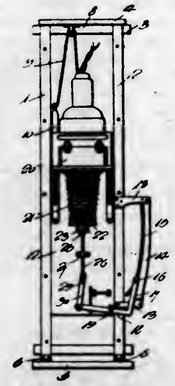


1. The combination with a chair, of rockers pivoted to said chair at their forward ends, a cross piece at the rear

of the chair, a rod connecting the rear portion of the rockers, a bar pivotally carried by said rod, the bar being

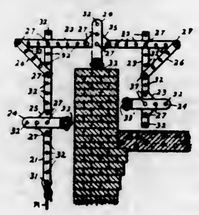
notched to engage the upper edge of the cross piece and beveled to fit under said cross piece, and means for locking the bar in place.

1,423,996. ARC BARRIER FOR DYNAMO-ELECTRIC MACHINES. JOSEPH L. BURNHAM, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 7, 1922. Serial No. 527,700. 15 Claims. (Cl. 171—321.)



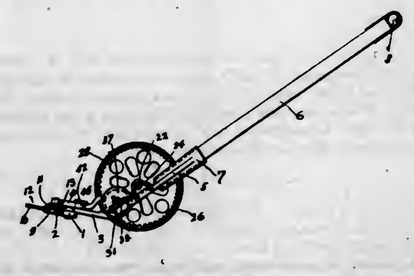
1. In combination, a commutator, sets of brushes therefor, and arc barriers located between adjacent sets of brushes, each of said barriers comprising a member of insulating material mounted so as to be in close proximity to said commutator and inclined thereto at an obtuse angle having reference to the direction of rotation of the commutator, and an arc splitter of insulating material located between the ends of such first mentioned member and extending at substantially right angles thereto and at substantially right angles to said commutator and toward said set of brushes in front of which said barrier is located having reference to the direction of rotation of said commutator.

1,423,997. AUTOMATIC FOCUSING DEVICE FOR ENLARGING CAMERAS. FELIX J. CALLIES, Brush, Colo. Filed Mar. 21, 1921. Serial No. 453,874. 6 Claims. (Cl. 88—24.)



6. A device of the character described comprising a track, a camera carrier movable longitudinally thereof, a lever pivoted to said camera carrier, means for imparting swinging movement to the lever as the camera carrier moves longitudinally of the track, a rod extending longitudinally of said camera carrier and slidably connected

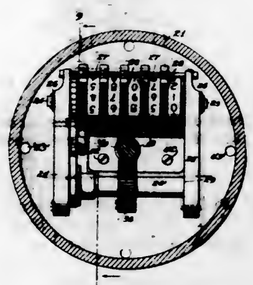
therewith, lens board engaging means adjustably connected with said rod and extending therefrom for connection



with the lens board of a camera, and means connecting the lower end of the rod with the inner end portion of said lever.

1,423,998. SCAFFOLD CARRIER. ARTHUR E. CAMP, Binghamton, N. Y. Filed Dec. 29, 1921. Serial No. 525,680. 8 Claims. (Cl. 304—17.)

1. An expansible scaffold supporting hook in combination with roller members arranged for attachment thereof to project various distances from and at any of various points along the length of the inner faces of said hook, whereby such rollers will be adapted to serve both for supporting and stabilizing said hook in cooperating with the top of a wall or the like.



1,423,999. LAWN MOWER. PHILIP ALEXANDER CAMPBELL, Vancouver, British Columbia, Canada. Filed June 24, 1921. Serial No. 480,072. 2 Claims. (Cl. 56—259.)

1. A lawn mower comprising a wheeled frame forked at its lower front end and provided in each forked arm with

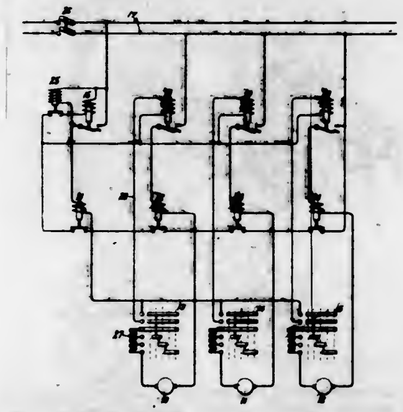
a transverse slot, a transverse plate secured to the forks of the frame having a slot in its front edge and a slot registering with one of the fork slots, a lower knifed bar having its rear edge slidably mounted in said front edge slot, an upper knifed bar superposed on said plate having a slot registering with the fork and plate slots aforesaid, a vertical pin secured to said lower knifed bar projecting through the upper knife slot, the plate slot, and the fork slot, a vertical pin secured to the upper knifed bar projecting through the other fork slot, and means for simultaneously imparting opposite reciprocating motion to said pins.

1,424,000. HUB ODOMETER. CLARENCE CARSON, New Rochelle, N. Y., assignor to Johns-Manville Incorporated, a Corporation of New York. Filed June 17, 1920. Serial No. 389,551. 8 Claims. (Cl. 235—95.)

1. In a hub odometer, the combination of a closed cylindrical casing mounted for rotary movement about its axis, an odometer mechanism including a numeral wheel set contained within said casing, a relatively fixed shaft extending axially into said casing, a driving connection between the numeral wheel set and said shaft and a lubricant-travel-limiting partition disposed between the numeral wheel set and the shaft at the axis.

1,424,001. TOOL. BERT W. CHRISTIAN, Delavan, Wis. Filed Apr. 6, 1920. Serial No. 371,641. 2 Claims. (Cl. 137—70.)

1. A trap clean out tool comprising a rigid S shaped member, the arms of said member extending in opposite directions in the same plane, cutting edges carried by the ends of said arms, said arms forming hand grips whereby the tool may be oscillated in a trap passage when the opposite arm is disposed in said trap passage.



1,424,002. PISTON. JOHN ALBERT COLE and LEO JOSEPH SHORTER, Coventry, England. Filed Nov. 14, 1921. Serial No. 515,057. 1 Claim. (Cl. 123—197.)

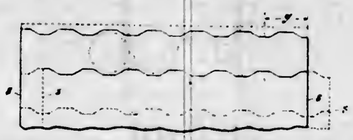
A piston for an internal combustion engine in which the whole of the crown of the piston is flat and the plane thereof is oblique to the axis of the cylinder, the piston having a wrist pin bearing cutting the piston axis; the direction of slope of the crown being such that the edge thereof nearest the mouth of the cylinder is against that

side of the cylinder which takes the whole side thrust during the entire working stroke.

1,424,003. CONTROL SYSTEM. CHARLES B. CONNELY, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 23, 1921. Serial No. 517,405. 2 Claims. (Cl. 171—97.)

1. The combination with a plurality of electric translating devices, of a separate controller for each of said devices, a normally closed electromagnetic line switch under the control of all of the said controllers in a common conductor for the said translating devices, a separate normally open electromagnetic line switch under the control of its corresponding one of said controllers in each of the separate return conductors for said devices, an electromagnetic relay having its winding connected across the circuit making contacts of the said line switch in the common conductor, current responsive means, and connections whereby the operation of the current responsive means deenergizes the said line switches and the said relay is energized to maintain the said line switch in the common conductor in the open position until all of the said controllers are first returned to their respective off positions.

1,424,004. PUMP. EVERETT CUSHMAN CUMMINGS, Electra, Tex. Filed Dec. 13, 1921. Serial No. 522,098. 7 Claims. (Cl. 103—179.)

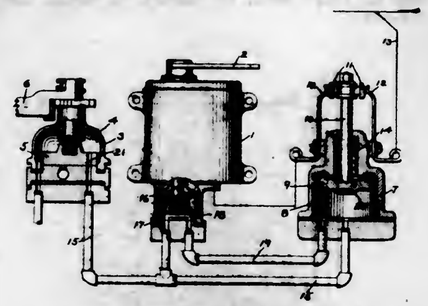


1. A pump of the class described, comprising a barrel, a plunger slidably mounted in the barrel, a valve located

near the lower end of the barrel, a polish rod attached to the plunger for operating it, a valve located near the upper end of the polish rod, and means in conjunction with

the plunger for enclosing the barrel valve to protect it from being packed with sand when the pump is not in operation.

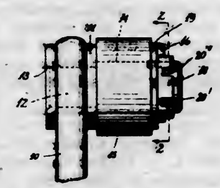
1,424,005. MANUFACTURE OF BLANKS OF SHEET METAL. FRANK DRURY, Altrincham, Liverpool, England, assignor to G. H. Williamson & Sons, Limited, Worcester, England, a Corporation of Great Britain. Filed Sept. 11, 1920. Serial No. 409,727. 1 Claim. (Cl. 164—48.)



A shearing machine for the production of sheet metal strips with zig-zag or waved longitudinal edges having in combination shearing tools the cutting edges of which are the requisite zig-zag or waved contour, an adjustable stop to limit the forward movement of said sheet metal, and adjustable stops to limit the sidewise movement of the sheet metal, said last mentioned stops being so set that the metal may be shifted for alternate cutting operation to right or left a distance equal to one-half the pitch of the zig-zag or waved longitudinal edges.

1,424,006. MANUFACTURE OF ARSENICAL COMPOUNDS. KARL BASIL EDWARDS, Eltham, London, England. Original application filed Jan. 26, 1921, Serial No. 440,168. Divided and this application filed Oct. 22, 1921. Serial No. 509,749. 4 Claims. (Cl. 23—18.)

2. A process for the manufacture of salts of the formula $R_2As_2O_2S_2$, R_2AsOS_3, where R is an alkali metal or ammonium, which comprises treating arsenious oxide with a solution of alkaline polysulphide and reducing the salts to an anhydrous condition.

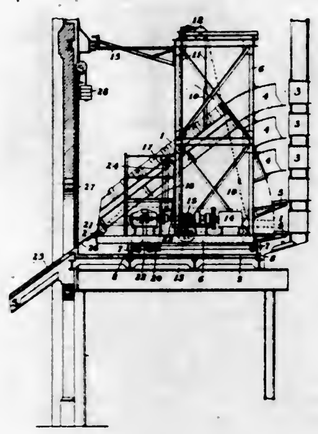


1,424,007. PNEUMATIC CUT-OUT DEVICE. CLYDE C. FARMER, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1920. Serial No. 401,896. 8 Claims. (Cl. 303—6.)

1. The combination with a controller and a brake valve, of a fluid pressure operated switch device for controlling the power circuit to the controller and means controlled by said controller for controlling a communication through which fluid under pressure is supplied from the brake valve to said switch device.

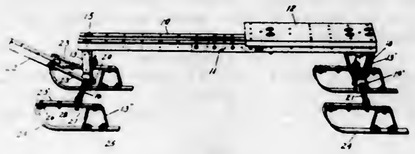
7. In a brake and power control apparatus, the combination with a controller, of a fluid pressure operated switch for controlling the power circuit to said controller, a brake valve for supplying fluid under pressure to said switch device in release position and for venting fluid under pressure from said switch device in the brake applied positions of the brake valve, and a valve operated by said controller for supplying fluid under pressure to said switch device only in the off position of the controller.

1,424,008. WASHER. PAUL W. FLEISCHER, Weehawken, N. J. Filed July 21, 1921. Serial No. 486,379. 1 Claim. (Cl. 85—50.)



A washer comprising a tubular or neck portion and a flange extending outwardly at one end of said neck portion, the said neck portion being provided with a plurality of pairs of notches, open at the end of said portion opposite to the flanged end, and having their bottom walls at different distances from said flanged end.

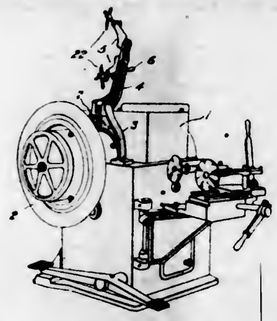
1,424,009. BASKET HANDLE AND LID FASTENER. GEORGE R. FOWLER, Marlboro, N. Y. Filed Nov. 30, 1921. Serial No. 518,952. 6 Claims. (Cl. 217—125.)



1. A basket having a pliable handle, coacting fastening means adjacent the free ends of the handle, and one of said means being pivotable to the other means to engage the basket lid.

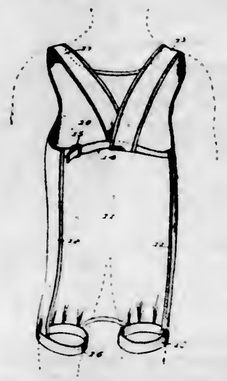
1,424,010. DISCHARGE CHUTE. RALPH ERNEST GIBSON and HERBERT NICOLL, Liverpool, England. Filed May 13, 1922. Serial No. 560,691. 5 Claims. (Cl. 214—18.)

1. A discharge chute mechanism for furnaces of the type having carbonizing chambers arranged in superposed tiers, comprising in combination, a carriage arranged to travel along the furnace front; a plurality of superposed tubular guides mounted on said carriage in position to register with successive tiers of said chambers; and a tube movably mounted on said carriage so as to be capable of registering selectively with said tubular guides.



1,424,011. SLED. ALFRED C. GILBERT, New Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Filed Apr. 10, 1919. Serial No. 288,948. 19 Claims. (Cl. 280—14.)

17. A detachable runner frame for a toy vehicle including a bearing member secured thereon comprising a strip having an end thereof bent to form a circular loop.

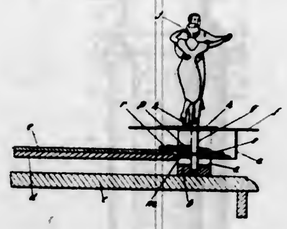


1,424,012. TRIMMING DEVICE. FRANK H. GROVE, Columbiana, Ohio, assignor to The Banner Machine Company, Columbiana, Ohio, a Corporation of Ohio. Filed Mar. 16, 1920. Serial No. 366,269. 6 Claims. (Cl. 164—38.)

1. In combination with a rotatable tire building core, a trimming device including a swinging arm pivoted adjacent said core and arranged to be swung into position above the core, means for automatically stopping the arm in the desired position, individual arms pivotally mounted upon said swinging arm and arranged to be located upon opposite sides of the core when the swinging arm is moved into operative position and trimming knives carried by

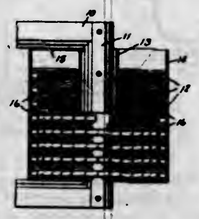
said individual arms and arranged to be moved toward the core by the swinging movement of the individual arms.

1,424,013. CREEPER BIB. METHEL F. HALE, Grover Hill, Ohio. Filed Apr. 18, 1922. Serial No. 554,844. 2 Claims. (Cl. 2—54.)



1. A garment of the type indicated having front body and skirt members and a looped strap formed as an extension of the body member at the upper edge of the latter and opposite sides of the same to provide right and left shoulder straps, a belt connecting the opposite edges of the skirt member and extending through the loop of the shoulder strap, and leg engaging members provided through the lower edge of the skirt member.

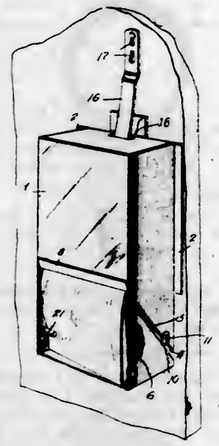
1,424,014. SPRING GUARD FOR VEHICLES. LOUIS H. B. HAND, Harvey, Ill. Filed Jan. 23, 1922. Serial No. 531,263. 10 Claims. (Cl. 293—55.)



4. A guard comprising a pair of elliptical spring members, each having a secondary loop at an end thereof, each having reversely curved front and back portions diverging from the ends of the loop toward the transverse medial line of the spring member an additional spring member of general arcuate or bow-shape, means for clamping the end portions of the second named spring member to the front portions of the elliptical spring members intermediately of the latter, and means for attaching the back portions of the elliptical spring members to a support.

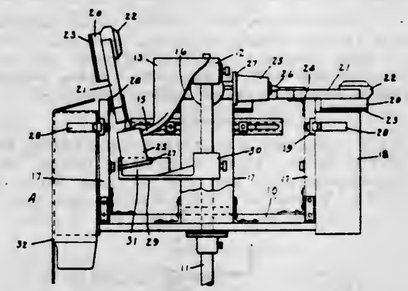
1,424,015. MECHANICAL TOY OPERATED BY GRAMOPHONES. HERBERT JOSEPH HASTINGS and CHARLES ST. VINCENT SMITH, East Twickenham, England. Filed Sept. 2, 1921. Serial No. 498,030. 6 Claims. (Cl. 46—40.)

1. A mechanical toy for use in combination with a phonograph of the disc-record type, comprising a weighted frame, a stationary horizontal table of non-magnetic material carried thereby, an upright magnetized spindle mounted to revolve in bearings in said frame, the upper end of said spindle projecting through an aperture in the table, a disc fixed concentrically upon the spindle, a floating disc of non-magnetic material centrally apertured so as to give free passage to said spindle and to be adapted to rest upon the margin both of said fixed disc and also of a phonograph-turntable, an armature of magnetic material adapted to rest upon and slide easily over the surface of said table, and a figure carried by said armature, substantially as and for the purpose set forth.



1,424,016. ELECTRICAL APPARATUS. LAWRENCE A. HAWORTH, Dalton, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 13, 1920. Serial No. 416,677. 5 Claims. (Cl. 175—356.)

1. In an electrical apparatus, the combination with windings composed of coils in assembled relation, of spacing devices for holding said windings in spaced relation, each of said devices comprising a member having portions extending over the faces of a coil, and filling members engaged in interlocked relation with said first member.

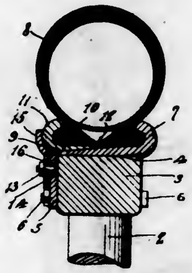


1,424,017. BAG HOLDER. CARL R. HELLSTROM, Minneapolis, Minn. Filed Jan. 23, 1922. Serial No. 531,238. 10 Claims. (Cl. 24—2.)

1. A dispensing device comprising, in combination, a casing, an opening in the front of the casing, a bar adjacent one end of the opening to retain the ends of objects to be dispensed, a depressed edge at the opposite side of the opening, and means in said casing to move said objects toward said opening.

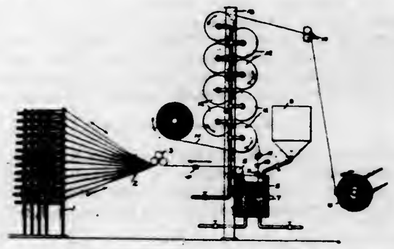
2. A dispensing device comprising, in combination, a casing having an opening adjacent one end of its front, means in said opening to retain the ends of objects to be dispensed, a diagonal guide-way carried by the side walls of said casing opposite said opening, means working in said guide way to press objects towards said opening.

1,424,018. CARTON SEALER. GEORGE K. HENDERSON, Indianapolis, Ind., assignor to International Printing Company, Indianapolis, Ind., a Corporation. Filed July 2, 1921. Serial No. 482,079. 10 Claims. (Cl. 93—36.)



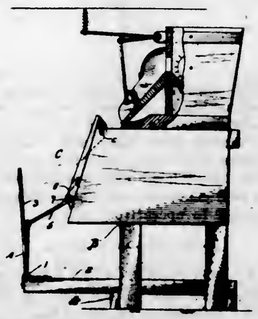
1. A sealing machine for paper receptacles having means for supporting a receptacle, means for clamping and sealing said receptacle under pressure, and a separate means for actuating said clamp and sealing means for causing the same to automatically release said receptacle for permitting its removal and replacement, and thereafter causing said clamping and sealing means to be automatically brought to operative position.

1,424,019. SECTIONAL TIRE RIM. HAL HENRY HIVELY, Tar River, Okla. Filed Dec. 30, 1916. Serial No. 139,728. 1 Claim. (Cl. 301—11.)



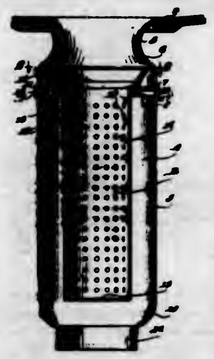
A demountable rim comprising a major section having a tire retaining flange and a radially inwardly extending flange, a tire retaining section seated on the major sec-

tion and a plurality of clips pivoted to the inwardly extending flange of the major section so as to engage or disengage the tire retaining section, the inwardly extend-



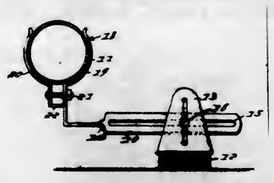
ing flange of the major section being provided with holes intermediate of the clips for the reception of means to secure the rim to the wheel.

1,424,020. PROCESS FOR THE PRODUCTION OF FABRICATIONS OF RUBBER AND FILAMENTARY MATERIAL AND PRODUCTS OBTAINED THEREFROM. ERNEST HOPKINSON, New York, N. Y. Filed Apr. 22, 1921. Serial No. 463,694. 17 Claims. (Cl. 154—2.)



1. A process of the kind described which comprises coating warplike elements with rubber latex, maintaining the warplike elements in unwoven relationship and forming an unwoven sheet in which the warplike elements are joined together by rubber deposited from latex.

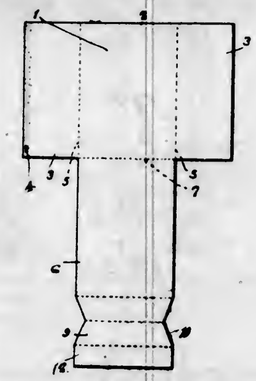
1,424,021. BREAST-ACTUATING MECHANISM FOR COTTON GINS. JAMES R. HUBBARD, Duncan, Okla. Original application filed Aug. 25, 1919, Serial No. 319,666. Divided and this application filed Sept. 2, 1920. Serial No. 407,774. 1 Claim. (Cl. 19—48.)



The combination with a gin having a base, beams extending from said base, a pivoted breast hung from its fulcrum, of a rock shaft journaled on said beams, an arm on said rock shaft, a handle for said rock shaft, a link pivoted to said arm and to said breast below the fulcrum of the latter, whereby the breast will move upwardly from its lower end in opening and will return to closed position of itself and by gravity.

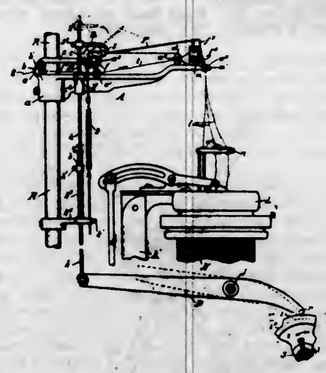
1,424,022. SINK STRAINER. PATRICK LACOSTE, San Antonio, Tex. Filed Mar. 8, 1920. Serial No. 365,987. 4 Claims. (Cl. 4—35.)

1. The combination of a body having a drain aperture, of an attachment therefor including a casing arranged to surround the drain aperture, a strainer associated with the casing and spaced from the casing throughout its entire length, and a transversely curved bead formed on the upper end of the casing arranged above the strainer and to partially overhang said strainer.



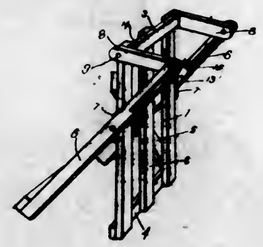
1,424,023. RECORD-WIPER FOR PHONOGRAPHS. CHARLEY LANDGRAF and JOHN HERNACKI, Chicago, Ill. Filed Apr. 17, 1922. Serial No. 553,375. 2 Claims. (Cl. 274—1.)

1. A record wiper for phonographs and similar machines having a supporting arm provided with means for engagement with a phonograph sound arm, and a brush having a body portion consisting of a plate arranged in contact with said arm and adjustably mounted thereon for arrangement in advance of the sound box needle, the supporting arm having a longitudinal slot and the body portion of the brush being provided with a corresponding slot extending at right angles thereto for mutual engagement by a set screw to provide for adjustment of the brush in directions parallel with and transverse to the length of the supporting arm.



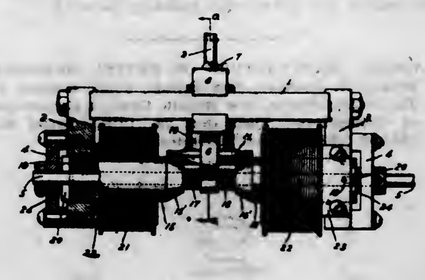
1,424,024. ENVELOPE. REUBEN A. LARSEN, Pasadena, Calif. Filed May 3, 1918. Serial No. 232,232. 1 Claim. (Cl. 229—66.)

An envelope formed from a blank and having a front wall, laterally extending wing means on said front wall foldable thereover to provide a compartment, a rear wall substantially similar to said front wall extending therefrom at substantially a right angle to said wing means and foldable over and against said wing means, a closure flap extending from the rear wall folded into a loop, said loop being insertible into one end of the envelope intermediate said front wall and said wing means, where-



by a pocket is afforded exteriorly of said compartment adapted to be torn along the fold line between said loop and the rear wall during opening thereof without danger of tearing the contents of said compartment.

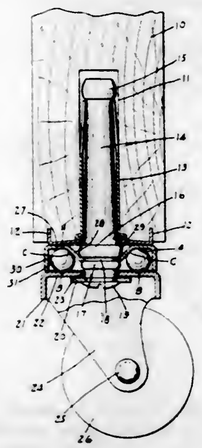
1,424,025. AUTOMATIC TENSION-CONTROLLING MEANS FOR KNITTING MACHINES. JOHN LAWSON, Central Falls, R. I., assignor, by mesne assignments, to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Mar. 2, 1914. Serial No. 821,867. 1 Claim. (Cl. 66—9.)



A circular knitting machine having in combination a plurality of guides for a corresponding plurality of threads, a corresponding plurality of take-ups, and a corresponding plurality of pivoted tension devices, one for each of said threads, each take-up and its corresponding tension device being structurally distinct and independent from all the other said take-ups and tension devices, and each pivoted tension device having a part to be engaged by the corresponding take-up, thereby to render the same active or inactive, a cam shaft, means thereon having a corresponding plurality of cam elevations and depressions, said elevations and depressions controlling the position of the corresponding take-up and tension device for circular work and the position of the take-ups and tension devices for reciprocating work, a corresponding plurality of levers adapted to engage said cam elevations and depressions respectively, link like members extending upwardly from said levers and having rectilinear movement, a controller member carried by each of said link like members and movable therewith, and a separate spring to act on each controller member, each of said controller members being structurally free from but adapted periodically to be brought into pushing contact with its take-up to depress the same and to release the corresponding tension device.

1,424,026. BAG HOLDER. BENJAMIN F. MILLER, Vienna, Va. Filed June 22, 1921. Serial No. 479,556. 4 Claims. (Cl. 83—26.)

1. In a bag holder, a frame comprisign an inclined back piece, a pair of legs secured to said back piece and forming with the lower edge of said back piece a base of support for said bag holder, means secured to said back piece extending above the plane of said back piece for holding the mouth of a bag in opened position, said legs being constructed to support the back piece at an angle to the vertical of sufficient acuteness that the center of mass of a bag held thereby will be without the base of support of said bag holder.



1,424,027. ELECTROMAGNETIC CLUTCH AND REVERSING MECHANISM. EDWIN J. MURPHY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 15, 1920. Serial No. 351,587. 4 Claims. (Cl. 74—26.)

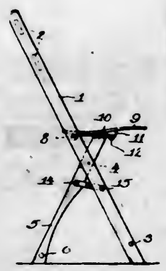
1. An electro-magnetic gear clutch and reversing mechanism, comprising a driving shaft, two gears of magnetic material splined to the shaft so as to be capable of moving independently lengthwise of the same, a driven shaft supporting a gear of magnetic material in proximity to the driving shaft gears, springs for holding the latter gears normally out of engagement with the driven shaft

gear, and means for establishing selectively a local magnetic short-circuit including either of the driving shaft gears and the driven shaft gear.

1,424,028. BALL-BEARING CASTER. WILLIAM H. NOBLTING, Evansville, Ind., assignor to Faultless Caster Company, Evansville, Ind., a Corporation. Filed Jan. 27, 1922. Serial No. 532,165. 6 Claims. (Cl. 16—21.)

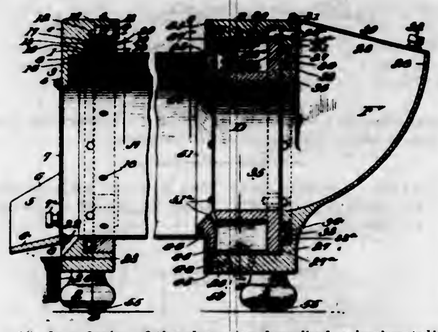
5. A caster including a pivot with a reduced portion, a centrally apertured cup having an inwardly and angularly extending annular portion surrounding the aperture and an outer annular depending apron portion, said cup being seatable in said reduced portion, a trackplate apertured and receivable by said pivot and pivotally supported thereby, and a plurality of balls in the raceway formed by said cup and said plate, said balls being of less diameter than the width of the raceway, whereby each ball will contact the cup and the yoke and but one of the annular cup portions, said apron portion being greater in depth than the radius of said balls and less in depth than the diameter of said balls for retaining the same in the raceway and guarding the same.

1,424,029. MANUFACTURE OF SWIVEL MEMBERS. STUART W. PARSONS, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Oct. 28, 1919. Serial No. 333,950. 1 Claim. (Cl. 59—9.)



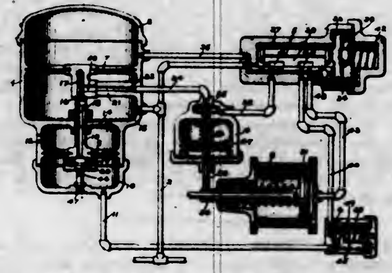
The improved method of manufacturing swivel members for hasp fasteners which consists in punching from a flat sheet of metal a blank having an unbroken ring and an integral post extending therefrom, then by suitable dies simultaneously shaping the ring and the post so that the blank is substantially circular in cross section and of uniform diameter in all parts, and then reducing one end of the post to thus form a pintle.

1,424,030. SHOEHORN. HARRY E. PECK, Waverly, N. Y. Filed June 24, 1921. Serial No. 480,046. 3 Claims. (Cl. 132—7.)



1. A shoe horn comprising a handle member, a plurality of transversely and longitudinally flexible fingers pivotally connected to one end of the handle member and adapted to be spread apart at their free ends for forming a shoe horn.

1,424,031. FOLDING CHAIR. PETER H. PETERS, Downers Grove, Ill. Filed Sept. 23, 1921. Serial No. 502,665. 4 Claims. (Cl. 155—143.)

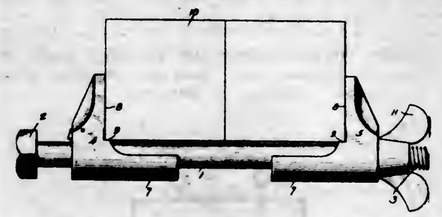


1. In a folding chair, a pair of tall risers connected by cross-bars, a pair of shorter legs pivoted thereto and adapted to aline therewith when the chair is folded, a seat, pivot straps secured to the seat and diverging downwardly from the seat forwardly thereof, and wedges disposed respectively between the straps and the bottom of the seat.

1,424,032. VEGETABLE PEELER. THEODORE H. PICKERING, Rochester, N. Y., assignor to Josiah Anstice & Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Sept. 14, 1921. Serial No. 500,547. 25 Claims. (Cl. 146—14.)

18. In a device of the character described, a horizontally supported rotatable peeling cylinder having open ends, and a water-actuated member surrounding the opening at one end of the cylinder.

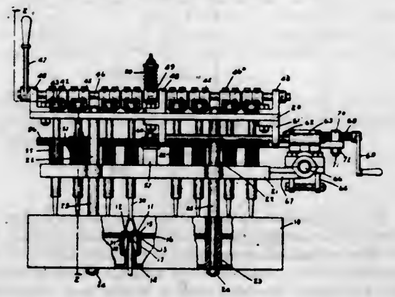
1,424,033. FLUID-PRESSURE BRAKE. EARL M. RICHARDS, Wilkinsburg, Pa. Filed July 23, 1920. Serial No. 398,436. 18 Claims. (Cl. 303—36.)



1. In a fluid pressure brake, the combination with a brake pipe, of means subject to the opposing pressures of the brake pipe and a chamber normally charged with fluid from the brake pipe for controlling the brakes and means operated upon an increase in brake pipe pressure above normal for preventing the charging of said chamber from the brake pipe.

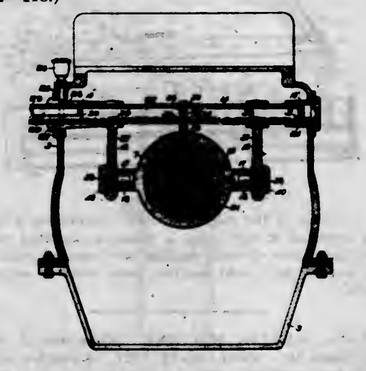
11. In a fluid pressure brake, the combination with a brake pipe, brake cylinder, and valve mechanism subject to the opposing pressures of the brake pipe and a chamber normally charged with fluid under pressure from the brake pipe for controlling the application and release of the brakes, of means normally establishing communication through which fluid from the brake cylinder is released by said valve mechanism and operated upon an increase in brake pipe pressure above normal for cutting off said communication and for opening another communication through which fluid is released from the brake cylinder.

14. In a fluid pressure brake, the combination with a brake pipe, brake cylinder, and a valve mechanism subject to the pressures in the brake pipe and brake cylinder for controlling the brakes, of means operated upon an increase in brake pipe pressure above normal for controlling the release of the brakes.



1,424,034. CLAMP. HERMAN RIGERT, Brooklyn, N. Y. Filed May 4, 1921. Serial No. 466,714. 2 Claims. (Cl. 144—303.)

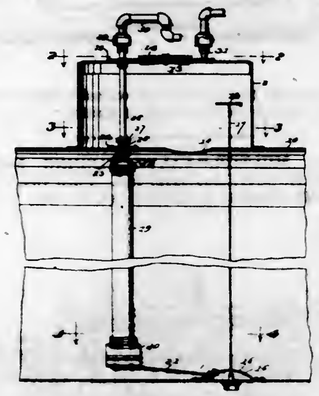
1. As a new article of manufacture, a clamp including a rod, a pair of clamping jaws slidable and rotatable on the rod, substantially semi-cylindrical bearing bosses integral with the jaws and presented towards each other, said



bosses and jaws being located on opposite sides of the rod, whereby to brace the jaws against strain.

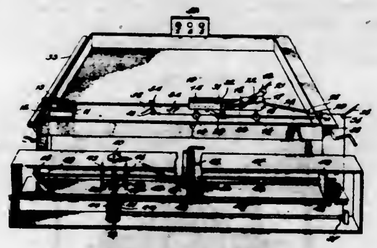
1,424,035. MULTIPLE-VALVE-GRINDING MACHINE. ROBERT M. ROOF, Anderson, Ind. Filed Oct. 29, 1920. Serial No. 420,459. 6 Claims. (Cl. 51—29.)

1. In a valve grinder, a frame, a valve engaging and driving member, a holder in said frame for said driving member, a pin and slot connection between said holder and said valve engaging member permitting longitudinal but preventing rotational movement therebetween, yielding means associated with said valve engaging member and said holder for normally maintaining the valve engaging member in valve engaging position, means for oscillating said holder, and means for raising and lowering said holder in said frame.



1,424,036. CLUTCH. DELMAR G. ROOS, Bridgeport, Conn., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn., a Corporation of Delaware. Filed Aug. 8, 1918. Serial No. 248,878. 9 Claims. (Cl. 192—113.)

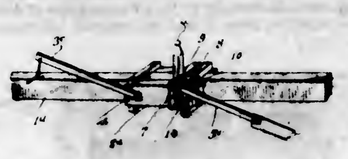
1. In a clutch, the combination of a rotatable thrust member, a thrust collar, a thrust collar operating rock



shaft, and thrust collar lubricating means including an oil reservoir and oil absorbing means interposed between said reservoir and said thrust collar.

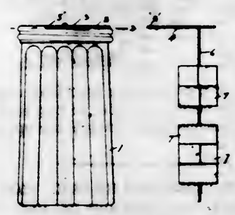
1,424,037. TANK-CAR-LOADING DEVICE. EMETT H. RUDOLPH, Pershing, Okla. Filed Nov. 18, 1920. Serial No. 424,954. 6 Claims. (Cl. 220—86.)

6. The combination with a tank car having a hull and a dome surmounting the hull and in communication therewith by a manhole in the shell of the hull, said dome being provided with a manhole fitted with a removable plug, and the hull being provided with a bottom vent valve and a guard strap spanning the same, of a loading and unloading device having relatively enlarged and reduced pipe sections arranged respectively in the hull and dome and connected by a reducer arranged adjacent to the top of the hull and supported thereon by a flange nipple, and a vacuum vent pipe in communication with the interior of said dome.



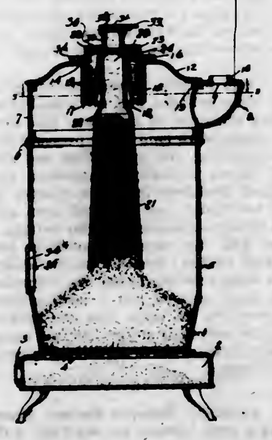
1,424,038. SWIMMING RACE. RYUJI SATO and CHIYOSABURO MATSUI, New York, N. Y. Filed Jan. 3, 1921. Serial No. 434,664. 6 Claims. (Cl. 46—56.)

2. A device of the class described, comprising a tank, a track mounted in said tank, a manikin mounted on said track, and means operable to draw said manikin along said track and to move said manikin from erect to swimming posture.



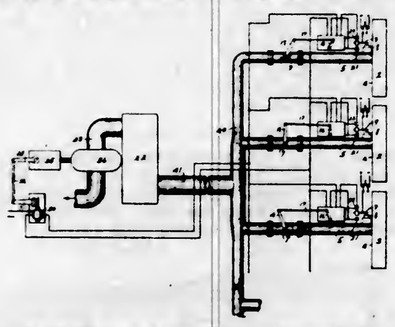
1,424,039. SAWING MACHINE. FLETCHER J. SCOTT. Hurdland, Mo. Filed June 27, 1921. Serial No. 480,875. 2 Claims. (Cl. 143—68.)

1. A cross-head or guided means constituting a connection between a means for producing reciprocating motion, and a saw reciprocated thereby, and an element pivoted to



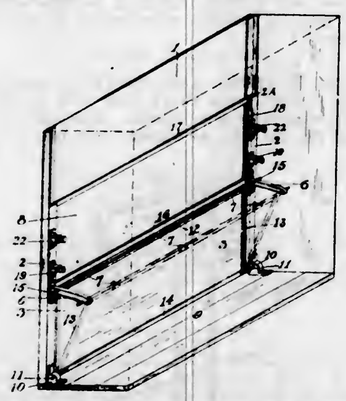
said cross-head on an axis parallel to its reciprocating motion, to which element the saw is attached.

1,424,040. SALTCELLAR. JOHN E. SCOTT, Philadelphia, Pa. Filed Sept. 20, 1921. Serial No. 501,957. 1 Claim. (Cl. 65—37.)



In a salt cellar, a receptacle, a cover therefor having a segmental delivery slot in the side thereof, a quadrant-shaped metallic member pivoted to the under side of the central portion of the cover and including an offset portion movable through the slot and acting as an operating member and a slot cleaner, the edge portion of the plate being in the plane of the delivery slot and adapted to close the latter, and an agitator formed with the metallic plate and constituting a strip projecting downwardly therefrom, said agitator including angular cutting blades deflected laterally in various directions by bending the metal of which the strip is formed.

1,424,041. FUEL FEED FOR HEATING DEVICES. FREDERICK SANFORD SEYMOUR, Manchester, Iowa. Filed Oct. 8, 1921. Serial No. 506,280. 7 Claims. (Cl. 126—73.)

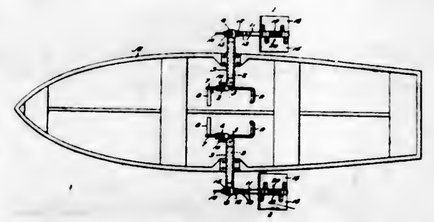


1. In a heating device, the combination with the fire pot, of a fuel feed tube depending towards the centre of the fire pot and having an open upper end, a steam generator into which the open upper end of the feed tube extends, and means for directing the water overflow into the fire pot.

1,424,042. AUTOMATIC REGULATOR FOR COKE OVENS. WILMER M. SHALLCROSS, Milwaukee, Wis., assignor to Northwestern Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 27, 1919. Serial No. 326,847. 8 Claims. (Cl. 48—173.)

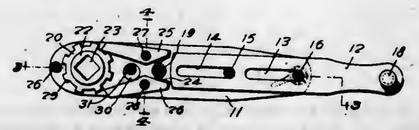
1. The method of automatically regulating the pressure of gas in a series of gas producing chambers having separate connections with a common outlet, consisting in continuously exhausting gas from the outlet, separately throttling the connections between the respective chambers and the outlet, in inverse correspondence to the pressure in such chambers, and separately varying the rate of gas withdrawal at the outlet when the degree of variation in any duct exceeds a predetermined limit.

1,424,043. PROTECTING DEVICE FOR SHOW WINDOWS. MAX A. SKALL, New York, N. Y. Filed July 25, 1921. Serial No. 487,280. 5 Claims. (Cl. 20—40.)



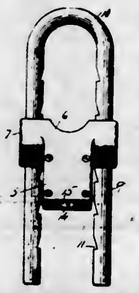
1. In a device of the kind described a glass plate forming the front of a show window, a movable frame holding a second plate or screen slidably mounted parallel to said first plate, and a vertical glass shield adapted to rotate about its lower horizontal edge and forming means to support said frame.

1,424,044. BOAT. JOSEPH SOLACK, Scranton, Pa. Filed Apr. 26, 1921. Serial No. 464,659. 3 Claims. (Cl. 115—21.)



1. A propelling apparatus for boats comprising a shaft arranged in a horizontal bearing and having the latter

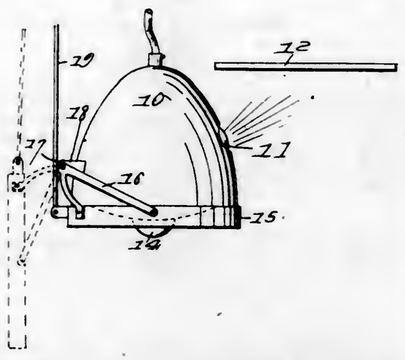
secured to one side of a boat, a socket member secured to the outer end of said shaft and a crank secured to the inner end thereof, a guideway provided on said crank, a flat bar slidably mounted in the latter and a handle provided on said bar at the upper end and a foot piece at the lower end thereof, means for holding the bar in



adjusted position in said guideway, a stem adapted to engage the socket member and adjustaly mounted therein, means for preventing turning movement of the stem in the socket member, a pair of blades hinged to the lower end of said stem, stops provided on said blades and a projection provided on said stem for engaging said stops.

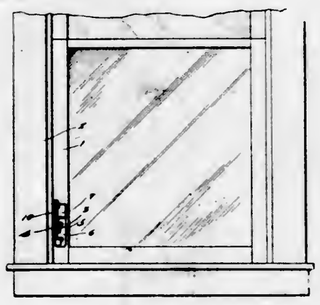
1,424,045. RATCHET CRANK. GEORGE EDWIN SPRAGUE, Cambria, Ill. Filed Sept. 12, 1921. Serial No. 499,888. 1 Claim. (Cl. 74—54.)

A ratchet crank comprising plates spaced apart by members holding such plates rigidly in spaced position, a ratchet rotatable between the plates and having hubs extending outwardly through the plates perforated by a multi-angular opening, ratchet detents pivoted between the plates, a spring tending to hold the ratchet detents in engagement with the perimeter of the ratchet, a cam operable from the exterior of the plates capable of throwing either of the ratchets out of operating relation, an arm slidable longitudinally between the plates, means to secure the arm at an adjusted position, and a handle adjacent the end of the arm.



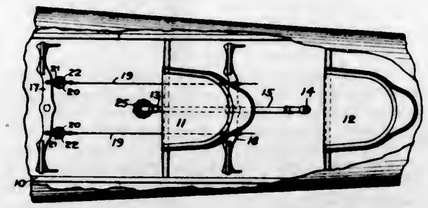
1,424,046. LOCK. ELMER B. STONE, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Dec. 16, 1921. Serial No. 522,738. 6 Claims. (Cl. 70—108.)

3. A lock case including a stem member and a cross member providing wings on opposite sides of said case,



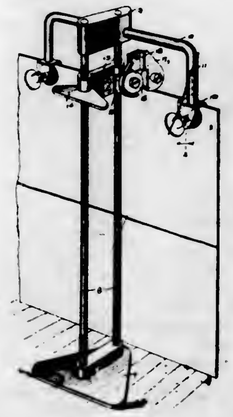
said members being located at an oblique angle each to the other, a shackle comprising arms extending through the wings on opposite sides of said stem, mechanism located in said stem to be operated by a key positioned at an oblique angle to said shackle arms, and members included in said mechanism and adapted to engage and hold said shackle arms.

1,424,047. TAIL LIGHT FOR AUTOMOBILES. AUGUST O. SVEDAHL, Marmarth, N. Dak. Filed July 12, 1920. Serial No. 395,586. 1 Claim. (Cl. 240—7.)



A tail light for automobiles and similar vehicles having a lamp of which the casing is provided with a rearwardly directed illuminating lens and an annular frame adapted for arrangement in co-extensive relation with a rear end of the casing and having a pivoted carrying bracket, means for moving the said frame into and out of position in registration with the casing, and a signal lens carried by said frame for displacement in light intercepting relation with the illuminating lens, and disposed in a light penetrable medium co-extensive with said illuminating lens.

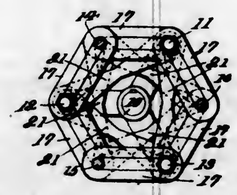
1,424,048. WINDOW LATCH. JOSEPH SZALAY, Vicksburg, Miss. Filed Mar. 14, 1921. Serial No. 452,105. 1 Claim. (Cl. 292—228.)



A sash lock comprising a stud on the frame, a plate on the sash, a second plate pivoted to the first plate and arranged at right angles thereto, an offset portion provided on said plate and having a recess therein and rolled over to provide an eye, said plate including a movable plate and a pivot pin carried thereby with which the eye engages so that the movable plate is pivotally secured, a spring engaging said pivot pin and having one end bent over to engage a small hole in the movable plate and its other end engaging a notch formed in the first mentioned plate, a pin carried by the movable plate to engage the offset portion of the first mentioned portion of the first mentioned plate for limiting the movement of the movable plate, the pivoted plate having a notch therein and beveled edge leading to the notch and a stud adapted to be secured to the opposite part of which the plate is secured and arranged to engage the beveled edge of the plate when the sash is being closed to force said plate outwardly and to come opposite the notch at the end of the closing movement so that the spring will place the notch in engagement with the stud.

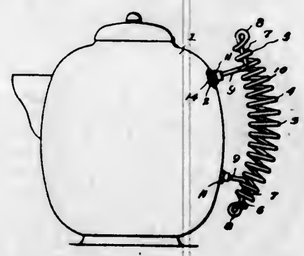
1,424,049. DUAL CONTROL FOR AIRPLANES. BENJAMIN DOUGLAS THOMAS, Ithaca, N. Y., assignor of one-tenth to Thomas-Morse Aircraft Corporation, Ithaca, N. Y., a Corporation of New York. Filed July 3, 1919. Serial No. 308,584. 8 Claims. (Cl. 244—29.)

1. In an airplane, the combination of dual manual control members, one for instructor and one for pupil, and a connection between said members normally adapted to move the same in unison, said connection including an elastic element adapted to yield under a greater than normal stress, and to return to normal condition when said greater stress is removed, independently of the amount of flexure.



1,424,050. SUPPORT AND CUTTER. HOCKLEY M. THOMAS and MARTIN FOGEL, New York, N. Y.; said Fogel assignor to said Thomas. Filed JAN. 3, 1921. Serial No. 434,659. 10 Claims. (Cl. 164—73.)

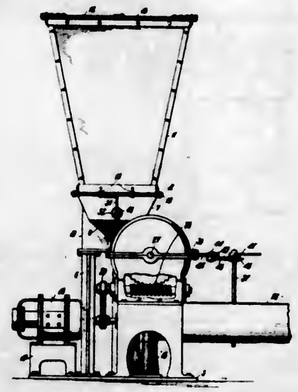
1. A supporting device for material adapted to lie in a vertical plane, including a base, a column extending upwardly from said base, a traveler slidably mounted upon said column, cutting means for said material secured to said traveler and means connecting said column with the material to be cut at a point adjacent the upper edge of the latter.



1,424,051. UNIVERSAL JOINT. HERBERT N. WAYNE, Washington, D. C. Filed Dec. 23, 1920. Serial No. 432,672. 9 Claims. (Cl. 64—97.)

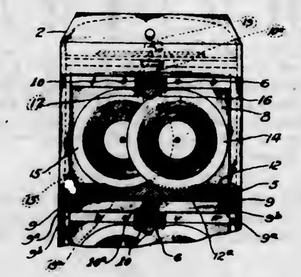
9. In a power coupling, a series of studs extending from each coupling member, and a flexible loop for connecting pairs of said studs, said loop being formed of cords laid one upon the other and the loops formed by joining each side portion thereof between the ends with the opposite side portions to form a crossing of said

intermediate portion, the cords of the several layers in one portion joining with the cords of the other portion in reverse arrangement, as and for the purpose set forth.



1,424,052. HANDLE. EMIL A. WEIBEL, Fairbank, Iowa. Filed Apr. 8, 1921. Serial No. 459,815. 1 Claim. (Cl. 16—120.)

A detachable handle constructed from wire bent to form convolutions, and L shaped ends a portion of which is arranged within certain of said convolution, and nuts for clamping the ends to an article.

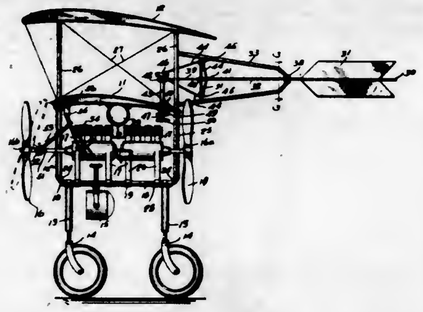


1,424,053. PULVERIZED-FUEL CARBURETOR AND FEEDER. WILLIAM H. WHITAKER, Shelbyville, Ill., assignor to American Atomized Fuel Company, Shelbyville, Ill., a Corporation of South Dakota. Filed Oct. 5, 1920. Serial No. 414,926. 2 Claims. (Cl. 302—42.)

1. A fuel feeder and carburetor comprising a hopper, a cylindrical chamber at its lower end and communicating therewith, a roller in the chamber having a plurality of parallel grooves in its periphery, a plurality of slidable members mounted in the grooves and capable of filling all or part of the latter, a slidable member to which the slidable members are connected, a fan having an inlet and outlet, an air pipe communicating therewith, a passageway communicating with the chamber and fan, a shaft journaled in the air pipe, a valve fixed thereto, a forked lever pivotally mounted at one end and having operative connection with the slidable member, a link pivotally connected with the opposite end of the lever, an arm fixed to the shaft and operatively connected with the link, an operating handle on the shaft whereby to simultaneously control the valve and shift the slidable

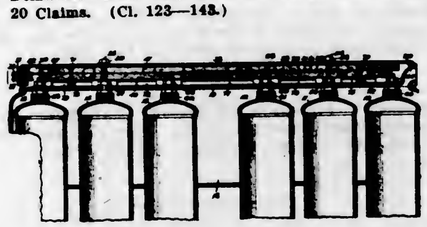
member to position the slidable members at the desired point in the grooves, a motor for driving the fan, and driving means between the motor and feed roller.

1,424,054. PHONOGRAPH-RECORD CABINET. ALFRED WIEHL, Brooklyn, N. Y. Filed Oct. 11, 1920. Serial No. 416,126. 6 Claims. (Cl. 211—16.)



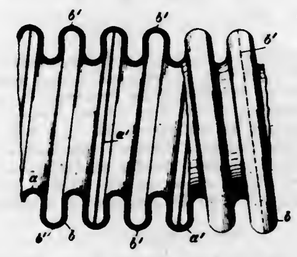
2. A phonograph record cabinet comprising a drawer, a fixed front and floor therefor and a fixed medial longitudinal member extending from the top of the front and rigidly connected to the floor at the rear, a series of parallel grooves in said floor and extending inwardly from each side thereof, a relatively depressed grooved section formed in adjacent grooves alternately on opposite sides of the middle of the drawer, adapted to engage a substantial portion of the periphery of a record.

1,424,055. AEROPLANE. EUGENE WILDER, Boulder, Colo. Filed Aug. 9, 1921. Serial No. 490,907. 2 Claims. (Cl. 244—14.)



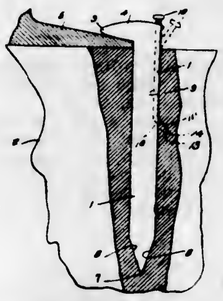
1. An aeroplane comprising a body frame enclosed by screen material and separated by vertical partitions into compartments, said frame comprising bottom members and standards rising from the bottom members, upper and lower planes, the lower plane being supported on said

body frame and the standards of said body frame being extended upwardly beyond the bottom plane and con-



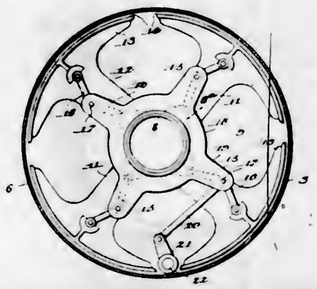
stituting supporting posts for the upper plane, there being additional posts between the upper and lower planes beyond the body frame.

1,424,056. IGNITION APPARATUS FOR INTERNAL-COMBUSTION ENGINES. NIKLAS WINBLAD, Stepney, Conn., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn., a Corporation of Delaware. Filed July 18, 1918. Serial No. 245,489. 20 Claims. (Cl. 123—143.)



1. In an ignition apparatus for internal combustion engines, the combination of a spark-plug, a cable leading to said spark-plug, and a divided housing presenting a longitudinal chamber formed partly within each division and enclosing said cable, the latter being received partly in each division.

1,424,057. FLEXIBLE METAL HOSE. EMIL WITTENMANN, Pforzheim, Germany. Filed Apr. 29, 1921. Serial No. 465,515. 2 Claims. (Cl. 137—70.)

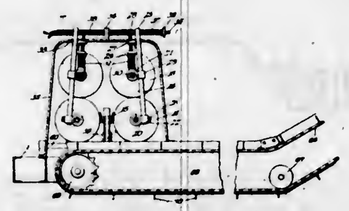


1. A flexible metal hose, consisting of two single hose one arranged inside the other and each formed by winding a metal band of a similar corrugated cross-section into the shape of a cylindrical spiral, the adjacent edges of the windings of the band forming the outer hose being joined by welding and the edges of the inner hose being adapted to be displaced relatively to each other.

1,424,058. SPIKE. WILLIAM W. YEHLING, Butte, Mont. Filed June 29, 1920. Serial No. 392,705. 1 Claim. (Cl. 85—23.)

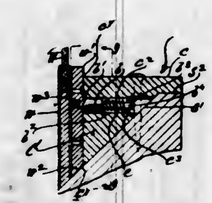
A spike having a substantially longitudinally disposed grooves in a side wall thereof, and a deflecting surface at the base of said groove, an anchoring pin for insertion into said groove, said pin having a deflected surface at its lower end for cooperation with said surface to deflect the lower end of said pin into the element receiving the spike, said pin being provided with a bevelled surface extending from the opposite side of the spike to its deflected end aforesaid in order to prevent engagement of the lower end of the pin with said element until deflected thereinto through coaction of the deflecting surface.

1,424,059. BRAKE. GEORGE B. YOUNGS, New York, N. Y. Filed May 11, 1920. Serial No. 380,458. 4 Claims. (Cl. 188—79.)



1. In a device of the class described, the combination of a brake drum; a plurality of brake blocks movable radially thereof; a pair of toggle links for each of said blocks, each of said pairs having one link pivoted to the respective block and the other to a stationary part; and a web mounted for rotary movement and connected to each pair of toggle links at their knuckle.

1,424,060. HUSKER. GEORGE W. ZEISS, Ethan, S. Dak. Filed Mar. 4, 1922. Serial No. 541,151. 2 Claims. (Cl. 130—5.)



1. In a corn husking machine the combination, a wheeled frame, snapping rolls supported at a downward angle from the front thereof, said rolls having fluted bodies and conical threaded lower ends, a guard to the outer side of each of the rolls, husking rolls horizontally supported in superimposed pairs on the frame, spring means influencing the upper toward the lower husking rolls, a trough at the outer side of the snapping rolls and between the cooperating

pairs of husking rolls, an endless conveyor in the trough, means for operating the same, means for simultaneously revolving the snapping and husking rolls, means receiving

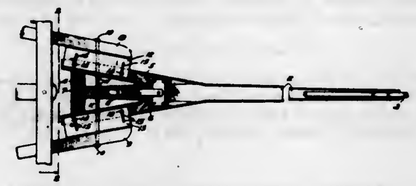
the corn from the husking rolls to deliver the same to one side of the frame, and operating means for said last mentioned means.

1,424,061. SECURING MEANS FOR AUTOMOBILE TOP CLOSURES. HARRY E. ADAMS, New York, N. Y. Filed Mar. 7, 1921. Serial No. 450,375. 4 Claims. (Cl. 296—45.)

1. Securing means for an automobile top closure panel of the character designated, comprising a plurality of automatic locking devices each consisting of a dovetail coupling tongue secured to the lower member of the panel frame, said coupling tongue being formed with a bolt mortise, a casing mounted on the car sill and formed with a dovetail groove for the reception of said dovetail coupling tongue on the panel, and a peak nosed spring bolt mounted in said casing and adapted to engage the said mortise in the coupling tongue, for the purpose described.

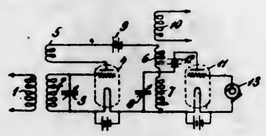
1,424,062. HIGH-TEMPERATURE DEVELOPMENT OF PHOTOGRAPHIC MATERIALS. ALEXANDER JOHNSTON AGNEW and FRANK FORSTER RENWICK, Ilford, England, assignors to Ilford Limited, Ilford, England. Filed Feb. 28, 1919. Serial No. 279,882. 10 Claims. (Cl. 95—88.)

1. A composition for treating gelatine-surfaced photographic materials for hardening them only, comprising a substance adapted to yield formaldehyde together with a relatively greater amount of a salt of the known class which tends to raise the melting point of a gelatine jelly and to retard or restrict the swelling of gelatine in water.



1,424,063. SHIM. JEFFERSON H. AKINS, Lewistown, Mont. Filed Oct. 23, 1916. Serial No. 127,282. 5 Claims. (Cl. 301—20.)

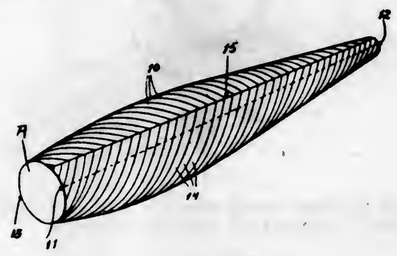
1. An auxiliary for clamping lugs of demountable rims comprising a strip of sheet metal having one end portion provided with a longitudinal slot to receive a bolt, the intermediate portion of the strip being bent to extend at right angles to said end portion a distance, the other end portion being bent inward over the said intermediate portion at an acute angle, and away from the first named end



portion, and being extended beyond the junction of said intermediate portion and first mentioned end portion.

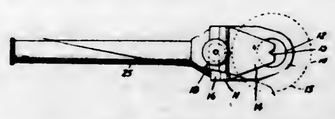
1,424,064. WAGON TONGUE. JOHN H. ANDERSON, St. Paul, Minn. Filed Apr. 3, 1918. Serial No. 226,421. 1 Claim. (Cl. 278—43.)

The combination, with the wagon hounds, of angle plates having their vertical flanges seated against the inner faces of said hounds and their horizontal flanges projecting into the space between said hounds, a tongue adapted to lie between said wagon hounds and having tongue hounds on which said horizontal flanges are seated, said horizontal flanges each having a plurality of transverse rows or holes therein through which the proper places for the bolt holes in the tongue hounds may be marked, bolts passing vertically through the holes in said horizontal flanges and through the holes made in said tongue hounds, and a horizontal bolt passing transversely through said wagon and tongue hounds and the vertical flanges of said plates.



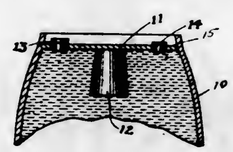
1,424,065. SIGNALING SYSTEM. EDWIN H. ARMSTRONG, Yonkers, N. Y. Filed June 27, 1921. Serial No. 480,563. 17 Claims. (Cl. 179—171.)

1. The method of amplifying varying electric currents which comprises impressing the varying potential of the current to be amplified upon a feedback system having a certain degree of damping, and periodically altering the relation between the amount of feedback and the degree of damping of the system, whereby super-regenerative action is obtained.



16. A vacuum tube regenerative system comprising a feedback circuit having damping and adjusted near the point of oscillation, an oscillating feedback circuit associated therewith and means by which it causes a periodic variation in both the amount of feedback and the damping of said first circuit, whereby super-regenerative action is obtained.

1,424,066. AEROPLANE FUSELAGE AND PROCESS OF BUILDING SAME. ERNOLD G. BAHL, Lincoln, Nebr. Filed June 24, 1921. Serial No. 480,215. 6 Claims. (Cl. 244—30.)



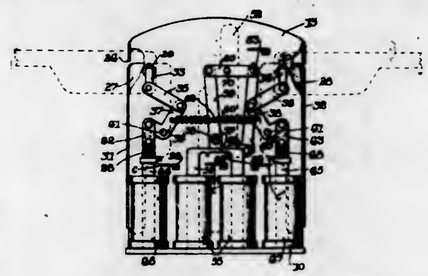
1. An aeroplane fuselage comprising a plurality of superposed layers secured together permanently, each layer being formed of a plurality of sections with the joints of the sections of the successive layers arranged in staggered relation, each section being formed of a plurality of strips.

1,424,067. GAUGE FOR LAMPS. RALPH BEMAN, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Mar. 20, 1920. Serial No. 367,507. 4 Claims. (Cl. 33—180.)

1. In a device for gauging the light center length of an incandescent lamp, the combination of sighting means, a holder mounted thereon for receiving the said lamp and means whereby said holder may be moved with reference to said sighting means, said device being provided with means whereby the extent of said movement may be indicated.

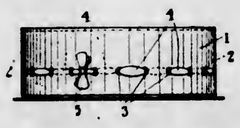
1,424,068. ATTACHMENT FOR HYDROCARBON CONTAINERS. JOHN BINGMAN, Mount Tabor, Wis. Filed June 19, 1919. Serial No. 305,250. 2 Claims. (Cl. 220—85.)

1. The combination with a liquid containing barrel, and the head thereof, of a downwardly flaring pocket mounted on the lower face of said head and projecting downwardly, its upper end being closed and its lower end open, for the purpose described.



1,424,069. WRENCH. FRED W. BLACKMAR, Providence, R. I., assignor of one-half to Lewis M. Blackmar, Providence, R. I. Filed Apr. 22, 1921. Serial No. 463,628. 3 Claims. (Cl. 81—121.)

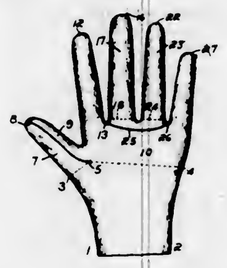
1. A socket wrench comprising a cylindrical head, a handle, and a shank connecting one side of the head and the handle, the said handle and one end of the head occupying substantially parallel planes, and the said shank extending diagonally beyond the said end of the head and between the same and the handle, and the juncture of the shank with the side of the head being spaced inwardly from the plane of the opposite end of the head,



the internal wall of the head being provided with a circumferential series of notches to receive the corners of a nut or the like, and the head being exteriorly tapered circumferentially in the direction away from the juncture of the shank with the head.

1,424,070. AUTOMOBILE DIRECTION INDICATOR. JAMES B. BLAIR, Decatur, Ill.; Ora Mueller Blair administratrix of said James B. Blair, deceased. Filed Sept. 20, 1917. Serial No. 192,268. 3 Claims. (Cl. 177—337.)

1. In an indicator, the combination with a plurality of electromagnets adapted to be actuated upon change of motion of a vehicle, of a series of levers connected at one end to said electromagnets, crank arms connected at the opposite end to said levers, signal members on said crank arms indicating change of motion either lateral or cessational, two of said signal members projecting outwardly for lateral change and the other projecting upwardly for cessational change and common spring means for assisting the return of said signal members.



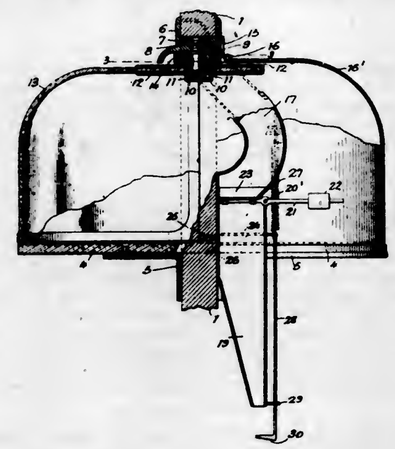
1,424,071. BOX AND THE LIKE. STANLEY SEPTIMUS BOOTT, London, England. Filed July 7, 1920. Serial No. 394,452. 1 Claim. (Cl. 229—46.)

A box comprising lid and body portions adapted to be telescopically engaged one with the other and having curved walls, holes spaced apart circumferentially in the wall of the lid portion, a band threaded through the

holes and stretched sufficiently taut between them to secure a firm frictional connection between the lid and body portions.

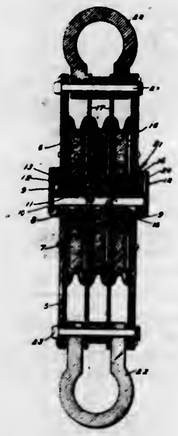
1,424,072. GLOVE AND METHOD OF MAKING SAME. GEORGE P. BOSWORTH, Central Falls, R. I., assignor to Hemphill Company, Pawtucket, R. I., a Corporation of Massachusetts. Filed Sept. 6, 1918. Serial No. 252,965. 2 Claims. (Cl. 66—4.)

1. A knitted glove formed in one continuous piece and having a circularly knitted, seamless wrist and hand, and a thumb, and fingers integral with the hand, each finger being knitted as a flat, oppositely selvaged strip, the first and fourth fingers each being formed of a flat, oppositely selvaged strip of sufficient width to encircle the finger, and seamed only along their inner edges and being integral continuations of the hand, and the second and third finger strips being integral continuations of the back of the hand and being each of twice the length of the finger and seamed along their opposite edges, said second and third finger strips having as an integral knitted continuation thereof a strip of the width of both fingers, said continuation being seamed across the palm of the hand from the first to the fourth finger strips.



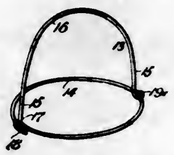
1,424,073. COLLAPSIBLE TIRE RIM. JOHN H. BOWLES, New York, N. Y. Filed Sept. 3, 1921. Serial No. 498,221. 3 Claims. (Cl. 301—34.)

1. A tire rim split at one point, the tire rim being trough-shaped in cross section, a lever trough-shaped in cross section and having longitudinally extending ears pivoted to one of the sections of the rim at their extremities and pivoted intermediate their extremities to the other section of the rim, whereby upon an oscillation of the lever the rim sections may be shifted into or out of alignment with each other, a socket formed in that end of the lever remote from its pivotal connection to the first named section, and means for locking the lever in a radial position with the rim sections in offset relation to each other.



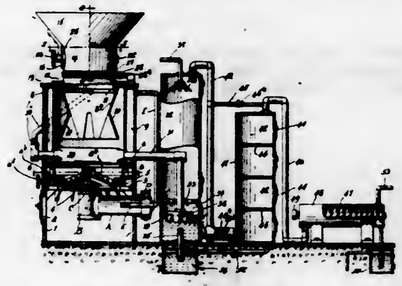
1,424,074. VENDING APPARATUS. EDWARD COLTON BOYCE, Washington, D. C. Filed June 7, 1922. Serial No. 566,574. 7 Claims. (Cl. 194—1.)

1. In a vending apparatus, the combination of a support provided with an opening, a shelf extending from one side of said opening, a rotatable cover for said shelf, means for securing said cover in closed position, coin



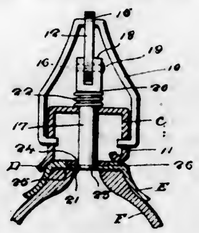
operated means for releasing said cover, and means for moving said cover to open position when released.

1,424,075. TRAVELING BLOCK. BURWELL BOYKIN, Jr., Beaumont, Tex. Filed Dec. 16, 1920. Serial No. 431,216. 1 Claim. (Cl. 254—192.)



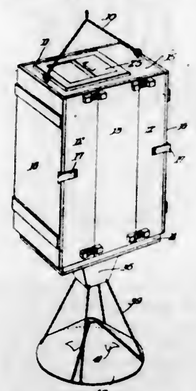
In a device of the character described, side plates having openings, a hollow shaft extending through the openings, said shaft having threaded ends, cups having threaded openings positioned over the threaded ends and adapted to engage the side plates to secure the same in position, spacing plates supported on the shaft and disposed between the side plates, said shaft having openings extending through the wall thereof, bearing members having openings and mounted on the shaft, pulleys disposed between the spacing plates and mounted on the bearings, said pulleys having openings to receive a lubricant from the hollow shaft.

1,424,076. CARRIER FOR BOTTLES, ETC. ANTHONY F. BRAUTIGAM, Buffalo, N. Y., assignor of one-half to Abraham M. Rudiger, Buffalo, N. Y. Filed Sept. 10, 1919. Serial No. 322,822. 1 Claim. (Cl. 215—108.)



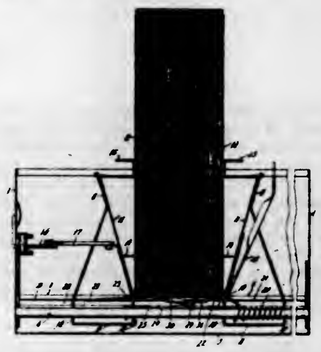
A bottle carrier constructed from a single piece of wire which is bent to form an upright U-shaped handle having two vertical upright arms and a bow connecting the upper ends of said arms, a horizontal supporting ring having a single split one end of which is integrally connected with the lower end of one of said arms and forms a corner therebetween, a hook formed integrally on the other end of said ring and engaging detachably with said corner, and an eye formed integrally with the lower end of the other arm of said handle and permanently embracing said ring diametrically opposite the hook thereof.

1,424,077. GAS PRODUCER AND PROCESS. ELBERT M. BRAXTON, Fort Worth, Tex., assignor of one-half to Mabel R. Spellman, Dallas, Tex. Filed Nov. 18, 1921. Serial No. 516,147. 4 Claims. (Cl. 48—66.)



4. The herein described process for producing gas from lignite, which involves ignition of a bed of lignite of substantially cone shape on its under side and the constant rotation thereof to form gas, superheating the gas at a point adjacent to the apex of the under side of the bed, and then in conducting the gas after superheating to be cleaned, cooled and dried.

1,424,078. RIM FASTENER. WILLIAM BROADWAY and THOMAS C. PLEDGER, Oklahoma, Okla.; said Broadway assignor to said Pledger. Filed Apr. 11, 1921. Serial No. 460,215. 2 Claims. (Cl. 301—21.)

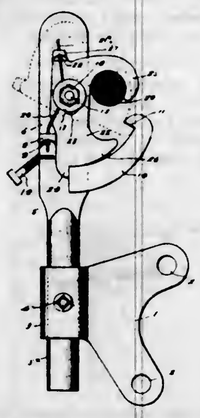


1. In a wheel including a felly and a demountable rim disposed thereon, means for locking the rim upon the felly comprising a series of locking devices disposed throughout the inner periphery of the felly and each comprising a spring pressed plunger slidable through the felly, a socket member carried by the inner periphery of the rim at each locking member and adapted to receive the plunger, and cam means for forcing said plunger outwardly into engagement with the socket.

1,424,079. POULTRY FEEDER. CHARLES EDWARD CANELL, Portland, Oreg., assignor of one-half to Edward T. White, Everett, Wash. Filed Oct. 24, 1921. Serial No. 509,909. 5 Claims. (Cl. 161—10.)

1. A feeder of the character described comprising a casing provided with filling means whereby grain may be introduced thereinto, the casing being provided in its bottom with an outlet opening, a trap door normally closing said opening, a spring-pressed catch engaging said trap door whereby to hold the same closed, and time controlled electrically operated means mounted within the casing for moving said catch out of engagement with the trap door, said means including a clock switch mounted directly within the casing.

1,424,080. FILING TRAY OR DRAWER. CHARLES C. CARPENTER, Cincinnati, Ohio, assignor to The Samuel C. Tatum Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 21, 1918. Serial No. 235,876. 11 Claims. (Cl. 129—16.)

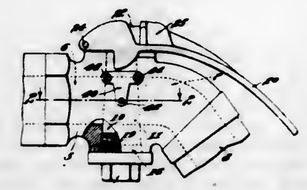


2. In a card filing drawer or tray, a casing, a pair of followers movably supported within the casing between which the cards to be filed are packed, each follower comprising a frame member, and a card engaging plate

hingedly mounted upon said frame for supporting the cards in inclined or upright positions.

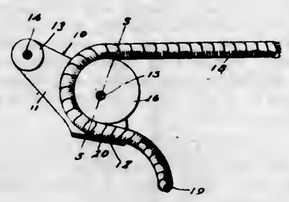
9. In a device of the class described, a casing for supporting a pack of cards, a platform mounted within the casing beneath the cards, composed of two hingedly united sections, and means for moving said sections to relatively oppositely inclined positions to elevate the cards engaged thereby to bring their fingering edges in an offset relation to one another.

1,424,081. CLUTCH-LEVER RETAINER. MARTIN L. CLINE and FRANK HERGE, Malinta, Ohio. Filed July 8, 1921. Serial No. 483,347. 5 Claims. (Cl. 74—81.)



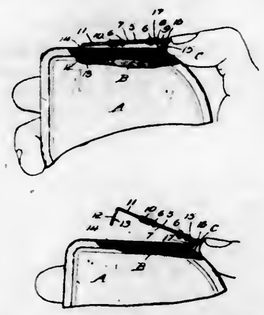
1. The combination in a retainer, of a frame having stops, a sliding and swinging dog connected and movable with respect to the frame and having an arm to engage a device to be held and also having a stop, the latter for cooperation with the stops of the frame, and a spring to move the dog clear of the device to be held thereby for the release of said device.

1,424,082. RING GAUGE. MORTIMER L. CLOPTON, Wichita Falls, Tex. Filed May 6, 1921. Serial No. 467,382. 1 Claim. (Cl. 33—178.)



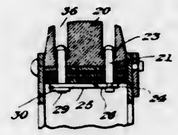
A ring gauge comprising a hollow tapered tube of a material susceptible to distortion to change the shape thereof when a ring has been inserted thereover and forcibly brought thereagainst and adapted to conform itself to the shape of the ring without changing the circumference of the tube.

1,424,083. SHUT-OFF VALVE FOR AIR-BRAKE PIPES. ALBERT L. COLE, Auburndale, Mass., assignor of one-fourth to Francis J. V. Dakin, Newtonville, Mass., and one-fourth to Frank A. Tilton, South Braintree, Mass. Filed July 6, 1920. Serial No. 394,106. 4 Claims. (Cl. 251—94.)



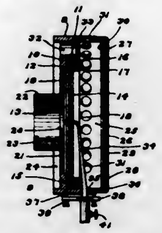
1. A shut-off valve for air-brake pipes on railroad cars comprising a valve casing, a valve mounted in said casing, said valve casing and said valve being each provided with a port, said ports being so arranged that a clear and unobstructed passage is provided for the air to escape from the pipe on one side of said valve when the latter is in a closed position and means affixed to the outside of said valve casing for closing the outer end of said port in said valve casing; said means being flat and substantially flush with the outer surface of said valve casing and rigidly fixed against lateral movement yet resilient to permit the escape of compressed air from said last mentioned port.

1,424,084. CLOTHESLINE ADJUSTER. GLAUDEL COLB, Poughkeepsie, N. Y. Filed Mar. 19, 1920. Serial No. 367,059. 1 Claim. (Cl. 24—134.)



A device of the class described comprising a bracket formed from a single piece of material and bent to provide a pair of parallel inclined side bearing plates having aligned openings therein, a transverse web connecting one end of said plates and provided with a plurality of transverse inwardly extending projections, a rivet passing through said openings in said bearing plates, a roller eccentrically mounted on said rivet and cooperating with said projections to provide a clamp, spaced ears extending from the opposite ends of said plates and having aligned openings therein, a rivet extending through the openings in said ears and a roller rotatably mounted on the last mentioned rivet.

1,424,085. LATCH RELEASE FOR TAPES. CHARLES W. CROGAN, Bangor, Me. Filed Oct. 16, 1920. Serial No. 417,307. 16 Claims. (Cl. 83—138.)

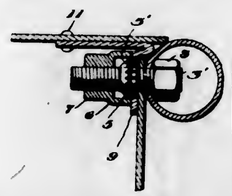


1. In a line terminal for engagement with a casing, a latching element and a fulcrum connection between the element and the line to coact with the casing for the automatic release of said element when manually actuated.

1,424,086. VEHICLE WHEEL AND RESILIENT TIRE THEREFOR. FELIX DE BORGGRAVE, Chicago, Ill. Filed June 17, 1921. Serial No. 478,376. 4 Claims. (Cl. 152—8.)

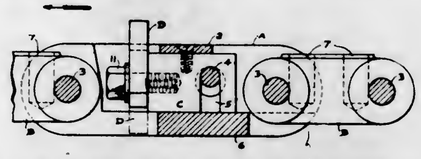
4. In a vehicle wheel, the combination of a plurality of circular leaf springs, flanges for preventing relative lateral movement of said springs, spokes carried by said flanges, bolts connecting said flanges, a locking ring for locking said bolts and flanges in position, a plurality or cushioning tread members mounted upon the outermost of said springs in circumferentially spaced relation one to another, bolts extending through said springs and tread members, locking members engaging said bolts for preventing relative movement of the tread members and springs, handles formed upon said ring for moving the same, links pivoted to said handles and adapted to be bolted to certain of said spokes for locking the locking ring against movement.

1,424,087. REPRODUCER. CHARLES J. DEL'MARMOL, Frankford, Pa. Filed Sept. 6, 1921. Serial No. 498,775. 2 Claims. (Cl. 274—27.)



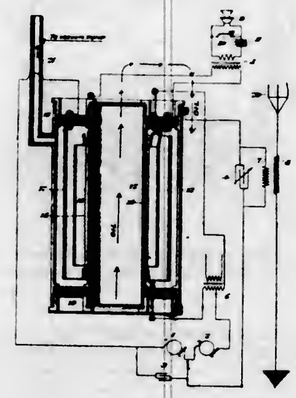
1. A sound box comprising a cylindric body, an apertured wall closing one end of said body and formed with a peripheral enlargement, a diaphragm, a supplemental diaphragm closing the other end of the cylindric body and forming an amplifying chamber, said enlargement being apertured and said cylindric body being apertured around the amplifying chamber.

1,424,088. COMPOSITION FOR COATING METALS FOR THE PURPOSE OF PERMITTING ELECTRIC CURRENTS TO OPERATE BY THE ACTION OF LIGHT. HILBERT L. FALK, New Orleans, La., assignor to Lyndon D. Wood, Philadelphia, Pa. Filed Dec. 10, 1921. Serial No. 521,477. 3 Claims. (Cl. 219—76.)



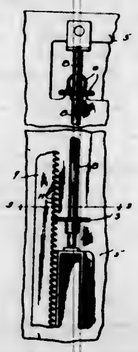
1. A composition for coating surfaces for the purpose of permitting electric currents to operate by the action of light comprising a mixture of platinum-barium-cyanide of potassium crystals, crude sulphur, tungstate of soda, calcium chloride, and selenium crystals.

1,424,089. RAIL-FASTENING DEVICE FOR BEDS AND THE LIKE. JOHN FINDURA, Pittsburgh, Pa., assignor to Fort Pitt Bedding Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 3, 1921. Serial No. 442,041. 9 Claims. (Cl. 5—55.)



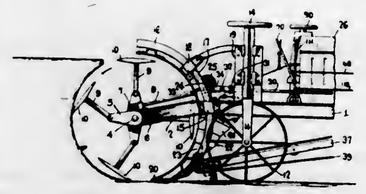
1. In a bed, a post having a lateral hole therein, a threaded stud mounted in said hole, means securing the stud in position and located inside said post, a foot or head rail mounted on said stud outside said post, a nut or support holding said rail in position on said stud and against the outer face of said post, a second or side rail having a recessed end portion with a face having a contour corresponding to the contour of the said post, such recessed portion fitting over the said nut or support, a clamping member loosely mounted on the stud and another nut on said stud arranged to bear against the clamping member and force it against the said end portion of the second rail to hold it on said second nut or support and against said post.

1,424,090. FEEDING CHAIN FOR WOODWORKING AND OTHER MACHINES. CHESTER B. FOSTER and FRANK H. CLEMENT, Rochester, N. Y.; Louisa S. Clement, Mary G. Clement, and Benj. H. Clement executors of said Frank H. Clement, deceased; said executors assignors of the entire right of said Frank H. Clement, deceased, to American Woodworking Machinery Company, Rochester, N. Y., a Corporation of Pennsylvania; said Foster assignor of his entire right to American Woodworking Machinery Company, Rochester, N. Y., a Corporation of New York. Filed May 27, 1919. Serial No. 300,146. 6 Claims. (Cl. 198—176.)



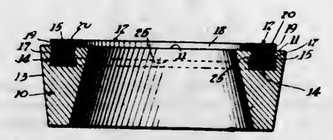
1. The combination in a feeding chain of a main link, a block fitted to slide longitudinally in said link, a feeding dog made vertically adjustable on the sliding block and means for positively adjusting the sliding block longitudinally in the main link.

1,424,091. RADIOELECTRON OSCILLATOR. CLAUDE R. FOUNTAIN, Macon, Ga. Filed Jan. 21, 1919. Serial No. 272,357. 4 Claims. (Cl. 250—27.)



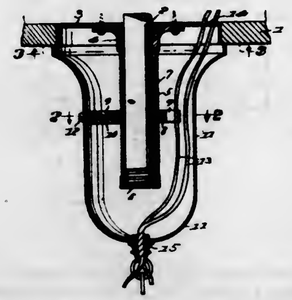
1. In a radio-electron oscillator, a source of electrons, an attracting medium, a grid in front and a medium behind said source and possessed of the capacity of synchronous action to change the speed of electrons toward the attracting medium, the said attracting medium being so perforated that some of the electrons may pass on to another medium, where their impacts may free other electrons, and the said second named medium.

1,424,092. CALL CLOCK. CHESTER B. GAINS, Colfax, Iowa, assignor of one-half to Samuel A. Potts, Muscatine, Iowa. Filed June 7, 1921. Serial No. 475,751. 1 Claim. (Cl. 58—116.)



The combination with a rotatable shaft, of a longitudinaly movable rack bar having the teeth thereof beveled obliquely with respect to the horizontal, at one side thereof, a disk fixed to rotate with the shaft, a plurality of spaced horizontally arranged teeth carried thereby and having their edges beveled so as to pass the beveled face of the teeth on the rack bar, the latter being adapted to successively rest upon the upper face of the disk and to subsequently pass between two adjacent teeth of the latter.

1,424,093. EXCAVATOR. JOHN A. GILMAN, American Lake, Wash. Filed Sept. 4, 1920. Serial No. 408,202. 7 Claims. (Cl. 37—11.)

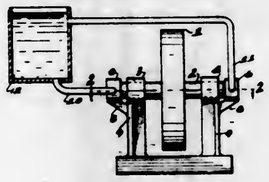


1. An excavator comprising a supporting frame, a bracket mounted upon the frame, means for moving the bracket transversely of the frame, a plurality of sets of cutters carried by the bracket, the sets being spaced apart and means for operating the cutters.

1,424,094. VALVE SEAT. ROBERT W. GUNN and WILLSIE A. S. THOMPSON, Los Angeles, Calif. Filed May 17, 1920, Serial No. 381,808. Renewed June 19, 1922. Serial No. 569,574. 3 Claims. (Cl. 251—167.)

3. A valve member with a seating ring groove having a middle portion of uniform width, an inner portion wider than the middle portion, and an outer portion diverging outwardly from the middle portion.

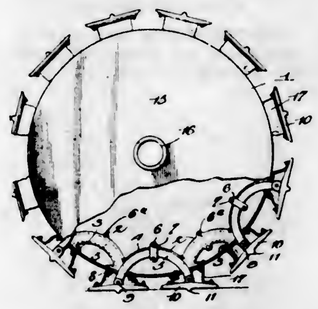
1,424,095. ELECTRIC-LIGHTING FIXTURE. PLINY L. HAISLIP, Washington, D. C. Filed Oct. 11, 1921. Serial No. 507,059. 5 Claims. (Cl. 240—85.)



1. An electric light fitting including supporting means, a sleeve of insulating material carried by the supporting means and having external threads, a ring adjustably mounted on said sleeve and having internal threads engaging the threads of the sleeve, a fixture cap carried by said ring, and means accessible from the exterior of said cap for securing the cap to the ring.

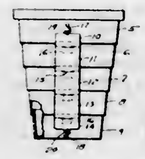
1,424,096. PENCIL ATTACHMENT. CHARLES B. HANSEN, Providence, R. I. Filed Apr. 5, 1922. Serial No. 549,845. 6 Claims. (Cl. 24—12.)

1. In a pencil attachment, a cap having a closed end with a struck-out ring and having a bead intermediate its ends, said cap being formed to frictionally engage over a pencil end, a sleeve formed to frictionally fit over the outer end of the cap and to engage the bead of the cap at one end and having its opposite end open, a coil spring capable of being housed within the sleeve and having one end connected to the ring, and a safety pin connected to the other end of the spring and disposed without the sleeve for securement to the garment of the user.



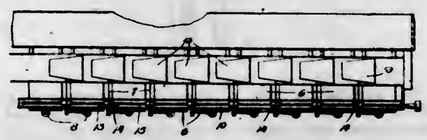
1,424,097. WATER-COOLED BEARING. JOHN HERMAN, Los Angeles, Calif. Filed July 22, 1920. Serial No. 398,166. 2 Claims. (Cl. 257—1.)

2. The combination with a rotatable member, of means for circulating a cooling fluid through said rotatable member, said circulating means including a thermosiphon circulation of said fluid, and also means for pumping said liquid actuated by the rotation of said member.



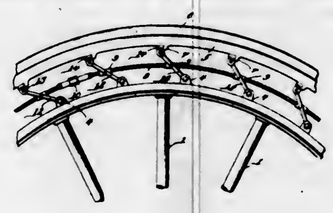
1,424,098. TRACTOR WHEEL. HARRY G. HOWARD, Greenwich, N. Y. Filed Sept. 14, 1920. Serial No. 410,139. 4 Claims. (Cl. 305—13.)

1. In a device of the class described, the combination of a rim, a plurality of series of arcuate members slidably mounted in said rim, a plurality of tread members each



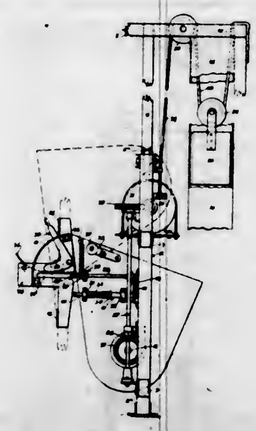
pivotally secured to a plurality of said arcuate members, and arcuate housings for said arcuate members.

1,424,099. COLLAPSIBLE SHIPPING CONTAINER. NANNIE K. HUNT, Adolphus, Ky. Filed Mar. 21, 1922. Serial No. 545,553. 2 Claims. (Cl. 220—8.)



1. A collapsible container comprising a plurality of annular interengaging elements and a plurality of braces, each of said braces comprising a plurality of sections, means for connecting the several sections of said braces detachably together in such manner that when said sections are connected the braces are vertically rigid, said means comprising slots formed in some of the sections and offset projections upon other of the sections engageable in said slots and interengaging elements between the uppermost and lowermost sections of the container and the uppermost and lowermost sections of the braces.

1,424,100. ATTACHMENT FOR CONE-WINDING MACHINES. ADOLPH A. JOHNSON, Hanes, N. C., assignor of one-fifth to S. B. Hanes and one-fifth to D. A. Ricks, both of Hanes, N. C. Filed July 26, 1921. Serial No. 487,795. 1 Claim. (Cl. 28—59.)

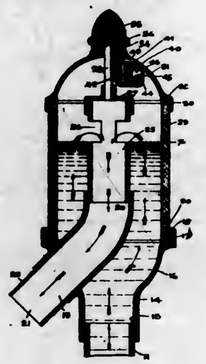


A cone winding machine for winding a plurality of cones, means for winding yarn upon said cones, means for moistening the yarn, said last mentioned means comprising a water containing trough mounted adjacent the cones, a fixed shaft extending longitudinally of the trough, said shaft being partially submerged in the water, enlargements rotatably mounted on said shaft, there being an enlargement for each cone, said enlargements arranged in the path of the yarn and being engaged and rotated by the yarn as the yarn is being wound on the cones.

1,424,101. RESILIENT WHEEL. CARL JOHNSON, San Francisco, Calif. Filed Nov. 12, 1920. Serial No. 423,528. 3 Claims. (Cl. 152—32.)

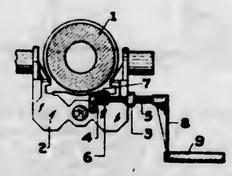
3. In a resilient wheel structure, the combination of inner and outer annular bands, an annular cable interposed between and spaced from the said bands, and levers pivotally connected with the inner band and similarly connected with the outer band at points in advance of the inner connections and receiving the said cable.

1,424,102. AGITATING AND DUMPING BUCKET. GEORGE JOHNSON, Brier Hill, Pa. Filed Mar. 28, 1922. Serial No. 547,504. 5 Claims. (Cl. 83—73.)



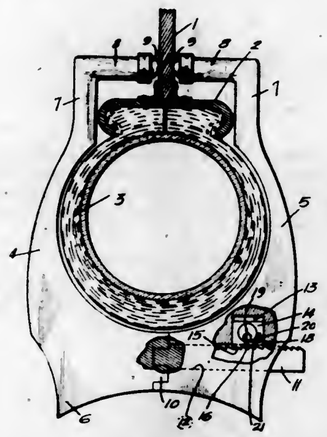
1. In an apparatus of the character described, in combination with a supporting structure, a frame mounted on said structure for movement along the same, a bucket mounted in the frame, a shaft extending through the bucket and supporting the same for tilting movement into discharging and receiving positions, means for releasably securing the bucket in receiving position, agitating members secured on the shaft within said bucket, and means for rotating said shaft during travel of the bucket.

1,424,103. LINGERIE CLASP. HAROLD R. JOHNSON, Edgewood, R. I., assignor to Oscar R. Johnson Company, Cranston, R. I. Filed Jan. 21, 1922. Serial No. 530,822. 3 Claims. (Cl. 24—248.)



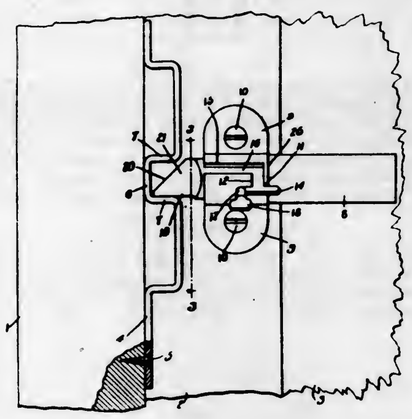
3. In a clasp, a pair of members one of which has a doubled slotted end and a curved end, the other member having a tongue at one end hingedly engaged in the slot and having its opposite end formed to snap into engagement with the curved end of the first member.

1,424,104. VISIBLE FLUID GAUGE. MARSHALL W. JOY, San Francisco, Calif. Filed Sept. 2, 1920. Serial No. 407,757. 9 Claims. (Cl. 221—102.)



1. A fluid gauge comprising an open ended casing adapted to detachably engage the priming column of a fluid pump; an outlet conduit formed integrally with said casing and substantially in the center thereof; a transparent cylindrical member adapted to be mounted on said casing around said outlet and a closure adapted to be secured to said outlet and to engage said cylindrical member.

1,424,105. GUN RETRACTING MECHANISM. BRYAN P. JOYCE, Washington, D. C. Filed May 19, 1922. Serial No. 562,240. 4 Claims. (Cl. 89—40.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

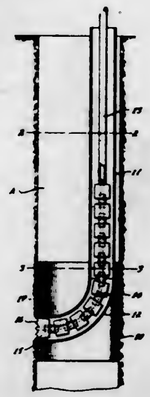


1. A gun retracting mechanism, including a gun barrel, a rack formed thereon and extending longitudinally thereof, a support for the gun barrel, a shaft journaled in said support, a pinion rigid on the shaft and in mesh with the rack and means for rotating the shaft.

1,424,106. AUTOMOBILE THEFT SIGNAL. HARRY M. LAKE and OWEN C. BETRY, Los Angeles, Calif. Filed May 26, 1921. Serial No. 472,843. 5 Claims. (Cl. 70—90.)

1. A device of the character described comprising separable sections adapted to form an annulus, one of said sections having a toothed bolt extending through a bore of the other section, and a locking block in said second section adapted to engage said toothed bolt.

1,424,107. WINDOW LOCK. WILLIAM MARCUS LOWTHORP, Summertown, Tenn. Filed Jan. 11, 1922. Serial No. 528,391. 3 Claims. (Cl. 292—60.)

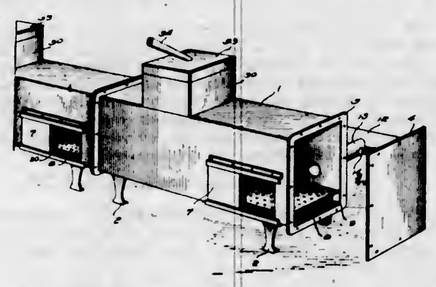


1. The combination with a frame and a slidable sash, of a rack strip on the frame and having a seat provided with parallel portions; a guide on the sash and having a T-shaped slot including a transverse body, a longitudinal head at one end of the body and a transverse arm at the other end of the body; a bolt slidable in the guide, and a stud projecting from the bolt, the bolt cooperating with one of the parallel portions of the seat to hold the sash against downward movement and the bolt having a beveled end which is so positioned with respect to the other parallel portions of the seat that the sash may be raised when the stud is at one end of the head of the slot, the stud being movable to the other end of the head of the slot to permit a lowering of the sash, the bolt having parallel surfaces, and being rotatable to permit said surfaces to coact with the parallel portions of the seat thereby to hold the sash against upward movement and downward movement, the stud being adapted to enter the extension of the slot by way of the body of the slot, thereby to hold the bolt against rotation; and spring means in the guide for advancing the bolt.

1,424,108. HYDROMETER. JOSEPH O. LUTHY, San Antonio, Tex. Filed Sept. 22, 1916. Serial No. 121,617. 7 Claims. (Cl. 265—45.)

1. A hydrometer or the like, comprising a shell or body portion of celluloid.

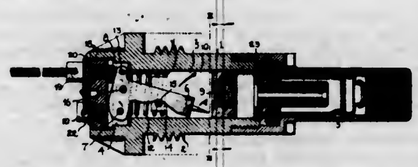
1,424,109. DRILLING DEVICE. WILLIAM S. MCBRIDE, Caldwell, Ohio. Filed Feb. 7, 1921. Serial No. 443,115. 5 Claims. (Cl. 255—19.)



1. A device of the character described comprising a casing insertable within a well, a tube secured to said casing and serving as a handle for governing the position thereof, a hollow flexible shaft extending through said tubing, the lower end of said tubing being curved and extending to the peripheral wall of the casing, and a bit carried by said flexible shaft.

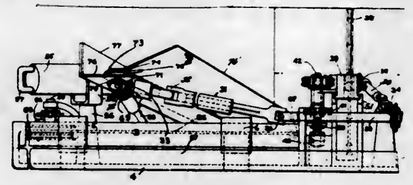
1,424,110. BELT. MICHEAL J. MAAKESTAD, Chicago, Ill. Filed Jan. 20, 1921. Serial No. 438,640. 10 Claims. (Cl. 241—8.)

1. A belt including a plurality of pliable elements comprising a body portion and a plurality of integral tongues extending therefrom, said body portion and tongues being provided with openings, the tongues of each element being threaded through openings of a pair of adjacent elements and folded back for the passage of tongues of succeeding elements.



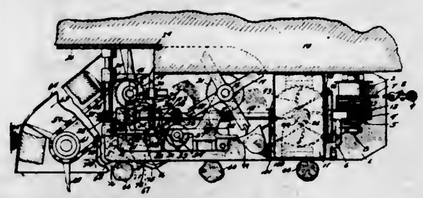
1,424,111. MEDICINAL APPARATUS. AUGUSTUS F. W. MACMANUS, San Antonio, Tex., assignor of one-tenth to J. E. Greer and J. B. Stafford, both of San Antonio, Tex. Filed Jan. 8, 1921. Serial No. 435,847. 9 Claims. (Cl. 167—3.)

1. A medicinal apparatus comprising a fire box, a settling chamber arranged adjacent said fire box, a plurality of baffle plates arranged therein, and a conditioning chamber arranged adjacent said settling chamber and communicating therewith.



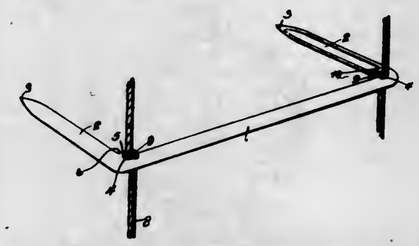
4. A medicinal apparatus comprising a casing, a fire box arranged adjacent one end of said casing, a settling chamber arranged adjacent said fire box, a plurality of baffle plates arranged therein, said plates being alternately secured to the top and bottom of the casing to produce a tortuous passage, and a conditioning chamber arranged adjacent said settling chamber and communicating therewith.

1,424,112. IMPACT FUSE. SETH G. MALBY, U. S. Army, assignor to Secretary of War of the United States of America, trustee. Filed Nov. 16, 1918. Serial No. 262,892. 20 Claims. (Cl. 102—39.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



18. A fuse for projectiles, including a movable percussion pellet carrying a primer and a pivotally mounted firing pin normally held with its pin out of alinement with the primer, the pellet and pin cooperating upon movement of the pellet in one direction to bring the firing pin and primer into operative relation.

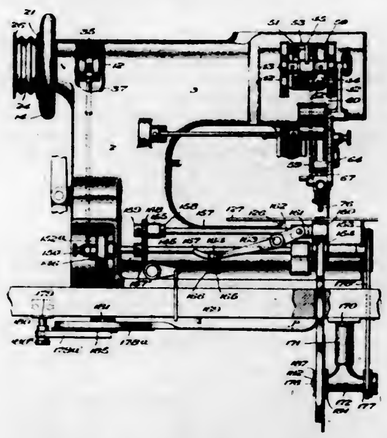
1,424,113. MINING MACHINE. EDMUND C. MORGAN, Morgan Park, Ill. Filed June 27, 1910, Serial No. 569,173. Renewed May 18, 1916. Serial No. 98,438. 85 Claims. (Cl. 262—9.)



1. In a mining machine, the combination with a supporting frame, of cutting mechanism mounted thereon and movable bodily therewith into positions to cut horizontal kerfs, an additional supporting frame connected to said first-named supporting frame in fixed relation thereto but movable relatively thereto, cutting mechanism mounted on said additional frame and movable bodily therewith into positions to cut upright kerfs transverse to the coal face, and means for operating said cutting mechanisms.

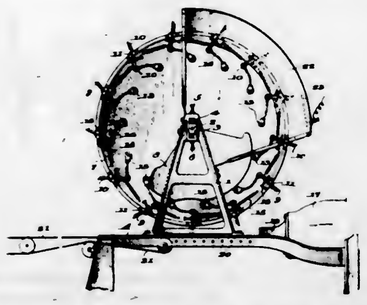
1,424,114. MINING MACHINE. EDMUND C. MORGAN, Morgan Park, Ill. Filed June 27, 1910, Serial No. 569,168. Renewed Jan. 7, 1918. Serial No. 210,796. 59 Claims. (Cl. 262—9.)

1. In a machine of the character described, the combination with means for making two horizontal kerfs in the material to be mined, of means for making a vertical kerf intersecting said horizontal kerfs to form a column, and picking means disposed between the horizontal kerf-making means and operating from the machine directly against the exposed surface of the mine wall for breaking down sections from said column.



1,424,115. ROPE LADDER CONSTRUCTION. RICHARD D. NILSON, Bell, Pa. Filed June 24, 1921. Serial No. 480,062. 2 Claims. (Cl. 228—40.)

1. A rope ladder construction comprising a ladder rung having its ends bent at right angles from the main portion of the rung, the portion of the rung at which the bend is formed, being provided with a V-shaped notch forming a retaining tongue, one corner of the notch being equipped



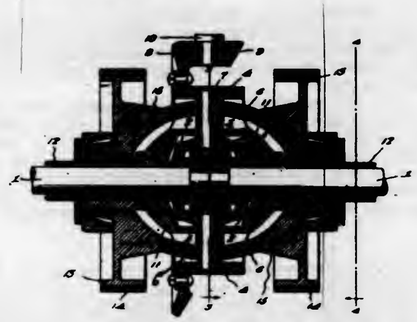
with a circular recess, the rope being provided with a single loop and slipped over the said tongue before the bend is formed, a wedging member also formed on the bent portion, the said wedging member binding the said rope in said recess and in the space between the retaining tongue and the recess when the said bend is formed.

1,424,116. PAPER-FEEDING MECHANISM. DONALD NOBLE, Bridgeport, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Continuation in part of application Serial No. 232,744, filed May 6, 1918. This application filed Feb. 12, 1919. Serial No. 276,609. 4 Claims. (Cl. 242—55.)

4. In a perforating machine, in combination, a supporting bench, a machine frame mounted thereon and carrying a perforating tool and a slotted work-support cooperating therewith, and a pair of paper-feeding rolls beneath said work-support, a paper-receiving reel disposed beneath the supporting bench with its axis in substantial parallelism with those of said feeding rolls, a driving connection between said reel and feeding rolls, and a paper supply reel mounted beneath said supporting bench and rotatable upon a substantially vertical axis, means being provided whereby a strip of paper is led from the supply reel through said bench and the slots of said work-support to the feed-rolls and thence through the bench to the receiving reel.

1,424,117. AUTOMATIC BUTTER-CUTTING MACHINE. ISAAC C. POPPER, New York, N. Y. Filed Apr. 23, 1921. Serial No. 463,851. 21 Claims. (Cl. 31—65.)

1. An automatic butter-cutting machine including a rotatable wheel or cutter-head, knives pivotally connected therewith which successively come into the path of the butter, means for holding a knife in fixed relation to the wheel or cutterhead during the entire operation of cutting, and means for feeding the butter against the intermittently fixed knife, whereby the wheel or cutter-head is revolved, and the butter is cut into lengths.



4. An automatic butter cutting machine including an automatic feed for the material to be cut, and a wheel or cutter-head carrying pivotally mounted knives which are intermittently fixed and which come in the path of the butter, whereby the wheel is revolved, and the butter is automatically cut into lengths, and name-plates secured to the periphery of the wheel or cutter-head between the knives for imprinting the butter.

8. The combination with a table having rollers and conveyors thereon, a former, a former-head, and means for feeding the material into, and discharging it from, the former-head upon the rollers, of a rotatable wheel or cutter-head carrying pivoted cutters, and means connected with each cutter for holding said cutters in fixed relation successively in the path of the fed material whereby the wheel is turned and the material is cut into lengths.

12. In an automatic butter cutting machine, a rotatable wheel carrying fixed name-plates on its periphery and knives, the latter pivotally supported, and means for controlling the position of the knife-holders, during the functioning of the knife.

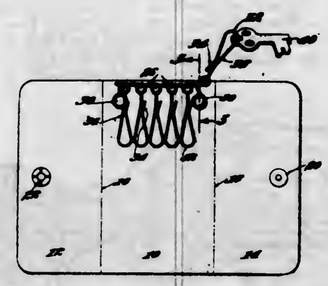
16. Means for shaping and cutting plastic material including a rotatable device presenting cutting means in the path of the oncoming material and following cutting means successively to sever the fed plastic material, and means for holding the cutters rigidly during the cutting operation, thus providing an abutment in position to receive the impact of the fed material, whereby the rotation of the device is effected.

1,424,118. EQUALIZING AND STEERING GEARING FOR MOTOR VEHICLES. JACOB B. RAMER, Chambersburg, Pa. Filed May 24, 1921. Serial No. 472,180. 1 Claim. (Cl. 180—17.)

Equalizing and steering gearing for motor vehicles comprising axles arranged in alinement and opposed relation, bevel gears fast on said axles, a rotary member between said gears and loose upon the inner opposed portions of the axles, an annulus surrounding and spaced from said rotary member, shafts extending between and carried by the rotary member and the annulus, inner bevel gears on said shafts intermeshed with the gears fast on the axles, outer comparatively large bevel gears on the shafts and fixed to said inner gears, housing sections enclosing the gears on the axle and the gears intermeshed therewith and having sleeves receiving the axles, said housing sections having their inner portions arranged between the inner and outer gears on the shafts, brake wheels loosely mounted on the said sleeves and having inwardly extending annular bevel gear portions surrounding the housings

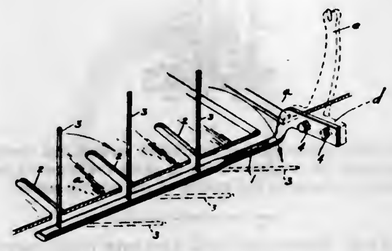
and intermeshed with the comparatively large outer gears on the shafts, and manually-controlled means complementary to the brake wheels and independently operable to retard either brake wheel.

1,424,119. THRASHING MACHINE. GEORGE E. RICHMOND, Enid, Okla. Filed July 28, 1919. Serial No. 313,695. 2 Claims. (Cl. 130—22.)



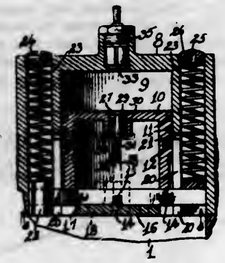
1. In a thrashing machine, the combination of a casing, a plurality of concaves arranged one in front of the other in the casing and respectively made up of transverse rods spaced apart; the rods of the rearmost concave being comparatively small in cross-section, and arranged comparatively close together, rotary beaters complementary to the concaves, cleaning means, means for conducting grain and tailings from the concaves to the cleaning means, and means for returning tailings from the cleaning means to the rearmost concave.

1,424,120. MAKING OF ZINC RETORTS AND OTHER REFRACTORY SHAPES. WILLIAM F. ROSSMAN, St. Louis, Mo., assignor to American Zinc, Lead & Smelting Company, St. Louis, Mo., a Corporation of Maine. Filed May 16, 1921. Serial No. 470,102. 4 Claims. (Cl. 106—10.)



1. A refractory material for zinc retorts and the like, composed of plastic clay, a proportion of finely pulverized silica, and a proportion of ground grog about equal to the proportion of silica mixed together in a plastic state.

1,424,121. KEY HOLDER. WILLARD G. STAPLES, Newburyport, Mass., assignor of one-half to Timothy Harrington, Newburyport, Mass. Filed Apr. 25, 1921. Serial No. 464,419. 2 Claims. (Cl. 150—40.)



1. A key holder comprising a foldable cover of flexible material, a wire secured to the inner face of said cover and in engagement therewith, said wire being bent to form a series of closed loops all lying in the same plane, and a plurality of key-carrying hooks mounted one in each of said loops.

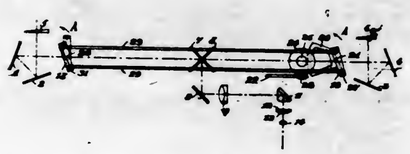
1,424,122. GRAIN HOLDER FOR BINDERS. LAWRENCE H. STOWELL, Wheatland, N. Dak. Filed Nov. 10, 1920. Serial No. 423,084. 6 Claims. (Cl. 56—443.)

1. A grain holding device for a binder adapted to be disposed on the head side of the sheaf supporting grain deck thereof, which comprises spaced members extending upwardly from the surface of said deck.

1,424,123. AIR PUMP. WILLIS A. SWAN, Port Huron, Mich. Filed May 17, 1920. Serial No. 382,165. 4 Claims. (Cl. 230—27.)

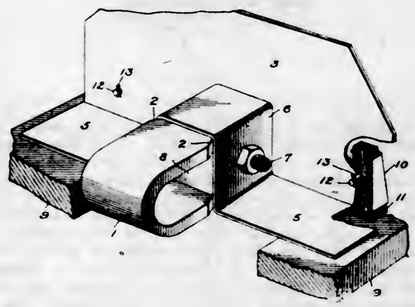
1. In an air pump, the combination of a casing, an eccentric rotatably mounted therein, a cylinder secured to the casing having a large central chamber and a series of smaller diametrically opposed chambers arranged thereabout, a hollow piston reciprocably mounted in the central chamber, a check valve in the upper end thereof, a check valve in the upper end of the cylinder, a series of arms extending from the piston through the portion of the cylinder wall between each of the smaller and the large chamber, a member engaging over the extreme end of each arm fitting the chamber, and a spring in each smaller chamber engaging the members on the said arms, the said smaller chambers providing an air inlet to the interior of the casing.

1,424,124. TENSION DEVICE AND YARN CLEANER. GEORGE N. TAYLOR, East Providence, R. I., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed May 23, 1921. Serial No. 471,765. 15 Claims. (Cl. 28—71.)



1. In a tension-device, the combination of a tension-element adapted to bear against a running yarn to cause

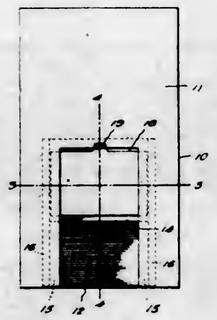
resistance to its draft, gravity-operated means for applying pressure on the tension-element to cause it to act on the



yarn, and resilient means interposed between the gravity-means and the tension-element to adapt the latter to yield without overcoming the inertia of the gravity-means.

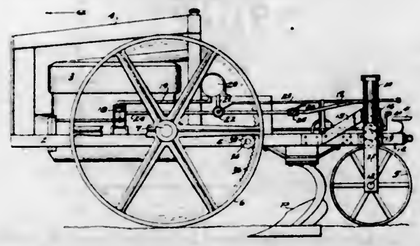
1,424,125. RANGE-FINDING AND THE LIKE INSTRUMENT. HAROLD DENNIS TAYLOR, York, England, assignor of one-half to Alfred Taylor, York, England. Filed May 28, 1918. Serial No. 237,127. 12 Claims. (Cl. 88—2.7.)

1. A range finder comprising in combination a pair of prisms, an optical eye-piece receiving images from said prisms, means to move said prisms in unison in planes substantially at right angles to their own planes, means to indicate the amount of said movement, prismatic windows receiving light prior to refraction by said prisms.



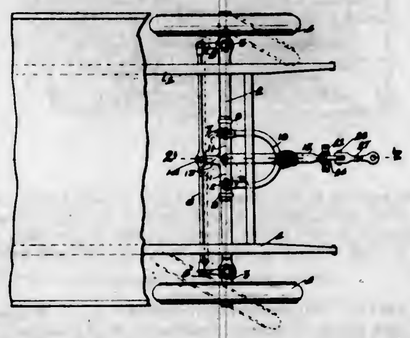
1,424,126. FLIGHT FOR CONVEYER CHAINS. SAMUEL V. TENCH, Wilkes-Barre, Pa. Filed Feb. 4, 1920. Serial No. 356,198. 17 Claims. (Cl. 198—176.)

1. The combination with the link of a conveyer chain; of a flight detachably mounted directly on the link and comprising a body portion having a recess substantially conforming to the cross-sectional area of the link, to accommodate the link; a housing, including two sides and a connecting member, projecting at approximate right angles to the body portion of the flight, around the recess, the sides of the housing being substantially equal in length to the cross-sectional height of the link to embrace the opposite sides of the link, the connecting member lying in contact with one face of the link, to brace the body portion of the flight; flanges projecting at substantially right angles to the body portion of the flight, along one edge thereof; and a fastening means passing through the sides of the housing and through the link, to secure the flight to the link.



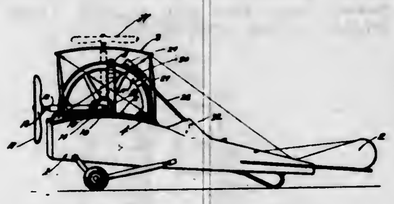
17. The combination with a link chain; of a flight detachably mounted on a link, and including a body portion extending across the link, and lying in a plane at substantial right angles to the direction of travel of the chain, side members connected with the body portion and adapted to embrace the sides of the link, the side members lying at substantial right angles to the body portion and in vertical planes substantially parallel with the direction of travel of the chain; and fastening means passing through the side members, and through the link to removably secure the flight to the link.

1,424,127. BOX. EDWARD J. THOLE, Evansville, Ind. Filed Sept. 28, 1920. Serial No. 413,315. 1 Claim. (Cl. 229—7.)



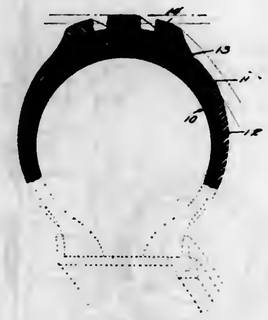
A box provided in one end with an opening, a U-shaped member secured at said opening at the inner side of the end and including a bight portion partly covering the opening and further arms extending along the sides of the opening, spacing strips secured between said ends and said U-shaped member whereby to space said arms away from the inner sides of the ends, and a plate slidable between said ends and the U-shaped member and provided with a tab serving to form a handle.

1,424,128. TRACTOR. GEORGE J. ZIEGLER, Los Angeles, Calif., assignor of one-third to Sherwin Gibbons, one-third to Ernest Stewart, and one-third to Frederick C. Beutel, all of Los Angeles, Calif. Filed Feb. 25, 1920. Serial No. 361,347. 8 Claims. (Cl. 97—30.)



1. A tractor comprising, in combination, a frame supported intermediately of its length on a wheeled axle upon which it is tiltable, the parts thereon so constructed and arranged to render the tilting facile; an agricultural implement carried by the frame to the rear of the wheeled axle, a jacking device at the rear end of the frame for tilting the frame upon its axle, said jacking device including fluid pressure means, and means on the tractor frame for preventing swerving of said jacking device.

1,424,129. STEERING GEAR FOR TRAILERS. ABRAHAM ARBETBLATT, Los Angeles, Calif. Filed July 29, 1920. Serial No. 399,970. 4 Claims. (Cl. 280—33.5.)

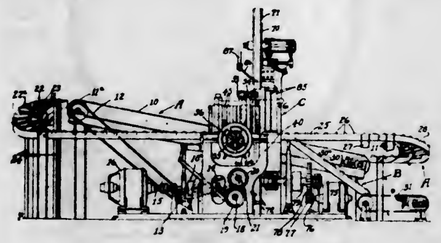


1. The combination with a trailer having steering knuckles and a rod connecting said steering knuckles, or a pin secured to the front axle of the trailer, a sleeve journaled on said pin, an arm projecting rearwardly from said sleeve, which arm is pivotally connected to said connecting rod, arms projecting laterally from said sleeve, a yoke having the rear ends of its arms pivotally connected to the arms that project laterally from the sleeve, a draw bar having its rear end pivotally connected to the pin, and a flexible connection between the forward end of said draw bar and said yoke.

1,424,130. AEROPLANE. GEORGE L. BANKS, Walnut Park, Calif. Filed June 2, 1920. Serial No. 386,002. 2 Claims. (Cl. 244—15.)

2. In an aeroplane, a wing provided with a centrally arranged opening, one side of which extends to the forward edge of said wing, an arcuate member pivotally mounted on the body of the aeroplane below said opening, means for shifting said arcuate member through a vertical plane, a propeller shaft carried by said arcuate member, means for driving said propeller shaft, a propeller on the forward end of said shaft, the length of which propeller shaft permits the propeller to occupy a position above the opening in the wing when said shaft is shifted into a vertical position, and the opening in said wing having a diameter greater than the combined length of the propeller blades.

1,424,131. PNEUMATIC-TIRE TREAD. BURGESS DARROW, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 6, 1918. Serial No. 220,753. 10 Claims. (Cl. 152—13.)

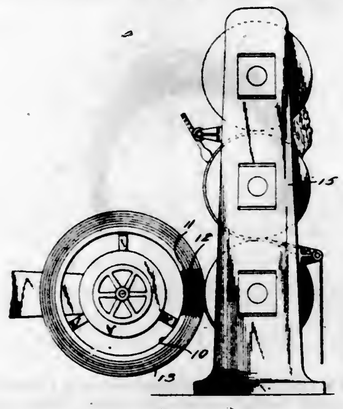


8. In a tire casing, the combination with a tire carcass, and a tread member, of an interposed cushion member having portions in sliding engagement with the tire carcass.

1,424,132. PROCESS OF COOKING GRAIN AND A PRODUCT FOR EFFECTING THE SAME. HERBERT M. GREENE, Portland, Oreg. Filed Oct. 18, 1920. Serial No. 417,625. 4 Claims. (Cl. 99—10.)

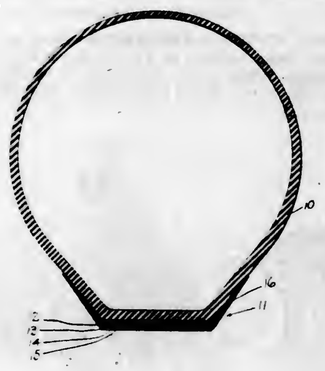
2. The process of cooking grain which consists in first mixing the grain with a substance that is quickly convertible by the application of water and heat into a viscous boiling medium and then boiling the mixture in water, thereby converting said mixture into a mucilaginous envelope for each particle, and cooking the grain.

1,424,133. CUTTING APPARATUS. NEAL M. JOHNSON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 20, 1919. Serial No. 325,050. 14 Claims. (Cl. 146—11.)



1. An apparatus of the character described comprising in combination an endless track, bundle conveying mechanism included in said track, means interposed in said track for cutting a slice of material from said bundle, and means for moving the bundle laterally of the track to gage the thickness of the slice to be cut.

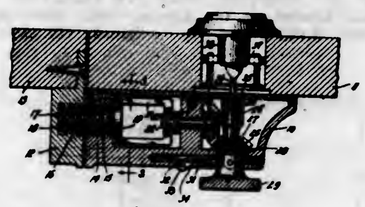
1,424,134. METHOD OF BUILDING TIRES OF THE SOLID TYPE. PAUL W. LITCHFIELD, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 21, 1918. Serial No. 255,113. 6 Claims. (Cl. 154—12.)



6. The method of building a solid tire comprising, filling in the space between the sides of a tire rim having

vertical side flanges with rubber compound to provide a resilient flush surface across the face of the rim, apply-

ing windings of material of a different rubber compound upon said flush surface through rotation of the rim, and exerting pressure against each winding as it is applied.



1,424,135. INNER TUBE FOR PNEUMATIC TIRES. CLIFFORD B. OAR, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 11, 1919. Serial No. 303,404. 5 Claims. (Cl. 152—13.)

5. An inner tube for tires, having incorporated therewith a longitudinally stretchable element positioned exteriorly of the inner periphery thereof, and composed of laminated unwoven material whereby the tube is equipped to perform the function of a tire flap.

1,424,136. LOCK. BERNARD MORGENTHAU, New York, N. Y. Filed May 12, 1921. Serial No. 469,029. 2 Claims. (Cl. 70—46.)

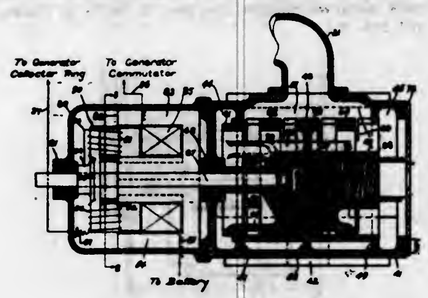
1. In a lock, the combination with a casing, of a longitudinally shiftable and rotatable locking-bolt therein, the outer end of said bolt being screw-threaded and adapted to project through said casing for engagement with a screw-threaded keeper, a disk-shaped head upon the inner end of said bolt having in diametrically opposite portions peripheral notches, a rotatable spindle in said casing extending in the longitudinal axis of said bolt, a fork-shaped member fixed to said spindle having its prongs extend-

ing parallel to the longitudinal axis of said spindle, said prongs being seated in said notches, a knob rotatably mounted in said casing disposed outside of the same, and a driving connection between said knob and said spindle.

1,424,137. POLYGLYCEROL RESIN. LOUIS WEISBERG and RALPH S. POTTER, Grantwood, N. J., assignors to The Barrett Company, a Corporation of New Jersey. Filed Feb. 19, 1921. Serial No. 446,509. 6 Claims. (Cl. 23—24.)

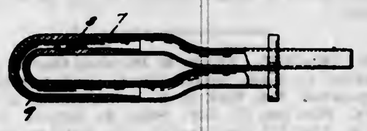
1. The process which comprises heating a polyglycerol and a polybasic acid of the aromatic series until a water-resistant product results.

1,424,138. PURIFICATION OF SUBSTANCES BY DISTILLATION WITH A SOLVENT. GEORGE C. BAILEY, Woodcliff-on-Hudson, CHARLES W. FISCHER, Grantwood, N. J., and JOHN F. W. SCHULER, Edgewood, Md., assignors to The Barrett Company, a Corporation of New Jersey. Filed Feb. 9, 1921. Serial No. 443,674. 8 Claims. (Cl. 260—122.)



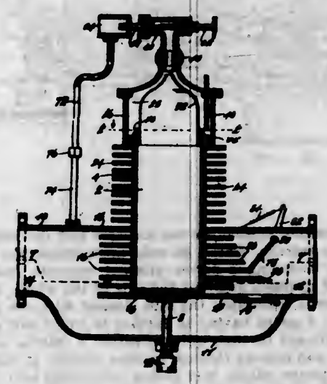
8. The process of purifying maleic acid mixed with benzoquinone, which comprises distilling said acid in the presence of xylol.

1,424,139. WATCH-CHAIN FASTENER. JOHN LOMAN, Bristol, Conn. Filed July 23, 1921. Serial No. 487,014. 1 Claim. (Cl. 24—3.)



A watch chain fastener for being applied to a belt comprising a single piece of metal, one end position of said piece serving as the front wall, the other end portion thereof being divided to provide individual hooks in spaced relation and being positioned in front of said front wall, a part of said piece serving as the back wall and being spaced from the front wall by a belt receiving space, a top connecting portion connecting the uper ends of said walls and serving to close the upper end of said belt receiving space, and a bottom portion extending from the bottom end of said back wall across the lower end of said belt receiving space and merging with said individual hooks.

1,424,140. ENGINE GOVERNOR. JAMES B. REPLOGLE, Detroit, Mich., assignor to The Remy Electric Company, a Corporation of Indiana. Filed June 14, 1919. Serial No. 304,275. 8 Claims. (Cl. 137—139.)

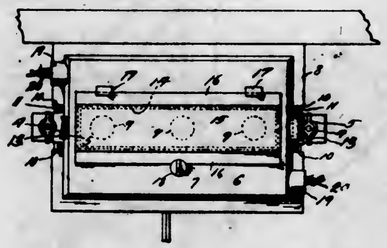


1. In a throttle governor, the combination with a port member; of a valve; electromagnetic means for controlling the position of the valve; and windings adapted to be connected with an alternating current source for reducing hysteresis in said electromagnetic means.

1,424,141. ELECTRICAL OSCILLATION GENERATOR. LEONARD F. FULLER, Palo Alto, Calif., assignor to Augustus Taylor, San Francisco, Calif. Filed June 16, 1919. Serial No. 304,600. 7 Claims. (Cl. 250—36.)

7. In an electrical oscillation generator, an anode tip comprising a U-shaped metallic tube.

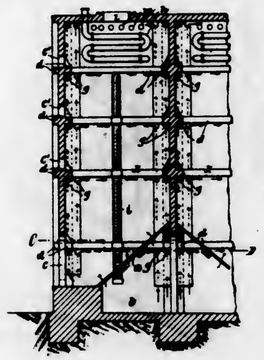
1,424,142. KEROSENE VAPORIZER. WILLIAM H. HILL, Manati, P. R. Filed Aug. 28, 1918. Serial No. 251,765. 11 Claims. (Cl. 48—107.)



1. In an apparatus of the character described, the combination with the exhaust chamber of an internal combustion motor, of means arranged in the path of the gases through said chamber for absorbing a portion of the heat of said gases, said heat absorbing means offering resistance to the passage of the gases, and a valve-controlled by-pass arranged to relieve excessive back pressure, said valve being yieldingly held in closed condition and arranged to open under a predetermined pressure.

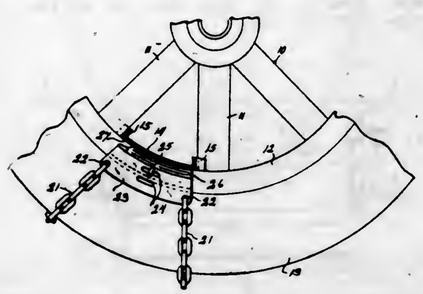
1,424,143. STEERING WHEEL FOR AEROPLANES. WILLIAM C. HURST, New York, N. Y. Filed May 23, 1921, Serial No. 471,601. Renewed June 9, 1922. Serial No. 567,235. 5 Claims. (Cl. 244—29.)

1. In an aeroplane having oppositely disposed planes and a rudder, of a steering device therefor, comprising a steering shaft, means for axially rotatably mounting said steering shaft, means for bodily rotatably mounting said steering shaft, gearing operated upon axial rotation of said steering shaft and controlling said planes, a controlling element for operating said rudder, and means for mounting said controlling element on said steering shaft to operate said controlling element upon axial rotation of said steering shaft and for rendering said rudder controlling element ineffectual upon bodily rotation of said steering shaft.



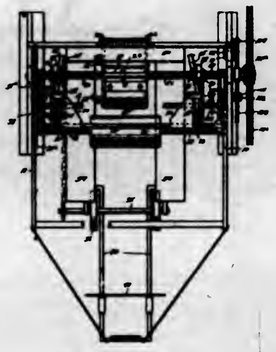
1,424,144. BATTERY COVER. BERT KUNKEL, Hart, Mich. Filed Feb. 11, 1921. Serial No. 444,225. 1 Claim. (Cl. 204—29.)

The combination with an electric battery for motor driven vehicles, said battery having aligned filling openings substantially centrally thereof, of a cover for said battery, said cover comprising a main cover and an auxiliary cover, said main cover entirely enclosing the upper side of the battery and provided with an elongated opening disposed above the battery filling openings, said auxiliary cover being detachably connected to the main cover and normally closing the elongated openings in the main cover.



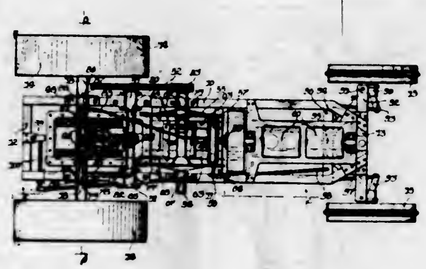
REISSUES.

15,417. APPARATUS FOR WORKING GARBAGE AND REFUSE OF TOWNS. GIUSEPPE BECCARI, Florence, Italy, assignor to Società Anonima Brevetti Beccari, Florence, Italy, an Association. Filed Feb. 1, 1922. Serial No. 533,422. Original No. 1,329,105, dated Jan. 27, 1920, Serial No. 85,567, filed Mar. 21, 1916. 11 Claims. (Cl. 71—1.)



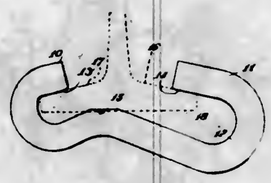
6. A hollow structure including a fermentation chamber and a vapor cooling means arranged within said structure in the course of the vapors rising from the fermenting mass therein.

15,418. NONSKID ATTACHMENT FOR VEHICLE TIRES. JAMES N. BURRIS, deceased, by Henry E. Voss, administrator, Davenport, Iowa. Filed Nov. 30, 1920. Serial No. 427,412. Original No. 1,298,001, dated Mar. 25, 1919, Serial No. 163,290, filed Apr. 19, 1917. 4 Claims. (Cl. 152—14.)



2. A non-skid device embodying a saddle to engage a wheel felly, an attaching member, one side portion of the saddle being provided with an outstanding rotatable part, said part having a cross head, the attaching member having an opening through which said part extends when the cross head is in one position, said cross head when in a second position coacting with the attaching member for detachably holding the same to the saddle, and anti-slipping means connected to said attaching member and to the saddle.

15,419. ENVELOPE-FEEDING MECHANISM. CLIFTON CHISHOLM, Cleveland, Ohio, assignor, by mesne assignments, to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 4, 1920. Serial No. 356,279. Original No. 1,285,623, dated Nov. 26, 1918, Serial No. 202,094, filed Nov. 15, 1917. 62 Claims. (Cl. 271—2.)



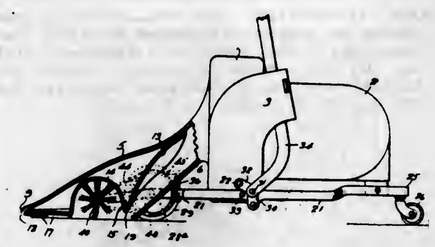
1. In an envelope feeding device, the combination of pivoted means adapted to swing toward the ends of an envelope to engage the envelope between its flap and the adjacent face, means for moving said engaging means into and out of engaging position, and means for moving said engaging means in another direction to feed the envelope engaged.

15,420. TRACTOR. JOSEPH M. DENNING, Denver, Colo., assignor, by mesne assignments, to General Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 10, 1920. Serial No. 350,674. Original No. 1,207,875, dated Dec. 12, 1916, Serial No. 49,099, filed Sept. 4, 1915. 14 Claims. (Cl. 74—98.)

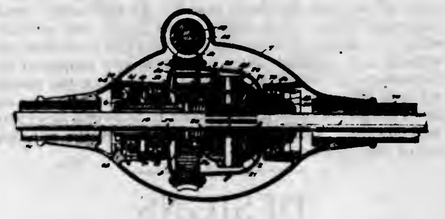
1. Propelling mechanism for tractors and the like, embodying a traction wheel, an axle upon which the wheel is loosely mounted, a driven element separate from the wheel and disposed adjacent the axis of the wheel, rigidly acting means connecting the said element with the rim of the wheel, a casing having an opening in which said driven element fits and through which it passes, a driving element fitting in and passing through another opening in said casing, and means within said casing connecting said driven and driving elements whereby the former is responsive to the movement of the latter, said means including a differential and reduction gearing between said differential and said driven element.

15,421. CREEP CHECK. LEWIS O. HENGGI, Oakmont, Pa., assignor to The P. & M. Company, Chicago, Ill., a Corporation of Illinois. Filed June 7, 1922. Serial No. 566,538. Original No. 1,167,299, dated Jan. 4, 1916, Serial No. 46,258, filed Aug. 19, 1915. Continuation in part of application Serial No. 825,244, filed Mar. 17, 1914. 20 Claims. (Cl. 238—330.)

1. An anti-creeper for rails comprising a body and inwardly extending jaws so arranged that lateral clearance is provided for applying the device transversely to a rail with the body contacting with the bottom face and with the jaws in preliminary engagement with the upper faces of the flanges of the rail, and so arranged that the device is movable in right lines transversely of the rail from its position of preliminary engagement into its operative engaging position and is thereby forced into strong gripping engagement.



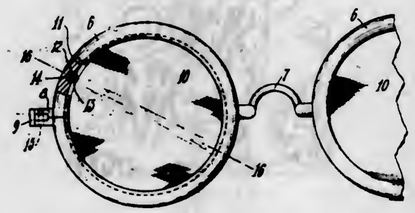
15,422. SLITTING ATTACHMENT FOR CIGARS. WALTER M. JACKSON, New York, N. Y. Filed Sept. 26, 1921. Serial No. 503,458. Original No. 1,345,677, dated July 6, 1920, Serial No. 307,516, filed June 30, 1919. 2 Claims. (Cl. 131—20.)



2. A sheet metal puncturing and slitting attachment for cigars consisting of a body portion having projections formed therein and extending from one face thereof, said body portion adapted to be applied against the end surface of the cigar and the projections thereon to penetrate into such end surface, said body portion also having arms to engage over and embrace the cigar end, each of said arms formed with a cutting point or projection at the extremity thereof, said cutting points or extremities bent into substantially right angular relation to the planes of the arms and adapted to penetrate the body of the cigar whereby the withdrawal of the attachment from the cigar leaves the end surface of the cigar punctured and the exterior surface of the cigar end slitted longitudinally.

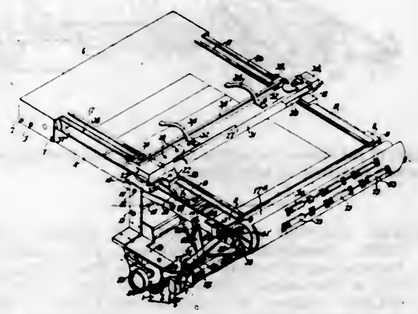
15,423. SUCTION CLEANER. WILLIAM V. ORR, Cleveland, Ohio. Filed Mar. 14, 1921. Serial No. 452,298. Original No. 1,346,972, dated July 20, 1920, Serial No. 142,837, filed Jan. 17, 1917. 15 Claims. (Cl. 15—8.)

12. In a suction cleaner, in combination, a frame having at least three wheels arranged to support the same in stable equilibrium upon a horizontal surface, one of such wheels being a caster and pivoted for movement about a vertical axis, a cleaner-casing supported by said frame and having a collecting nozzle which overhangs the forward part of the frame, and means for raising and lowering said nozzle relatively to said frame.



15,424. DRIVING MECHANISM FOR MOTOR VEHICLES. CHARLES E. STARR, Oakland, Calif., assignor to Perfecto Gear Differential Co., Seattle, Wash., a Corporation of Washington. Filed May 16, 1922. Serial No. 561,515. Original No. 1,362,360, dated Dec. 14, 1920, Serial No. 293,189, filed Apr. 28, 1919. 17 Claims. (Cl. 74—99.)

11. The combination with a differential gear system, of a planetary gear system having its intermediate gears journaled on the differential casing, and a housing enclosing both gear systems for mounting the master gear of the planetary system.



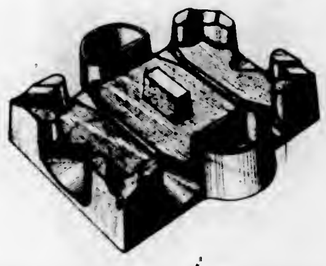
15,425. OPHTHALMIC MOUNTING. FREDERICK A. STEVENS, Providence, R. I., assignor to Stevens and Company, Incorporated, Providence, R. I., a Corporation of Rhode Island. Filed Dec. 8, 1921. Serial No. 520,985. Original No. 1,383,872, dated July 5, 1921, Serial No. 328,102, filed Oct. 3, 1919. 7 Claims. (Cl. 88—47.)

1. An ophthalmic mounting comprising a circular rim, a circular lens in the rim and ground on its surface to cor-

rect visual defects of the eye, and compressible means, intermediate the rim and the lens, for locking the lens within the rim.

15,426. TYPEWRITER. JOHN ASHLAND WHERRY, New Orleans, La., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 15, 1921. Serial No. 461,657. Original No. 1,351,081, dated Aug. 31, 1920, Serial No. 258,146, filed Oct. 15, 1918. 41 Claims. (Cl. 197—126.)

1. The combination with a platen which is bodily movable to and from operative position, of a collating board connected at one of its ends to the platen and movable with it to assume substantially vertical and horizontal positions, said collating board being pivotally supported intermediate its ends, and means for actuating the platen when in operative position, said means being disengageable from the platen to permit the latter to be swung forwardly and upwardly to its inoperative position with the collating board face upward.



DESIGNS.

61,266. TEXTILE FABRIC. GEORGE BARCI, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 2, 1922. Serial No. 2,047. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

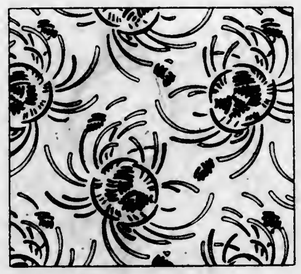
61,267. ASH TRAY. WILLIAM M. CHAPMAN, Hartford, Ind. Filed Jan. 6, 1922. Serial No. 62. Term of patent 7 years.

The ornamental design for an ash tray, as shown.

61,268. STOCKING BABY DOLL. J OLIVE ENOCH, Los Angeles, Calif. Filed Nov. 28, 1921. Serial No. 517,366. Term of patent 7 years.

The ornamental design for a stocking baby doll substantially as shown.

61,269. TEXTILE FABRIC, WALL PAPER, WRAPPING PAPER, OR ARTICLE OF SIMILAR NATURE. EDMOND GAUDIOS, Watford, England, assignor to Witcombe, McGeachin & Co., New York, N. Y., a Partnership. Filed Mar. 2, 1922. Serial No. 992. Term of patent 7 years.



The ornamental design for textile fabric, wall paper, wrapping paper, or article of similar nature, substantially as shown and described.

61,270. PAPER OR SIMILAR ARTICLE. FERNAND JAVAL, Paris, France. Filed Apr. 7, 1922. Serial No. 1,617. Term of patent 14 years.

The ornamental design for paper or similar article, substantially as shown.

61,271. TEXTILE FABRIC. ELLA KRUPICKA, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 2, 1922. Serial No. 2,039. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

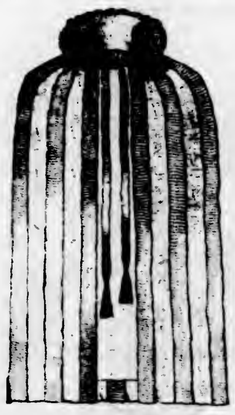
61,272. VALANCE. HAROLD H. LINDNER, New York, N. Y., assignor to Montague & Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 1, 1922. Serial No 1,487. Term of patent 7 years.

The ornamental design for a valance, substantially as shown.

61,273. TOY DOLL. CATHERINE B. LOCKWOOD, Washington, D. C. Filed Apr. 14, 1922. Serial No. 1,751. Term of patent 14 years.

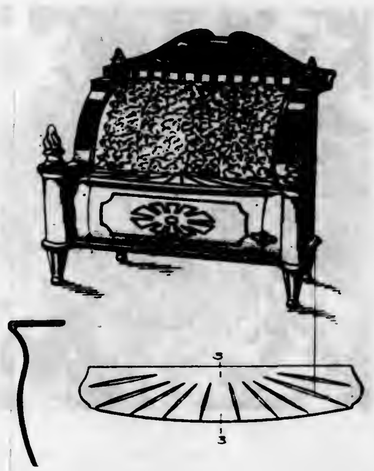
The ornamental design for a toy doll, as shown.

61,274. RING OR SIMILAR ARTICLE. JOSHUA W. MAYER, New York, N. Y. Filed Mar. 2, 1922. Serial No. 975. Term of patent 7 years.



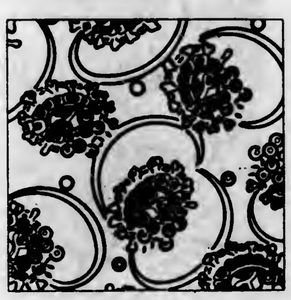
The ornamental design for a ring or similar article, as shown.

61,275. SAFETY PAPER. FRANK MEYER, Lakewood, Ohio, assignor to The Forman Bassett Company, a Corporation of Ohio. Filed Feb. 23, 1921. Serial No. 447,316. Term of patent 3½ years.



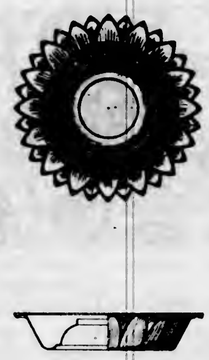
The ornamental design for safety paper, as shown.

61,276. KNITTED CAPE. JOSEPH PELT, Newark, N. J. Filed Feb. 16, 1922. Serial No. 738. Term of patent 3½ years.



The ornamental design for a knitted cape as shown.

61,277. GAS HEATER. CLARENCE V. ROBERTS and KENNETH C. FARNSWORTH, Philadelphia, Pa., assignors to Roberts and Mander Stove Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 7, 1921. Serial No. 475,733. Term of patent 14 years.



The ornamental design for a gas heater, substantially as shown.

61,278. TEXTILE FABRIC. GLADYS ROWLAND, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 2, 1922. Serial No. 2,040. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

61,279. HUSK FOR LIGHTING FIXTURES. JOHN WILLIAM SCHULER, Providence, R. I., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed June 13, 1921. Serial No. 477,289. Term of patent 14 years.

The ornamental design for a husk for lighting fixtures, as shown.

61,280. FINGER RING. DAVID SHIMAN, New York, N. Y., assignor to Shiman Bros. & Co. Inc., New York, N. Y., a Corporation of New York. Filed Apr. 6, 1922. Serial No. 1,569. Term of patent 3½ years.

The ornamental design for a finger ring as shown.

61,281. TEXTILE FABRIC. WILLIAM STRASSER, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 2, 1922. Serial No. 2,041. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

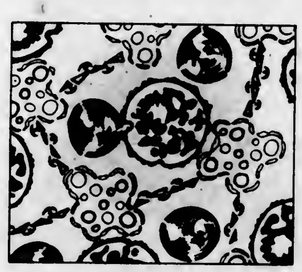
61,282. TEXTILE FABRIC. WILLIAM STRASSER, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 2, 1922. Serial No. 2,042. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

61,283. TEXTILE FABRIC. WILLIAM STRASSER, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 2, 1922. Serial No. 2,043. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

61,284. TEXTILE FABRIC. WILLIAM STRASSER, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 2, 1922. Serial No. 2,044. Term of patent 3½ years.



The ornamental design for a textile fabric, as shown.

61,285. TEXTILE FABRIC. VIOLA TARDY, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 2, 1922. Serial No. 2,045. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

61,286. TEXTILE FABRIC. VIOLA TARDY, New York, N. Y., assignor to Susquehanna Silk Mills, New York, N. Y., a Corporation of New York. Filed May 2, 1922. Serial No. 2,046. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 25, 1922.

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 123,579. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THOMAS HUBBUCK & SON. LIMITED, London, England. Filed Oct. 9, 1919. Under ten-year proviso.

HUBBUCK.

Particular description of goods.—Sulphates, Chlorides, and Acetates of Metals, Refined Tar, Perfumes, Toilet Waters, Perfume Extracts and Powders, Laundry Bluing, Laundry Soda, Borax, Starch, and Laundry Glazes.
Claims use since 1775.

Ser. No. 125,959. (CLASS 43. THREAD AND YARN.) KEMP & BEATLEY, INC., New York, N. Y. Filed Dec. 13, 1919.

Particular description of goods.—Embroidery Yarns.
Claims use since Nov. 1, 1919.

Ser. No. 126,029. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE HERFELD-PHILLIPSON COMPANY, doing business as Milwaukee Boston Store, Milwaukee, Wis. Filed Dec. 15, 1919.

No claim is made to the words "Boston Store" apart from mark.
Particular description of goods.—Razor Strops.
Claims use since Jan. 1, 1916.

Ser. No. 130,822. (CLASS 39. CLOTHING.) ALBERT C. FISCHER, doing business as Servicised Products Company, Chicago, Ill. Filed Apr. 8, 1920.

SERVICISED
LOOK FOR IT ON ALL PURCHASES

No claim is made to words "Look for It on All Purchases" apart from mark.
Particular description of goods.—Garters, Men's, Women's, Children's Neckties, Collars, Hose; Men's Women's, Children's Underwear, Knitted, Netted, and Woven, in One and Two Piece Garments; Ladies' and Infants' Suits, Dresses, and Coveralls; Men's Suits and Coveralls, Men's Shirts.
Claims use since Jan. 15, 1920.

Ser. No. 136,044. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) SCINTILLA, Solothurn, Switzerland. Filed Aug. 12, 1920.

SCINTILLA

Trade-mark "Scintilla."

Particular description of goods.—Physical and Meteorological Instruments—viz, Anemometers, Humidity-meters, Altimeters, and Compasses, and Parts Thereof; Registering Instruments—viz, Revolving and Speed Counters and Kilometers; Recording Apparatus; Indicating and Measuring Apparatus—viz, Pressure Gauges, Ampere and Volt Meters, Oil Gauges; Automatic Switches, Weighing Machines, and Moving-Picture Machines, and Parts Thereof.

Claims use since June 19, 1917.

Ser. No. 138,036. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SIDNEY BLUMENTHAL & CO. INC., New York, N. Y., assignor to Central Union Trust Company of New York, trustee, New York, N. Y., a Corporation of New York. Filed Oct. 7, 1920.

Molquilt

Particular description of goods.—Pile Fabrics in the Piece.

Claims use since Jan. 15, 1920.

Ser. No. 139,429. (CLASS 32. FURNITURE AND UPHOLSTERY.) RIP VAN WINKLE WALL BED COMPANY, Oakland, Calif. Filed Nov. 9, 1920.

RIP VAN WINKLE

Particular description of goods.—Wall Beds.

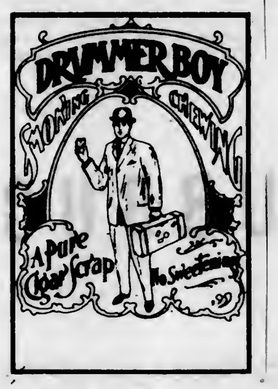
Claims use since May 1, 1918.

Ser. No. 139,493. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) AMERICAN MANUFACTURING COMPANY, Boston, Mass., and Brooklyn, N. Y. Filed Nov. 11, 1920.

UNION

Particular description of goods.—Bagging Manufactured from Jute Fiber.

Claims use since Dec. 31, 1909.



Ser. No. 140,430. (CLASS 39. CLOTHING.) DREIFUS, TICHNER & ECKSTEIN, New York, N. Y., assignor, by mesne assignments, to Louis Tichner, Bertram Tichner, and Milton J. Tichner, copartners, trading as Tichner Bros., New York, N. Y. Filed Nov. 30, 1920.

Linen-weave

Particular description of goods.—Hosiery.

Claims use since 1910.

Ser. No. 141,000½. (CLASS 17. TOBACCO PRODUCTS.) EXCELSIOR TOBACCO CO., St. Louis, Mo. Filed Dec. 13, 1920.

The words "Smoking," "Chewing," "A Pure Cigar Scrap," and "No Sweetening" as shown in mark are disclaimed.

Particular description of goods.—Smoking and Chewing Tobacco.

Claims use since Feb. 1, 1903.

Ser. No. 142,357. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) PNEUMATIC SCALE CORPORATION, LIMITED, Norfolk Downs, Mass. Filed Jan. 17, 1921.

PNEUMATIC

Particular description of goods.—Mechanical Packaging Machinery—Namely, Machines for Feeding Carton Blanks, Machines for Sealing the Top and Bottom Flaps of Carton Blanks, Machines for Inserting Linings Into Cartons, Machines for Drying Labels on Containers, Machines for Applying Wrappers to Containers, Machines for Filling Cartons by Volume, Machines for Applying Caps to Containers, Machines for Applying Labels to Containers, Devices for Inserting Coupons Into Containers, and Devices for Applying Dates or Distinguishing Marks to Packages.

Claims use since 1904.

Ser. No. 143,095. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THOMAS DAVIS KAIN, Chicago, Ill. Filed Feb. 2, 1921.

Trade-mark consists in the representation of a seal, the seal itself being printed in blue with a representation of tapes or ribbons depending therefrom in red, and with the words "Blue Seal" printed in red upon a transverse band of white or other light contrasting color, all as indicated by the conventional lining of the accompanying drawing.

Particular description of goods.—Chemical Exterminators for Rats, Mice, and Vermin.

Claims use as early as Apr. 1, 1917.

Ser. No. 144,041½. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE OTTERSON AUTO-EDUCTOR CO., Springfield, Ohio. Filed Feb. 25, 1921.

THE OTTERSON AUTO-EDUCTOR

Particular description of goods.—Vehicular Apparatus Having Means Adapted to be Lowered Into Sewer Catch Basins and the Like for Removing the Contents Thereof.

Claims use since November, 1916.

Ser. No. 144,526. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) JULIAN B. JENSEN, doing business as Pacific Engineering Co., Oakland, Calif. Filed Mar. 9, 1921.

PECO

Particular description of goods.—Rotary and Centrifugal Pumps.

Claims use since Jan. 21, 1921.

Ser. No. 145,054. (CLASS 39. CLOTHING.) BANNER SHIRT CO. INC., New York, N. Y. Filed Mar. 22, 1921.

Banner

Particular description of goods.—Dress, Negligee, Soft, and Sport Shirts.

Claims use since on or about Feb. 15, 1921.

Ser. No. 145,481. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LEENDERT VERMEULEN, Waddinxveen near Gouda, Netherlands. Filed Mar. 30, 1921.

All wording excepting the word "Erica" is disclaimed apart from the mark.

DOG WORLD
DEVOTED TO DOGS

Particular description of goods.—Monthly Publication.
Claims use since Jan. 2, 1922.

Ser. No. 161,836. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HOOKER ELECTROCHEMICAL COMPANY, Niagara Falls, N. Y. Filed Apr. 6, 1922.

PARACIDE

Particular description of goods.—Insecticides.
Claims use since Mar. 27, 1922.

Ser. No. 161,837. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HOOKER ELECTROCHEMICAL COMPANY, Niagara Falls, N. Y. Filed Apr. 6, 1922.

PARADI

Particular description of goods.—Insecticides.
Claims use since Mar. 27, 1922.

Ser. No. 161,841. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LAY RITÉ LABORATORY, St. Louis, Mo. Filed Apr. 6, 1922.

LayRité

Particular description of goods.—Face Powder and Perfumes.
Claims use since Dec. 1, 1921.

Ser. No. 161,847. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. MERCK, Darmstadt, Germany. Filed Apr. 6, 1922.

Eukodal

Particular description of goods.—Dihydrooxycodeinonchlorhydrate.
Claims use since January, 1917.

Ser. No. 161,848. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. MERCK, Darmstadt, Germany. Filed Apr. 6, 1922.

Choleval

Particular description of goods.—Colloidal Sliver Preparation Combined with Sodium Cholate as Protective Colloid.
Claims use since June 15, 1912.

Ser. No. 161,849. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. MERCK, Darmstadt, Germany. Filed Apr. 6, 1922.

Argochrom

Particular description of goods.—Methylene Blue Silver Compound.
Claims use since February, 1917.

Ser. No. 161,850. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. MERCK, Darmstadt, Germany. Filed Apr. 6, 1922.

Theacylon

Particular description of goods.—Acetylsalicyloyltheobromine.
Claims use since July, 1915.

Ser. No. 161,851. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. MERCK, Darmstadt, Germany. Filed Apr. 6, 1922.

Citobaryum

Particular description of goods.—Preparation of Barium Sulphate (Purest) for Ready Administration, Used in X-Ray Diagnosis.
Claims use since June, 1915.

Ser. No. 161,852. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. MERCK, Darmstadt, Germany. Filed Apr. 6, 1922.

Incarbon

Particular description of goods.—A Suspension of Animal Charcoal of the Highest Adsorptive Power Ready for Injections.
Claims use since December, 1916.

Ser. No. 161,869. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) STEPHEN K. WATTS, New York, N. Y. Filed Apr. 6, 1922.

BARMANCO

Particular description of goods.—Cotton Goods, Linens, Madras, and Other Cotton Fabrics in the Piece.
Claims use since Feb. 24, 1922.

Ser. No. 161,889. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LECAR CARBON COMPANY, Springfield, Ohio, assignor to Walter K. Jamison, Stanley B. Mathewson, Howard F. Marston, Mrs. W. K. Jamison, and Mrs. S. B. Mathewson, trustees of the Lecar Carbon Company, Springfield, Ohio, a Trust Estate. Filed Apr. 7, 1922.

LECAR

Particular description of goods.—Carbonizing Compounds.
Claims use since Feb. 13, 1922.

Ser. No. 161,896. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ORSEMUS S. RIMER, doing business as Sweetola Company, Dayton, Ohio. Filed Apr. 7, 1922.

SWEETOLA

Particular description of goods.—Powder Preparation for Use as a Body Deodorant.
Claims use since Apr. 1, 1921.

Ser. No. 161,902. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SCHERING & GLATZ, INC., New York, N. Y. Filed Apr. 7, 1922.

PERALGA

Particular description of goods.—Medicinal Preparation Recommended as a Pain Alleviator.
Claims use since Mar. 1, 1922.

Ser. No. 161,927. (CLASS 39. CLOTHING.) THE A. T. LEWIS & SON DRY GOODS COMPANY, Denver, Colo. Filed Apr. 8, 1922.

FLEXION

Particular description of goods.—Leather Shoes.
Claims use since about Mar. 1, 1922.

Ser. No. 161,931. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MILLER-FATLAND NOVELTY CO., Chicago, Ill. Filed Apr. 8, 1922.

KICK-ITY-KICK

Trade-mark, "Kick-Ity-Kick."
Particular description of goods.—Combination Inhalers, Remedy for Catarrh, Hay Fever, Colds in the Head, Headaches, and Other Ailments.
Claims use since Sept. 1, 1921.

Ser. No. 161,940. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) R. ODELL & SONS COMPANY, Newark, N. J. Filed Apr. 8, 1922.

GLOSSINE

Trade-mark, "Glossine."
Particular description of goods.—Liquid Preparation for Controlling Stubborn Hair.
Claims use since Sept. 15, 1921.

Ser. No. 161,942. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) REIDAR G. SEEL, New York, N. Y. Filed Apr. 8, 1922.

Somnacetin

Particular description of goods.—Medicinal Preparation for Internal Use of a Sedative Character.
Claims use since Apr. 15, 1921.

Ser. No. 161,946. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GERTRUDE I. SAMPSON, doing business as Ambercrude Products Co., Philadelphia, Pa. Filed Apr. 8, 1922.

AMBERCRUDE

Particular description of goods.—Preparation for the Treatment of the Hair and Scalp.
Claims use since about Nov. 4, 1921.

Ser. No. 161,956. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BEACH CHEMICAL COMPANY, St. Louis, Mo. Filed Apr. 10, 1922.

BRO-ASPRIN

The lining of drawing indicates the color blue.
Particular description of goods.—Medicinal Preparation in Tablet Form for Relief of Colds, La Grippe, Fever, Headache, and Like Ailments.
Claims use since October, 1920.

Ser. No. 161,974. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) JOSEPH HENRY CALISHER, doing business as The Angelus Powder Puff Co., New York, N. Y. Filed Apr. 10, 1922.

ANGELUS

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

DOWELL *v.* DOMAN.

No. 1470. Decided April 3, 1922.

1. PATENTS—BURDEN IS ON APPELLANT TO SHOW CONCURRENT CONCLUSIONS OF TRIBUNALS OF PATENT OFFICE WERE WITHOUT SUBSTANTIAL SUPPORT.

Where the three tribunals of Patent Office found against the appellant in interference proceedings, the burden is on him clearly to establish that the Commissioner's conclusion is without substantial basis in the testimony.

2. SAME—STRUCTURE NOT CONTAINING ELEMENT OF ISSUE IN INTERFERENCE HELD NOT REDUCTION TO PRACTICE OF INVENTION.

Where one of the elements of the issue in interference in an air-cooling system for internal-combustion engines was a port connecting a chamber with the intake of the engine to regulate the capacity of the cooling system, a structure built and tested by the junior applicant before the filing date of the senior applicant, which did not have such a port, was not a reduction to practice of the invention in issue.

Mr. William F. Hall for Dowell.

Mr. Howard P. Denison for Doman.

SMYTH, *C. J.:*

From a decision of the Commissioner of Patents awarding priority to Doman, Dowell brings the case here.

The invention relates to an air cooling system, and is described in a single count, as follows:

The combination of an internal combustion engine, a cooling system therefor, means for varying the capacity of the cooling system, a motor for actuating the capacity varying means, having a chamber connected with the intake of the engine, a port connecting this chamber with the atmosphere, and thermostatic means adapted to close the port, thereby controlling the degree of vacuum in said chamber.

There are two questions in the case: First, was the testimony of Dowell's wife sufficient to corroborate him with respect to the time of his disclosure; and second, was he diligent when Doman came into the field? We find it necessary to answer only the second. Doman is the senior party. He took no testimony, but rested on his filing date, November 28, 1916. The three tribunals of the Office found against Dowell, and therefore the burden is on him to clearly establish that the Commissioner's conclusion is without a substantial basis in the testimony. (*Kennicott* v. *Caps*, 49 App. D. C., 187; 271 O. G., 361; 262 Fed., 641; *Ruth* v. *Groch*, —— App. D. C., ——; 296 O. G., 839; 279 Fed., 1013, and cases cited therein.)

Assuming, without deciding, that Dowell conceived, as he claims, in the summer of 1916, he did not actually reduce to practice before Doman filed. But to overcome this situation he urges that in an earlier interference it was shown that a structure built and tested by him before Doman filed formed an actual reduction to practice, and that the structure so reduced was an equivalent of the one defined by the claim. The Commissioner pointed out that the claim of the issue calls for a port so located in the device that it may be manipulated so as to govern the vacuum conditions in the motor which actuates the means that regulate the capacity of the cooling system. The device, which it is claimed was reduced to practice by Dowell, did not have such a port, and hence the claimed equivalency of that device and the one of the issue does not exist.

We agree with the Commissioner and affirm his decision.

Affirmed.

Court of Appeals of the District of Columbia.

GRAY *v.* MCAFEE.

No. 1461. Decided March 6, 1922.

INTERFERENCE—EVIDENCE REVIEWED.

Evidence reviewed and award to McAfee.

Mr. J. Edgar Bull and *Mr. R. J. Dearborn* for Gray.

Mr. Alfred M. Houghton and *Mr. Melville Church* for McAfee.

SMYTH, *C. J.:*

From a decision of the Commissioner of Patents in an interference proceeding, Gray appeals. The contest is between an application of McAfee and patents to Gray issued while McAfee's application was pending. The subject matter of the interference relates to the conversion of high-boiling petroleum hydrocarbons into lower-boiling petroleum hydrocarbons under certain conditions. There are eight counts of the issue, of which 1 and 6 are examples.

1. The process of converting hydrocarbons having higher-boiling points into naphtha, which consists in heating said hydrocarbons in the presence of anhydrous aluminum chlorid to a temperature producing vapor having a temperature not substantially above the end-boiling point of naphtha and maintaining them at such temperature.

6. The process of converting hydrocarbons having higher-boiling points into naphtha, which consists in heating said

hydrocarbons in the presence of anhydrous aluminum chlorid to a temperature producing vapor having a temperature above the end-boiling point of naphtha, but below the end-boiling point of illuminating oil, condensing the illuminating oil driven off in a preliminary cooling chamber, returning said oil to the still to be further acted on whereby higher-boiling oil is converted into naphtha and conducting the naphtha driven off to a condenser.

Gray was successful before the Examiner of Interferences, but lost on appeal to the Examiners in Chief, whose decision was affirmed by the Commissioner. It is agreed by the three tribunals that the essence of the invention lies in a proper temperature control in the vapor line, and that the present process converts substantially all the higher-boiling hydrocarbons into any desired specific lower-boiling hydrocarbon, such, for example, as gasoline.

Gray and McAfee are highly-trained chemists, and were employed by The Texas Company, which was engaged in producing and refining petroleum products. Gray says in his preliminary statement that he conceived and disclosed the invention as "early as November 5, 1912." He does not claim that he personally reduced it to practice, but asserts that what McAfee did in perfecting the process was done in accordance with a general plan disclosed by him to McAfee. From this it appears that the question to be solved is one of originality. Whether or not Gray should prevail must be determined by the consideration of a letter sent by him to McAfee on November 5, 1912. By that letter, he says, he disclosed to McAfee. No claim of a later disclosure is put forward by him. If, then, the letter did not disclose the invention Gray can not succeed.

The Examiner of Interferences found that it did, but, as we have said, the Examiners in Chief and the Commissioner held otherwise. With great thoroughness the Examiners in Chief analyzed the letter, and compared its disclosures with the claims of the issue. We do not think it necessary to do much more than follow in substance their opinion.

Gray wrote to McAfee on October 29, 1912, giving directions with respect to certain experiments which he desired him to carry out. He said that McAfee was evidently posted on all the literature relating to the subject, and that if he went ahead he would "probably accomplish something." McAfee responded, making some suggestions, part of which did not meet with Gray's approval. The latter then wrote the letter of November 5, in which he advised that McAfee take some tar or residuum from Oklahoma crude and place it in a small experimental still, but gave no intimation that aluminum chloride, or any other catalyst, should be mixed with it. He recommended that the vapor line be so placed that the vapor would have to pass up through probably eight or ten feet of pipe before reaching the condenser, and that the oil in the still be held at a temperature of 625 to 675° F. He thought that, if his suggestion was followed, it would produce cracking, and that the product passing over through the vapor line would be light hydrocarbon having a gravity lighter than 50° Baumé. He further said that the pipe should slope upward, so that nothing which condensed in it would reach the condenser, but would return to the still. The still, according to him, was to be held at the temperature specified for at least forty-eight hours, and, if this was done, he said, the distillate thrown over would contain a very large percentage of cracker products, which should be hydrogenized very rapidly. The plan thus outlined by Gray is nothing more than a cracking process to be followed by hydrogenization. This is emphasized by his further statement that,

> the distillates can probably be hydrogenized by passing a catalyzing agent in that part of the vapor line furthest from the fire, keeping this part of the line at a temperature of probably 350 degrees F.

This is all upon which he bases a disclosure of that feature of the invention which requires the maintenance in the vapor line of a temperature not substantially above the end-boiling point of naphtha. But we do not think it is open to such an interpretation. What he writes about is hydrogenization, and if the specific temperature mentioned has any significance it can only be in connection with the process of producing a hydrogenized product which is not the matter in issue here.

It should also be borne in mind that Gray is not discussing a process in which a catalyst is mixed with the oil in the still, for he specifically states that the catalyzing agent should be placed in that part of the vapor line furthest from the fire. He does not suggest a temperature below 350° F., higher for the purpose of preventing the catalyst from passing over to the condenser with the light hydrocarbons or for the purpose of allowing the naphtha products to pass over while the higher-boiling products condense and flow back to the still. Nor does he advise the use of aluminum chloride as a catalyzing agent. As just noted, he does not direct that the catalyst shall be mixed with the oil in the still. Gray attempts to explain this by saying that any one skilled in the art of refining oil, as McAfee was, would know that if aluminum chloride was to be employed as a catalyst, it should be placed in the still. But he, Gray, directs that the catalyzing agent should be placed at a point in the vapor line furthest from the fire. However, it is clear that Gray's letter does not mention the substance aluminum chloride, called for by all of the interference counts, and is specific to a mode of procedure different from that of the issue and involving the use of a catalyst other than that employed in the process in issue.

After stating that the process should be continued forty-eight to sixty hours, with a constant temperature, the letter concludes by saying:

> You will thus obtain some cracked distillates which will give you an idea of what they look like, how they smell, how they react with sulphuric acid, and when you receive your materials you will know better what is taking place.

The products mentioned in this quotation appear to be what would be produced by the treatment of heavy oils in the absence of a catalyzing agent. Finally, this letter discloses nothing in such detail as would enable McAfee to work out the process of the issue without invention.

Admittedly the invention was reduced to practice by McAfee during the month of December, 1912, and there is evidence that Gray saw demonstration of it on or about the 22d of that month. Prior to that Gray had been informed over the telephone by McAfee of a successful test of the invention which occurred about December 11 or 12. Gray does not deny this, but, as we have said, claims that what McAfee did by way of reducing it to practice inured to his benefit. In other words, he relies upon McAfee's reduction to practice had about the 11th or 12th of December.

Now happens a very significant thing: On January 23, 1913, a little over a month after McAfee's reduction to practice, Gray filed two applications for patents on this subject matter, yet he does not say one word in either about vapor control, which, as we have remarked, is conceded to be the essence of the invention. On the contrary, he describes therein the mixture of gas, oil, and anhydrous aluminum chloride in the still. In one he states that the mixture is heated to a temperature not substantially above 325 to 350° F., and in the other, not substantially above the end-boiling point of naphtha. Thus the applications remained until January 22, 1915, nearly two years, when they were amended to aver a control of vapor temperature. If Gray had the invention on the 5th of November, it seems

incredible that he would not have embodied in his applications the idea of temperature control of the vapors in the vapor line. We do not think he possessed it at that time. He knew what he wanted, but did not know how to get it. McAfee, independently of him, conceived and reduced to practice the process by which to achieve the desired end, and is entitled to priority.

The decision of the Commissioner of Patents was right, and it is affirmed.

Affirmed.

VAN ORSDEL, *J.* (dissenting):

I am unable to agree with my associates in the conclusions reached in this case.

All the apparatus used by McAfee in conducting his successful experiments, as well as that shown in his application, were constructed and operated essentially as described in Gray's letter of November 5th. A careful reading of this letter, in the light of the conversations and correspondence preceding it, demonstrates that Gray had a clear conception of the means of accomplishing the result. Much is attempted to be made of a sentence of the letter to the effect that—

> the distillates can probably be hydrogenized by passing a catalyzing agent in that part of the vapor line furthest from the fire.

If Gray had added the injunction that when aluminum chloride is used as a catalyst it should be mixed with the oil in the still instead of placed in the vapor line, a fact concededly known to both at the time the letter was written, his disclosure would have been complete. But Gray had not in mind any particular catalyzing agent, since by his direction, a number had been ordered by McAfee with which experiments were to be made.

It must be remembered that the breaking of oil, was old in the art as well as the making of gasoline by condensation. The whole invention here was to construct an apparatus in which condensation would take place at a point productive of the largest percentage of gasoline. In other words, locating a condensation point sufficiently distant from the fire that the temperature would be 350 degrees. Such an apparatus was described in Gray's letter of November 5th. It is the apparatus shown as Gray's Exhibit "A" sketched by McAfee on the witness stand. It shows a reflux or air-cooled condenser with a thermometer located at the top of the condenser to maintain a constant temperature of 350 degrees, all as described in Gray's letter. This is the apparatus shown in Gray's patents in interference, as the applications were originally filed.

McAfee, a learned chemist, but with little or no knowledge of treating oils, was working under the supervision and direction of Gray. All information which he possessed on the subject he had derived in conversation or by correspondence with Gray. Gray in his letter of November 5th, described the apparatus to be used in accomplishing the desired result and advised McAfee as to the method of experimenting with it. It, therefore, results that anything derived from those experiments is the invention of Gray, and not McAfee.

The Examiner of Interferences after a thorough analysis of the testimony, reached a conclusion which in my opinion epitomizes this case:

> From the evidence submitted it is concluded that during the time when the invention in controversy was developed, McAfee was under the immediate supervision of Gray and was responsible to him directly; that Gray disclosed the plan of the invention to McAfee; that what McAfee did in developing the said process was no more than the duty of his position required of him, and was in accordance with the plan outlined and suggested to him by Gray; and that what McAfee did under those conditions inures to Gray under the well established principle of law enumerated and reiterated in the decisions indicated above. (Citing a number of decisions from this court.)

Whatever mistakes Gray may have made in filing his applications are beside the case since McAfee was not an original inventor, and, therefore, in no position to profit by Gray's mistakes. Gray, therefore, should be awarded priority.

ADJUDICATED PATENTS.

(U. S. C. C. A. Mo.) The Ballman patent, No. 1,239,249, for improvement in rectifiers of alternating current, not infringed. *Fore Electrical Mfg. Co.* v. *St. Louis Electrical Works*, 280 Fed. Rep., 49.

(U. S. C. C. A. Mo.) The Eberle patent, No. 1,304,951, for swing, *Held* anticipated. *Eberle* v. *Stix, Baer & Fuller Dry Goods Co.*, 280 Fed. Rep., 117.

(U. S. C. C. A. Ill.) The Fulton patent, No. 907,770, for electric-light switch, *Held* not to disclose invention. *Jesmurun* v. *Peerless Light Co.*, 280 Fed. Rep., 113.

(U. S. C. C. A. Mo.) The Girtanner patent, No. 986,455, claims 1 to 3, for furnace arch, *Held* anticipated. *Laclede-Christy Clay Products Co.* v. *City of St. Louis*, 280 Fed. Rep., 88.

(U. S. D. C. Mich.) The Jay patent, No. 1,132,273, claims 9 and 14, for vacuum-feed tank for automobiles, *Held* valid and infringed. *Jay* v. *Ireland & Matthews Mfg. Co.*, 280 Fed. Rep., 166.

(U. S. C. C. A. N. J.) The Schroder patent, No. 1,007,146, for prepared roofing, *Held* anticipated. *Stuso Laminated Slate Co.* v. *Stowell Mfg. Co.*, 280 Fed. Rep., 107.

Adverse Decisions in Interference.

PATENT NO. 1,277,178.

On June 14, 1922, a decision was rendered that Charles F. Bernhard and Harry I. Bernhard were not the first inventors of the subject matter covered by claims 1, 2, and 3 of their Patent No. 1,277,178, subject, "Lubricating systems for internal-combustion engines," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,377,225.

On June 20, 1922, a decision was renderd that Arthur J. Seymour was not the first inventor of the subject matter covered by claim 8 of his Patent No. 1,377,225, subject, "Semiautomatic telephone system," and no appeal having been taken within the time allowed such decision has become final.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 26, 1922.

Paragon Malt Extract Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of the Pabst Corporation, Milwaukee, Wis., the Decatur Brewing Co., 604 Cantrell Street, Decatur, Ill., and the Pabst Brewing Company, 917 Chestnut Street, Milwaukee, Wis., for registrations of trade-marks and trade-mark registered March 5, 1907, No. 61,117, to the Paragon Malt Extract Co., 3553 Third Avenue, New York, N. Y., and a notice of such declaration sent by registered mail to the said Paragon Malt Extract Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Paragon Malt Extract Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 4TH DAY OF JULY, 1922.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Abele, Joseph B., Philadelphia, Pa. Game. No. 1,421,656; July 4.

Abrams, John M., Brooklyn, N. Y. Screw cap. No. 1,421,885; July 4.

Acland, Edward H., Toronto, Ontario, Canada. Guard for billiard-table pockets. No. 1,421,361; July 4.

Advance Rumely Company. (See Ross, James, assignor.)

Aeolian Company, The. (See Collyer, Louis G., assignor.)

Aktiebolaget Svenska Kullagerfabriken. (See Olsson, Nils J., assignor.)

Aldrich, Alonzo, and A. L. Larson, Beloit, Wis.; said Larson assignor to said Aldrich. Paper-making machine. No. 1,421,752; July 4.

Aldrich, Alonzo, Beloit, Wis. Paper-making machine. No. 1,421,753; July 4.

Aldrich, Alonzo, Beloit, Wis. Paper-making machine. No. 1,421,754; July 4.

Allan, Alexander, Middletown, R. I. Method of and apparatus for raising sunken ships. No. 1,421,887; July 4.

Allan, Hugh L., Ayr, Scotland. Fractionating apparatus. No. 1,421,886; July 4.

Allan, Percy, Montclair, N. J., assignor to A. B. Sands & Son Co., New York, N. Y. Marine closet. No. 1,421,362; July 4.

Alldredge, Francis B., Des Moines, Iowa. Bailer structure. No. 1,421,363; July 4.

Allen, Alfred, Birmingham, England. Pencil and pen clip. No. 1,421,657; July 4.

Allen, Carlton H., assignor of one-half to Great Northern Paper Company, Millinocket, Me. Pulp-thickening machine. No. 1,421,364; July 4.

Allen, William H., Detroit, Mich. Weatherproofing clay. No. 1,421,888; July 4.

Allwork, Robert H., New York, N. Y. Flat-top roll-cover desk. No. 1,421,357; July 4.

Aluminum Company of America. (See Sherwin, Ralph S., assignor.)

American Hardware Corporation, The. (See Hurd, Norman B., assignor.)

American Optical Company. (See Schumacher, Elmer L., assignor.)

American Telephone and Telegraph Company. (See McCurdy, Ralph G., assignor.)

Anderson, E. D., Inc. (See Elder, Earl B., assignor.)

Anderson, Ivan, East Elmhurst, N. Y. Liquid-level gauge. No. 1,421,365; July 4.

Anderson, Peter F., assignor of one-half to P. S. Lound, Prentice, Wis. Wrench. No. 1,421,366; July 4.

Anderson, Ulrich, Wausau, Wis. Cushion tire and rim therefor. No. 1,421,755; July 4.

Anderson, William J., Hyde, England. Showcard, calendar and the like. No. 1,421,367; July 4.

Anthony, George H., Sykesville, Pa. Dirigible headlight for locomotives. No. 1,421,368; July 4.

Apollo Magneto Corporation. (See Fuegel, G., and Schmid, assignors.)

Arcadia Trailer Corporation. (See Collier, Joseph W., assignor.)

Ardo, Joseph, Newhall, W. Va., assignor of one-half to Kalman Horvath, Newhall, W. Va. Submersible flying boat. No. 1,421,369; July 4.

Arnao, Charles, Brooklyn, N. Y. Massage apparatus. No. 1,421,756; July 4.

A/S. Labrador. (See Mejdell, Thor, assignor.)

Ashworth, Thomas, Millersburg, Ohio. Bench and floor clamp. No. 1,421,370; July 4.

Attaway, Sidney C., Thomasville, Ga. Disk plow. No. 1,421,371; July 4.

Augustine, Addison E., Hackensack, N. J., assignor to Chester Machine Co. Inc., New York, N. Y. Gripper mechanism for envelope-making machines. No. 1,421,889; July 4.

Austin, Frederick C. (See Bager, Frederic E., assignor.)

Austin, Frederick C. (See Bentson, Hans J., assignor.)

Auto Sales and Service Company. (See Penrod, William F., assignor.)

Avery, Thomas J., Albia, Iowa. Combination scraper, charger, and tamper. No. 1,421,358; July 4.

Backhaus, Arthur A. (See Whitaker, M. C., and Backhaus.)

Bacon, Raymond F. (See Davis, H. S., and Bacon.)

Badger, Le Roy H., Oak Park, Ill., assignor to De Remer Blatchford Company, Chicago, Ill. Ladder construction. No. 1,421,372; July 4.

Bager, Frederic E., Kanosha, Wis., assignor to Frederick C. Austin, Chicago, Ill. Liquid-distributor discharge mechanism. No. 1,421,373; July 4.

Bagnell, Robert A., St. Louis, Mo. Trough. No. 1,421,374; July 4.

Baines Engineering Company, The. (See Baines, Henry C., assignor.)

Baines, Henry C., East Cleveland, assignor to The Baines Engineering Company, Canal Dover, Ohio. Transmission. No. 1,421,375; July 4.

Baker, George W., Jacksonville, Fla. Self-leveling stove for ships. No. 1,421,890; July 4.

Baker, Howard H., assignor to United States Fuse Corporation, Buffalo, N. Y. Fuse. No. 1,421,376; July 4.

Baker, Joseph, and Sons Limited. (See Prescott, William E., assignor.)

Baker, Newton D., Secretary of War. (See Milligan, Lowell H., assignor.)

Ball, John P., Chicago, Ill. Sewage purifier. No. 1,421,891; July 4.

Baner, Carl O., San Francisco, Calif. Rotary steam engine. No. 1,421,892; July 4.

Barber Asphalt Company, The. (See Browne, Frank A., assignor.)

Barr, Stevenson E., Tacoma, Wash. Combined thimble and stovepipe holder. No. 1,421,359; July 4.

Barry Company. (See Barry, Thomas F., assignor.)

Barry, Thomas F., assignor to Barry Company, Muscatine, Iowa. Split loose pulley bushing. No. 1,421,377; July 4.

Barta, Otto, New York, N. Y. Sterilizer for instruments and dressings. No. 1,421,893; July 4.

Barth, Karl, Essen, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Self-discharging car. No. 1,421,378; July 4.

Bartlett, Samuel O., New York, N. Y. Calendar. No. 1,421,379; July 4.

Bastin, L. A., et al. (See Hull, Horace, assignor.)

Batchelder, Asa F., Schenectady, N. Y., assignor to General Electric Company. Power transmission and electric braking. No. 1,421,894; July 4.

Bateman, Arthur R., Lynchburg, Va. Aligning instrument for crosshead guide bars. No. 1,421,895; July 4.

Bateman, William H., London, England. Separator employed for the separation of liquids of different density. No. 1,421,658; July 4.

Bauer, John G. (See Roeling, H. W., Williams, and Bauer.)

Baum, Henry, East Cleveland, Ohio. Scraper. No. 1,421,380; July 4.

Baum, J. Safe & Lock Company. (See Freyberg, J., and Wubbolding, assignors.)

Bawtree, Alfred E., Sutton, assignor of one-half to A. S. Legg, Thornton Heath, England. Means for regulating the flow of compressed gases. No. 1,421,381; July 4.

Beard, Richard M., New York, N. Y. Electric-light fixture. No. 1,421,382; July 4.

Beardsley, Elmer O., Chicago, and W. F. Piper, Oak Park, Ill. Sand gathering and elevating machine. No. 1,421,383; July 4.

Beat, John, et al. (See Chladek, Joseph C., assignor.)

Beat, Roy A., et al. (See Chladek, Joseph C., assignor.)

Beatty, Henry B., Brooklyn, and C. L. Johnson, New York, assignors to Laplante & Dunklin Printing Company, New York, N. Y. Display container. No. 1,421,384; July 4.

Beecken, Charles, New York, N. Y. Rope clamp. No. 1,421,385; July 4.

Belden, Edward H., assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio. Spring suspension for vehicles. No. 1,421,758; July 4.

Belden, Edward H., assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio. Spring suspension. No. 1,421,759; July 4.

Belden, Edward H., assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio. Spring suspension for vehicles. No. 1,421,760; July 4.

Belden, Edward H., assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio. Power-transmitting mechanism. No. 1,421,761; July 4.

Bell, John E., Brooklyn, N. Y. Utilizing waste heat gases of cement kilns. No. 1,421,386; July 4.

Benedict, John W., Grand Ledge, Mich. Flour feeder. No. 1,421,896; July 4.

Beneke & Knapf Manufacturing Company. (See Rayfield, Charles L., assignor.)
Benoit, Joseph F., Sanford, Me. Wire motion for looms. No. 1,421,897; July 4.
Bentley, C. M., et al. (See Schaefer, Frank M., assignor.)
Bentson, Hans J., Winthrop Harbor, assignor to F. C. Austin, Chicago, Ill. Self-shifting track. No. 1,421,387; July 4.
Bergman, Lars H., Chicago, Ill. Pulverized-fuel furnace. No. 1,421,898; July 4.
Bianchi y Reche, Fernando, Madrid, Spain. Office desk. No. 1,421,564; July 4.
Biery, Harvey V., Oklahoma, Okla. Rotary photogravure press. No. 1,421,360; July 4.
Bingay, Robert V., Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, Transformer. No. 1,421,899; July 4.
Becker, Walter S., assignor to Little Falls Fibre Company, Little Falls, N. Y. Lapping machine. No. 1,421,650; July 4.
Belden, Edward H., assignor, by mesne assignments, to The Willys-Overland Company, Toledo, Ohio. Motor vehicle. No. 1,421,757; July 4.
Bippart, Achill, East Orange, N. J. Jewelry coupling. No. 1,421,388; July 4.
Birket, William E., Peoria, Ill. Sound recording and reproducing machine. No. 1,422,022; July 4.
Bischof, Bernhard, Geneva, Switzerland. Device for preventing the penetration of air into centrifugal pumps. No. 1,421,389; July 4.
Blackburn, Thomas B., et al. (See Sykes, George, assignor.)
Blake, Eli J., Buffalo, N. Y., assignor to Gould Coupler Company. Governor. No. 1,421,660; July 4.
Blake, Eli J., Buffalo, N. Y., assignor to Hall Switch & Signal Co. Train control system. No. 1,421,762; July 4.
Blangey, Louis. (See Römer, A., and Blangey.)
Boe, Edd, assignor of one-fourth to I. D. Kretser, Clearbrook, Minn., one-fourth to D. W. McNabb, Winnipeg, Canada, and one-fourth to E. A. Haiseth, Clearbrook, Minn. Thrashing machine. No. 1,422,023; July 4.
Bogdanoff, Paul G., Battle Creek, Mich. Split lubricating bearing for shafts, etc. No. 1,421,661; July 4.
Bosque, José V., and P. Giró y Casañas, Habana, Cuba. Speed-indicating device. No. 1,421,390; July 4.
Bossert, Charles P., assignor to Pfister & Vogel Leather Co., Milwaukee, Wis. Machine for treating hides and skins. No. 1,421,662; July 4.
Boureau, Désiré V., Detroit, Mich. Snubber. No. 1,421,900; July 4.
Bower, Chester A., Castor, Alberta, Canada. Display rack for phonograph disks. No. 1,421,391; July 4.
Bowler, Frank W., Chicago, Ill. Combination comb case. No. 1,421,392; July 4.
Bowman, A. M. (See Sturm, E. J., and Surnson, assignors.)
Boyd, James S., Spray, N. C. Register. No. 1,422,024; July 4.
Boykin, Herbert C. (See Ritchie, O. N., and Boykin.)
Boyle, Louis M., Los Angeles, Calif. Camp stove. No. 1,421,393; July 4.
Boyuls, Cecil H., Louisville, Ky. Shirt bosom and body machine. (Reissue.) No. 15,395; July 4.
Brackney, William S., Elizabethton, Tenn. Film holder. No. 1,422,029; July 4.
Breuker & Kessler Company. (See Kessler, Harry C., assignor.)
Broel, Louis G., Leichardt, near Sydney, New South Wales, Australia. Handling kapok. No. 1,421,663; July 4.
Brogden, Alvey L., Abbeville, S. C. Dirigible headlight. No. 1,420,025; July 4.
Brothers, Eli, Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J. Pulling-over machine. No. 1,421,394; July 4.
Brotsch, Frederick A., Jr., Rochester, N. Y. Pavement. No. 1,421,901; July 4.
Brown, Charles S., Bethel, Me. Feed wheel for spool machines. No. 1,421,395; July 4.
Brown Company. (See Brown, O. B., Moore, Parker, and Martinson, assignors.)
Brown, George R., Bondi, near Sydney, New South Wales, Australia, assignor to Electrostatic Separation Company, Limited, Sydney, New South Wales, Australia. Process and apparatus for electrostatic separation of finely-divided discrete material. No. 1,422,026; July 4.
Brown, John. (See Myer, B., and Brown.)
Brown, John H., Spaulnaw Creek, Okla. Heating system. No. 1,421,902; July 4.
Brown, Orton B., H. K. Moore, and H. Parker, Berlin, N. H., and H. M. Martinson, La Tuque, Quebec, Canada, assignors to Brown Company, Portland, Me. Method of and apparatus for washing pulp. No. 1,421,664; July 4.
Brown, Robert J., assignor of one-half to J. F. Walden, Merryville, La. Oil-well drill bit. No. 1,421,396; July 4.
Browne, Frank A., Buffalo, N. Y., assignor to The Barber Asphalt Company, Philadelphia, Pa. Tandem roller. No. 1,421,665; July 4.
Bruck, William A., Pearl River, N. Y. Fowl cleaner. No. 1,421,397; July 4.
Bryant Electric Company, The. (See Goodridge, Gilbert W., assignor.)
Bryon, William J., New York, N. Y. Door closer and check. No. 1,421,666; July 4.
Buberl, Carl, Detroit, Mich. Apparatus for indicating porosity. No. 1,421,903; July 4.
Bucher, William W., Chicago, Ill., assignor, by mesne assignments, to Kohler Company, Kohler, Wis. Automatic electric generating unit. No. 1,422,027; July 4.
Buckham, George T. (See Dawson, A. T., and Buckham.)
Budd, Edward G., assignor, by mesne assignments, to Budd Wheel Company, Philadelphia, Pa. Making wheel disks. No. 1,421,667; July 4.
Budd Wheel Company. (See Budd, Edward G., assignor.)
Buedingen, William L., Milwaukee, Wis. Box-tray support. No. 1,422,028; July 4.
Buehle, Erich, San Francisco, and E. C. Hutchinson, Oakland, assignors to Pelton Water Wheel Co., San Francisco, Calif. Safety control for hydraulic pipe lines. No. 1,421,904; July 4.
Burchess, Charles L., assignor of one-half to H. M. Dirks, Lincoln, Nebr. Christmas-tree support. No. 1,421,398; July 4.
Burgess Battery Company. (See Burgess, Charles F., assignor.)
Burgess, Charles F., assignor to Burgess Battery Company, Madison, Wis. Battery handlamp. No. 1,421,399; July 4.
Burns, Frank L., Three Rivers, Mich. Vehicle top curtain. No. 1,421,400; July 4.
Burnstine, Abraham, Washington, D. C. Second-hand-setting mechanism for watches. No. 1,421,668; July 4.
Busse, Edwin G. (See Williams, C. H., and Busse.)
Byers, Benjiman O., assignor of one-half to W. St. John, Cleveland, Ohio. Auto lock. No. 1,421,401; July 4.
Cade, Enos B., Portland, Oreg. Meter. No. 1,421,905; July 4.
Cadman, Addi B., Beloit, assignor to Warner Manufacturing Company, South Beloit, Wis. Trailer truck. No. 1,421,402; July 4.
Caldwell, Warren A., Oskaloosa, Iowa. Grain crib. No. 1,421,763; July 4.
Calef, Heman A., Portland, Oreg. Comforter or wadded quilt. No. 1,421,906; July 4.
Calhoun, John W., Chester, Pa. Meter-box cover. No. 1,421,669; July 4.
Callais, Julian C., St. Louis, Mo. Amusement device. No. 1,421,907; July 4.
Campbell, Charles S., New Haven, and W. H. Day, East Haven, assignors to Index Visible, Inc., New Haven, Conn. Index or file. No. 1,421,670; July 4.
Campbell, Sarah W. (See Linden, Alfred R., assignor.)
Caps, Arthur W. (See Hawley, J. E., and Caps.)
Capstan Glass Company. (See Kucera, Pater, assignor.)
Carlson, Gustaf, assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y. Switchboard signal. No. 1,421,403; July 4.
Carmichael, Duncan, Ancoats, Manchester, England. Acetylene-gas-lighting plant. No. 1,422,030; July 4.
Cartier, Charles E., et al. (See Putney, William W., assignor.)
Cattol, Louis C., Hurley, Wis. Gearless transmission mechanism. No. 1,421,908; July 4.
Caulkins, Theodore P., assignor to E. T. Wray, Chicago, Ill. Drilling machine. No. 1,422,031; July 4.
Chambers, Charles E., Wichita, Kans. Milk skimmer. No. 1,421,909; July 4.
Chapman, Frank, Brooklyn, N. Y. Amusement device. No. 1,422,032; July 4.
Chemical Construction Company. (See Hechenbleikner, I., and Oliver, assignors.)
Chemical Foundation, Inc., The. (See Goldschmidt, H., and Müller, assignors.)
Chemical Foundation, Inc., The. (See Lobeck, Oskar, assignor.)
Chemical Foundation, Inc., The. (See Löw-Beer, Oscar, assignor.)
Chemical Foundation, Inc., The. (See Minck, Paul H., assignor.)
Chemical Foundation, Inc., The. (See Röhm, Otto, assignor.)
Chemical Foundation, Inc., The. (See Römer, A., and Blangey, assignors.)
Chemical Foundation, Inc., The. (See Stuer, B. C., and Grob, assignors.)
Cheney, Forest, assignor to Cheney Talking Machine Company, Chicago, Ill. Motor for talking machines. No. 1,421,404; July 4.
Cheney Talking Machine Company. (See Cheney, Forest, assignor.)
Chernikeeff, Basil, London, England. Ship's log. No. 1,421,405; July 4.
Chester Machine Co. (See Augustine, Addison E., assignor.)
Chicago Automatic Conveyor Co. (See Shaw, Arthur L., assignor.)
Chicago Railway Equipment Company. (See Williams, C. H., and Busee, assignors.)
Chladek, Joseph C., assignor of one-fourth to R. A. Beat and one-fourth to J. Beat, Mount Horeb, Wis. Dual rotary snowplow. No. 1,421,671; July 4.
Christmas, Allen J., Rayville, La. Lamp. No. 1,421,406; July 4.
Cichon, Max, assignor to V. M. Cichon, Chicago, Ill. Emergency brake, antiskidding, and antitheft device. No. 1,421,910; July 4.
Cichon, Virginia M. (See Cichon, Max, assignor.)

Clark, Warren H., West Burlington, N. Y. Bail. No. 1,421,407; July 4.
Clarke, William E., Buffalo, N. Y. Deep-sea sounder. No. 1,421,672; July 4.
Claus, Emil L., Milwaukee, Wis. Gas cock and jet plug therefor. No. 1,422,033; July 4.
Clymer, Earl H. (See Dinning, T. W., and Clymer.)
Coates, Frederick, assignor to Federal Products Company, Cincinnati, Ohio. Can-capping tool. No. 1,421,673; July 4.
Cochrane, Sanders V., Bridgetown, Tex. Band cutter. No. 1,421,764; July 4.
Cockrell, William D. (See Sharp, A. H., and Cockrell.)
Cohen, Abraham B., Far Rockaway, N. Y. Tooth-cleaning device. No. 1,421,911; July 4.
Cohen, Alice H., executrix. (See Cohen, Stanley A.)
Cohen, Harry. (See Wolfe, Daniel D., assignor.)
Cohen, Solomon. (See Shirk, A. J., and Cohen.)
Cohen, Stanley A., deceased, by A. H. Cohen, executrix, New York, assignor to The New York Consolidated Card Company, Long Island City, N. Y. Plating machine. No. 1,421,912; July 4.
Colburn, Glen I., Geneva, N. Y. Nursery label. No. 1,421,674; July 4.
Coleman, George D., deceased, Buffalo, N. Y., by N. S. Coleman, executrix, Revere, Mass. Antifouling composition. No. 1,421,914; July 4.
Coleman, Nellie S., executrix. (See Coleman, George D.)
Collier, Joseph W., assignor to Arcadia Trailer Corporation, Newark, N. Y. Vehicle. No. 1,422,034; July 4.
Collins, Lester W., St. Paul, Minn. Refrigerator car. No. 1,421,913; July 4.
Collyer, Louis G., Upper Montclair, N. J., assignor to The Aeolian Company. Adjustable connection for actuating arms. No. 1,421,408; July 4.
Columbia Graphophone Manufacturing Company. (See Hinckley, Frank C., assignor.)
Colven, James M., Yonkers, N. Y., and A. Lowy, Newark, N. J., assignors to New York Engineering Company. Soot blower. No. 1,421,675; July 4.
Concentrators Limited. (See Ondra, Frank, assignor.)
Conrader, Rudolph, Erie, Pa. Pumping apparatus. No. 1,421,409; July 4.
Cook, Charles L., Louisville, Ky. Grinder. No. 1,422,035; July 4.
Cook, Stanley S. (See Parsons, C. A., and Cook.)
Cooke, Frank V., Detroit, Mich. Vehicle spring. No. 1,421,410; July 4.
Cooke, James H., Hartford, Conn. Chain. No. 1,421,915; July 4.
Corbitt, Lester J., Detroit, Mich. Indicator lock. No. 1,421,411; July 4.
Cory, Harvey, and O. D. Gray, Chicago, Ill. Friction lining. No. 1,421,412; July 4.
Cossitt, Malcolm L., Alameda, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev. Photographic-printing machine. No. 1,421,413; July 4.
Craig, Charles F., San Francisco, Calif., assignor to Craig Golfmeter Co., Wilmington, Del. Captive-ball practice device. No. 1,421,414; July 4.
Craig Golfmeter Co. (See Craig, Charles F., assignor.)
Craig, Louis B., Davenport, Iowa. Saddler's chest. No. 1,421,916; July 4.
Crane Company. (See Lindberg, Sam J., assignor.)
Crane, Joshua, et al., trustees. (See Waterhouse, Harold D., assignor.)
Crane, Walter S., et al., trustees. (See Waterhouse, Harold D., assignor.)
Crowley, Joseph P., and C. A. Rowley, assignors to The Libbey-Owens Sheet Glass Company, Toledo, Ohio. Method and apparatus for producing sheet glass. No. 1,422,036; July 4.
Crucet, Joseph M., New York, N. Y. Lamp shade. No. 1,421,415; July 4.
Cunningham, Emry L., Sikeston, Mo. Faucet valve. No. 1,421,765; July 4.
Curry, Robert, New York, N. Y. Resilient tire. No. 1,421,917; July 4.
Dake, Charles W., assignor to The Pyle-National Company, Chicago, Ill. Bearing for steam turbines. No. 1,421,918; July 4.
Daniel, Edward W., Cleveland, Ohio. Wire-rope socket. No. 1,421,676; July 4.
Davidson, Alexander H., Colma, and S. Sundelius, San Francisco, Calif. Cremation furnace. No. 1,421,919; July 4.
Davis, Harold S., and R. F. Bacon, Pittsburgh, Pa., assignors to Texas Gulf Sulfur Company, Bay City, Tex. Process and apparatus for melting sulphur. No. 1,421,416; July 4.
Dawson, Arthur T., and G. T. Buckham, assignors to Vickers Limited, Westminster, London, England. Ordnance breech mechanism. No. 1,422,037; July 4.
Day, David T., Washington, D. C. Treatment of hydrocarbon oils. No. 1,422,038; July 4.
Day, William H. (See Campbell, C. S., and Day.)
Dean, Charles L., assignor to Stearns-Roger Manufacturing Company, Denver, Colo. Drum for drying pulp and the like. No. 1,422,039; July 4.
Deegan, Daniel J., Youngstown, Ohio. Perforator for printing presses. No. 1,421,417; July 4.
Delco-Light Company. (See Kellholtz, Lester S., assignor.)
De Launty, Reuben H., Chicago, Ill. Trailer-steering device. No. 1,422,040; July 4.
De Laval Separator Company, The. (See Hapgood, Cyrus H., assignor.)
De Minico, Frank, assignor to Pollard-Alling Manufacturing Company, New York, N. Y. Printing machine. No. 1,421,920; July 4.
Denmire, Harold A., assignor of one-half to The General Tire and Rubber Company, Akron, Ohio. Collapsible tire core. No. 1,421,418; July 4.
De Remer Blatchford Company. (See Badger, Le Roy H., assignor.)
Dersom, John J., Columbus, Ohio. Mechanical stoker. No. 1,421,419; July 4.
Dery, Theodore J., Windsor, Ontario, Canada. Pressure-retaining dust cap for pneumatic-tire valves. No. 1,421,420; July 4.
Detroit Sheet Metal Works. (See Ehmka, William C., assignor.)
Di Le Compte, Onesime H., assignor to Universal Car and Hose Coupler Company, Oklahoma, Okla. Car-coupling knuckle. No. 1,421,421; July 4.
Dinning, Thomas W., and E. H. Clymer, Renton, Wash. Vehicle sled. No. 1,422,041; July 4.
Dirks, H. M. (See Burchess, Charles L., assignor.)
Doerr, Carl F., Yonkers, N. Y. Rotary glass cutter. No. 1,421,921; July 4.
Donat, Joseph L., Chicago, Ill. Antiskid device. No. 1,421,922; July 4.
Donnelly, John R., Fairfield, Me. Game board. No. 1,422,042; July 4.
Douros, Peter. (See Scarborough, Donald S., assignor.)
D. P. Company. (See Gamage, Harry C., assignor.)
Dunning, Parker, Bloomfield, N. J., assignor to General Electric Company. Starting compensator. No. 1,421,923; July 4.
Drake, Thomas J., Sadieville, Ky. Gate. No. 1,421,422; July 4.
Draper, Charles T., assignor to The Draper Manufacturing Company, Cleveland, Ohio. Removable false head for metallic containers. No. 1,422,043; July 4.
Draper, Isaac S., Sullivan, Ind. Voting booth. No. 1,421,423; July 4.
Draper Manufacturing Company, The. (See Draper, Charles T., assignor.)
Dufour, George H., Oak Park, assignor to Marshall Field & Company, Chicago, Ill. Finger guard for printing presses. No. 1,421,424; July 4.
Duncan, Wayne A., Chicago, Ill. Steam cooker. No. 1,421,425; July 4.
Dunning, William F., Washington, D. C. Loose-leaf binder or file. No. 1,421,677; July 4.
Eastman Kodak Company. (See Eberlin, L. W., and Sheppard, assignors.)
Eastman Kodak Company. (See Von Bramer, Harold, assignor.)
Eaton, Melvin C., et al. (See McFarland, William M., assignor.)
Eaton, Warren E., et al. (See McFarland, William M., assignor.)
Eaton, William S., Sag Harbor, N. Y. Etching or like machine. No. 1,421,426; July 4.
Eaton, William S., Sag Harbor, N. Y. Etching or like machine. No. 1,421,427; July 4.
Eberlin, Leon W., and S. E. Sheppard, assignors to Eastman Kodak Company, Rochester, N. Y. Light-diffusing medium and making the same. No. 1,421,924; July 4.
Ebert, Rudolph G., Portland, Oreg. Game board and game. No. 1,421,678; July 4.
Eckelmann, Luis E. (See Ferguson, G. E., and Eckelmann.)
Eckelmann, Luis E., New York, N. Y., assignor to Pyrene Manufacturing Company. Fire-extinguishing solution. No. 1,421,428; July 4.
Economic Steel Rack Company. (See Warnock, Amos W., assignor.)
Edwards, Henry J., Elyria, assignor to The Willys-Overland Company, Toledo, Ohio. Rotary pump. No. 1,421,766; July 4.
Edwards, Herbert A., London, England. Mount for artificial teeth. No. 1,422,044; July 4.
Edwards, William, Schenectady, N. Y., assignor to General Electric Company. Packing for mercury dashpots. No. 1,421,767; July 4.
Egbert, Albert, and E. Holmes, Toledo, Ohio. King bolt. No. 1,421,768; July 4.
Ehmka, William C., assignor to Detroit Sheet Metal Works, Detroit, Mich. Air-circulating system for industrial ovens. No. 1,421,429; July 4.
Ellersen, From C., Jersey City, N. J. Pie-making machine. No. 1,421,430; July 4.
Elder, Earl B., assignor to E. D. Anderson, Inc., New York, N. Y. Automatic packaging equipment. No. 1,421,925; July 4.
Elder, Earl B., assignor to E. D. Anderson, Inc., New York, N. Y. Automatic weighing mechanism. No. 1,421,926; July 4.
Electric Controller Company. (See Goldberg, Arthur M., assignor.)
Electric Fruit Marking Co. (See Neuenschwander, Lewis, assignor.)
Electrostatic Separation Company. (See Brown, George R., assignor.)
Elliott, Percy M., Chicago, Ill. Car-door top guide. No. 1,421,431; July 4.

Embanks, Fred, assignor to Anastazya Koszyczarek, Cleveland, Ohio. Combined muffler and deodorizer for explosive engines. No. 1,421,432; July 4.

Empfield, Berton C. (See Siemsen, Jurgen, assignor.)

Epps, Frank A., assignor to Foamite Firefoam Company, New York, N. Y. Fire-extinguishing system. No. 1,421,433; July 4.

Erickson, Julius, assignor to J. B. La Pierre, Chicago, Ill. Rim for steering wheels. No. 1,421,434; July 4.

Ethier, Raymond F. (See Pendergast, G., and Ethier.)

Eureka Tackle Block Company, The. (See Flynn, John H., Jr., assignor.)

Fauchon-Villeplee, André L. O., Paris, France. Electric apparatus for propelling projectiles. No. 1,421,435; July 4.

Faurot, Henry, Jr., assignor to Western Felt Works, Chicago, Ill. Window-mounting device. No. 1,421,927; July 4.

Federal Electric Company. (See Mars, Thomas H., assignor.)

Federal Products Company. (See Coates, Frederick, assignor.)

Ferguson, George E., and L. E. Eckelmann, New York, N. Y., assignors to Pyrene Manufacturing Company. Fire-extinguishing agent. No. 1,421,436; July 4.

Fernald, Burton J., et al. (See McFarland, William M., assignor.)

Fernández, Venerando, Habana, Cuba. Automobile guard. No. 1,421,437; July 4.

Ferris, Floyd A., Dallas, Tex. Order-filling counter. No. 1,421,679; July 4.

Field, Oscar S., Roselle, N. J., assignor to Hall Switch & Signal Co. Three-position operating mechanism. No. 1,421,769; July 4.

Fifield, Albert F., Newark, assignor to The Singer Manufacturing Company, Elizabeth, N. J. Stitch-forming mechanism for chain-stitch sewing machines. No. 1,421,438; July 4.

Finckh, Fritz, Essen, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Operating mechanism for the doors of self-discharging receptacles. No. 1,421,439; July 4.

Fisher, James B., assignor to Waukesha Motor Company, Waukesha, Wis. Suction intake for pumps. No. 1,421,440; July 4.

Fisk Rubber Company, The. (See Fording, William G., assignor.)

Fitzgerald, Jeremiah C., Kilbourn, Wis. Drill. No. 1,421,928; July 4.

Flaherty, Michael H., Philadelphia, Pa. Lock-sealed envelope. No. 1,422,045; July 4.

Flauder, Alfred J. (See Weidlich, L., and Flauder.)

Flinn, Francis J., Brooklyn, N. Y. Shim. No. 1,421,441; July 4.

Floreskul, Gabriel, Toronto, Ontario, Canada. Combination table. No. 1,421,929; July 4.

Flynn, John H., Jr., assignor to The Eureka Tackle Block Company, Cincinnati, Ohio. Tackle hook. No. 1,421,442; July 4.

Foamite Firefoam Company. (See Epps, Frank A., assignor.)

Fogel, Abraham, Montreal, Quebec, Canada. Hat box. No. 1,421,443; July 4.

Folsom, Thomas C., Tampa, Fla. Railway switch. No. 1,421,444; July 4.

Ford, Campbell, San Francisco, Calif. Apparatus for indicating the amount of water in automobile radiators. No. 1,421,930; July 4.

Fording, William G., Cleveland, Ohio, assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Forming tires. No. 1,422,046; July 4.

Forsberg, Peter W., Schenectady, N. Y., assignor to General Electric Company. Electric braking. No. 1,421,931; July 4.

Foster, John C., New York, N. Y. Spring-operated motor. No. 1,421,932; July 4.

Fränkel, Arwed, Berlin, Germany. Coke-quenching receptacle. No. 1,421,445; July 4.

Freyberg, Joseph, and L. F. Wubbolding, Newport, Ky., assignors to The J. Baum Safe & Lock Company, Cincinnati, Ohio. Safety-deposit construction. No. 1,421,770; July 4.

Freyberg, Joseph, and L. F. Wubbolding, Newport, Ky., assignors to The J. Baum Safe & Lock Company, Cincinnati, Ohio. Vault front and door construction. No. 1,421,771; July 4.

Freeman, Dudley, Roxbury, Mass. Garment. No. 1,421,446; July 4.

Fried. Krupp Aktiengesellschaft. (See Barth, Karl, assignor.)

Fried. Krupp Aktiengesellschaft. (See Finckh, Fritz, assignor.)

Fried. Krupp Aktiengesellschaft. (See Immand, Gerhard, assignor.)

Fried. Krupp Aktiengesellschaft. (See Kolbe, W., and Fritzen, assignors.)

Frinzi, Antonio, Easton, Pa. Switch plate. No. 1,421,447; July 4.

Fritsche, John, Philadelphia, Pa. Liquid-vending machine. No. 1,421,680; July 4.

Fritz, Lewis, Chicago, Ill. Picture frame. No. 1,421,448; July 4.

Fritzen, Johannes. (See Kolbe, W., and Fritzen.)

Fry, Conrad D. (See Mansell, H. J., and Fry.)

Fuegel, Gottlob, and H. Schmid, assignors, by mesne assignments, to Apollo Magneto Corporation, Brooklyn, N. Y. Lubricating device. No. 1,421,681; July 4.

Fulda, Edward, New York, N. Y. Clip device for reels. No. 1,421,933; July 4.

Gamage, Harry C., New York, N. Y., assignor to D. P. Company. Dustguard. No. 1,421,449; July 4.

Gammeter, John R., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Method and apparatus for manipulating flexible articles. No. 1,421,450; July 4.

Garagnani, Frank, Herrin, Ill. Railway-track indicator. No. 1,422,047; July 4.

Garberding, Angelo F., Goodland, Minn. Belt. No 1,421,451; July 4.

Gardner, John P., Soldiers Home, Calif. Rail fastener. No. 1,421,682; July 4.

Garvey, Richard, and T. J. Miner, New York, N. Y. Captive aeroplane. No. 1,421,683; July 4.

Gary, William P., Totowa Borough, N. J. Aeroplane construction. No. 1,421,934; July 4.

Gates, De Witt C. (See McConney, Robert B., assignor.)

General Electric Company. (See Batchelder, Asa F., assignor.)

General Electric Company. (See Dunning, Parker, assignor.)

General Electric Company. (See Edwards, William, assignor.)

General Electric Company. (See Forsberg, Peter W., assignor.)

General Electric Company. (See Junggren, Oscar, assignor.)

General Electric Company. (See Macloskie, George, assignor.)

General Electric Company. (See Pritchard, Franklin H., assignor.)

General Electric Company. (See Stevens, Harry M., assignor.)

General Motors Corporation. (See Sturt, Alfred T., assignor.)

General Tire and Rubber Company, The. (See Denmire, Harold A., assignor.)

Geraghty, John P., Jersey City, N. J. Locking device for automobiles. No. 1,421,684; July 4.

Gerosa, Carl N., Augusta, Ga. Mud hook. No. 1,421,452; July 4.

Gilbert, Walker B., Lynchburg, Va. Hoop-stretching device. No. 1,421,935; July 4.

Gilby, Frank R., Detroit, Mich. Wrench. No. 1,421,936; July 4.

Giles, Harvey, Brooklyn, assignor to A. Ward, New York, N. Y. Coin-controlled vending machine. No. 1,421,453; July 4.

Giró y Casañas, Pantaléon. (See Bosque, J. V., and Giró y Casañas.)

Glessner, Charles E., Portland, Oreg. Tank and closure. No. 1,421,454; July 4.

Glessner, Charles E., Portland, Oreg. Vacuum container. No. 1,421,685; July 4.

Goodman Manufacturing Company. (See Pray, Thomas E., assignor.)

Goodrich, B. F., Company, The. (See Gammeter, John R., assignor.)

Goodridge, Gilbert W., assignor to The Bryant Electric Company, Bridgeport, Conn. Hinge joint. No. 1,422,048; July 4.

Goodyear Tire & Rubber Company, The. (See Urquhart, W. R., Post, Humphrey, and Van Arsdale, assignors.)

Goldberg, Arthur M., assignor to Electric Controller Company, Inc., Indianapolis, Ind. Electric water heater. No. 1,421,937; July 4.

Goldblatt, Charles I., Brooklyn, N. Y. Window-operating device. No. 1,421,938; July 4.

Goldschmidt, Hans, and K. Müller, Essen, Germany, assignors, by mesne assignments, to The Chemical Foundation, Inc. Zinc alloy. No. 1,421,686; July 4.

Gould Coupler Company. (See Blake, Ell J., assignor.)

Gould, George M., Madison, S. Dak. Trap. No. 1,422,049; July 4.

Gray, Alexander. (See Moore, F., and Gray.)

Gray, Orrin D. (See Cory, H., and Gray.)

Great Northern Paper Company. (See Allen, Carlton H., assignor.)

Greenberg, David S., Warren Point, N. J. Automobile wheel. No. 1,422,050; July 4.

Green, Charles A., and H. F. Schuh, assignors to The C. F. Pease Company, Chicago, Ill. Ruling pen. No. 1,421,455; July 4.

Green, Daries O., Toledo, Ohio. Kitchenette cabinet. No. 1,421,456; July 4.

Gregg, Louis D., Hackensack, N. J. Rail fastening. No. 1,421,457; July 4.

Gregg, William H. (See Hachmann, Frederick, assignor.)

Gregory, George W., London, England. Apparatus for chopping foodstuffs. No. 1,421,458; July 4.

Griswold, George G., Jr. (See Sheridan, G. E., and Griswold.)

Gritzmacher, Henry F., Le Sueur, Minn. Snapping roll. No. 1,421,459; July 4.

Grob, Walter. (See Stuer, B. C., and Grob.)

Guillemet, François L., San Francisco, Calif. Propeller. No. 1,421,460; July 4.

Hachalachtl, Michael, assignor of one-fourth to G. L. Livingston and one-fourth to A. Okum, New York, N. Y. Air heater. No. 1,421,939; July 4.

Hachmann, Frederick, assignor to W. H. Gregg, St. Louis, Mo. Manifold sales book and cover therefor. No. 1,421,461; July 4.

Hall, C. M. Lamp Company. (See Watson, Harvey L., assignor.)

Hall, Charles G., Akron, Ohio. Washing machine. No. 1,421,462; July 4.

Hall, Furney C., Hartsfield, Ga. Cotton chopper. No. 1,422,051; July 4.

Hall Switch & Signal Co. (See Blake, Ell J., assignor.)

Hall Switch & Signal Co. (See Field, Oscar S., assignor.)

Haleeth, Edwin A., et al. (See Hoe, Edd, assignor.)

Hamachek, Frank, Kewaunee, Wis. Green-pea viner. No. 1,421,772; July 4.

Hamilton, Alexander M., Toronto, Ontario, Canada. Transmission-lever-locking device. No. 1,421,463; July 4.

Hamilton, William L., Bangor, Mich. Automatic pressure-operated switch. No. 1,421,940; July 4.

Hans, Pierre, Brussels, Belgium. Keyboard for musical instruments. No. 1,421,464; July 4.

Hansen, Marinius, Brooklyn, N. Y. Gauge for eyeglass mountings. No. 1,421,465; July 4.

Hanson, Harry C., Minneapolis, Minn. Wall attachment. No. 1,422,052; July 4.

Hanson, James R., and J. R. Shepherd, Anderson, S. C. Ring-rail brace for spinning machines. No. 1,421,466; July 4.

Hanson, Oscar J., Fargo, N. Dak. Typewriting-instruction machine. No. 1,422,053; July 4.

Hapgood, Cyrus H., Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y. Milking-machine system. No. 1,421,773; July 4.

Harden, Albert S., Newark, N. J. Wind-shield attachment. No. 1,421,467; July 4.

Harder, Harry M., assignor of one-half to W. F. Leschen, St. Louis, Mo. Pressure gauge. No. 1,421,774; July 4.

Harrington, William F., assignor to The Willys-Overland Company, Toledo, Ohio. Headlight-controlling mechanism. No. 1,421,775; July 4.

Hartford-Fairmont Company. (See Mulholland, Vergil, assignor.)

Haumerson, Anton F., assignor to Pounder Harrow Company, Fort Atkinson, Wis. Combined merry-go-round and teeter board. No. 1,421,468; July 4.

Hauptmeyer, Friedrich, Essen, Germany. Material for artificial internal members of the human body. No. 1,421,776; July 4.

Hawley, Joel E., Kansas City, Mo., and A. W. Cope, Topeka, Kans., assignors of one-fourth to W. J. Riley, Kansas City, Mo. Dispensing device. No. 1,421,777; July 4.

Hayes, Alva J., Corydon, Iowa. Door hanger. No. 1,421,941; July 4.

Haynes, George P., Brooklyn, N. Y. Valve. No. 1,421,687; July 4.

Healy, Maurice J., West Hoboken, N. J. Boiler. No. 1,421,778; July 4.

Hechenbleikner, Ingenuin, and T. C. Oliver, Charlotte, N. C., assignors to Chemical Construction Company, New York, N. Y. Treating acids. No. 1,421,688; July 4.

Heerling, W., New York, N. Y. Foldable chair or the like. No. 1,421,779; July 4.

Heide, William A., Detroit, Mich. Carburetor. No. 1,422,054; July 4.

Heil, Julius P., Milwaukee, Wis. Fluid hoist. No. 1,421,469; July 4.

Hellsing, Karl G. F., assignor to J. & C. G. Bolinders Mekaniska Verkstads Aktiebolag, Stockholm, Sweden. Forced-lubrication apparatus provided with pumps. No. 1,421,470; July 4.

Henker, Otto, assignor to the Firm of Carl Zeiss, Jena, Germany. Machine for grinding beveled rim surfaces on spectacle glasses. No. 1,422,055; July 4.

Hercules Carburetor Company. (See Leahy, Herbert V., assignor.)

Heskett, Walter P., Castlecliff, New Zealand. Metal compound powder and production of the same. No. 1,421,471; July 4.

Hinckley, Frank C., assignor to Columbia Graphophone Manufacturing Company, Bridgeport, Conn. Correction device. No. 1,421,472; July 4.

Hinson, John, Montreal, Quebec, Canada. Journal-box cooler. No. 1,421,473; July 4.

Hirshfield, Morris, Brooklyn, N. Y. Blank for slippers. No. 1,421,474; July 4.

Hoffman, George F. (See Latsch, Otto, assignor.)

Hoffman, Joseph, Camden, N. J. Safety latch for steering controllers. No. 1,421,475; July 4.

Hokanson, Otto A., assignor to Woodstock Typewriter Company, Woodstock, Ill. Ribbon mechanism for typewriters. No. 1,421,780; July 4.

Holder, Edward P. (See Morgan, H. W., and Holder.)

Holland, Edward M., et al. (See Putney, William W., assignor.)

Holland, George R., Naugatuck, Conn. Window-shade fixture. No. 1,422,056; July 4.

Holmes, Edward. (See Egbert, A., and Holmes.)

Holmes, Edward. (See Thompson, F. H., and Holmes.)

Holmes, Edward, Toledo, Ohio. Wire tie. No. 1,421,781; July 4.

Holmes, Edward, assignor to The Willys-Overland Company, Toledo, Ohio. Decking apparatus for vehicles. No. 1,421,782; July 4.

Holmes, George A., Newton Center, Mass., assignor to United States Fastener Company. Stud and socket fastener. No. 1,421,476; July 4.

Holsberg, George A., San Francisco, Calif. Windshield sunshade. No. 1,421,942; July 4.

Horvath, Kalman. (See Ardo, Joseph, assignor.)

Hosch, Greene C., and G. B. Kyle, assignors to The Measuregraph Company, St. Louis, Mo. Cloth-measuring and cost-computing machine. No. 1,421,943; July 4.

Hooper, Charles L., Rochester, N. Y., assignor to Vacuum Oil Company, New York, N. Y. Apparatus for casing cans. No. 1,422,057; July 4.

Hope, John T., Kansas City, Mo. Fan. No. 1,421,477; July 4.

Hope, Ole J., Chicago, Ill. Scraper attachment for paint-brushes. No. 1,421,478; July 4.

Hopedale Manufacturing Company. (See Northrop, Jonas, assignor.)

Hopkins, Sydney B., Summit, N. J., and C. Jelinek, Richmond Hill, N. Y. Stereotyper's and printer's tool. No. 1,421,689; July 4.

Hovanec, Valent, Ambridge, Pa. Tool holder. No. 1,422,058; July 4.

Hover, Lee D., Chicago, Ill. Embroidery needle. No. 1,421,479; July 4.

Howard, Edward G., Cincinnati, Ohio. Rubber garter. No. 1,421,690; July 4.

Howard, Travis H. B., Como, Miss. Lamp extinguisher. No. 1,422,059; July 4.

Hughes, Robert R., Jr., Utica, N. Y., assignor to Union Special Machine Company, Chicago, Ill. Looper mechanism for sewing machines. No. 1,422,060; July 4.

Hughes, William C., New Haven, Conn. Clothes drier. No. 1,422,061; July 4.

Hull, Horace, assignor of one-half to L. A. Bastin and one-half to J. H. Post, Denver, Colo. Cooker. No. 1,421,480; July 4.

Humiston, Frederick L., New Haven, Conn., assignor to Winchester Repeating Arms Company. Spotlight. No. 1,421,944; July 4.

Humphrey, Dwight E. (See Urquhart, W. R., Post, Humphrey, and Van Arsdale.)

Hunley, Dempsie R., Cofoco, W. Va. Combination trolley-wire stretcher and splice. No. 1,421,481; July 4.

Hunt, Arthur H., Virgil, Kans. Self-adjusting clutch. No. 1,422,062; July 4.

Hurd, Norman B., assignor to The American Hardware Corporation, New Britain, Conn. Door-holding device. No. 1,421,691; July 4.

Hussong Dyeing Machine Company. (See Trickett, Walter S., assignor.)

Hutchins, Rufus J., Middletown, Ohio. Water heater. No. 1,421,692; July 4.

Hutchinson, Ely C. (See Buehle, E., and Hutchinson.)

Immand, Gerhard, Essen, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Self-discharging car. No. 1,421,482; July 4.

Index Visible, Inc. (See Campbell, C. S., and Day, assignors.)

Inman Manufacturing Company. (See Joslin, Frank M., assignor.)

International Paper Company. (See Murray, James M., assignor.)

International Scale Company. (See Osgood, Louis A., assignor.)

International Time Recording Company of New York, The. (See Odell, George W., assignor.)

Isco Chemical Company. (See Ladd, E. T., and Speiden, assignors.)

Isenberg, Rudolf A., San Francisco, Calif. Elevator controller. No. 1,421,945; July 4.

Iserson, Abraham S. (See Shirk, A. J., and Cohen, assignors.)

J. & C. G. Bolinders Mekaniska Verkstads Aktiebolag. (See Hellsing, Karl G. F., assignor.)

Jacques, George W., Stratford, Conn., assignor to The Singer Manufacturing Company. Back gauge. No. 1,421,483; July 4.

Jelinek, Charles. (See Hopkins, S. B., and Jelinek.)

Jennings, Arthur B., New York, N. Y. Air compressor. No. 1,421,484; July 4.

Jerdone, Francis, Jr., assignor to The Willys-Overland Company, Toledo, Ohio. Automatic take-up device. No. 1,421,783; July 4.

Jerdone, Francis, Jr., assignor to The Willys-Overland Company, Toledo, Ohio. Automatic take-up device. No. 1,421,784; July 4.

Joel, Alfred, & Co. (See Mickley, Karl, assignor.)

Johnson, Arthur A., Washington, D. C., assignor to Underwood Typewriter Company. Typewriting machine. No. 1,421,946; July 4.

Johnson, Clare L. (See Beatty, H. B., and Johnson.)

Johnson, John O. Q., Modesto, Calif. Motor-starting device. No. 1,422,063; July 4.

Jones, Albert F., Salem, Mass. Automatic counter-forming machine. No. 1,421,947; July 4.

Jones, David A., and C. R. Martin, Bartlesville, Okla. Filter. No. 1,421,948; July 4.

Jones, Emerald E., Chicago, Ill. Cone belt shifter. No. 1,421,485; July 4.

Jones, Erwin R., Columbus, Ohio. Operating devices for valve grinders. No. 1,421,486; July 4.

Jones, Omar G., Philadelphia, Pa. Vehicle fender. No. 1,421,693; July 4.

Jones, Samuel P., Columbia, S. C. Lubricator. No. 1,421,487; July 4.

Jorgensen, Bernhardt, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for removing surplus material. No. 1,421,488; July 4.

Joslin, Frank M., assignor to Inman Manufacturing Company, Inc., Amsterdam, N. Y. Strip-feeding mechanism. No. 1,421,489; July 4.

Juergens, Edward F., Middletown, Ohio, assignor to J. H. Wilson, Washington, D. C. Toy. No. 1,421,694; July 4.

Jung, Ernst, St. Louis, Mo. Permanent air gauge for pneumatic tires. No. 1,421,490; July 4.

Junggren, Oscar, Schenectady, N. Y., assignor to General Electric Company. Vibration damper. No. 1,421,785; July 4.

Kallman, Otto S., Minneapolis, Minn. Tap and reamer chuck. No. 1,421,940; July 4.

Kammerer, Friedrich, Pforzheim, Germany. Producing hollow wire for the manufacturing of chains and the like. No. 1,421,491; July 4.

Kamper, Edward, assignor to The Willys-Overland Company, Toledo, Ohio. Tube-welding machine. No. 1,421,786; July 4.

Kane, Patrick, Chicago, Ill. Sanitary garbage can. No. 1,422,064; July 4.

Kane, Thomas H., assignor to Truscon Steel Company, Youngstown, Ohio. Metal building construction. No. 1,421,950; July 4.

Kapferer, Henry, Billancourt, France. Trailer. No. 1,421,492; July 4.

Kappes, Karl F., Mannheim, assignor to the Firm Luftfahrzeug-bau Schutte-Lanz, Mannheim-Rheinau, Germany. Electromagnet for momentarily releasable locking devices with electric locking of the releasing means. No. 1,421,951; July 4.

Kee, Robert H., and W. K. Munson, Los Angeles, Calif., assignors to Mun-Kee Products Corporation. Resilient stamp pad. No. 1,421,952; July 4.

Keilholtz, Lester S., assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio. Signaling device. No. 1,421,953; July 4.

Keller, John L., Charleston, W. Va. Molding composition. No. 1,421,954; July 4.

Kellogg, Leroy D., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Ignition and lighting switch. No. 1,421,493; July 4.

Kellogg Switchboard and Supply Company. (See Kellogg, Leroy D., assignor.)

Kemp, Charles B., New York, N. Y. Golf-bag ball receptacle. No. 1,421,955; July 4.

Kessler, Harry C., Warrington, assignor to Breuker & Kessler Company, Philadelphia, Pa. Paper box. No. 1,421,494; July 4.

Kestler, Herman J., New York, N. Y. Collapsible mold for concrete structures. No. 1,421,956; July 4.

Kimball, Mayo D. (See Thomas, F. W., and Kimball.)

Kincaid, Wilbert F., assignor of one-half to A. H. Mason, Gauley Bridge, W. Va. Automobile body. No. 1,421,788; July 4.

Kingsbury, Albert, Pittsburgh, Pa. Bearing. No. 1,421,695; July 4.

Kininmonth, Colin P., assignor to Henry Simon Limited, Manchester, England. Elevator. No. 1,421,787; July 4.

Kirby, James B., Cleveland, Ohio. Suction sweeper. No. 1,421,957; July 4.

Kirby, James B., Cleveland, Ohio. Suction sweeper. No. 1,421,958; July 4.

Klavon, Joseph L., Jackson, Mich. Automobile spark indicator. No. 1,421,495; July 4.

Klewanech, John, Royalton, Ill. Mine-fire-fighting apparatus. No. 1,421,496; July 4.

Kloeffler, Royce G., Manhattan, Kans. Electrical heating unit. No. 1,421,959; July 4.

Knowles, Harford C., Elmira, N. Y., assignor, by mesne assignments, to The Willys-Morrow Company, Inc. Bearing. No. 1,421,789; July 4.

Koch, Hans, Dietikon, Switzerland. Device for dampening the warp on looms, etc. No. 1,421,498; July 4.

Koch, Hans, and H. Müller, Dietikon, Switzerland. Reel frame. No. 1,421,497; July 4.

Koehler, Howard R., Monaca, Pa. Liquid-measuring apparatus. No. 1,421,499; July 4.

Kohler Company. (See Bucher, William W., assignor.)

Kolbe, Werner, and J. Fritzen, assignors to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Axle-recording device for railways. No. 1,421,500; July 4.

Kops Bros. (See Weber, William G., assignor.)

Koszyczarek, Anastazya. (See Embanks, Fred, assignor.)

Koukos, John. (See Vafiades, G., and Koukos.)

Kraft, Henry P., Ridgewood, and M. C. Schweinert, West Hoboken, N. J. Gauge. No. 1,421,501; July 4.

Krahe, Walter F., Brooklyn, N. Y. Amusement apparatus. No. 1,421,960; July 4.

Kretser, Irvin D., et al. (See Boe, Edd, assignor.)

Kruse, John F., Indianapolis, Ind. Bath-cabinet vaporizer. No. 1,421,502; July 4.

Kucera, Peter, assignor to Capstan Glass Company, Connellsville, Pa. Pitcher, tumbler, and package. No. 1,421,696; July 4.

Kuhne, William H., Waterbury, Conn. Automatic advertising device. No. 1,421,961; July 4.

Kyle, George B. (See Hosch, G. C., and Kyle.)

Ladd, Edward T., and E. C. Speiden, assignors to Isco Chemical Company, Inc., Niagara Falls, N. Y. Bleaching powder. No. 1,421,503; July 4.

Lahey, Dennis E., Louisville, Ky. Railway-switch filler. No. 1,421,962; July 4.

Lahey, Dennis E., Louisville, Ky. Railway switch. No. 1,421,963; July 4.

Langford, Robert H., Springfield, Tenn. Shipping device. No. 1,421,964; July 4.

Langmeier, William, St. Louis, Mo. Indicator and caliper gauge for cane mills. No. 1,421,504; July 4.

La Pierre, Julian B. (See Erickson, Julius, assignor.)

Laplante & Dunklin Printing Company. (See Beatty, H. B., and Johnson, assignors.)

Larson, Albert L. (See Aldrich, A., and Larson.)

Lash, Eber M. (See Wheeler, John A., assignor.)

Latsch, Otto, Oxford, Ala., assignor of one-half to G. F. Hoffman, Philadelphia, Pa. High slip-draft apparatus for spinning cotton rovings. No. 1,421,965; July 4.

LaVigne, George J., New Haven, Conn. Tire-chain retainer. No. 1,421,966; July 4.

Leah, Howard, Wellington, New Zealand. Brake release spring mechanism for tram and the like cars. No. 1,421,697; July 4.

Leahy, Herbert V., assignor to Hercules Carburetor Company, Los Angeles, Calif. Carburetor. No. 1,421,790; July 4.

Lebherz, Harry J., Frederick, Md. Hand crowner for applying crown caps to bottles. No. 1,421,698; July 4.

Lees, Frederick, Philadelphia, Pa. Burial box. No. 1,421,967; July 4.

Legg, Arthur S. (See Bawtree, Alfred E., assignor.)

Lemoine, Louis R., Philadelphia, Pa., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J. Drying molds. No. 1,421,791; July 4.

Leonard, Chester S., Lansdowne, Pa. Date-depitting machine. No. 1,421,505; July 4.

Leschen, William F. (See Harder, Harry E., assignor.)

Lewis, John H., Rhinelander, Wis. Farming machine. No. 1,421,968; July 4.

Lewis, Joseph R. (See Straka, John, assignor.)

Libbey-Owens Sheet Glass Company, The. (See Crowley, J. P., and Rowley, assignors.)

Limpert, Alexander S., Pittsburgh, Pa. Headlight. No. 1,421,506; July 4.

Lindberg, Sam J., assignor to Crane Company, Chicago, Ill. Lapping metal pipe. No. 1,421,507; July 4.

Linden, Alfred R., Dorchester, assignor of one-half to S. W. Campbell, Newton, Mass. Combination ratchet tool. No. 1,421,792; July 4.

Lindsay, William, Chicago, Ill. Aeroplane propeller. No. 1,421,699; July 4.

Linley, Phillip H. (See Linley, Robert W., and P. B.)

Linley, Robert W. and P. B., Fairfield, Conn. Priming valve. No. 1,421,793; July 4.

Linn, Robert, Chicago, Ill. Resilient wheel for vehicles. No. 1,421,508; July 4.

Little Falls Fibre Company. (See Becker, Walter S., assignor.)

Livingston, George L., et al. (See Hachalachti, Michael, assignor.)

Lobeck, Oskar, Leipzig, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc. Means for stiffening textile fabrics. No. 1,421,700; July 4.

Lockwood, John A., Fillmore, N. Y. Illuminating apparatus. No. 1,421,509; July 4.

Loeb, Rudolf, Jenkintown, Pa. Means for cutting fabrics. No. 1,421,969; July 4.

Lorillard, P. Company. (See Ritchie, O. N., and Boykin, assignors.)

Loth, Gustave M., Chicago, Ill. Violin bow. No. 1,421,510; July 4.

Lound, Peter S. (See Anderson, Peter F., assignor.)

Löw-Beer, Oscar, Frankfort-on-Main, Germany, assignor, by mesne assignments, to The Chemical Foundation Inc. Tanning substance for tanning animal hides and preparing the same. No. 1,421,701; July 4.

Lowy, Arthur. (See Colven, J. M., and Lowy.)

Luftfahrzeug-bau Schutte-Lanz. (See Kappes, Karl F., assignor.)

Lund, Thomas, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Stamping machine. No. 1,421,511; July 4.

McCartney, James B., assignor of one-fourth to E. F. Richman and one-fourth to C. J. Richman, Muscatine, Iowa. Paint composition. No. 1,421,970; July 4.

McCarty, Bert, Tampa, Fla. Hydrochemical cleaner. No. 1,421,971; July 4.

McCollough, James H., Jr., San Jose, Calif. Automobile seat. (Reissue.) No. 15,396; July 4.

McConnell, Henry C., Grand River, Iowa. Train-operated gate. No. 1,421,512; July 4.

McConney, Robert B., assignor of sixteen and two-thirds one-hundredths to D. C. Gates, Denver, Colo. Automatically-operating hydropneumatic water-lifting apparatus. No. 1,421,513; July 4.

McCurdy, Ralph G., Cresskill, N. J., assignor to American Telephone and Telegraph Company. Testing apparatus. No. 1,421,702; July 4.

McFarland, William M., Norwich, N. Y., assignor of one-fifth to W. R. Turner, one-fifth to W. E. Eaton, one-fifth to M. C. Eaton, and one-fifth to B. J. Fernald. Trouser supporter. No. 1,421,514; July 4.

McGann, William H., Minneapolis, Minn. Grain-door-forcing device. (Reissue.) No. 15,397; July 4.

McGill, Daniel, assignor to Volos Manufacture Limited, London, England. Treatment of fibrous materials. No. 1,421,703; July 4.

McKnight, Richard, Chicago, Ill. Filing device. No. 1,421,515; July 4.

McLaughlin, Robert, assignor of one-half to A. G. Patton, Monmouth, Ill. Farm-gate hinge. No. 1,421,794; July 4.

McNabb, Dustin W., et al. (See Boe, Edd, assignor.)

Macklin, Otto H., assignor to The Miller Rubber Company, Akron, Ohio. Apparatus for producing thin rubber sheets. No. 1,421,795; July 4.

Mackovitch, Joseph F., Conway, assignor of one-third to M. Mailing, Pittsburgh, Pa. Burglar alarm. No. 1,421,972; July 4.

Macloskie, George, Erie, Pa., assignor to General Electric Company. Safety car-control equipment. No. 1,421,796; July 4.

Maeshima, Shintaro, Tokyo, Japan. Magnetic healing apparatus. No. 1,421,516; July 4.

Mailing, Mandaline. (See Mackovitch, Joseph F., assignor.)

Malcamp, Philip, New Orleans, La. Automatic alarm mechanism for pasteurizing milk. No. 1,421,517; July 4.

Malloy, Charles L., Coaldale, Pa. Sadiron light. No. 1,421,973; July 4.

Maloney, Edward J., Long Island City, assignor to A. Wolf, New York, N. Y. Presser-foot attachment for sewing machines. No. 1,421,797; July 4.

Mandel, William, Minneapolis, Minn. Storm-sash fastener. No. 1,421,798; July 4.

Manifold Impressions Corporation. (See Cossitt, Malcolm L., assignor.)

Mansell, Henry J., Oakland, and C. D. Fry, Alameda, Calif. Change-speed-gear mechanism. No. 1,421,799; July 4.

Marckworth, Otto S., Columbus, Ohio. Producing non-shatterable glass. No. 1,421,974; July 4.

Maris, Claude A., Terre Haute, Ind. Adjustable thrust bearing. No. 1,421,518; July 4.

Mars, Thomas H., assignor to Federal Electric Company, Chicago, Ill. Gearing. No. 1,421,800; July 4.

Marsh, Edward A., Newton, assignor to Waltham Watch Company, Waltham, Mass. Repeater timepiece. No. 1,421,801; July 4.

Marshall Field & Company. (See Dufour, George H., assignor.)

Marshall, Lewis C., Walpole, assignor to Pressure Proof Piston Ring Company, Boston, Mass. Piston packing. No. 1,421,802; July 4.

Martin, Clarence R. (See Jones, D. A., and Martin.)

Martin, James V., Elyria, Ohio. Tractor biplane. No. 1,421,803; July 4.

Martinson, Herman M. (See Brown, O. B., Moore, Parker, and Martinson.)

Mason, Albert H. (See Kincaid, Wilbert F., assignor.)

Masson, Charles T., Wood Bay, Manitoba, Canada. Watch pocket for overalls, working shirts, and the like. No. 1,421,519; July 4.

Mattern, George A., Berkeley, Calif. Bathing suit. No. 1,421,704; July 4.

Mattson, Julius G., Heretaunga, New Zealand. Saw. No. 1,421,520; July 4.

Maxwell, George E., New Ulysses, Kans. Automatic clutch release. No. 1,421,521; July 4.

Mayer, George F., Chicago, Ill. Lock. No. 1,421,522; July 4.

Measuregraph Company, The. (See Hosch, G. C., and Kyle, assignors.)

Measuregraph Company. (See Turner, Douglas, assignor.)

Mechau, Emil, Rastatt, Germany. Kinematographic apparatus. No. 1,421,523; July 4.

Meeker, John A., Potsdam, N. Y. Butter-fat gauge. No. 1,421,524; July 4.

Meisel, Charles A., assignor to Meisel Press Manufacturing Company, Boston, Mass. Numbering head. No. 1,421,525; July 4.

Meisel Press Manufacturing Company. (See Meisel, Charles A., assignor.)

Mejdell, Thor, assignor to A/S Labrador, Christiania, Norway. Removing iron from solutions containing aluminium. No. 1,421,804; July 4.

Melish, Thomas G., Cincinnati, Ohio. Holder for jars. No. 1,421,705; July 4.

Melown, George E., McKeesport, Pa. Lubricating device for rolling mills. No. 1,421,805; July 4.

Melvin, William O., Lakewood, Ohio. Display attachment for counters. No. 1,421,806; July 4.

Metzger, Fritz L., Avalon, Pa. Spacing bar. No. 1,421,807; July 4.

Meyers, J Nicholas, Philadelphia, Pa. Tracing device. No. 1,421,975; July 4.

Michell, Anthony G. M., Melbourne, Victoria, Australia, assignor to Michell Bearings Limited, Westminster, England. Method and apparatus for pumping fluids. No. 1,421,976; July 4.

Michell Bearings Limited. (See Michell, Anthony G. M., assignor.)

Mickley, Karl, assignor to the Firm Alfred Jöel & Co., Zurich, Switzerland. Shock absorber. No. 1,421,977; July 4.

Miethe, Carl, Chicago, Ill. Vehicle spring wheel. No. 1,421,808; July 4.

Miller, Charles C., Fort Wayne, Ind. Folding box. No. 1,421,526; July 4.

Miller, E. A. (See Müller, Eduard F., assignor.)

Miller, Joseph B., Indianapolis, Ind. Fire-extinguishing composition and preparing same. No. 1,421,527; July 4.

Miller, Louis A., assignor to Winchester Repeating Arms Company, New Haven, Conn. Flashlight. No. 1,421,528; July 4.

Miller Rubber Company, The. (See Macklin, Otto H., assignor.)

Millhouse, Ross, Los Angeles, Calif. Cleaning device. No. 1,421,529; July 4.

Milligan, Lowell H., New Kensington, Pa., assignor to Newton D. Baker, Secretary of War. Making arsenic trichloride. No. 1,421,978; July 4.

Mills, Ronald V., Sandy Spring, Md. Excluding water from oil and gas wells. No. 1,421,706; July 4.

Minck, Paul H., Petersdorf, Germany, assignor, by mesne assignments, to The Chemical Foundation, Inc. Preparing a permanent and spinnable solution in the cupric ammonia process. No. 1,421,707; July 4.

Miner, Theodore J. (See Garvey, R., and Miner.)

Miner, William H. (See O'Connor, John F., assignor.)

Mining and Metallurgical Process Proprietary Limited. (See Rigg, Gilbert, assignor.)

Mischke, Paul, East Rutherford, N. J. Ash sifter. No. 1,421,809; July 4.

Mitchell, Howard S., Homer, La. Fire extinguisher. No. 1,421,979; July 4.

Moore, Frank, and A. Gray, Toronto, Ontario, Canada. Carburetor attachment. No. 1,421,530; July 4.

Moore, Hugh K. (See Brown, O. B., Moore, Parker, and Martinson.)

Moras, Ferdinand, Sommerfield, Germany. Double-knee siphon. No. 1,421,531; July 4.

Morgan, Henry W., and E. P. Holder, Greenville, S. C. Tight band pulley. No. 1,421,708; July 4.

Morse, Frederick L., Framingham, Mass. Protecting shoe lasts. No. 1,421,980; July 4.

Muck, John, Milwaukee, Wis. Roller skate. No. 1,421,532; July 4.

Mulholland, Vergil, West Hartford, Conn., assignor to Hartford-Fairmont Company, Canajoharie, N. Y. Closure for molten-glass outlets. No. 1,421,810; July 4.

Müller, Eduard F., Leipsig-Lindenau, Germany, assignor to E. A. Miller, Millvale Extension, Pa. Liquid-coating machine. No. 1,421,811; July 4.

Müller, Gottfried, Sumiswald, Switzerland. Frame saw. No. 1,421,533; July 4.

Müller, Gottwalt, Berlin-Weissensee, Germany. Worm drive for electric cars especially mine locomotives. No. 1,421,534; July 4.

Müller, Hans. (See Koch, H., and Müller.)

Müller, Karl. (See Goldschmidt, H., and Müller.)

Mun-Kee Products Corporation. (See Kee, R. H., and Munson, assignors.)

Munson, Whitney K. (See Kee, R. H., and Munson.)

Murdock, Van Quinton, Columbus, Ohio. Pencil grip. No. 1,421,535; July 4.

Murray, James M., Berlin, N. H., assignor to International Paper Company. Method of and apparatus for feeding pulp to the forming wires of paper-making machines. No. 1,421,981; July 4.

Myer, Bert, and J. Brown, Elkhart, Kans. Wrench. No. 1,421,536; July 4.

National Sales Machine Company. (See Reith, George C., assignor.)

Needham, Moses W., Waco, Tex. Soft-rubber tire filler. No. 1,421,537; July 4.

Neff, Harry D., Cambridge, assignor to Re-Filit Broom Company, Boston, Mass. Broom-bundle-making machine. No. 1,421,812; July 4.

Nelson, Frank C., Clarksburg, W. Va. Clothes hanger. No. 1,421,709; July 4.

Nesbit, Arthur F., Wilkinsburg, Pa. Direct-current transformer. No. 1,421,538; July 4.

Neuenschwander, Lewis, Los Angeles, assignor to Electric Fruit Marking Co., San Francisco, Calif. Electric fruit-marking machine. No. 1,421,539; July 4.

New York Consolidated Card Company, The. (See Cohen, Stanley A., assignor.)

New York Engineering Company. (See Colven, J. M., and Lowy, assignors.)

Noll, George L., Madison, N. J. Antifriction skid. No. 1,421,540; July 4.

Nolty, Lewis, Lancaster, Pa. Folding table. No. 1,421,541; July 4.

Nonnemacher, Clyde S., Wenonah, N. J. Strap fastener. No. 1,421,813; July 4.

Nonnemacher, Clyde S., Wenonah, N. J. Strap fastener. No. 1,421,814; July 4.

Nordfors, Conrad, Jersey City, N. J., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Printing couple. No. 1,421,982; July 4.

Nordfors, Conrad, Jersey City, N. J., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Machine for counting out and marking printed products. No. 1,421,983; July 4.

Northrop, Jonas, Hopedale, assignor to Hopedale Manufacturing Company, Milford, Mass. Loom-temple thread cutter. No. 1,421,815; July 4.

Novick, Abraham, Brooklyn, assignor to F. L. Smithe Machine Company, Incorporated, New York, N. Y. Machine for making lined envelopes. No. 1,421,816; July 4.

Novick, Abraham, Brooklyn, assignor to F. L. Smithe Machine Company, Incorporated, New York, N. Y. Creasing mechanism. No. 1,421,817; July 4.

Oakley, Clifford H., Trenton, N. J. Rubber mat. No. 1,421,818; July 4.

Ochsner, Emil, Sutton, Nebr. Radiator. No. 1,421,542; July 4.

O'Connor, John F., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Shock absorber. No. 1,421,819; July 4.

O'Connor, John F., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Shock absorber. No. 1,421,820; July 4.

O'Connor, John F., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Friction shock-absorbing mechanism. No. 1,421,821; July 4.

O'Connor, John F., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Friction shock-absorbing mechanism. No. 1,421,822; July 4.

O'Connor, John F., Chicago, Ill., assignor to W. H. Miner, Chazy, N. Y. Hand brake. No. 1,421,823; July 4.

Odell, George W., Binghamton, N. Y., assignor to The International Time Recording Company of New York. Time recorder. No. 1,421,824; July 4.

Okum, Abraham, et al. (See Hachalachti, Michael, assignor.)

O'Leary, William, Belvedere College, Dublin, Ireland. Clock. (Reissue.) No. 15,398; July 4.

Oliver, Thomas C. (See Hechenbleikner, I., and Oliver.)

Olson, Charle, Lafayette, Minn. Dishwashing machine. No. 1,421,543; July 4.

Olsson, Nils J., assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden. Means for automatically cutting off the feed motion of machine tools. No. 1,421,544; July 4.

Ondra, Frank, assignor to Concentrators Limited, Johannesburg, Transvaal, South Africa. Concentrating pulverulent material. No. 1,421,984; July 4.

Orussa, Lorence, Roanoke, Ill. Toy. No. 1,421,985; July 4.

Osborn, Alden E., New York, N. Y. Motor vehicle. No. 1,421,545; July 4.

Osgood, Louis A., assignor to International Scale Company, Dayton, Ohio. Thermostat for portable scales. No. 1,421,836; July 4.

Owen, Richard E., Washington, D. C. Mounting for outboard motors. No. 1,421,710; July 4.

Parker, Howard. (See Brown, O. B., Moore, Parker, and Martinson.)

Parkin, David O., Venice, Calif. Radiator. No. 1,421,546; July 4.

Parks, Harry S., Philadelphia, Pa., assignor to Pneumercator Company, New York, N. Y. Distant boiler-water-level indicator. No. 1,421,711; July 4.

Parslow, Earl E., San Diego, Calif. Valve-stem lubricator. No. 1,421,826; July 4.

Parsons Appliance Company. (See Parsons, Jesse, assignor.)

Parsons, Charles A., and S. S. Cook; said Cook assignor to said Parsons; Wallsend-on-Tyne, England. Steam superheater. No. 1,421,712; July 4.

Parsons, Jesse, assignor to Parsons Appliance Company, Seattle, Wash. Window-operating means. No. 1,421,547; July 4.

Pattison, William L., Rosedale, Kans. Floor grating. No. 1,421,827; July 4.

Patton, A. G. (See McLaughlin, Robert, assignor.)

Pease, C. F., Company, The. (See Green, C. A., and Schuh, assignors.)

Peebles, Thomas A., Pittsburgh, Pa. Furnace. (Reissue.) No. 15,399; July 4.

Peerless Motor Car Company, The. (See Strickland, William R., assignor.)

Pelton Water Wheel Co. (See Buehle, E., and Hutchinson, assignors.)

Pendergast, George, and R. F. Ethier, Milwaukee, Wis. Fastener for license plates. No. 1,421,548; July 4.

Penrod, William F., Blanchester, assignor of two-thirds to Auto Sales and Service Company, Cincinnati, Ohio. Lighting system for automobiles. No. 1,421,549; July 4.

Peters, Carl, St. Louis, Mo. Aeroplane. No. 1,421,550; July 4.

Peters Machine and Manufacturing Company, The. (See Thiemer, William H., assignor.)

Petrasek, Charles J., New York, N. Y. Self-oiling rotary cutter. No. 1,421,713; July 4.

Pfister & Vogel Leather Co. (See Bossert, Charles P., assignor.)

Phillips, Arthur T. (See Theed, W. H. A., and Phillips.)

Phillips, Elmer V., Philadelphia, Pa. Wall construction. No. 1,421,986; July 4.

Phillips, James F. A., Trenton, N. J. Spring lubricator. No. 1,421,551; July 4.

Piper, Walter F. (See Beardsley, E. O., and Piper.)

Pittsburgh Transformer Company. (See Ringay, Robert V., assignor.)

Pletscher, Fritz, Lucerne, Switzerland. Rear brake for motor and other cycles. No. 1,421,552; July 4.

Pneumercator Company. (See Parks, Harry S., assignor.)

Pneumercator Company. (See Stancliffe, Cecil W., assignor.)

Pohl, Charles, Los Angeles, Calif. Gun sight. No. 1,421,553; July 4.

Pohl, Charles, Los Angeles, Calif. Auxiliary inlet device for internal-combustion engines. No. 1,421,554; July 4.

Pollard-Alling Manufacturing Company. (See De Minico, Frank, assignor.)

Post, Clifford W. (See Urquhart, W. R., Post, Humphrey, and Van Arsdale.)

Post, John H., et al. (See Hull, Horace, assignor.)

Post, Nathaniel B., Chicago, Ill. Pop-corn mold. No. 1,421,555; July 4.

Potter & Buffinton Company. (See Weed, Edward L., assignor.)

Potter, Charles F., et al. (See Sykes, George, assignor.)

Pounder Harrow Company. (See Haumerson, Anton F., assignor.)

Powers, Robert E., Montreal, Quebec, Canada. Coupling centering device. No. 1,421,556; July 4.

Pray, Thomas B., assignor to Goodman Manufacturing Company, Chicago, Ill. Support for mining machines. No. 1,421,557; July 4.

Prelmesberger, Alois L., Menasha, Wis. Friction-clutch pulley. No. 1,421,558; July 4.

Prendergast, Edward, St. Louis, Mo. Grading machine. No. 1,421,559; July 4.

Prescott, William E., assignor to J. Baker and Sons Limited, London, England. Machine for breaking cocoa cake or the like. No. 1,421,560; July 4.

Pressure Proof Piston Ring Company. (See Marshall, Lewis C., assignor.)

Pritchard, Franklin H., Schenectady, N. Y., assignor to General Electric Company. Power transmission and electric braking. No. 1,421,828; July 4.

Puc, Vojtěch, Prague-Vinohrady, Bohemia. Sealing device. No. 1,421,714; July 4.

Puc, Vojtěch, Prague-Vinohrady, Bohemia. Mechanism for sorting the socket members of snap fasteners. No. 1,421,715; July 4.

Pugsley, Edwin, New Haven, Conn., assignor to The Winchester Repeating Arms Company. Battery candle. No. 1,421,561; July 4.

Putney, William W., assignor of one-fourth to C. E. Cartier and one-fourth to E. M. Holland, Grand Rapids, Mich. Hoop-forming machine. No. 1,421,829; July 4.

Pyle-National Company, The. (See Dake, Charles W., assignor.)

Pyrene Manufacturing Company. (See Eckelmann, Luis E., assignor.)

Pyrene Manufacturing Company. (See Ferguson, G. E., and Eckelmann, assignors.)

Quinn, Elmer, Philadelphia, Pa. Tool for releasing an air valve from rim of an automobile tire. No. 1,421,987; July 4.

Raftery, William J., Berkeley, assignor to Standard Oil Company of California, San Francisco, Calif. Testing machine. No. 1,421,562; July 4.

Raggio, Dante A., Chicago, Ill. Locking means. No. 1,421,563; July 4.

Randall, Arthur F., Shreveport, La. Automobile storm curtain. No. 1,421,716; July 4.

Rayfield, Charles L., Chicago, Ill., assignor to Beneke & Kropf Manufacturing Company. Thermostatic device for cooling systems of internal-combustion engines. No. 1,421,830; July 4.

Re-Flilt Broom Company. (See Neff, Harry D., assignor.)

Reed, Walter C., Dalton, Mass. Power-transmission apparatus. No. 1,421,565; July 4.

Reese, Reese D., Virginia, Minn. Machine for making springs. No. 1,421,566; July 4.

Reith, George C., Philadelphia, Pa., assignor, by mesne assignments, to National Sales Machine Company, Worcester, Mass. Vending machine and the like. No. 1,421,831; July 4.

Remington Typewriter Company. (See Seib, George A., assignor.)

Renda, Anthony, New York, N. Y. Pan with overflow-alarm device. No. 1,421,717; July 4.

Rhoads, Harry E., assignor to The Willys-Overland Company, Toledo, Ohio. Oil pump. No. 1,421,718; July 4.

Richards, William H., Knoxville, Tenn. Apparatus for casting fillings for teeth. No. 1,421,988; July 4.

Richey, William A., and C. H. Rowles, Akron, Ohio. Gasoline and oil saver. No. 1,421,567; July 4.

Richman, Charles J., et al. (See McCartney, James B., assignor.)

Richman, Evert F., et al. (See McCartney, James B., assignor.)

Rigg, Gilbert, assignor to Mining and Metallurgical Process Proprietary Limited, Melbourne, Victoria, Australia. Blast-roasting apparatus and the like. No. 1,421,989; July 4.

Riley, Ralph J., Portland, Me. Sprocket wheel. No. 1,421,832; July 4.

Riley, William J. (See Hawley, J. E., and Cass, assignors.)

Rindt, Vincent R., Winter, Wis. Signal. No. 1,421,990; July 4.

Riser, Jacob J., Shelbyville, Ind. Apparatus for resetting sound reproducers. No. 1,421,568; July 4.

Ritchie, Oscar N., Hamilton, and H. C. Boykin, Middletown, Ohio, assignors to P. Lorillard Company, New York, N. Y. Article-feeding machine. No. 1,421,569; July 4.

Robb, John F., Cleveland, Ohio. Control mechanism for calculating machines. No. 1,421,719; July 4.

Roberts, Claudius H. M., Washington, D. C. Method of and apparatus for detecting the presence of one gas in another. No. 1,421,720; July 4.

Robinson, Jay G., Chicago, Ill. Door-operating appliance. No. 1,421,721; July 4.

Robinson, Joseph V., Morristown, N. J. Automatic trainpipe connector. (Reissue.) No. 15,400; July 4.

Rod, Albert Edward Day's Bay, Wellington, New Zealand. Game. No. 1,421,570; July 4.

Rodger, John M., Chicago, Ill. Power-operated churn. No. 1,421,571; July 4.

Rodgers, Claude M., and A. W. Wenger, Warsaw, Ind. Fish lure. No. 1,421,991; July 4.

Roeling, Henry W., E. H. Williams, and J. G. Bauer, New Orleans, La. Automatic coin separating and counting device. No. 1,421,992; July 4.

Rofe, Charles A., Marton, New Zealand. Lifting iron for motor cars. No. 1,421,993; July 4.

Rofe, Thomas E., et al. (See Stevenson, Cecil V., assignor.)

Röhm, Otto, Darmstadt, Germany, assignor to The Chemical Foundation, Inc. Tanning with aluminum salts. No. 1,421,723; July 4.

Rohrer, John W., Columbus, Ohio. Driving mechanism for locomotive stokers. No. 1,421,994; July 4.

Römer, Adolf, Stuttgart, and L. Blangey, Mannheim, Germany, assignors, by mesne assignments, to The Chemical Foundation, Inc. Tanning. No. 1,421,722; July 4.

Rosamond, Arthur R., Laramie, Wyo., assignor to D. E. Soden, Kansas. Electric time-switch mechanism. No. 1,421,833; July 4.

Rosenberg, Louis E. (See Spector, B., and Rosenberg.)

Ross, James, assignor to Advance Rumely Company, Laporte, Ind. Differential. No. 1,421,834; July 4.

Rowan, Alfred J., Sault Ste. Marie, Mich. Lubricant-controlling device for automatically controlling the lubricating system of gas engines of automobiles and other motor vehicles. No. 1,421,995; July 4.

Rowles, Clem H. (See Richey, W. A., and Rowles.)

Rowley, Clifford A. (See Crowley, J. P., and Rowley.)

Rugg, Frank D., Greenfield, Mass. Support for ice-cream freezers. No. 1,421,724; July 4.

Running, Tom, Juneau, Alaska. Seine-operating mechanism. No. 1,421,996; July 4.

Russ, George F., Jersey City, N. J. Envelope filling and closing machine. No. 1,421,835; July 4.

Russel, Albert W., assignor to Russel Motor Axle Company, Detroit, Mich. Vehicle axle. No. 1,421,836; July 4.

Russel Motor Axle Company. (See Russel, Albert W., assignor.)

Ryalls, Henry W., Thurmond, W. Va. Valve for gauge cocks. No. 1,421,572; July 4.

Sacks, George P. (See White, George H., assignor.)

Sandquist, John V., Houston, Tex. Link. No. 1,421,997; July 4.

Sands, A. B., & Son Co. (See Allen, Percy, assignor.)

Saunders, Randall W., Brooklyn, N. Y. Attachment plug for oiling systems for internal-combustion engines. No. 1,421,725; July 4.

Saunders, Randall W., Brooklyn, N. Y. Safety steel strap cushion lock. No. 1,421,726; July 4.

Scarborough, Donald S., St. Louis, Mo., assignor to P. Douros, East St. Louis, Ill. Commutator and battery-charging outfit including the same. No. 1,421,998; July 4.

Schaefer-De Lude-Wallace Company, et al. (See Schaefer, Frank M., assignor.)

Schaefer, Frank M., assignor of one-half to C. M. Bentley, Chicago, Ill., and one-half to Schaefer-De Lude-Wallace Company. Vegetable-paring machine. No. 1,421,837; July 4.

Schaefer, Henry H., Weldona, Colo. Gate fastener. No. 1,421,573; July 4.

Schaeffer, Don W., Day on, Ohio. Illuminating mechanism. No. 1,421,838; July 4.

Schafer, William J., Santa Cruz, Calif. Direction indicator. No. 1,421,727; July 4.

Schiffmann, Johannes, Ballenstedt, Germany. Making an indestructible black stamp dye for documents. No. 1,421,728; July 4.

Schiller, Rudolph F., Sun Prairie, Wis. Shoe-string tip. No. 1,421,999; July 4.

Schlosser, Morris, New York, N. Y. Display book. No. 1,421,574; July 4.

Schmick, Henry J., Williamsport, Pa. Cam gearing. No. 1,422,000; July 4.

Schmid, Herman. (See Fuegel, G., and Schmid.)

Schmid Manufacturing Company. (See Seastrom, Wesley E., assignor.)

Schmid, William, Bronson, Mich. Fishline reel. No. 1,421,839; July 4.

Schmidt, Edward F., Chicago, Ill. Game. No. 1,421,575; July 4.

Schmidt, Henry F., Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company. Fluid-translating device. No. 1,421,840; July 4.

Schmidt, Henry F., Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company. Fluid-translating device. No. 1,421,841; July 4.

Schmidt, Henry F., Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company. Fluid-translating device. No. 1,421,842; July 4.

Schmidt, Henry F., Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company. Fluid-translating device. No. 1,421,843; July 4.

Schmidt, Henry F., Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company. Fluid-translating device. No. 1,421,844; July 4.

Schmidt, Henry F., Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company. Fluid-translating device. No. 1,421,845; July 4.

Schneider & Cie. (See Schneider, Eugène, assignor.)

Schneider, Eugène, assignor to Schneider & Cie, Paris, France. Compressed-air recuperator for guns. No. 1,421,576; July 4.

Schofield, Frederick E., Waterford, Conn. Apparatus for aircraft. No. 1,421,846; July 4.

Schopke, Charlie, San Francisco, Calif. Nonglaring attachment for headlights. No. 1,421,847; July 4.

Schuchman, Harry, Little York, Ill. Automobile tire-chain hook. No. 1,421,577; July 4.

Schuh, Henry F. (See Green, C. A., and Schuh.)

Schumacher, Elmer L., assignor to American Optical Company, Southbridge, Mass. Ophthalmic mounting. No. 1,421,729; July 4.

Schussler, Joseph, Bethlehem, Pa. Safety revolver holster. No. 1,421,578; July 4.

Schweinert, Maximilian C. (See Kraft, H. P., and Schweinert.)

Scusa, Lino, Phoenix, N. Y. Toilet-paper winder. No. 1,421,730; July 4.

Sealright Co. (See Wright, Wilbur L., assignor.)

Seastrom, Wesley E., assignor to Schmid Manufacturing Company, Dubuque, Iowa. Handle joint. No. 1,421,848; July 4.

Seeberger, Othmar, Brugg, Switzerland. Bobbinet-making machine. No. 1,421,579; July 4.

Seemann, Henry, Hamburg, Germany. Worm for worm gearings. No. 1,421,580; July 4.

Seewald, Joseph, Brooklyn, N. Y. Garment construction. No. 1,421,849; July 4.

Seib, George A., assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting machine. No. 1,421,581; July 4.

Seng, Wendelin P., Chicago, Ill. Lubricating device. No. 1,421,582; July 4.

Seng, Wendelin P., Chicago, Ill. Oiling device. No. 1,421,583; July 4.

Shafer, Homer R., Detroit, Mich. Resilient wheel. No. 1,421,584; July 4.

Sharp, Alonzo H., and W. D. Cockrell, Aldrich, Minn. Chimney cleaner. No. 1,422,001; July 4.

Shaw, Arthur L., Chicago, Ill., assignor to Chicago Automatic Conveyor Co. Conveyer. No. 1,422,002; July 4.

Shawmut Machine Works, Inc. (See Smith, Raymond D., assignor.)

Shearer, Arthur M., Indiana, Pa. Single-line grab-bucket construction. No. 1,422,003; July 4.

Shelton, Harry J., St. Louis, Mo. Grinder and shredder. No. 1,421,731; July 4.

Shepherd, John R. (See Hanson, J. R., and Shepherd.)

Sheppard, Samuel E. (See Eberlin, L. W., and Sheppard.)

Sheridan, Guy E., and G. G. Griswold, Jr., Butte, Mont. Concentration of ores by flotation. No. 1,421,585; July 4.

Sherwin, Ralph S., East St. Louis, Ill., assignor to Aluminum Company of America, Pittsburgh, Pa., Obtaining alumina. No. 1,422,004; July 4.

Shirk, Art J., and S. Cohen, assignors to A. S. Iserson, New York, N. Y. Stand and automatic switch for electric irons. No. 1,421,586; July 4.

Shirk, Art J., and S. Cohen, assignors to A. S. Iserson, New York, N. Y. Electric press iron. No. 1,421,587; July 4.

Shirk, Art J., and S. Cohen, assignors to A. S. Iserson, New York, N. Y. Electric press iron. No. 1,421,588; July 4.

Shirk, Art J., and S. Cohen, assignors to A. S. Iserson, New York, N. Y. Electric press iron. No. 1,421,589; July 4.

Shirk, Art J., and S. Cohen, assignors to A. S. Iserson, New York, N. Y. Stand and automobile switch for electric irons. No. 1,421,850; July 4.

Shrieves, Albert, and H. E. Sutton Coldfield, England. Lifting jack. No. 1,421,590; July 4.

Shrieves, Henry E. (See Shrieves, Albert and H. E.)

Shuler, Edwin H., Lansing, and M. C. Shuler, Charlotte, Mich. Gas burner. No. 1,421,591; July 4.

Shuler, Max C. (See Shuler Edwin H. and M. C.)

Siemsen, Jurgen, assignor to B. C. Ensfield, Broken Bow, Nebr. Grain-car door. No. 1,421,592; July 4.

Simon, Henry Limited. (See Kininmouth, Colin P., assignor.)

Sims, Milford R., Saunemin, Ill. Cultivator attachment. No. 1,421,593; July 4.

Singer Manufacturing Company, The. (See Fifield, Albert F., assignor.)

Singer Manufacturing Company, The. (See Jacques, George W., assignor.)

Skarzynski, Frank, Rochester, N. Y. Direction indicator for motor vehicles. No. 1,422,005; July 4.

Skelly, Samuel, Alameda, Calif. Clothes drier. No. 1,421,851; July 4.

Slack, Albert R., San Antonio, Tex. Tool box. No. 1,421,732; July 4.

Sletten, Anton I., Christiania, Norway. Internal-combustion engine. No. 1,421,594; July 4.

Smallwood, Alfred, London, England. Furnace. No. 1,421,852; July 4.

Smith, Charles, Providence, R. I. Easel for florists' use. No. 1,421,595; July 4.
Smith, George L., Washington, D. C. Friction brake. No. 1,422,006; July 4.
Smith, Raymond D., Boston, Mass., assignor to Shawmut Machine Works, Inc. Pull-socket switch. No. 1,421,853; July 4.
Smith, William I., Gary, Ind. Chill. No. 1,421,596; July 4.
Smithe, F. L., Machine Company. (See Novick, Abraham, assignor.)
Smythe, James, Dines, Wyo. Shoe-shining machine. No. 1,421,597; July 4.
Snelling, Walter O., Allentown, Pa. Preparation of halogen compounds. No. 1,421,733; July 4.
Soddy, Frederick, Oxford, England. Apparatus for purifying coal gas. No. 1,422,008; July 4.
Soddy, Frederick, Aberdeen, Scotland. Method of stripping the illuminants from and of purifying coal-gas by means for charcoal. No. 1,422,007; July 4.
Soden, Doris E. (See Rosamond, Arthur R., assignor.)
Sorenson, Sigvard, assignor of one-half to A. Vollegraaf, St. Paul, Minn. Woodworking tool. No. 1,421,599; July 4.
Sorrell, Samuel H., Ashland, Ala. Shaker grate. No. 1,421,598; July 4.
Sparks, William, Jackson, Mich., assignor to Sparks-Withington Company, Cleveland, Ohio. Commutator. No. 1,421,734; July 4.
Sparks-Withington Company. (See Sparks, William, assignor.)
Speck, Clifford P., Oakland, Calif. Making confections. No. 1,421,600; July 4.
Speck, Clifford P., Oakland, Calif. Confection mold. No. 1,421,601; July 4.
Spector, Benjamin, and L. E. Rosenberg, Brooklyn, N. Y. Knitted cap. No. 1,421,602; July 4.
Speiden, Eben C. (See Ladd, E. T., and Speiden.)
Sperry, Elmer A., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y. Gyroscopic apparatus for torpedos. No. 1,421,854; July 4.
Sperry Gyroscope Company, The. (See Sperry, Elmer A., assignor.)
Spiro, Charles, New York, N. Y. Reflex camera. No. 1,421,735; July 4.
Spiro, Charles, New York, N. Y. Curtain camera shutter. No. 1,421,736; July 4.
Stahl, Max, assignor to The Wahl-Henius Research Laboratory, Chicago, Ill. Producing cereal beverages. No. 1,421,737; July 4.
Staley, Joseph H., Columbus, Ind. Arbor press. No. 1,421,738; July 4.
Stancliffe, Cecil W., Toronto, Canada, assignor to Pneumercator Company, New York, N. Y. Manometer. No. 1,421,739; July 4.
Standard Oil Company of California. (See Raftery, William J., assignor.)
Stanton, Howard M., Indianapolis, Ind. Means for supporting signs or similar articles. No. 1,421,603; July 4.
Stearns-Roger Manufacturing Company. (See Dean, Charles L., assignor.)
Steffens, John A., Baltimore, Md., assignor to U. S. Industrial Alcohol Co. Manufacture of esters. No. 1,421,604; July 4.
Steffens, John A., Baltimore, Md., assignor to U. S. Industrial Alcohol Co. Manufacturing esters. No. 1,421,605; July 4.
Stevens, Harry M., Schenectady, N. Y., assignor to General Electric Company. Switch mechanism. No. 1,421,740; July 4.
Stevens, M. T., & Sons Company. (See Stone, George, assignor.)
Stevenson, Cecil V., assignor of five-eighths to T. E. Rofe, Sydney, New South Wales, and three-eighths to S. L. Varvel, Wahroonga, near Sydney, New South Wales, Australia. Fuel vaporizing and economizing apparatus. No. 1,421,606; July 4.
Stiel, Carl F., St. Paul, Minn. Refrigerator attachment. No. 1,421,607; July 4.
Stirling, Clarence C., Hartford, Conn. Electric switch. No. 1,421,855; July 4.
St. John, William. (See Byers, Benjamin O., assignor.)
Stoddard, James T., Portland, Oreg. Refuse burner. No. 1,421,741; July 4.
Stone, Frank V., et al, trustees. (See Waterhouse, Harold D., assignor.)
Stone, George, assignor of one-half to M. T. Stevens & Sons Company, North Andover, Mass. Drying machine. No. 1,421,856; July 4.
Störe, Johan, Christiania, Norway. Constructing subaqueous concrete structures. No. 1,421,857; July 4.
Straka, John, assignor of one-half to J. R. Lewis, Chicago, Ill. Magazine pencil. No. 1,421,742; July 4.
Strickland, William R., East Cleveland, assignor to The Peerless Motor Car Company, Cleveland, Ohio. Combined spring horn and bumper support. No. 1,421,608; July 4.
Stromberg-Carlson Telephone Manufacturing Company, The. (See Carlson, Gustaf, assignor.)
Stuer, Bernhard C., and W. Grob, Aachen, Germany, assignors, by mesne assignments, to The Chemical Foundation, Inc. Manufacture of product from acetylene. No. 1,421,743; July 4.
Sturm, Earl J., and M. Surnson, assignors of one-third to A. M. Bowman, Houston, Tex. Movable painter's platform. No. 1,421,609; July 4.
Sturt, Alfred T., New York, N. Y., assignor to General Motors Corporation, Detroit, Mich. Driving cleat mechanism for motor-vehicle driving wheels. No. 1,422,009; July 4.
Styli, Harry H., Southbridge, Mass. Eye protector. No. 1,421,744; July 4.
Summit Thread Company. (See Weaver, Lucius E., assignor.)
Sun Motors Corporation. (See Wedig, John H., assignor.)
Sundelius, Severus. (See Davidson, A. H., and Sundelius.)
Surnson, Morris. (See Sturm, E. J., and Surnson.)
Svehla, Martin J., Sutherland, Iowa. Game trap. No. 1,421,610; July 4.
Svehla, Martin J., Sutherland, Iowa. Game trap. No. 1,421,611; July 4.
Sykes, George, San Francisco, assignor of one-half to T. B. Blackburn and one-half to C. F. Potter, Los Angeles County, Calif. Load bracing and ventilating device for vehicles. No. 1,421,612; July 4.
Takamine, Jokichi, Jr. (See Takamine, Jokichi and J., Jr.)
Takamine, Jokichi, New York, N. Y., and Jokichi, Jr., Clifton, N. J. Treating textile and other fabrics, thread, yarn, and the like. No. 1,421,613; July 4.
Taubman, Herman, Sturgeon Bay, Wis. Garment hanger. No. 1,421,614; July 4.
Tauchar, Anton, Dunlo, Pa. Railway track construction. No. 1,422,010; July 4.
Taylor, Jason C., Los Angeles, Calif. Sand delivery device for vehicles. No. 1,421,745; July 4.
Taylor Machinery Company. (See Taylor, Thomas I., assignor.)
Taylor, Thomas I., Newton, assignor to Taylor Machinery Company, Boston, Mass. Water gauge for automobile radiators. No. 1,421,615; July 4.
Texas Gulf Sulfur Company. (See Davis, H. S., and Bacon, assignors.)
Theed, William H. A., South Kensington, and A. T. Phillips, Hammersmith, England. Method of making liners for reenforcing the covers of pneumatic tires. No. 1,421,616; July 4.
Thermokept Products Corporation. (See Willison, Walter W., assignor.)
Thiede, Richard A., Camden, N. J. Ash sifter. No. 1,422,011; July 4.
Thiemer, William H., assignor to The Peters Machine and Manufacturing Company, Cleveland, Ohio. Universal joint. No. 1,421,617; July 4.
Thomas, Frank W., and M. D. Kimball, Pasadena, Calif. Vacuum oiling system. No. 1,421,858; July 4.
Thompson, Fred H., and E. Holmes, assignors to The Willys-Overland Company, Toledo, Ohio. Automobile decking. No. 1,421,747; July 4.
Thompson, John D., Rochester, N. Y. Printing frame. No. 1,421,859; July 4.
Thorne, Harold, New York, N. Y. Door-securing device. No. 1,421,746; July 4.
Thu, Martin, Bakersfield, Calif. Crank holder. No. 1,421,860; July 4.
Thurston, Albert, London, England. Strip or sheet metal structure. No. 1,421,618; July 4.
Tisch, George C. L., assignor to Tisch Machine & Tool Works, Elizabeth, N. J. Pin guard. No. 1,421,861; July 4.
Tisch Machine & Tool Works. (See Tisch, George C. L., assignor.)
Topham, Laurence E., Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Insole. No. 1,421,619; July 4.
Trent Process Corporation. (See Trent, Walter E., assignor.)
Trent, Walter E., assignor to Trent Process Corporation, Washington, D. C. Collecting and purifying minerals. No. 1,421,862; July 4.
Trickett, Walter S., assignor to Hussong Dyeing Machine Company, Groveville, N. J. Yarn rack. No. 1,422,012; July 4.
Truscou Steel Company. (See Kane, Thomas H., assignor.)
Tunnell, Frederic H., Philadelphia, Pa. Apparatus for the extraction of glue, gelatine, and the like. No. 1,421,620; July 4.
Turner, Douglas, assignor to Measuregraph Company, St. Louis, Mo. Lock for notching shears of measuring machines. No. 1,421,863; July 4.
Turner, Hubert S., Washington, D. C. Telephony. No. 1,421,864; July 4.
Turner, Laurence B., Cambridge, England. Thermionic apparatus applicable for wireless telegraphy and other purposes. No. 1,422,013; July 4.
Turner, William B., et al. (See McFarland, William M., assignor.)
U. S. Industrial Alcohol Co. (See Steffens, John A., assignor.)
U. S. Industrial Alcohol Co. (See Whitaker, M. C., and Backhaus, assignors.)
U. S. Industrial Alcohol Co. (See Whitaker, Milton C., assignor.)
Underwood Typewriter Company. (See Johnson, Arthur A., assignor.)
Union Special Machine Company. (See Hughes, Robert R., Jr., assignor.)

United Shoe Machinery Corporation. (See Brothers, Eli, assignor.)
United Shoe Machinery Corporation. (See Jorgensen, Bernhardt, assignor.)

Schieren, Chas. A., Company, New York, N. Y. Leather belting. No. 161,276; July 4.

Schlaugen Bros. Co., Chicago, Ill. Hose nozzles. No. 157,636; July 4.

Sept Cinema Camera Distributors, Inc., New York, N. Y. Cinema cameras. No. 161,901; July 4.

Shackman, B., & Co., New York, N. Y. Snapping mottoes. Nos. 164,125–6; July 4.

Shapiro, Charles H., doing business as A-B-C Auto Radiator Works, Chicago, Ill. Radiators for motor vehicles. No. 162,463; July 4.

Sheffield Mfg. Co., Burr Oak, Mich. Coaster wagons. Nos. 164,611–13; July 4.

Sheffield Mfg. Co., Burr Oak, Mich. Hand sleds. No. 164,614; July 4.

Sheffield Mfg. Co., Burr Oak, Mich. Coaster wagons. No. 164,615; July 4.

Shipley-Allen, Inc., Dover, Del., and Pittsburgh, Pa. Piston rings. No. 162,855; July 4.

Silbert, Harry, doing business as Hudson Bay Fur Company, New York, N. Y. Prepared furs. No. 152,727; July 4.

Skelton Tool Co., Syracuse, N. Y. Reamers, boring bars, special metal-working tools, machine guards. No. 144,546; July 4.

Smith, Carolyn S., doing business as Vitalized Water Process Co., New York, N. Y. Filters. No. 162,583; July 4.

Smith, Margaret J., trading as U. Z. A. Manufacturing Co. (not Inc.), Chicago, Ill. Curtain holders. No. 161,204; July 4.

Societe Rodier, Paris, France. Woolen, merino, and cashmere piece goods. No. 157,333; July 4.

Societe Rodier, Paris, France. Piece goods of wool and of silk and of combinations of silk and wool. No. 157,334; July 4.

Societe Rodier, Paris, France. Piece goods of cotton and wool and combinations of same. No. 157,335; July 4.

Societe Rodier, Paris, France. Woolen piece goods. No. 157,587; July 4.

Southwestern Milling Company, Inc., The, New York, N. Y., and Kansas City, Mo. Wheat flour. No. 155,326; July 4.

Standard Crayon Manufacturing Co., Danvers, Mass. Wax and chalk crayons. No. 161,798; July 4.

Standard Neckwear Company. (See Greaney, Thomas E.)

Star Oil Company, Chicago, Ill. Lubricating oils. No. 152,217; July 4.

Sta-Rite Hair Pin Co., Shelbyville, Ill. Hair pins. No. 160,303; July 4.

Stein, A., & Company, Chicago, Ill. Elastic webbing and shirred elastic ribbon. No. 148,623; July 4.

Stevens, J. P., & Co., New York, N. Y. Woolen piece goods. Nos. 163,119–20; July 4.

Stevenson, Robert T., doing business as The Stevenson Sales Company, Chicago, Ill. Can opener. No. 158,543; July 4.

Stevenson Sales Company, The. (See Stevenson, Robert T.)

Stimule Company Inc., The New York, N. Y. Toilet powder. No. 160,509; July 4.

Stimule Company Inc., The, New York, N. Y. General tonic in tablet form. No. 160,510; July 4.

Stimule Company Inc., The New York, N. Y. Toilet cream. No. 160,511; July 4.

Stimule Company Inc., The, New York, N. Y. Headache medicine. No. 160,512; July 4.

Stimule Company Inc., The, New York, N. Y. Laxative medicine. No. 160,513; July 4.

St. John Brothers Co. Inc., New York, N. Y. Fabrics identified as follows: piece-dyed chambray, piece-dyed chambray shorts, tickings, etc. No. 162,697; July 4.

Stuart & Holmes Drug Co., Seattle, Wash. Combs. No. 162,906; July 4.

Sullivan Machinery Company, Boston, Mass., and Chicago, Ill. Air lifts and liquid separators. No. 145,861; July 4.

Superior Manufacturing Co., Massillon, Ohio. Aluminum tipped saucepans, pots, kettles, pitchers, coffeepots, teapots, etc. No. 161,205; July 4.

Sussfeld, Lorsch & Schimwel, New York, N. Y. Watch parts. No. 154,100; July 4.

Sykes & Thompson Co., The, Cleveland, Ohio. Confections—namely, candy. No. 156,866; July 4.

Taylor, Charles G., doing business as The Bok-A-Bel Medicine Co., Peoria, Ill. Compound for treating catarrh, asthma, and colds. No. 159,389; July 4.

Ternstedt Manufacturing Co., Detroit, Mich. Automobile body hardware. No. 156,471; July 4.

Tuckett Tobacco Company, Limited, The, Hamilton and London, Ontario, and Montreal, Quebec, Canada. Cut and plug tobacco. No. 144,358; July 4.

United Manufacturing Trimming Co. Inc., New York, N. Y. Buttons, buckles, girdles, beads, spangles, etc. No. 161,158; July 4.

United Shoe Machinery Corporation, Paterson, N. J., and Boston, Mass. Cement such as is used in the manufacture and repairing of boots and shoes. No. 148,041; July 4.

United States Brewing Company, Newark, N. J. Beer and near beer. No. 147,380; July 4.

United States Gypsum Company, Chicago, Ill. Calcined gypsum wall plaster. No. 163,204; July 4.

United States Playing Card Company, The, Cincinnati, Ohio. Playing cards. No. 164,526; July 4.

United States Rubber Company, New Brunswick N. J., and New York, N. Y. Hose made of cotton and rubber and hose made of linen. No. 161,287; July 4.

U. Z. A. Manufacturing Co. (not Inc.). (See Smith, Margaret J.)

Valcour, Frank, Cutbank and Forsyth, Mont. Liquid cleaning compound. No. 153,420; July 4.

Van Raalte Company, New York, N. Y. Stockings. No. 147,266; July 4.

Velvetone Chemical Co., The, Jacksonville, Fla. Preparation to promote the growth of the hair and for the treatment of dandruff, etc. No. 154,942; July 4.

Vitalized Water Process Co. (See Smith, Carolyn S.)

Waites & Co., Inc., Long Island City, N. Y. Snap fasteners. No. 159,394; July 4.

Wallace & Co., Brooklyn, N. Y. Candies. No. 158,467; July 4.

Warren Brothers Company, Boston, Mass. Pavements and paving material containing bituminous matter. No. 158,498; July 4.

Wertheimer, Sydney B., New York, N. Y. Combined vanity case and corsage shield. No. 161,289; July 4.

West Disinfecting Company, New York, N. Y. Paper towels. No. 162,705; July 4.

Western Electric Company, Incorporated, New York, N. Y. Electric signal or alarm boxes, door openers, sewing machines, etc. No. 111,634; July 4.

Western Electric Company, Incorporated, New York, N. Y. Cord fasteners, hooks, and pulleys, window springs, etc. No. 111,635; July 4.

Westgate Sea Products Co., San Diego, Calif. Canned white tuna fish. No. 157,973; July 4.

West Point Manufacturing Company, Langdale, Ala. Crash, towels, and toweling. No. 163,061; July 4.

White Bros. & Crum Co., Lewiston, Idaho. Fresh deciduous fruits. No. 158,349; July 4.

Wildes, Alice S., doing business as Alys, New York, N. Y. Perfumes. No. 160,523; July 4.

Williams Patent Crusher & Pulverizer Co., St. Louis, Mo. Crushers and like machines. No. 158,279; July 4.

Williams Patent Crusher & Pulverizer Co., St. Louis, Mo. Crushers and like machines. No. 158,462; July 4.

Willson Goggles, Inc., Reading, Pa. Goggles and protection glasses. No. 160,734; July 4.

PUBLISHED FOR OPPOSITION.

[Act of Feb. 20, 1905, Sec. 6, as amended Mar. 2, 1907.]

Wilson & Co. Inc., New York, N. Y. Tomato catchup, fruit in sugar, cherries, oysters, etc. No. 129,819; July 4.

Wolf Doll Co. Inc., New York, N. Y. Dolls. No. 162,864; July 4.

Wontshed Brush Co., Troy, N. Y. Shaving brushes. No. 161,218; July 4.

Yeast Tablet Co., The, South Bend, Ind. Food tonic containing vitamines of yeast. No. 158,511; July 4.

Zinsser, William, & Company, Incorporated, New York, N. Y. Oil paint. No. 158,166; July 4.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 4TH DAY OF JULY, 1922.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Acetylene-gas-lighting plant. D. Carmichael. No. 1,422,030; July 4.

Acetylene, Manufacture of products from. B. C. Stuer, and W. Grob. No. 1,421,743; July 4.

Acids, Treating. I. Hechenbleikner and T. C. Oliver. No. 1,421,688; July 4.

Advertising device, Automatic. W. H. Kuhne. No. 1,421,961; July 4.

Aeroplane. C. Peters. No. 1,421,550; July 4.

Aeroplane, Captive. R. Garvey and T. J. Miner. No. 1,421,683; July 4.

Aeroplane construction. W. P. Gary. No. 1,421,934; July 4.

Aeroplane propeller. W. Lindsay. No. 1,421,699; July 4.

Air-brake-pressure retainer. A. Young. No. 1,421,651; July 4.

Air compressor. A. B. Jennings. No. 1,421,484; July 4.

Air heater. M. Hachalachti. No. 1,421,939; July 4.

Aircraft, Apparatus for. F. E. Scholfield. No. 1,421,846; July 4.

Alarm: *See*—
Burglar alarm.

Alloy of refractory metals and forming same. J. A. Yunck. No. 1,422,019; July 4.

Alloy, Zinc. H. Goldschmidt and K. Müller. No. 1,421,686; July 4.

Alumina, Obtaining. R. S. Sherwin. No. 1,422,004; July 4.

Ammonia process, Preparing a permanent and spinnable solution in the cupric. P. H. Minck. No. 1,421,707; July 4.

Amusement apparatus. W. F. Krahe. No. 1,421,960; July 4.

Amusement device. J. C. Callais. No. 1,421,907; July 4.

Amusement device. F. Chapman. No. 1,422,032; July 4.

Antifouling composition. G. D. Coleman. No. 1,421,914; July 4.

Antiskid device. J. L. Donat. No. 1,421,922; July 4.

Arbor press. J. H. Staley. No. 1,421,738; July 4.

Arms, Adjustable connection for actuating. L. G. Collyer. No. 1,421,408; July 4.

Arsenic trichloride, Making. L. H. Milligan. No. 1,421,978; July 4.

Artificial internal members of the human body, Material for. F. Hauptmeyer. No. 1,421,776; July 4.

Auto lock. B. Byers. No. 1,421,401; July 4.

Automobile body. W. F. Kincaid. No. 1,421,788; July 4.

Automobile decking. F. H. Thompson and E. Holmes. No. 1,421,747; July 4.

Automobile guard. V. Fernández. No. 1,421,437; July 4.

Automobile locking device. J. P. Geraghty. No. 1,421,684; July 4.

Automobile radiators, Apparatus for indicating the amount of water in. C. Ford. No. 1,421,930; July 4.

Automobile radiators, Water gauge for. T. I. Taylor. No. 1,421,615; July 4.

Automobile seat. J. H. McCollough, Jr. (Reissue.) No. 15,396; July 4.

Automobile spark indicator. J. L. Klavon. No. 1,421,495; July 4.

Automobile steering mechanism, Locking device for. E. L. B. Von Diezelski. No. 1,421,870; July 4.

Automobile storm curtain. A. F. Randall. No. 1,421,716; July 4.

Automobile wheel. D. S. Greenberg. No. 1,422,050; July 4.

Automobiles, and other motor vehicles, Lubricant-controlling device for automatically controlling the lubricating system of gas engines of. A. J. Rowan. No. 1,421,995; July 4.

Automobiles, Cast wheel for. W. E. Williams. No. 1,421,643; July 4.

Automobiles, Lighting system for. W. F. Penrod. No. 1,421,549; July 4.

Back gauge. G. W. Jacques. No. 1,421,483; July 4.

Bailer structure. F. B. Alldredge. No. 1,421,363; July 4.

Bail. W. H. Clark. No. 1,421,407; July 4.

Band cutter. S. V. Cochrane. No. 1,421,764; July 4.

Bar: *See*—
Spacing bar.

Basket, Sanitary waste. D. E. Watkins. No. 1,421,628; July 4.

Bath-cabinet vaporizer. J. F. Kruse. No. 1,421,502; July 4.

Bathing suits. G. A. Mattern. No. 1,421,704; July 4.

Bearing. A. Kingsbury. No. 1,421,695; July 4.

Bearing. H. C. Knowles. No. 1,421,789; July 4.

Bearing assembly. C. H. Wills. No. 1,421,644; July 4.

Bearing for shafts, etc., Split lubricating. P. G. Bogdanoff. No. 1,421,661; July 4.

Bearing for steam turbines. C. W. Dake. No. 1,421,918; July 4.

Belt. A. F. Garberding. No. 1,421,451; July 4.

Belt shifters, Cone. E. E. Jones. No. 1,421,485; July 4.

Bench and floor clamp. T. Ashworth. No. 1,421,370; July 4.

Beverages, Producing cereal. M. Stahl. No. 1,421,737; July 4.

Billiard-table pockets, Guard for. E. H. Acland. No. 1,421,361; July 4.

Binder or file, Loose-leaf. W. F. Dunning. No. 1,421,677; July 4.

Biplane, Tractor. J. V. Martin. No. 1,421,803; July 4.

Bit: *See*—
Oil-well drill bit.

Blast-roasting apparatus and the like. G. Rigg. No. 1,421,989; July 4.

Board: *See*—
Game board.

Boat, Submersible flying. J. Ardo. No. 1,421,369; July 4.

Bobbinet-making machine. O. Seeberger. No. 1,421,579; July 4.

Boiler. M. J. Healy. No. 1,421,778; July 4.

Bolt: *See*—
King bolt.

Book and cover therefor, Manifold sales. F. Hachmann. No. 1,421,461; July 4.

Bottle and nipple protector, Nursing. W. Weissbeier. No. 1,421,877; July 4.

Bottles, Hand crowner for applying crown caps to. H. J. Lebherz. No. 1,421,698; July 4.

Box: *See*—
Burial box.
Folding box.
Hat box.
Paper box.
Tool box.

Box-tray support. W. L. Buedingen. No. 1,422,028; July 4.

Brake: *See*—
Friction brake.
Hand brake.

Brake beam. C. H. Williams and E. G. Busse. No. 1,421,881; July 4.

Broom-bundle-making machine. H. D. Neff. No. 1,421,812; July 4.

Brushes, Scraper attachment for paint. O. J. Hope. No. 1,421,478; July 4.

Building construction, Metal. T. H. Kane. No. 1,421,950; July 4.

Burglar alarm. J. F. Mackovitch. No. 1,421,972; July 4.

Burial box. F. Lees. No. 1,421,967; July 4.

Burner: *See*—
Gas burner.
Refuse burner.

Butter-fat gauge. J. A. Meeker. No. 1,421,524; July 4.

Cabinet, Kitchenette. D. O. Green. No. 1,421,456; July 4.

Cake or biscuit cutter. B. S. Williams. No. 1,421,749; July 4.

Calculating machines, Control mechanism for. J. F. Robb. No. 1,421,719; July 4.

Calendar. S. O. Bartlett. No. 1,421,379; July 4.

Camera, Reflex. C. Spiro. No. 1,421,735; July 4.

Camera shutter, Curtain. C. Spiro. No. 1,421,736; July 4.

Can: *See*—
Garbage can.

Can-capping tool. F. Coates. No. 1,421,673; July 4.

Cans, Apparatus for casing. C. L. Hooper. No. 1,422,057; July 4.

Candle, Battery. E. Pugsley. No. 1,421,561; July 4.

Cane mills, Indicator and caliper gauge for. W. Langmeier. No. 1,421,504; July 4.

Canning, Treating vegetables in preparation for. W. W. Willison. No. 1,421,750; July 4.

Captive-ball practice device. C. F. Craig. No. 1,421,414; July 4.

Car-control equipment, Safety. G. Macloskie. No. 1,421,796; July 4.

Car-coupling knuckle. O. H. di Le Compte. No. 1,421,421; July 4.

Car door, Grain. J. Siemsen. No. 1,421,592; July 4.

Car-door top guide. P. M. Elliott. No. 1,421,431; July 4.

Car, Freight. M. J. Whelan. No. 1,421,637; July 4.

Car, Refrigerator. L. W. Collins. No. 1,421,913; July 4.

Car, Self-discharging. K. Barth. No. 1,421,378; July 4.

Car, Self-discharging. G. Immand. No. 1,421,482; July 4.
Car wheel. C. S. Zabriskie. No. 1,421,653; July 4.
Cars. Brake release spring mechanism for tram and the like. H. Leah. No. 1,421,697; July 4.
Cars, especially mine locomotives. Worm drive for electric. G. Müller. No. 1,421,534; July 4.
Cars, Lifting iron for motor. C. A. Rofe. No. 1,421,993; July 4.
Carburetor. W. A. Heide. No. 1,422,054; July 4.
Carburetor. H. V. Leahy. No. 1,421,790; July 4.
Carburetor attachment. F. Moore and A. Gray. No. 1,421,530; July 4.
Case: *See*—
Combination comb case. Toilet case.
Caster. A. W. Warnock. No. 1,421,626; July 4.
Caster. J. F. Wolfs. No. 1,421,647; July 4.
Centering device, Coupling. R. E. Powers. No. 1,421,556; July 4.
Chain. J. H. Cooke. No. 1,421,915; July 4.
Chains and the like, Producing hollow wire for manufacturing of. F. Kammerer. No. 1,421,491; July 4.
Chair or the like, Foldable. W. Heerling. No. 1,421,779; July 4.
Chill. W. I. Smith. No. 1,421,596; July 4.
Chimney cleaner. A. H. Sharp and W. D. Cockrell. No. 1,422,001; July 4.
Chopper: *See*—
Cotton chopper.
Christmas-tree support. C. L. Burchess. No. 1,421,398; July 4.
Churn, Power-operated. J. M. Rodger. No. 1,421,571; July 4.
Cinematographic apparatus. E. Mechau. No. 1,421,523; July 4.
Clamp: *See*—
Bench and floor clamp. Rope clamp.
Clasp. W. G. Weber. No. 1,421,874; July 4.
Cleaner: *See*—
Chimney cleaner. Hydrochemical cleaner.
Fowl cleaner.
Cleaning device. R. Millhouse. No. 1,421,529; July 4.
Clip: *See*—
Pen and pencil clip.
Clip device for reels. E. Fulda. No. 1,421,933; July 4.
Clock. W. O'Leary. (Reissue.) No. 15,398; July 4.
Closet, Marine. H. Allan. No. 1,421,362; July 4.
Clothes drier. W. C. Hughes. No. 1,422,061; July 4.
Clothes drier. S. Skelly. No. 1,421,851; July 4.
Clothes hanger. F. C. Nelson. No. 1,421,709; July 4.
Clutch pulley, Friction-. A. L. Preimesberger. No. 1,421,858; July 4.
Clutch release, Automatic. G. E. Maxwell. No. 1,421,521; July 4.
Clutch, Self-adjusting. A. H. Hunt. No. 1,422,062; July 4.
Coating machine, Liquid-. E. F. Müller. No. 1,421,811; July 4.
Cocoa cake or the like, Machine for breaking. W. E. Prescott. No. 1,421,560; July 4.
Coin separating and counting device. H. W. Roeling, E. H. Williams, and J. G. Bauer. No. 1,421,992; July 4.
Coke-quenching receptacle. A. Frankel. No. 1,421,445; July 4.
Comb case, Combination. F. W. Bowler. No. 1,421,392; July 4.
Combination table. G. Floreskul. No. 1,421,629; July 4.
Comforter or wadded quilt. H. A. Calef. No. 1,421,906; July 4.
Commutator. W. Sparks. No. 1,421,734; July 4.
Commutator and battery-charging outfit including the same. D. S. Scarborough. No. 1,421,998; July 4.
Compensator, Starting. P. Dunning. No. 1,421,923; July 4.
Concrete structures, Collapsible mold for. H. J. Kestler. No. 1,421,956; July 4.
Concrete structures, Constructing subaqueous. J. Störe. No. 1,421,857; July 4.
Confection mold. C. P. Speck. No. 1,421,601; July 4.
Confections, Making. C. P. Speck. No. 1,421,600; July 4.
Connecting ring. E. L. Weed. No. 1,421,876; July 4.
Conveyer. A. L. Shaw. No. 1,422,002; July 4.
Cooker. H. Hull. No. 1,421,480; July 4.
Cooler: *See*—
Journal-box cooler.
Correction device. F. C. Hinckley. No. 1,421,472; July 4.
Cotton chopper. F. C. Hall. No. 1,422,051; July 4.
Cotton compress. F. L. White. No. 1,422,014; July 4.
Counter-forming machine, Automatic. A. F. Jones. No. 1,421,947; July 4.
Counter, Order-filling. F. A. Ferris. No. 1,421,679; July 4.
Counters, Display attachment for. W. O. Melvin. No. 1,421,806; July 4.
Coupling: *See*—
Jewelry coupling.
Creasing mechanism. A. Novick. No. 1,421,817; July 4.
Cremation furnace. A. H. Davidson and S. Sundelius. No. 1,421,919; July 4.
Crank holder. M. Thn. No. 1,421,860; July 4.
Cultivator. M. F. Watkins. No. 1,421,872; July 4.
Cultivator attachment. M. R. Sims. No. 1,421,593; July 4.
Current transformer, Direct-. A. F. Nesbit. No. 1,421,538; July 4.
Cushion lock, Safety steel strap. R. W. Saunders. No. 1,421,726; July 4.
Cutter: *See*—
Band cutter. Loom-temple thread cutter.
Glass cutter. Self-oiling rotary cutter.
Damper, Vibration. O. Junggren. No. 1,421,785; July 4.
Depitting machine, Date-. C. S. Leonard. No. 1,421,565; July 4.
Derailing guard. F. Zeis. No. 1,422,021; July 4.
Desk, Flat-top roll-cover. R. H. Allwork. No. 1,421,357; July 4.
Desk, Office. F. Bianchi y Reche. No. 1,421,564; July 4.
Differential. J. Ross. No. 1,421,834; July 4.
Direction indicator. W. J. Schafer. No. 1,421,727; July 4.
Dishwashing machine. C. Olson. No. 1,421,543; July 4.
Dispensing device. J. E. Hawley and A. W. Capps. No. 1,421,777; July 4.
Display book. M. Schlosser. No. 1,421,574; July 4.
Display container. H. B. Beamy and C. L. Johnson. No. 1,421,384; July 4.
Door closer and check. W. J. Bryon. No. 1,421,666; July 4.
Door hanger. A. J. Hayes. No. 1,421,941; July 4.
Door-holding device. N. B. Hurd. No. 1,421,691; July 4.
Door-operating appliances. J. G. Robinson. No. 1,421,721; July 4.
Door-securing device. H. Thorne. No. 1,421,746; July 4.
Doors of self-discharging receptacles, Operating mechanism for the. F. Finckh. No. 1,421,439; July 4.
Drier: *See*—
Clothes drier.
Drill. J. C. Fitzgerald. No. 1,421,928; July 4.
Drilling machine. T. P. Caulkins. No. 1,422,031; July 4.
Drying machine. G. Stone. No. 1,421,856; July 4.
Drying molds. L. R. Lemoine. No. 1,421,791; July 4.
Dust guard. H. C. Gamage. No. 1,421,449; July 4.
Dye for documents, Making an indestructible black stamp. J. Schiffmann. No. 1,421,728; July 4.
Easel for florists' use. C. Smith. No. 1,421,595; July 4.
Electric apparatus for propelling projectiles. A. L. O. Fauchon-Villeplee. No. 1,421,435; July 4.

Pad: *See*—
Resilient stamp pad.
Paint and making same. C. A. Ward. No. 1,421,625; July 4.
Paint composition. J. B. McCartney. No. 1,421,970; July 4.
Pan with overflow-alarm device. A. Renda. No. 1,421,717; July 4.
Paper box. H. C. Kessler. No. 1,421,494; July 4.
Paper-making machine. A. Aldrich. Nos. 1,421,753–4; July 4.
Paper-making machine. A. Aldrich and A. L. Larson. No. 1,421,752; July 4.
Paper-making machines, Method of and apparatus for feeding pulp to the forming wires of. J. M. Murray. No. 1,421,981; July 4.
Paper material container and the like. W. L. Wright. No. 1,422,018; July 4.
Paper winder, Toilet-. L. Scusa. No. 1,421,730; July 4.
Paring machine, Vegetable-. F. M. Schaefer. No. 1,421,837; July 4.
Pattern-transfer machine. P. Yohns. No. 1,421,884; July 4.
Pavement. F. A. Brotsch, Jr. No. 1,421,901; July 4.
Paving blocks, building blocks, and the like, Composition of mattter for. G. S. and C. W. Wright. No. 1,421,751; July 4.
Pen, Ruling. C. A. Green and H. F. Schuh. No. 1,421,455; July 4.
Pencil and pen clip. A. Allen. No. 1,421,657; July 4.
Pencil grip. V. Murdock. No. 1,421,535; July 4.
Pencil, Magazine. J. Straka. No. 1,421,742; July 4.
Phonograph. J. Youngquist. No. 1,421,652; July 4.
Phonograph disks, Display rack for. C. A. Bower. No. 1,421,391; July 4.
Photographic-printing machine. M. L. Cossitt. No. 1,421,413; July 4.
Photogravure press, Rotary. H. V. Biery. No. 1,421,360; July 4.
Picture frame. L. Fritz. No. 1,421,448; July 4.
Pie-making machine. F. C. Ellersen. No. 1,421,430; July 4.
Pin guide. G. C. L. Tisch. No. 1,421,861; July 4.
Pipe: *See*—
Lapping metal pipe.
Pipe lines, Safety control for hydraulic. E. Buehle and E. C. Hutchinson. No. 1,421,904; July 4.
Piston packing. L. C. Marshall. No. 1,421,802; July 4.
Pitcher, tumbler, and package. P. Kucera. No. 1,421,696; July 4.
Platform, Movable painter's. E. J. Sturm and M. Sturnson. No. 1,421,609; July 4.
Plating machine. S. A. Cohen. No. 1,421,912; July 4.
Plow, Disk. S. C. Attaway. No. 1,421,371; July 4.
Pocket for overalls, working shirts, and the like, Watch. C. T. Masson. No. 1,421,519; July 4.
Pop-corn mold. N. B. Post. No. 1,421,555; July 4.
Porosity, Apparatus for indicating. C. Buberl. No. 1,421,903; July 4.
Powder, Bleaching. E. T. Ladd and E. C. Speiden. No. 1,421,503; July 4.
Power transmission and electric braking. A. F. Batchelder. No. 1,421,894; July 4.
Power transmission and electric braking. F. H. Pritchard. No. 1,421,828; July 4.
Power-transmission apparatus. W. C. Reed. No. 1,421,565; July 4.
Power-transmitting mechanism. E. H. Belden. No. 1,421,761; July 4.
Press: *See*—
Arbor press. Rotary photogravure press.
Press Iron Electric. A. J. Shirk and S. Cohen. Nos. 1,421,587–9; July 4.
Pressure gage. H. E. Harder. No. 1,421,774; July 4.
Pressure-operated switch, Automatic. W. L. Hamilton. No. 1,421,940; July 4.
Printed products, Machine for counting out and marking. C. Nordfors. No. 1,421,983; July 4.
Printing couple. C. Nordfors. No. 1,421,982; July 4.
Printing frame. J. D. Thompson. No. 1,421,859; July 4.

Printing machine. F. De Minico. No. 1,421,920; July 4.
Printing presses, Finger guard for. G. H. Dufour. No. 1,421,424; July 4.
Printing presses, Perforator for. D. J. Deegan. No. 1,421,417; July 4.
Propeller. F. L. Guillemet. No. 1,421,460; July 4.
Pulley bushing, Split loose. T. F. Barry. No. 1,421,377; July 4.
Pulley, Tight band. H. W. Morgan and E. P. Holder. No. 1,421,708; July 4.
Pulling-over machine. E. Brothers. No. 1,421,804; July 4.
Pulp and the like, Drum for drying. C. L. Dean. No. 1,422,039; July 4.
Pulp, Method of and apparatus for washing. O. B. Brown, H. K. Moore, H. Parker, and H. M. Martinson. No. 1,421,664; July 4.
Pulp-thickening machine. C. H. Allen. No. 1,421,364; July 4.
Pulverized-fuel furnace. L. H. Bergman. No. 1,421,898; July 4.
Pulverulent material, Concentrating. F. Ondra. No. 1,421,984; July 4.
Pump, Oil. H. E. Rhoads. No. 1,421,718; July 4.
Pump, Oil. H. H. Watkins. No. 1,421,629; July 4.
Pump, Rotary. H. J. Edwards. No. 1,421,766; July 4.
Pumps, Device for preventing the penetration of air into centrifugal. B. Bischof. No. 1,421,389; July 4.
Pumps, Suction intake for. J. B. Fisher. No. 1,421,440; July 4.
Pumping apparatus. R. Conrader. No. 1,421,409; July 4.
Rack: *See*—
Yarn rack.
Radiator. E. Ochsner. No. 1,421,542; July 4.
Radiator. D. O. Parkin. No. 1,421,546; July 4.
Rail fastener. J. P. Gardner. No. 1,421,682; July 4.
Rail fastening. L. D. Gregg. No. 1,421,457; July 4.
Railway switch. T. C. Folsom. No. 1,421,444; July 4.
Railway switch. D. E. Lahey. No. 1,421,963; July 4.
Railway-switch filler. D. E. Lahey. No. 1,421,962; July 4.
Railway-track construction. A. Tauchar. No. 1,422,010; July 4.
Railway track indicator. F. Garagnani. No. 1,422,047; July 4.
Railway-traffic-controlling system. G. C. Whitney. No. 1,421,880; July 4.
Railways, Axle-recording device for. W. Kolbe and J. Fritzen. No. 1,421,500; July 4.
Ratchet tool, Combination. A. R. Linden. No. 1,421,792; July 4.
Reel: *See*—
Fishing reel.
Reel frame. H. Koch and H. Müller. No. 1,421,497; July 4.
Refrigerator attachment. C. F. Stiel. No. 1,421,607; July 4.
Refuse burner. J. T. Stoddard. No. 1,421,741; July 4.
Register. J. S. Boyd. No. 1,422,024; July 4.
Resilient wheel. H. R. Shafer. No. 1,421,584; July 4.
Revolver holster, Safety. J. Schussler. No. 1,421,578; July 4.
Ring: *See*—
Connecting ring.
Roads, Making. L. S. van Westrum. (Reissue.) No. 15,401; July 4.
Roll, Snapping. H. F. Gritzmacher. No. 1,421,459; July 4.
Roller: *See*—
Tandem roller.
Rolling mills, Lubricating device for. G. E. Melown. No. 1,421,805; July 4.
Rope clamp. C. Beecken. No. 1,421,385; July 4.
Rotary cutter, Self-oiling. C. J. Petrasek. No. 1,421,713; July 4.
Rubber garter. E. G. Howard. No. 1,421,690; July 4.
Rubber mat. C. H. Oakley. No. 1,421,818; July 4.
Rubber sheets, Apparatus for producing thin. O. H. Macklin. No. 1,421,795; July 4.
Saddler's chest. L. B. Craig. No. 1,421,916; July 4.
Sadiron light. C. L. Malloy. No. 1,421,973; July 4.
Safe-deposit construction. J. Freyberg and L. F. Wubbolding. No. 1,421,770; July 4.
Sand gathering and elevating machine. E. O. Beardsley and W. F. Piper. No. 1,421,383; July 4.
Sash fastener, Storm-. W. Mandel. No. 1,421,798; July 4.
Sash-locking device. J. Zak. No. 1,422,020; July 4.
Saw. J. G. Mattson. No. 1,421,520; July 4.
Saw, Frame. G. Müller. No. 1,421,533; July 4.
Saw handle, Crosscut-. J. F. Williams. No. 1,422,015; July 4.
Scales, Thermostat for portable. L. A. Osgood. No. 1,421,825; July 4.
Scraper. H. Baum. No. 1,421,380; July 4.
Scraper, charger, and tamper, Combination. T. J. Avery. No. 1,421,358; July 4.
Screw cap. J. M. Abrams. No. 1,421,685; July 4.
Sealing device. V. Puc. No. 1,421,714; July 4.
Seat: *See*—
Automobile seat.
Seine-operating mechanism. T. Running. No. 1,421,996; July 4.
Sewage purifier. J. P. Ball. No. 1,421,891; July 4.
Sewing-machine looper mechanism. R. R. Hughes, Jr. No. 1,422,060; July 4.
Sewing-machine shuttles, Adjunct for. L. E. Weaver. No. 1,421,873; July 4.
Sewing machines, Presser-foot attachment for. E. J. Maloney. No. 1,421,797; July 4.
Sewing machines, Stitch-forming mechanism for chain-stitch. A. F. Fifield. No. 1,421,438; July 4.
Shaft and making same, Flexible. C. H. Veeder. No. 1,421,623; July 4.
Sheet-straightening apparatus. P. Volkmere. No. 1,421,868; July 4.
Shell. H. E. Winans. No. 1,421,882; July 4.
Shim. F. J. Flinn. No. 1,421,441; July 4.
Ship's log. B. Chernikeeff. No. 1,421,405; July 4.
Ships, Method of and apparatus for raising sunken. A. Allan. No. 1,421,887; July 4.
Shipping device. R. H. Langford. No. 1,421,964; July 4.
Shirt bosom and body machine. C. H. Boyuls. (Reissue.) No. 15,395; July 4.
Shock absorber. K. Mickley. No. 1,421,977; July 4.
Shock absorber. J. F. O'Connor. Nos. 1,421,819–20; July 4.
Shock-absorbing mechanism, Friction. J. F. O'Connor. Nos. 1,421,821–2; July 4.
Shoe lasts, Protecting. F. L. Morse. No. 1,421,980; July 4.
Shoe-shining machine. J. Smythe. No. 1,421,597; July 4.
Shoe-shining parlor. D. D. Wolfe. No. 1,421,646; July 4.
Shoe-string tips. R. F. Schiller. No. 1,421,999; July 4.
Showcard, calendar, and the like. W. J. Anderson. No. 1,421,367; July 4.
Sifter, Ash. P. Mischke. No. 1,421,809; July 4.
Sifter, Ash. R. A. Thiede. No. 1,422,011; July 4.
Signal: *See*—
Switchboard signal.
Signal. V. R. Rindt. No. 1,421,990; July 4.
Signaling device. L. S. Kellholts. No. 1,421,953; July 4.
Signs or similar articles, Means for supporting. H. M. Stanton. No. 1,421,603; July 4.
Siphon, Double-knee. F. Moras. No. 1,421,531; July 4.
Skate, Roller. J. Muck. No. 1,421,532; July 4.
Skids, Antifriction. G. L. Noll. No. 1,421,540; July 4.
Slippers, Blank for. M. Hirshfield. No. 1,421,474; July 4.
Snap fasteners, Mechanism for sorting the socket members of. V. Puc. No. 1,421,715; July 4.
Snowplow, Dual rotary. J. C. Chladek. No. 1,421,671; July 4.
Snubber. D. V. Boureau. No. 1,421,900; July 4.
Socket switch, Pull-. R. D. Smith. No. 1,421,853; July 4.
Sole tacker. C. F. Ziegler. No. 1,421,655; July 4.
Soot blower. J. M. Colven and A. Lowy. No. 1,421,675; July 4.
Sound recording and reproducing machine. W. E. Birket. No. 1,422,022; July 4.
Sound reproducers, Apparatus for resetting. J. J. Riser. No. 1,421,568; July 4.
Sounder, Deep-sea. W. E. Clarke. No. 1,421,672; July 4.
Spacing bar. F. L. Metzger. No. 1,421,807; July 4.
Speed-changing mechanism. W. I. Wheeler. No. 1,421,689; July 4.
Speed-indicating device. J. V. Bosque and P. Giró y Casañas. No. 1,421,390; July 4.
Spinning cotton rovings, High slip-draft apparatus for. O. Latsch. No. 1,421,965; July 4.
Spinning machines, Ring-rail brace for. J. R. Hanson and J. R. Shepherd. No. 1,421,466; July 4.
Spool machines, Feed wheel for. C. S. Brown. No. 1,421,895; July 4.
Spotlight. F. L. Humiston. No. 1,421,944; July 4.
Spring: *See*—
Vehicle spring.
Spring horn and bumper support, Combined. W. R. Stuckland. No. 1,421,608; July 4.
Spring lubricator. J. F. A. Phillips. No. 1,421,551; July 4.
Spring-operated motor. J. C. Foster. No. 1,421,932; July 4.
Spring suspension. E. H. Belden. No. 1,421,759; July 4.
Springs, Machine for making. R. D. Reese. No. 1,421,566; July 4.
Sprocket wheel. R. J. Riley. No. 1,421,832; July 4.
Stamp pad, Resilient-. R. H. Kee and W. K. Munson. No. 1,421,952; July 4.
Stamping machine. T. Lund. No. 1,421,511; July 4.
Stamping machine for cutting out articles from sheet metal. T. H. Wilson. (Reissue.) No. 15,402; July 4.
Starting device, Motor-. J. O. Q. Johnson. No. 1,422,063; July 4.
Steam cooker. W. A. Duncan. No. 1,421,425; July 4.
Steam engine, Rotary. C. O. Baner. No. 1,421,892; July 4.
Stereotyper's and printer's tool. S. B. Hopkins. No. 1,421,689; July 4.
Steriliser for instruments and dressings. O. Barta. No. 1,421,893; July 4.
Stoker, Mechanical. J. J. Dersom. No. 1,421,419; July 4.
Storage-battery containers, Making. T. A. Willard. No. 1,421,748; July 4.
Stove, Camp. L. M. Boyle. No. 1,421,393; July 4.
Stove for ships, Self-leveling. G. W. Baker. No. 1,421,890; July 4.
Strainer for milk cans, pails, and the like. N. J. Van Ness. No. 1,421,622; July 4.

Strap fastener. C. S. Nonnemacher. Nos. 1,421,813–4; July 4.
Strip-folding mechanism. F. M. Joslin. No. 1,421,489; July 4.
Strip or sheet metal structure. A. P. Thurston. No. 1,421,618; July 4.
Stud and socket fastener. G. A. Holmes. No. 1,421,476; July 4.
Sulphur, Process and apparatus for melting. H. S. Davis and R. F. Bacon. No. 1,421,416; July 4.
Superheater, Steam. C. A. Parsons and S. S. Cook. No. 1,421,712; July 4.
Surplus material, Machine for removing. B. Jorgensen. No. 1,421,488; July 4.
Sweeper, Suction. J. B. Kirby. Nos. 1,421,957–8; July 4.
Switch: *See*—
Electric switch.
Ignition and lighting switch.
Pressure-operated switch.
Pull-socket switch.
Railway switch.
Switch mechanism. H. M. Stevens. No. 1,421,740; July 4.
Switch plate. A. Frinzi. No. 1,421,447; July 4.
Switchboard signal. G. Carlson. No. 1,421,403; July 4.
Table: *See*—
Combination table.
Folding table.
Tachometer. C. H. Veeder. No. 1,421,865; July 4.
Tackle hook. J. H. Flynn, Jr. No. 1,421,442; July 4.
Take-up device, Automatic. F. Jerdone, Jr. Nos. 1,421,783–4; July 4.
Talking machines, Motor for. F. Cheney. No. 1,421,404; July 4.
Tandem roller. F. A. Browne. No. 1,421,665; July 4.
Tank and closure. C. E. Giessner. No. 1,421,454; July 4.
Tanning. A. Römer and L. Blangey. No. 1,421,722; July 4.
Tanning with aluminum salts. O. Röhm. No. 1,421,723; July 4.
Teeth, Apparatus for casting fillings for. W. H. Richards. No. 1,421,988; July 4.
Teeth mounts, Artificial. H. A. Edwards. No. 1,422,044; July 4.
Telegraphy and other purposes, Thermionic apparatus for wireless. L. B. Turner. No. 1,422,013; July 4.
Telephony. H. S. Turner. No. 1,421,864; July 4.
Testing apparatus. R. G. McCurdy. No. 1,421,702; July 4.
Testing machine. W. J. Raftery. No. 1,421,562; July 4.
Textile and other fabrics, thread, yarn, and the like, Treating. J. Takamine and J. Takamine, Jr. No. 1,421,613; July 4.
Textile fabrics, Means for stiffening. O. Lobeck. No. 1,421,700; July 4.
Thimble and stovepipe holder, Combined. S. E. Barr. No. 1,421,359; July 4.
Thrashing machine. E. Boe. No. 1,422,023; July 4.
Three-position operating mechanism. O. S. Field. No. 1,421,769; July 4.
Thrust bearing, Adjustable. C. A. Maris. No. 1,421,518; July 4.
Tie: *See*—
Wire tie.
Time recorder. G. W. Odell. No. 1,421,624; July 4.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 11TH DAY OF JULY, 1922.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Aarup, Hans C., Springfield, Ill. Air compressor. No. 1,422,070; July 11.

Abegg, Walter A., Los Angeles, Calif. Socket wrench. No. 1,422,067; July 11.

Adams, Carleton C. (See Grob, A. R., and Adams.)

Adams, Charles F., Swampscott, Mass., assignor to Hamel Shoe Machinery Company, Bridgeport, Conn. Bed-laster end clasp. No. 1,422,806; July 11.

Adams, James D., Wabash, Ind. Knockdown table. No. 1,422,246; July 11.

Adamson, Allan A., Brooklyn, N. Y., and W. F. Grupe, Hudson Heights, N. J. Producing rim boards. No. 1,422,648; July 11.

Aillearn, Frank M., Greenville, Pa. Frame support. No. 1,422,104; July 11.

Aktiebolaget Ingeniörsfirma Fritz Egnell. (See Rodhe, Olof, assignor.) (Reissue.)

Aktiebolaget Ljungstroms Angturbin. (See Ljungstrom, Fredrik, assignor.)

Aladdin Renew Electric Lamp Corporation Limited. (See Coxon, S., and Williams, assignors.)

Alguire, Clifford G., Madison, S. Dak. Elevating rack for beds. No. 1,422,405; July 11.

Allen, Frank M., Ridley Park, Pa., assignor to General Chemical Company, New York, N. Y. Gassing liquors with SO_2. No. 1,422,327; July 11.

Allen, Paul W., Cedar Rapids, Iowa, assignor, by mesne assignments, to Penick & Ford, Ltd. Incorporated. Manufacture of grape sugar. No. 1,422,328; July 11.

Allenbaugh, George G., Mansfield, Ohio. Swimming device. No. 1,422,071; July 11.

Alquist, John C., Portland, Conn. Tool holder. No. 1,422,247; July 11.

Aluminum Company of America. (See Frary, Francis C., assignor.) (Reissue.)

Aluminum Seal Company. (See Sharp, John, assignor.)

American Abrasive Metals Company. (See Napolitan, Francis J., assignor.)

American Automatic Lock and Lift Company. (See Wheelock, Arthur C., assignor.)

American Balsa Company. (See Broady, Harry W., assignor.)

American Brake Company, The. (See Wahlert, H. A., and Redford, assignors.)

American Investigation Corporation. (See Schuette, Johann, assignor.)

American Lux Products Corporation. (See Troeger, John F. R., assignor.)

American Pulley Company, The. (See Bilger, W. A., and Walker, assignors.)

American Steel and Wire Company of New Jersey, The. (See Carstarphen, Frederick C., assignor.)

American Telephone and Telegraph Company. (See Osborne, Harold S., assignor.)

American Smelting and Refining Company. (See Howard, William H., assignor.)

Amundson, Peter A., assignor of one-half to T. A. Amundson, Oconomowoc, Wis. Variable-speed gear. No. 1,422,072; July 11.

Amundson, Thomas A. (See Amundson, Peter A., assignor.)

Anderson, Albin E., Oakmont, assignor of two-thirds to E. M. Verner and J. W. Macfarlane, Pittsburgh, Pa. Wire-rope machine. No. 1,422,073; July 11.

Anderson-Barngrover Mfg. Co. (See Thompson, Albert R., assignor.)

Anderson, Gustaf A., Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y. Truck side frame. No. 1,422,074; July 11.

Applas, Clarence S., Sacramento, Calif. Vehicle curtain fastener. No. 1,422,513; July 11.

Aptowicz, Leon, Yonkers, N. Y. Ash receptacle. No. 1,422,165; July 11.

A. P. W. Paper Co. (See Crandell, Willis S., assignor.)

Arbuckle, Alexander J., Johannesburg, Transvaal, South Africa. Apparatus for separating the liquid and solid components of mixtures of liquids and crushed or ground ore products. No. 1,422,514; July 11.

Arndt, John P., Milwaukee, Wis. Disconnecting device. No. 1,422,248; July 11.

Arndt, William F., Watertown, Wis. Pressure-signaling device for tires. No. 1,422,068; July 11.

Aronson, Louis V., Newark, N. J. Sparking toy. No. 1,422,075; July 11.

Asseltine, Fred E., assignor to Cadillac Motor Car Company, Detroit, Mich. Carburetor. No. 1,422,329; July 11.

Atkins, Charles H., Palmer, Mass. Steam trap. No. 1,422,069; July 11.

Athons, Fred M., Los Angeles, Calif. Direction indicator for motor vehicles. No. 1,422,330; July 11.

Augenbraun, Peter F., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Pin-tumbler lock. No. 1,422,515; July 11.

Augenbraun, Peter F., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Pin-tumbler lock. No. 1,422,516; July 11.

Augenbraun, Peter F., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Pin-tumbler lock. No. 1,422,517; July 11.

Augenbraun, Peter F., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Pin-tumbler lock. No. 1,422,518; July 11.

Augenbraun, Peter F., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Pin-tumbler lock. No. 1,422,519; July 11.

Augenbraun, Peter F., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Pin-tumbler lock. No. 1,422,520; July 11.

Automatic Electric Heater Company. (See Clark, Warren F., assignor.)

Averitt, Robert W., Fort Worth, Tex. Water heater. No. 1,422,521; July 11.

Babcock, Everett P., et al. (See Power, Dudley P., assignor.)

Bach, Emmann, Woonsocket, R. I. Self-opening knurling tool. No. 1,422,649; July 11.

Baird, Frank T., Blue Island, Ill. Adapter. No. 1,422,331. July 11.

Bakula, Edward J., St. Louis, Mo. Phonograph-record brush. No. 1,422,166; July 11.

Baldwin Locomotive Works, The. (See Shannon, Ellwood M., assignor.)

Barbé, Maxime. (See Bernard, P., and Barbé.)

Bareiss, John C., Philadelphia, Pa. Pipe and tube tester. No. 1,422,522; July 11.

Barpar, Frederick C., Columbus, Ohio, assignor to Foamite Firefoam Company, New York, N. Y. Fire extinguisher. No. 1,422,406; July 11.

Barnard, Samuel G. (See Dotzer, H., and Barnard.)

Barry, Gerald G., Chicago, Ill. Wheel. No. 1,422,167; July 11.

Barry, Gerald G., Chicago, Ill. Metal wheel. No. 1,422,168; July 11.

Bartholdy, Max, Essen, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Indicating-lever-limit gauge. No. 1,422,169; July 11.

Barton, William L., assignor of forty-five per cent to J. L. Kerr, Vancouver, British Columbia, Canada. Overhead-wire transport system. No. 1,422,650; July 11.

Bausch & Lomb Optical Company. (See Poser, Max, assignor.)

Bava, Antonio G., San Francisco, Calif. Belting tool. No. 1,422,332; July 11.

Baxter, William C., assignor to E. M. Trimble, doing business as the E. M. Trimble Manufacturing Company, Rochester, N. Y. Hinge. No. 1,422,651; July 11.

Bay State Pump Company. (See Waterhouse, Harold D., assignor.)

Beach, Clarence E., Binghamton, N. Y., assignor, by mesne assignments, to The Gamewell Fire Alarm Telegraph Company. Signaling mechanism. No. 1,422,523; July 11.

Beal, Ralph W. and W. V., Alliance, Nebr. Bag holder. No. 1,422,524; July 11.

Beal, Warren V. (See Beal, Ralph W. and W. V.)

Beebe, John A., assignor of one-fourth to P. A. Greaves, Omaha, Nebr. Dumping mechanism for trucks. No. 1,422,077; July 11.

Becher, Theodor, Gustavsburg, assignor to Machinenfabrik Augsburg-Nuernberg A. G., Nuernberg, Germany. Segment gate. No. 1,422,076; July 11.

Becker, Adolph, Wheeling, W. Va. Matrix and distributing apparatus for type-casting machines. No. 1,422,333; July 11.

Becker, Rudolph, Roselle Park, N. J., assignor to The Singer Manufacturing Company. Thread cutter. No. 1,422,407; July 11.

Bellamore, David H., New York, N. Y., and T. I. S. Boak, East Orange, N. J.; said Boak assignor to said Bellamore. Rim construction for pressed-steel wheels. No. 1,422,408; July 11.

Bell, William A., Kenosha, Wis., assignor to C. M. Hall Lamp Company, Detroit, Mich. Lamp ring. No. 1,422,525; July 11.

Benjamin Electric Manufacturing Company. (See Benjamin, Reuben B., assignor.)

Benjamin, Reuben B., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill. Electrical connector device. No. 1,422,170; July 11.

Bennett, Clarence W., New York, N. Y. Velocipede. No. 1,422,171; July 11.

Bennett, Clarence W., New York, N. Y. Velocipede. No. 1,422,172; July 11.

Benoit, Napoleon, Watervliet, N. Y. Thread-cutting tool. No. 1,422,652; July 11.

Berdan, Jacob M., Paterson, N. J., assignor to Johns-Manville Incorporated. Roofing. No. 1,422,526; July 11.

Berger, Christian, assignor of one-half to F. L. Sawyer, New York, N. Y. Color print viewable by lights of different colors and making same. No. 1,422,527; July 11.

Bernard, James L., Beaver, Pa. Safety screen. No. 1,422,409; July 11.

Bernard, Paul, Boulogne-sur-Seine, and M. Barbé, Paris, France. Apparatus for lighting and extinguishing gas burners of street lamps. No. 1,422,249; July 11.

Berringer, Henry J., San Francisco, Calif. Fender lamp. No. 1,422,528; July 11.

Berry, Frederick E., Hayes, England. Electrical transformer for regulating or varying the voltage of the current supplied therefrom. No. 1,422,653; July 11.

Beucler, Harvey L., Lake Park, Minn. Potato cutter. No. 1,422,731; July 11.

Biggerstaff, Frank G., Kansas City, Mo. Harrow. No. 1,422,173; July 11.

Bihn, William H., Petaluma, Calif. Egg turner. No. 1,422,250; July 11.

Bijur, Joseph, New York, N. Y., assignor, by mesne assignments, to Bijur Motor Appliance Company. Engine starting device. (Reissue.) No. 15,403; July 11.

Bijur Motor Appliance Company. (See Bijur, Joseph, assignor.) (Reissue.)

Bilger, Walter A., and A. C. Walker, assignors to The American Pulley Company, Philadelphia, Pa. Ladder and manufacturing the same. No. 1,422,654; July 11.

Billingham, Milton C. J., assignor of one-half to H. L. Vander Horst, Kalamazoo, Mich. Method of and apparatus for disintegrating paper stock. No. 1,422,251; July 11.

Bingaman, Raymond A., Batavia, Ohio. Advertising device. No. 1,422,529; July 11.

Biroscak, Stephen S. K., Bridgeport, Conn. Toy. No. 1,422,334; July 11.

Blackwell, Demarkus S., San Springs, Okla. Automobile sand and mud dog for attaching to vehicle wheels. No. 1,422,078; July 11.

Blanton, John B., Chattanooga, Tenn., assignor of one-half to H. A. Wingers, St. Louis, Mo. Shutter for motion-picture-projecting machines. No. 1,422,410; July 11.

Boak, Thomas I. S. (See Bellamore, D. H., and Boak.)

Boettcher, Otto J., assignor of two-fifths to F. W. Mans and one-fifth to G. C. Hume, Chilton, Wis. Hoisting tackle. No. 1,422,174; July 11.

Bonsor, Walter, assignor of one-half to W. C. Steenburg, South Bend, Ind. Carbonizing method. No. 1,422,530; July 11.

Borden Company, The. (See Nonneman, Ira W., assignor.)

Boreiko, Ladislas B., Honolulu, Hawaii. Loading and transporting apparatus. No. 1,422,252; July 11.

Borick, Frank V., New York, N. Y. Screw driver. No. 1,422,411; July 11.

Boston Pressed Metal Co. (See Needham, William H., assignor.)

Boughter, H. Dixon, Decatur, Ill. Movable headlight. No. 1,422,732; July 11.

Boyce, Carrol R., Wautoma, Wis. Automatic tool-dropping machine. No. 1,422,531; July 11.

Bradley, Walter E. F., Nyack, N. Y. Metallurgical process. No. 1,422,734; July 11.

Bradley, Walter E. F., New York, N. Y. Producing iron and steel. No. 1,422,733; July 11.

Braley, Wayne M. (See Mitton, R. E., and Braley.)

Brehmer, William G. H., assignor to The Cleveland Graphite Bronze Company, Cleveland, Ohio. Bearing and making same. No. 1,422,655; July 11.

Breit, Martin M., assignor of one-half to Light Publishing Company, San Antonio, Tex. Machine for making ornamental rules and borders. No. 1,422,532; July 11.

Brennan, James, New Orleans, La. Banana unloader. No. 1,422,656; July 11.

Brennan, John S., Milwaukee, Wis. Burner-lifting means. No. 1,422,079; July 11.

Briggs, Isabelle M., executrix. (See Briggs, Thomas L.)

Briggs, Thomas L., deceased, by I. M. Briggs, Flushing, executrix, assignor to General Chemical Company, New York, N. Y. Making chlorosulphonic acid. No. 1,422,335; July 11.

Broady, Harry W., Bayside, N. Y., assignor to American Balsa Company, Inc. Life raft. No. 1,422,657; July 11.

Bronnert, Emile, Mulhausen, France. Manufacture of artificial silk. No. 1,422,412; July 11.

Brooks, Lloyd B., assignor to Stay-Rite Mfg. Co., Philadelphia, Pa. Necktie retainer. No. 1,422,658; July 11.

Brown, Albert F., Los Angeles, and L. B. Burck, Pasadena, Calif. Automatic means for controlling electrically-heated devices. No. 1,422,735; July 11.

Brown, Clement, Birchfield, Birmingham, England. Carburetor for internal-combustion engines. No. 1,422,413; July 11.

Brown, Colin, Rochester, N. Y. Powder distributor. No. 1,422,253; July 11.

Brown Company. (See Parker, Howard, assignor.)

Brown, Earl R., Redlands, Calif. Ore separator. No. 1,422,736; July 11.

Brown, Grace C., San Francisco, Calif. Water cycle. No. 1,422,533; July 11.

Brown, Orlando H., Victoria, British Columbia, Canada. Grain elevator. No. 1,422,534; July 11.

Brown, Ralph D. (See Luetgert, A. C., and Melkiejohn, assignors.)

Brown, Thomas E. (See Hoover, W. W., and Brown.)

Brown, Walter D. R., and W. T. Pickston, Bolton, England. Apparatus for automatic and continuous analysis and recording of gases. No. 1,422,080; July 11.

Buccicone, Dario, Canonsburg, Pa. Feeding mechanism for tinning machines. No. 1,422,535; July 11.

Buckeye Iron & Brass Works. (See Sauer, George A., assignor.)

Buckham, George T. (See Dawson, A. T., and Buckham.)

Buckham, George T., and J. I. Nasmith, assignors to Vickers Limited, Westminster, London, England. Wire-stretching machine. No. 1,422,081; July 11.

Bucyrus Company. (See Gage, Clarence E., assignor.)

Bullard, Lester H., San Leandro, Calif. Selective coupling. No. 1,422,536; July 11.

Bulman, Elvah O., Grand Rapids, Mich. Bag holder. No. 1,422,659; July 11.

Bump, George P., La Crosse, Wis. Loop-forming terminal clamp. No. 1,422,660; July 11.

Burck, Lawrence B. (See Brown, A. F., and Burck.)

Burke Electric Company. (See Burke, James, assignor.)

Burke, James, Erie, Pa., assignor to Burke Electric Company. Rotor spider. No. 1,422,414; July 11.

Burke, Paul, Green Bay, Wis., assignor, by mesne assignments, to Northwest Engineering Company. Control means for locomotive cranes. No. 1,422,082; July 11.

Burke, Wilbur B., Cleveland, Ohio. Making tires. No. 1,422,537; July 11.

Burns, Thomas A., assignor to Dunlop Tire and Rubber Goods Company, Limited, Toronto, Ontario, Canada. Apparatus for solutionizing tire beads. No. 1,422,083; July 11.

Business Systems, Limited. (See Roberts, Herbert L., assignor.)

Butcher, Harry E., assignor to The Standard Parts Company, Cleveland, Ohio. Demountable vehicle wheel rim. No. 1,422,661; July 11.

Bylger, Frans I. L., Jersey City, N. J. Troughing pulley for belt conveyers. No. 1,422,662; July 11.

Cadillac Motor Car Company. (See Aseltine, Fred E., assignor.)

Callison, Abner F., Buffalo Creek, Colo. Loading and unloading means and portable body for trucks. No. 1,422,663; July 11.

Cameron, Hugh, Newark, assignor to R. D. Kent, Passaic, N. J. Automatic scale. No. 1,422,664; July 11.

Cameron, William H., assignor to Radium Chemical Company, Pittsburgh, Pa. Tool. No. 1,422,538; July 11.

Carlson, Carl O., Riverside, Calif. Hand truck. No. 1,422,254; July 11.

Carr, Thomas J., Newcastle-upon-Tyne, England. Ship's davit. No. 1,422,175; July 11.

Carrier, Carl F. P., Philadelphia, Pa. Automatic electrical controlling device. No. 1,422,415; July 11.

Carstarphen, Frederick C., Trenton, N. J., assignor to The American Steel and Wire Company of New Jersey. Aerial tramway. No. 1,422,255; July 11.

Carter, Martin E., Philadelphia, Pa. Strainer for sugar juices. No. 1,422,737; July 11.

Caspari, Karl, Frankfort-on-the-Main-Ginnheim, Germany. Tensioning peg for stringed instruments. No. 1,422,738; July 11.

Cathrill, Jack, Los Angeles, Calif. Valve lock. No. 1,422,336; July 11.

Catlett, Charles, Staunton, Va. Oxysalt composition. No. 1,422,337; July 11.

Central Manufacturing Company. (See Schuette, August E., assignor.)

Chain Belt Company. (See Fraser, D., Shafer, and Levalley, assignors.)

Chalman, John E., assignor to Union Special Machine Company, Chicago, Ill. Folder for sewing machines. No. 1,422,176; July 11.

Chanier, Gaston L., Jersey City, N. J., assignor to Pathe Exchange Inc., New York, N. Y. Film-testing machine. No. 1,422,665; July 11.

Champion Ignition Company. (See McDougal, T. G., and McDowell, assignors.)

Chapdelaine, Norbert, assignor, by mesne assignments, to International Toy Company, Limited, Montreal, Quebec, Canada. Child's vehicle. (Reissue.) No. 15,404; July 11.

Chapman, Frank C., Modesto, Calif. Combustion and mixing chamber for dehydrators. No. 1,422,416; July 11.

Chase-Shawmut Company, The. (See Conant, Franklin N., assignor.)

Cherry, Isaac W., Pensacola, Fla. Window screen. No. 1,422,539; July 11.

Chesnutt, Owen L., Atlanta, Ga. Tape or web printing machine. No. 1,422,666; July 11.

Chladek, Joseph F., Niobrara, Nebr. Haystacker. No. 1,422,667; July 11.

Chleso, Jorgen E., San Francisco, Calif. Brush. No. 1,422,739; July 11.

Christensen, John L., Chicago, Ill. Fiber-board box. No. 1,422,540; July 11.

Christofferson, Christian A., St. Paul, Minn. Signal lamp. No. 1,422,668; July 11.

Christofferson, Christian A., St. Paul, Minn. Illuminated signal. No. 1,422,669; July 11.

Church, Harold D., assignor to Packard Motor Car Company, Detroit, Mich. Hydrocarbon motor. No. 1,422,338; July 11.

Church, Harold D., assignor to Packard Motor Car Company, Detroit, Mich. Shaft coupling. No. 1,422,339. July 11.

Clanton, Grover C., Bayonne, N. J. Wall-radiator bracket. No. 1,422,177; July 11.

Clark, Warren F., Cleveland, Ohio, assignor, by mesne assignments, to Automatic Electric Heater Company, Warren, Pa. Mold adapted for use in vulcanizing rubber articles. No. 1,422,084; July 11.

Clayborne, Ell, Hot Springs, Ark. Snowplow. No. 1,422,417; July 11.

Cleghorn, Charles A., Bedfordshire, assignor to The Gayner Pneumatic Company, Limited, London, England. Receptacle, flexible conduit gas mask, and the like. No. 1,422,670; July 11.

Cleveland Graphite Bronze Company, The. (See Brehmer, William G. H., assignor.)

Cochran, Clyde E., assignor to The Elwell-Parker Electric Company, Cleveland, Ohio. Spring steering fork for wheeled vehicles. No. 1,422,671; July 11.

Coen Co. (See Sherwood, Carlyle J., assignor.)

Coghlan, Thomas G., Wellsburg, W. Va. Thermocouple. No. 1,422,672; July 11.

Cohen, William, Bayonne, N. J. Gasoline soldering iron. No. 1,422,740; July 11.

Colby, Henry H., Tallula, Ill. Subsoil attachment for plows. No. 1,422,418; July 11.

Collier, Shade B., Orlando, Fla. Grease retainer. No. 1,422,741; July 11.

Collins, James, Lancaster, Pa. Parcel and package elevator or carrier. No. 1,422,673; July 11.

Colonial Stamping Company. (See Schultz, Abraham J., assignor.)

Columbia Graphophone Manufacturing Company. (See Hinckley, Frank C., assignor.)

Commonwealth Shoe & Leather Company. (See Jones, Paul, assignor.)

Conant, Franklin N., Newburyport, Mass., assignor, by mesne assignments, to The Chase-Shawmut Company. Renewable fuse. No. 1,422,419; July 11.

Conant, Franklin N., Newburyport, Mass., assignor, by mesne assignments, to The Chase-Shawmut Company. Renewable fuse. No. 1,422,420; July 11.

Conrad, Frederick A. and J. L., Los Angeles, Calif. Cap gauge for pneumatic tires. No. 1,422,256; July 11.

Conrad, James L. (See Conrad, Frederick A. and J. L.)

Consolidated Tool Works. (See Thompson, W., and Roy, assignor.)

Continuous Process Coke Company. (See Helmholtz, Arthur W., assignor.)

Cook, Edward F., Freeport, N. Y. Settling and septic tank. No. 1,422,674; July 11.

Cook, William P., Laramie, Wyo. Tester. No. 1,422,742. July 11.

Cooley, Roswell P., assignor to Vapor Car Heating Company, Inc., Chicago, Ill. Valve. No. 1,422,178; July 11.

Cooper, Francis W., and H. Steadworthy, Montreal, Quebec, Canada. Anchor and clip for rails and the like. No. 1,422,340; July 11.

Corcoran, Daniel P., Gridley, Calif. Gradometer. No. 1,422,743; July 11.

Corona Manufacturing Company, The. (See Schlinglof, Frank C., assignor.)

Cortese, Frank, New Brunswick, N. J. Bed attachment. No. 1,422,744; July 11.

Coté, Adrian. (See Coté, Arthur J., and Coté.)

Coté, Arthur J., and A. Coté, Franklin, Mass. Attachment for spinning machines. No. 1,422,745; July 11.

Cottom, Albert E., East Brunswick, near Melbourne, Victoria, Australia. Manufacturing castings for shaping and drying hosiery. No. 1,422,675; July 11.

Couse, Kibbey W., New York, N. Y. Keyway locator. No. 1,422,746; July 11.

Coward, John D., Newton Upper Falls, Mass. Traffic signal. No. 1,422,179; July 11.

Coxon, Sydney, Liverpool, and W. A. Williams, Wallasey, assignors to The Aladdin Renew Electric Lamp Corporation Limited, London, England. Renewal of the filaments in metal-filament electric lamps. No. 1,422,747; July 11.

Crandell, Willis S., Elsmere, assignor to A. P. W. Paper Co., Albany, N. Y. Cylinder paper-making machine. No. 1,422,541; July 11.

Crane, Richard. (See Snadecki, William J., assignor.)

Creed, Frederick G., Croydon, England. Multiple-hull boat. No. 1,422,542; July 11.

Cross, Guy C., Denver, Colo. Photographic film rack. No. 1,422,341; July 11.

Cullen, Bernard P., and M. J. Wochus, Jersey City, N. J. Hand-bag catch. No. 1,422,748; July 11.

Cuno Engineering Corporation. (See Cuno, Charles F., assignor.)

Cuno Engineering Corporation, The. (See Cuno, Charles H., assignor.)

Cuno, Charles F., assignor to The Cuno Engineering Corporation, Meriden, Conn. Electric switch and stop for winding drums. No. 1,422,181; July 11.

Cuno, Charles H., assignor to The Cuno Engineering Corporation, Meriden, Conn. Electric switch for winding drums. No. 1,422,180; July 11.

Cunningham, Orin D., Buffalo, assignor to National Aniline & Chemical Company, Inc., New York, N. Y. Method and apparatus for mixing solid materials with liquids. No. 1,422,421; July 11.

Curme, George O., Jr., Pittsburgh, Pa., assignor to Union Carbide Company, New York, N. Y. Treating gaseous hydrocarbon mixtures. No. 1,422,182; July 11.

Curme, George O., Jr., Pittsburgh, Pa., assignor to Union Carbide Company, New York, N. Y. Treating gaseous mixtures. No. 1,422,183; July 11.

Curme, George O., Jr., Pittsburgh, Pa., assignor, by mesne assignments, to Union Carbide Company, New York, N. Y. Separating ethylene and other components from gaseous mixtures containing the same. No. 1,422,184; July 11.

Curry, Warren W. (See Darling, J., and Curry.)

Cutler-Hammer Mfg. Co., The. (See Meyer, Friedrich W., assignor.)

Cutler-Hammer Mfg. Co., The. (See Rodman, Thomas H., assignor.)

Czarnecki, Boleslaw V., Schenectady, N. Y. Drinking-glass holder. No. 1,422,676; July 11.

Dalits, Harry, assignor to J. C. Hipp, Cleveland, Ohio. Gripping and pulling tool. No. 1,422,185; July 11.

Dameron, Adolphus, Cleveland, Ohio. Work holder. No. 1,422,749; July 11.

D & W Specialty Company. (See Demmer, Paul E., assignor.)

D'Andrea, Nicola, assignor of one-half to M. Persichino, Bridgeport, Conn. Repair tip for shoes. No. 1,422,543; July 11.

Dann, Ernest G., Cleveland, Ohio., assignor to The Dann Products Company. Manufacturing composite articles for bearings or other purposes. No. 1,422,677; July 11.

Dann Products Company, The. (See Dann, Ernest G., assignor.)

Darling, Joseph, and W. W. Curry, Chicora, Pa. Bung for tank filling and discharge fittings. No. 1,422,342; July 11.

Darling, Loren W., assignor of one-half to A. E. Hammerschmidt, Sycamore, Ill. Box machine. No. 1,422,544; July 11.

Davies, David, Llanelly, and D. Jones, Tircoed, Wales. Apparatus used in the manufacture of sheet-metal plates. No. 1,422,085; July 11.

Davies, Elmer C., Portland, Oreg. Piston globe valve. No. 1,422,343; July 11.

Davis, Calvin R., assignor to Emerson-Brantingham Company, Rockford, Ill. Coupling for train of binders, mowers, and other vehicles. No. 1,422,186; July 11.

Davis, John A. (See Hammond, Harry F., assignor.)

Davis, Harmon L., Greenville, Pa. Lock nut. No. 1,422,750; July 11.

Davis, Meshack, Schlater, Miss. Folding feed box. No. 1,422,422; July 11.

Dawson, Arthur T., and G. T. Buckham, assignors to Vickers Limited, Westminster, London, England. Ammunition hoisting and loading apparatus for ordnance. No. 1,422,678; July 11.

Dayton, Curtis I., Chicago, Ill., assignor of one-half to E. L. Dayton, Detroit, Mich. Coating apparatus. No. 1,422,545; July 11.

Dayton, Ernest L. (See Dayton, Curtis I., assignor.)

Day, William H., Lockport, N. Y. Drainage tank for automobile radiators. No. 1,422,679; July 11.

Delano, Frank, et al. (See Power, Dudley P., assignor.)

Delkeskamp, Henry D. (See Mulherin, James A., assignor.)

Demmer, Paul E., assignor to D. & W. Specialty Company, Marysville Calif. Bumper. No. 1,422,546; July 11.

Denbrook, Fred W., Fond du Lac, Wis. Motor-driven sled. No. 1,422,751; July 11.

Dexter, Arthur C., Radford, Va. Means for connecting automobile bodies to the chassis. No. 1,422,086; July 11.

Des Parcis, Aristide H., Montreal, Quebec, Canada. Heating apparatus. No. 1,422,087; July 11.

Des Parois, Aristide H., Montreal, Quebec, Canada. Heating apparatus. No. 1,422,088; July 11.

Detwiler, Forest V., Pottstown, Pa. Hydrocarbon burner. No. 1,422,752; July 11.

Dever, Henry L., Owensboro, Ky. Grading machine. No. 1,422,753; July 11.

Dever, Henry L., Owensboro, Ky. Grader. No. 1,422,754; July 11.

Dewey, Frank H., assignor to Packard Motor Car Company, Detroit, Mich. Motor-vehicle hoist device. No. 1,422,344; July 11.

Desendorf, Richard L., Richmond Hill, N. Y. Means for and method of proving gas meters. No. 1,422,089; July 11.

Dickie, David S., Winifred, Mont. Garden tool. No. 1,422,090; July 11.
Dipworth, Hermann B., Saginaw, Mich. Vehicle spring. No. 1,422,755; July 11.
Disston, Henry, & Sons, Incorporated. (See Rogers, George L., assignor.)
Dithmer, Reimer N., Chicago, Ill. Fishplate for railway rails. No. 1,422,187; July 11.
Doman, Herman C., Oshkosh, Wis. Washing machine. No. 1,422,547; July 11.
Donald, Donald, Sydney, New South Wales, Australia. Stay for casement windows. No. 1,422,680; July 11.
Donaldson, William T., St. Paul, Minn., assignor to Standard Conveyor Company. Detector for elevators and conveyers. No. 1,422,091; July 11.
Dörffel, Ernst, Bernburg, Germany. Brush holder for electric machines. No. 1,422,188; July 11.
Doty, Leman E., Elyria, Ohio, and F. H. Smith, Brentwood Borough, Pa. Apron for coke-oven doors. No. 1,422,756; July 11.
Dotzer, Hugo, and S. G. Barnard, Seattle, Wash.; said Barnard assignor to said Dotzer. Brake mechanism. No. 1,422,423; July 11.
Douglas, Harry A., Bronson, Mich. Circuit connector. No. 1,422,257; July 11.
Douglas, William, Pawtucket, R. I. Trammel. No. 1,422,345; July 11.
Dovan Chemical Corporation. (See Weiss, Morris L., assignor.)
Dow Chemical Company, The. (See Harlow, Ivan F., assignor.)
Doyle, Mason I. (See Schweinsberg, G. W., and Doyle.)
Draper Corporation. (See Stafford, Alfred E., assignor.)
Draper Corporation. (See Stimpson, Edward S., assignor.)
Druar, Frank J., assignor to Packard Motor Car Company, Detroit, Mich. Motor vehicle. No. 1,422,346; July 11.
Dultmeier, Frank J., Manning, Iowa. Adjustable repair tongue hound. No. 1,422,681; July 11.
Duncan, Thomas, East Chicago, Ind. Cigarette holder. No. 1,422,347; July 11.
Duncan, Wayne A., Chicago, Ill. Electric steam-pressure cooker. No. 1,422,348; July 11.
Dunkerton, Richard D. (See Johannes, E. E., and Dunkerton.)
Dunlop Tire and Rubber Goods Company. (See Burns, Thomas A., assignor.)
Dunn, William, Bannack, Mont. Animal trap. No. 1,422,424; July 11.
Dunn, William, Bannack, Mont. Track brace. No. 1,422,425; July 11.
Duplex Holding Company. (See Meyer, A., and Walsh, assignors.)
Du Pont, E. I., de Nemours & Company. (See Gibbs, Harry D., assignor.)
Du Pont, E. I., de Nemours & Company. (See Grob, A. R., and Adams, assignors.)
Du Pont, E. I. de Nemours and Company. (See Tanberg, Arthur P., assignor.)
Dvorak, Wenzel, Fernie, British Columbia, Canada. Pipe wrench. No. 1,422,548; July 11.
Eastern Malleable Iron Company, The. (See Haugh, T. M., Schilling, and Finch, assignors.)
Eastman Kodak Company. (See Riddell, William A., assignor.)
Eaves, Augustus J., assignor to Western Electric Company, Incorporated, New York, N. Y. Multiple switch. No. 1,422,549; July 11.
Eckertz, Heinrich, Essen-Rellinghausen, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Coupling member for vehicles. No. 1,422,189; July 11.
Egerton, Henry C., Ridgewood, N. J. Friction driving device. No. 1,422,550; July 11.
Eigabroadt, Harry C., Amsterdam, N. Y. Signal-indicator system. No. 1,422,349; July 11.
Eklund, John G., assignor to St. Joseph Iron Works, St. Joseph, Mich. Mechanical movement. No. 1,422,682; July 11.
Electric Vacuum Cleaner Company. (See Hoff, Earl B., assignor.)
Electric Vacuum Cleaner Company. (See Kirby, James B., assignor.)
Elrod, Milton, Indianapolis, Ind., assignor to Warriner Manufacturing Company. Filter. No. 1,422,190; July 11.
Eltgroth, John N., Fairmont, Minn. Boot protector. No. 1,422,683; July 11.
Elwell, Cyril F. (See Lane, Charles J., assignor.)
Elwell-Parker Electric Company, The. (See Cochran, Clyde E., assignor.)
Emerson-Brantingham Company. (See Davis, Calvin R., assignor.)
Emerson, Lawerence, Percy, Iowa. Tractor plow. No. 1,422,350; July 11.
Emery, Harvey L., Worthington, assignor to Self Lay Block & Machine Company, Vincennes, Ind. Building block. No. 1,422,258; July 11.
Erskine, Gordon. (See Grace, Edwin B., assignor.)
Evans, John. (See Van Cott, A., and Evans.)
Facciuto, Louis, Jr., et al. (See Facciuto, Luigi, Sr., assignor.)
Facciuto, Luigi, Sr., Flushing, assignor of one-third to L. Facciuto, Jr., Lansing, and one-third to F. C. Leon, Flushing, Ohio. Railway-switch stand. No. 1,422,191; July 11.
Falley, Lewis H., Kansas City, Mo. Separating and classifying apparatus. No. 1,422,092; July 11.
Farmers Standard Carbide Co. (See Bogats, William B., assignor.)
Farr, Warren H., New York, N. Y., assignor to General Motors Corporation, Detroit, Mich. Cooling system for internal-combustion engines. No. 1,422,426; July 11.
Fauchon-Villeplée, André L. O., Paris, France. Electric apparatus for propelling projectiles. No. 1,422,427; July 11.
Fessler, Otto, Irvington, N. J. Bracelet link. No. 1,422,428; July 11.
Fiechtl, Ferdinand, Cherryvale, Kans. Vertical smelting furnace. No. 1,422,684; July 11.
Filkins, Charles D., Schenectady, N. Y., assignor to General Electric Company. Connection for electrical apparatus. No. 1,422,429; July 11.
Finch, John W. (See Haugh, T. M., Schilling, and Finch.)
Firestone Tire and Rubber Company, The. (See Heller, Jacob E., assignor.)
Fisk Rubber Company, The. (See Fording, William G., assignor.) (Reissue.)
Fisk Rubber Company, The. (See Knaus, Peter J., assignor.)
Fisk Rubber Company, The. (See Taylor, Edward C., assignor.)
Fitchet, Charles L., San Francisco, Calif. Mirror structure. No. 1,422,685; July 11.
Fitzsimons, Theodore F., Stanmore, near Sydney, New South Wales, Australia. Can-body-ending machine. No. 1,422,192; July 11.
Fletcher, John D. (See Sullivan, C. L., and Fletcher.)
Fletcher, John D., Evansville, Ind. Paving block and roadway constructed therefrom. No. 1,422,551; July 11.
Florin, John L., Davenport, Wash. Gear wheel. No. 1,422,351; July 11.
Foamite Firefoam Company. (See Bargar, Frederick C., assignor.)
Forbes, Alexander J., Brooklea, North Kessock, Scotland. Fastening for driving belts. No. 1,422,430; July 11.
Forbes, Kingston, Flint, assignor to General Motors Corporation, Detroit, Mich. Combination back and side curtain. No. 1,422,431; July 11.
Forbes, Percy L., West Middlesex, Pa. Hay loader. No. 1,422,432; July 11.
Fording, William G., Cleveland, Ohio, assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Tire. (Reissue.) No. 15,405; July 11.
Forman, Paris R., Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y. Fare-recording apparatus. No. 1,422,686; July 11.
Fornas, Louis, Paris, France. Gas producer. No. 1,422,093; July 11.
Forsyth, George H., Chicago, Ill. Spare-tire carrier. No. 1,422,094; July 11.
Fournier, Frederick, San Francisco, Calif. Window adjuster. No. 1,422,552; July 11.
Fowler, Edward, and J. V. Lewis, St. Elmo, Tenn. Draft coupling. No. 1,422,194; July 11.
Fowler, Jonathan O., New York, N. Y. Key base for plastic material. (Reissue.) No. 15,406; July 11.
Fox, John C. (See Phelps, H. C., and Fox.)
Frankenbüsch, Otto, Vienna, Austria. Apparatus for inking ribbons for typewriters of any make. No. 1,422,757; July 11.
Frary, Francis C., Oakmont, assignor to Aluminum Company of America, Pittsburgh, Pa. Aluminum alloy. (Reissue.) No. 15,407; July 11.
Fraser, Donald, S. Shafer, Jr., and C. W. Levalley, deceased, by H. P. Levalley and Wisconsin Trust Company, executors, assignors to Chain Belt Company, Milwaukee, Wis. Apparatus for conveying and delivering material. No. 1,422,687; July 11.
Friederich, Ernst, Berlin, Germany, assignor to General Electric Company. Inclosed-arc lamp and starting the same. No. 1,422,553; July 11.
Fried. Krupp Aktiengesellschaft. (See Bartholdy, Max, assignor.)
Fried. Krupp Aktiengesellschaft. (See Eckertz, Heinrich, assignor.)
Fried. Krupp Aktiengesellschaft Germaniawerft. (See Grunwald, Carl, assignor.)
Fried. Krupp Aktiengesellschaft. (See Heilemann, Walter, assignor.)
Frink, I. F., Inc. (See Spencer, William H., assignor.)
Fries, Rudolf, Berlin-Schoneberg, Germany. Typewriting machine. No. 1,422,433; July 11.
Froman, Joseph D., Vevay, Ind. Amusement device. No. 1,422,688; July 11.
Fuller, Franz A., assignor to The J. E. Mergott Company, Newark, N. J. Bag frame. No. 1,422,554; July 11.
Fuller, Franz A., assignor to The J. E. Mergott Co., Newark, N. J. Blotter. No. 1,422,555; July 11.
Funk, Everett W., Columbus, Ohio. Combination wrench. No. 1,422,689; July 11.
Futurist Company, The. (See Mower, Edward B., assignor.)
Gabet, Gustave, Paris, France. Heating system. No. 1,422,556; July 11.
Gablenz, Adolf, Lubeck, Germany. Door lock. No. 1,422,690; July 11.
Gage, Clarence E., Evansville, Ind., assignor to Bucyrus Company, South Milwaukee, Wis. Saddle-block structure for excavators. No. 1,422,259; July 11.

Gamewell Fire Alarm Telegraph Company, The. (See Beach, Clarence E., assignor.)
Ganam, Charles C., St. Paul, Minn., assignor to Waldorf Paper Products Company. Scoring and trimming machine. No. 1,422,095; July 11.
Gape, Henry B., Detroit, Mich. Hood fastener. No. 1,422,691; July 11.
Garbeth, George, Stockton, Calif. Piston-ring compressor. No. 1,422,557; July 11.
Gardan, Coll E., Wilson Creek, Wash. Extracting fertilizing elements from manure. No. 1,422,434; July 11.
Gardiner, Lou M., assignor to The Iron Horse Tractor Co., Pittsburgh, Pa. Tractor. No. 1,422,558; July 11.
Garrison, Cassius M. (See South, Mahlon C., assignor.)
Gayner Pneumatic Company, Limited, The. (See Cleghorn, Charles A., assignor.)
General Chemical Company. (See Allen, Frank M., assignor.)
General Chemical Company. (See Briggs, Thomas L., assignor.)

General Motors Corporation. (See Forbes, Kingston, assignor.)
General Motors Corporation. (See Hamilton, Alexander C., assignor.)
General Motors Corporation. (See Whitten, Frank A., assignor.)
Germani, Bernard F., Seattle, Wash. Liquid container. No. 1,422,559; July 11.
Ghetia, Nichitu V., Cleveland, Ohio. Hair clipper. No. 1,422,352; July 11.
Gibbons, Nathan A., Martins Ferry, Ohio, assignor to Whitaker-Glessner Company, Wheeling, W. Va. Collapsible box. No. 1,422,692; July 11.
Gibbs, Harry D., Pennsgrove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Making aluminum chloride. No. 1,422,560; July 11.
Gillmor, Horatio G., Washington, D. C. Anticreeper. No. 1,422,260; July 11.
Girin, Pierre, assignor to Societe Anonyme de Commentry, Fourchambault & Decazeville, Paris, France. Alloy containing iron, nickel, chromium. No. 1,422,096; July 11.
Gochenour, Benjamin C., Spokane, Wash. Lawn edger. No. 1,422,693; July 11.
Gockel, Heinrich, Neuwied-on-the-Rhine, Germany. Rolled iron bar. No. 1,422,694; July 11.
Gohmann, John B., Lincoln, Nebr. Stove and furnace. No. 1,422,195; July 11.
Goldberg, Morris, Brooklyn, N. Y. Attachment for neckscarfs. No. 1,422,758; July 11.
Goldenbaum, Frederick C., Kearny, N. J., assignor to International Printing Plate Company, Inc., New York, N. Y. Forming celluloid printing plates. No. 1,422,695; July 11.
Gomersall, John W., Manchester, England. Rubber-forcing machine. No. 1,422,561; July 11.
Goodin, George N., Macon, Ga., assignor of one-half to H. B. Grimshaw, Portsmouth, Va. Underframe and draft-arm connection. No. 1,422,562; July 11.
Gooding, Harold S., Medford, Mass. Cap. No. 1,422,435; July 11.
Goodyear, Charles H., Cedar Rapids, Iowa, assignor to Missouri Paper Products Company, St. Joseph, Mo. System of keeping notes. No. 1,422,696; July 11.
Gore, Frederick W., Huntington, N. Y. Aircraft. No. 1,422,261; July 11.
Gorgellino, Francesco, Turin, Italy. Motion device for automatons. No. 1,422,436; July 11.
Grace, Edwin B., assignor of one-half to G. Erskine, Memphis, Tenn. Wheel-securing device. No. 1,422,697; July 11.
Graham, Nelson W., Johannesburg, Transvaal, South Africa. Wrench. No. 1,422,563; July 11.
Granger, Leo A. (See Trullinger, D. N., and Granger.)
Gray, George B. M., Oakland, Calif. Gear-shift lock. No. 1,422,353; July 11.
Gray, William E., Chicago, Ill. Lemon squeezer. No. 1,422,196; July 11.
Greaves, Percy A. (See Beebe, John A., assignor.)
Greffenius, Hugo, Frankfort-on-the-Main, Germany. Ship for transporting raw products. No. 1,422,354; July 11.
Green, Henry M., Los Angeles, Calif. Pump. No. 1,422,759; July 11.
Green, Pansy F. (See Hodgson, H. W., and Green.)
Greene Aeronautical Company, The. (See Greene, Otto W., assignor.)
Greene, Otto W., assignor to The Greene Aeronautical Company, Elyria, Ohio. Airplane. No. 1,422,197; July 11.
Greenfield, David H., Denver, Colo. Ignition-point grinder. No. 1,422,097; July 11.
Greenleaf, George E., and C. F. Randolph, Plainfield, N. J., assignors to Niles-Bement-Pond Company, New York, N. Y. Lathe headstock. No. 1,422,098; July 11.
Grimshaw, Harry B. (See Goodin, George N., assignor.)
Griswold Manufacturing Company, The. (See Griswold, Roger W., assignor.)
Griswold, Roger W., assignor to The Griswold Manufacturing Company, Erie, Pa. Handle. No. 1,422,355; July 11.
Grob, Armin R., Wilmington, Del., and C. C. Adams, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Sulphonating carbon compounds. No. 1,422,564; July 11.
Groenewegen, Gijsbertus, Delft, Netherlands. Valve for steam engines. No. 1,422,437; July 11.
Grossmann, Hans, Zurich, Switzerland. Kindling device. No. 1,422,698; July 11.
Grübler, Erhard, Borsdorf, near Leipzig, Germany. Motor tractor. No. 1,422,438; July 11.
Grunwald, Carl, Essen-Bredeney, assignor to Fried. Krupp Aktiengesellschaft Germaniawerft, Kiel-Gaarden, Germany. Cooling device for internal-combustion engines. No. 1,422,565; July 11.
Grupe, William F. (See Adamson, A. A., and Grupe.)
Gruss, Lucien E., assignor to Pneumatic Cushion Co., San Francisco, Calif. Air-spring rigging. No. 1,422,566; July 11.
Gudith, Walter. (See Hacking, John G., assignor.)
Guerin, William J., Brooklyn, N. Y. Ice-cream-dispensing machine. No. 1,422,198; July 11.
Guernsey, Ernest W., and J. Y. Yee, Washington, D. C. Producing phosphoric acid. No. 1,422,699; July 11.
Guillery, René, assignor to Société des Etablissements Malicet & Blin, Aubervilliers, Seine, France. Vehicle suspension. No. 1,422,567; July 11.
Hacking, John G., assignor of one-half to W. Gudith, Detroit, Mich. Water-power apparatus. No. 1,422,700; July 11.
Hall, C. M., Lamp Company. (See Bell, William A., assignor.)
Hall, Frank W., Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Manufacture of aluminum chloride. No. 1,422,568; July 11.
Hall, Joseph, Stockport, England. Self-starting injector for steam boilers. No. 1,422,199; July 11.
Halvorson, Cromwell A. B., Jr., Lynn, Mass., assignor to General Electric Company. Anode for luminous arc lamps. No. 1,422,439; July 11.
Hamel Shoe Machinery Company. (See Adams, Charles F., assignor.)
Hamel Shoe Machinery Company. (See Valois, Felix E., assignor.)
Hamilton, Alexander C., Pontiac, assignor to General Motors Corporation, Detroit, Mich. Cushioned gear. No. 1,422,440; July 11.
Hammond, Harry F., South Shaftsbury, assignor of one-half to J. A. Davis, Dover, Vt. Soldering iron. No. 1,422,357; July 11.
Hammerschmidt, Albert E. (See Darling, Loren W., assignor.)
Hammes, John W., Racine, Wis. Floating weather strip. No. 1,422,569; July 11.
Handley Page Limited. (See Page, Frederick H., assignor.)
Hanle, Benjamin W., Roselle Park, N. J. Wrench. No. 1,422,760; July 11.
Hansen, Christ, Mink Creek, Idaho. Hammer. No. 1,422,262; July 11.
Harbord, Frank W., London, England. Roasting complex zinc sulphide ores or the like. No. 1,422,701; July 11.
Hardy, William B., and J. J. Piqué, Westminster, London, England. Apparatus for cooling and freezing of fish and the like. No. 1,422,570; July 11.
Harlow, Ivan F., assignor to The Dow Chemical Company, Midland, Mich. Extracting potassium salts from bitterns. No. 1,422,571; July 11.
Harmon, Anne, Irvington-on-the-Hudson, N. Y. Athletic skirt. No. 1,422,441. July 11.
Harris, Harry E., Bridgeport, Conn. Grinding wheel. No. 1,422,200; July 11.
Harter, Marion H., Minneapolis, Minn. Cotter-pin puller. No. 1,422,201; July 11.
Hartman, William H., Philadelphia, Pa., assignor to Pennsylvania Crusher Company, New York, N. Y. Hammer crusher. No. 1,422,761; July 11.
Haskel, Fred, Detroit, Mich. Two-piece pulley construction. No. 1,422,263; July 11.
Hasler, Andreas M., Randers, Denmark. Retarded electromagnetic switch. No. 1,422,702; July 11.
Hatfield, Floyd H., Rawlins, Wyo. Casing swage. No. 1,422,762; July 11.
Haugh, Thomas M., L. C. Schilling, and J. W. Finch, assignors to The Eastern Malleable Iron Company, New Britain, Conn. Automatic poker. No. 1,422,442; July 11.
Hawkesworth, Arthur L., Butte, Mont. Drill. No. 1,422,264; July 11.
Hawkesworth, Arthur L., Butte, Mont. Drill. No. 1,422,265; July 11.
Hayes & Meserole Mfg. Co. (See Meserole, Milton D., assignor.)
Head, Casimir J., London, England. Manufacture of chromic oxide and sodium sulphide from sodium chromate. No. 1,422,703; July 11.
Heeter, Charles M., Butler, Pa. Oil-well packer. No. 1,422,704; July 11.

Hellemann, Walter, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Gun with independent sighting line. No. 1,422,099; July 11.
Helfer, Charles A., Los Angeles, Calif. Telemotor. No. 1,422,705; July 11.
Heller, Jacob E., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Extruding machine. No. 1,422,356; July 11.
Helmholtz, Arthur W., Harrisburg, assignor to Continuous Process Coke Company, Chicago, Ill. Method of and means for distilling coal. No. 1,422,706; July 11.
Hemming, Carl H., New Haven, Conn. Cutlery-polishing machine. No. 1,422,358; July 11.
Hemming, Gustav F., deceased, New Haven, Conn.; T. L. Hemming, administratrix. Polishing compound for finishing table cutlery. No. 1,422,707; July 11.
Hemming, Theresa L., administratrix. (See Hemming, Gustav F.)
Henderson, Hiram L. (See Henderson, Nelson H. and H. L.)
Henderson, Nelson H. and H. L., Syracuse, N. Y. Dry kiln. No. 1,422,202; July 11.
Hieatzman, A. H., Company, The. (See Hieatzman, Arthur H., assignor.)
Hieatzman, Arthur H., Baltimore, Md., assignor to The A. H. Hieatzman Company. Gliding coaster. No. 1,422,203; July 11.
Hill, Charles E., San Bernardino, Calif. Air and water service hose locker. No. 1,422,359; July 11.
Hinckley, Frank C., assignor, by mesne assignments, to Columbia Graphophone Manufacturing Company, Bridgeport, Conn. Talking machine. No. 1,422,266; July 11.
Hipp, J. C. (See Dalitz, Harry, assignor.)
Hitt, Samuel E. Elyria, Ohio, and J. I. Peyton, Chicago, Ill. Ingot mold. No. 1,422,572; July 11.
Hodgdon, Herbert W., and P. F. Green, St. Louis, Mo. Potato-peeling machine. No. 1,422,708; July 11.
Hodgson, James, Carlisle, England. Attachment for converting motor driven chassis into tractors for agricultural purposes. No. 1,422,709; July 11.
Hoff, Earl B., assignor, by mesne assignments, to Electric Vacuum Cleaner Company, Inc., East Cleveland, Ohio. Beater for suction cleaners. No. 1,422,100; July 11.
Hoffman, Paul, Easton, Pa., and F. C. Reed, Harriette, Mich., assignors to Ingersoll-Rand Company, Jersey City, N. J. Gas-booster regulator. No. 1,422,573; July 11.
Hoge, Frederick, Zoug, Switzerland. Leading-in wires for incandescent electric lamps. No. 1,422,443; July 11.
Hokanson, Otto A., assignor to Woodstock Typewriter Company, Woodstock, Ill. Cover for typewriter keys. No. 1,422,267; July 11.
Holcroft, Charles T., Detroit, Mich. Annealing malleable cast iron. No. 1,422,710; July 11.
Hollis, William H., Germantown, assignor of one-half to Dr. V. Pinnock-Bailey, Philadelphia, Pa. Wash-basin for automobiles. No. 1,422,763; July 11.
Holmes, Walter G., Minneapolis, Minn. Knockdown dental and surgical table. No. 1,422,101; July 11.
Holzapfel, Albert C., New York, N. Y. Paint. No. 1,422,711; July 11.
Hood, Dalaware J., Philadelphia, Pa. Talking machine. No. 1,422,712; July 11.
Hoover, Wilson W., and T. E. Brown, New York, N. Y. Working oil shales. No. 1,422,204; July 11.
Hosking, William C. S. (See McEwen, William, assignor.)
Hough, Clarence E., Bowen, Ill. Milk-bottle carrier. No. 1,422,574; July 11.
Howard, William H., Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y. Discharging smelter gases. No. 1,422,575; July 11.
Howland, Waldo A., Adams, Mass. Controller for automatic vacuum breakers. No. 1,422,444; July 11.
Hughes, George W., West Philadelphia, Pa. Pulley adapter. No. 1,422,360; July 11.
Hulder, Joseph P., New York, N. Y., assignor to The Unit Player Action Co. Tracking device for player pianos. No. 1,422,713; July 11.
Hume, Geo. C., et al. (See Boettcher, Otto J., assignor.)
Humphreys, William, Fullerton, Pa., assignor to Wilmort Manufacturing Company, Chicago, Ill. Measuring gauge. No. 1,422,576; July 11.
Hundrieser, Hans, Halensee, near Berlin, Germany. Tubular rock drill. No. 1,422,361; July 11.
Hupfel, Adolph G., Reno, Nev., assignor to Hup Mfg. Co., Inc., New York, N. Y. Type-holding means for marking devices. No. 1,422,268; July 11.
Hup Mfg. Co. (See Hupfel, Adolph G., assignor.)
Hutchinson, Robert, Nottingham, England. Aging wheaten flour to improve its baking qualities. No. 1,422,102; July 11.
Illingworth, George C., Anniston, Ala. Reciprocating pan conveyer. No. 1,422,270; July 11.
Illingworth, Stewart R., Treforest, Wales. Coking of coal. No. 1,422,269; July 11.
Ingersoll Rand Company. (See Hoffman, P., and Reed, assignors.)
Ingersoll-Rand Company. (See Prellwitz, William, assignor.)
Ingold, Paul A., Paris, France. Jointed artificial hand. No. 1,422,714; July 11.
International Motor Company. (See Lotz, Walter P., assignor.)
International Printing Plate Company. (See Goldenbaum, Frederick C., assignor.)
International Toy Company. (See Chapdelaine, Norbert, assignor.) (Reissue.)
Iron Horse Tractor Co., The. (See Gardiner, Lou M., assignor.)
Irsch, Jacob, New York, N. Y. Amusement ride. No. 1,422,764; July 11.
Jarry, Frederick, assignor of one-half to S. Taylor, New Bedford, Mass. Slub catcher. No. 1,422,271; July 11.
Jarry, Frederick. (See Taylor, S., and Jarry.)
Jaskowiak, Frank, St. Cloud, Minn. Bench or floor dog. No. 1,422,272; July 11.
Jasperson, John J., Randwick, near Sydney, Australia, New South Wales. Expanding reamer. No. 1,422,208; July 11.
Jaworski, Paul, Bismarckhutte, Upper Silesia. Coking chamber for generators. No. 1,422,206; July 11.
Jeammet-Leyrit, René A., Billancourt, near Paris, France. Automatically-clamping tongs for grasping plates and dishes. No. 1,422,215; July 11.
Jobski, Otto H., assignor to The Standard Parts Company, Cleveland, Ohio. Rim. No. 1,422,715; July 11.
Johannes, Edward E., and R. D. Dunkerton, Devon, Kans. Disk truck. No. 1,422,362; July 11.
Johnson, Austin C., assignor to Production Meter Company, Chicago, Ill. Indicating and recording apparatus. No. 1,422,207; July 11.
Johnson, Carl E., Chanute, Kans. Battery grip. No. 1,422,765; July 11.
Johnson, David E., and T. A. Madsen, assignors to National Lock Company, Rockford, Ill. Method and apparatus for making headed machine parts. No. 1,422,274; July 11.
Johnson, Jonas, Ramsay, Mich. Pocketknife. No. 1,422,363; July 11.
Johnson, Oscar H. (See Pollard, G. T., and Johnson.)
Johns-Manville Incorporated. (See Berdan, Jacob M., assignor.)
Johnston, Harry B., Seattle, Wash. Piston and piston ring. No. 1,422,273; July 11.
Jones, David. (See Davies, D., and Jones.)
Jones, James H. (See Jones, Kenneth C. and J. H.)
Jones, Kenneth C., Chagrin Falls, and J. H. Jones, Cleveland Heights, Ohio. Rug-scouring machine. No. 1,422,445; July 11.
Jones, Oscar W., Cambridge City, Ind. Advertising wheel. No. 1,422,577; July 11.
Jones, Paul, Hanson, assignor to Commonwealth Shoe & Leather Company, Whitman, Mass. Shoe sole. No. 1,422,716; July 11.
Joosting, Pieter, Utrecht, Netherlands. Lift bridge. No. 1,422,717; July 11.
Jordan, Thomas E., Malden, assignor to Oliver Whyte Co., Inc., Boston, Mass. Seesaw. No. 1,422,766; July 11.
Jüst, Joseph. (See Schenkel, M., and Jüst.)
Kaplan, Louis, New York, N. Y. Rubber heel. No. 1,422,446; July 11.
Kattenberg, Carsten H., San Francisco, Calif. Cigar and cigarette ash retainer. No. 1,422,578; July 11.
Keast, Ernest, Nemaunee, Mich. Excavating and loading machine. No. 1,422,767; July 11.
Keehn, Clarence C., assignor to The Lisk Manufacturing Company, Ltd., Canandaigua, N. Y. Sustaining means for infants' bathtubs. No. 1,422,718; July 11.
K. F. & C. Tire & Rubber Corporation. (See Krusemark, Frederick A., assignor.)
Kelsay, Le Roy W., assignor to Western Electric Company, Incorporated, New York, N. Y. Switching key. No. 1,422,447; July 11.
Kennington, William O., London, England, assignor to The Remy Electric Company. Ignition system. (Reissue.) No. 15,408; July 11.
Kenny, James N., Ottawa, Ontario, Canada. Conveyer belt. No. 1,422,208; July 11.
Kent, Earl and G., Tacoma, Wash. Dispensing device. No. 1,422,768; July 11.
Kent, Glenn. (See Kent, Earl and G.)
Kent, Robert D. (See Cameron, Hugh, assignor.)
Kent, William J., Brooklyn, N. Y., assignor to Peerless Rubber Manufacturing Company. Making rubber tiling. No. 1,422,579; July 11.
Kerr, John L. (See Barton, William L., assignor.)
Kik, Charles L., Los Angeles, Calif. Iceless refrigerator. No. 1,422,364; July 11.
Kik, Charles L., Los Angeles, Calif. Iceless refrigerator No. 1,422,365; July 11.
Kingsbury, Albert, Greenwich, Conn. Bearing. No. 1,422,448; July 11.
Kiser, Henry F., Chattanooga, Tenn. Scale. No. 1,422,104; July 11.
Kirby, James B., Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc. Suction cleaner. No. 1,422,105; July 11.
Klots, Walter J., Scranton, Pa., assignor to W. J. Klots Raw Silk Cleaner Co. Inc. Thread cleaner. No. 1,422,106; July 11.
Klots, W. J., Raw Silk Cleaner Co. (See Klots, Walter J., assignor.)
Knaus, Peter J., Milwaukee, Wis., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass. Apparatus for vulcanizing articles of rubber or rubberized fabric. No. 1,422,209; July 11.
Koch, Louis O., Little Rock, Ark. Portable heater. No. 1,422,449; July 11.

Koch, Wellington A., Plainfield, N. J. Traffic signal. No. 1,422,210; July 11.
Kondolf, Mathias R., Philadelphia, Pa. Box-pressing machine. No. 1,422,580; July 11.
Kositzky, Carl R., Bismarck, N. Dak. Covered folding frame. No. 1,422,450; July 11.
Kramer, Andrew A., Kansas City, Mo. Tank construction. No. 1,422,107; July 11.
Kronenberg, Rudolf, Ohligs, Germany. Air-cooled internal-combustion engine. No. 1,422,719; July 11.
Kropf, Walter R., assignor of one-half to A. G. Siebert, San Francisco, Calif. Corner brace. No. 1,422,770; July 11.
Krusemark, Frederick A., assignor to K. F. & C. Tire & Rubber Corporation, Roanoke, Va. Making rubberized tire fabric. No. 1,422,451; July 11.
Kukac, Edward J., Chicago, Ill. Mold. No. 1,422,108; July 11.
Kunkel, Sherman T., Los Angeles, Calif. Gauge-cock-operating tool. No. 1,422,771; July 11.
Lace, Edward H., Vandergrift, Pa. Dental-plate anchorage. No. 1,422,452; July 11.
Lahey, Frank T., Akron, Ohio. Manufacturing insulating and resistant articles and products thereof. No. 1,422,720; July 11.
Lamb, Arthur B., Washington, D. C. Method and apparatus for treating gases and gaseous substances. No. 1,422,211; July 11.
Lamb, Joseph F., assignor to Landers, Frary & Clark, New Britain, Conn. Electrically-heated utensil. No. 1,422,721; July 11.
Lambert, Frank W., Hancock, Iowa. Propeller. No. 1,422,109; July 11.
Lane, Charles J., assignor to C. F. Elwell, London, England. Separating or sorting apparatus. No. 1,422,807; July 11.
Lane, Walter, Holland, Mich. Pneumatic piano player. No. 1,422,275; July 11.
Lane, Walter, Holland, Mich. Automatic player piano. No. 1,422,276; July 11.
Landers, Frary & Clark. (See Lamb, Joseph F., assignor.)
Landers, Frary & Clark. (See Smart, Joseph F., assignor.)
Landin, Peter J., Denver, Colo. Phonograph. No. 1,422,453; July 11.
Langland, Lammert H., Windom, Minn. Combination rolling cutter and shoe furrow opener for corn planters. No. 1,422,454; July 11.
Larner, Chester W., Cleveland, Ohio. Governor-operated pressure regulator. No. 1,422,212; July 11.
Laurency, Guillaume C., and M. Vigier, London, England. Process of and apparatus for preparing textile fibers for spinning. No. 1,422,581; July 11.
Lauterbur, Frank X., Sidney, Ohio. Safety clutch device for mixers. No. 1,422,213; July 11.
Lea, Charles, Boston, Mass., assignor, by mesne assignments, to Mohawk Carpet Mills, Inc., Amsterdam, N. Y. Weft supply and placing mechanism. No. 1,422,722; July 11.
Leblanc, Maurice C. A., Val-sur-Seine, par Croissy, assignor to Societe Anonyme Pour L'Exploitation Des Procedes Westinghouse Leblanc, Paris, France. Steam ejector. No. 1,422,582; July 11.
Lebovici, Justin, Oakley, Ohio, assignor to The Triumph Electric Company. Interlock circuit protector. No. 1,422,110; July 11.
Lebo, Robert B., Elizabeth, assignor to Standard Oil Company, Bayonne, N. J. Purifying higher secondary alcohols. No. 1,422,583; July 11.
Lees-Bradner Co. (See Schurr, C. H., and Lees, assignors.) (Reissue.)
Lees, Ernest J. (See Schurr, C. H., and Lees.) (Reissue.)
Leger, Oswald C., Los Angeles, Calif. Cap shaper. No. 1,422,366; July 11.
Leggett & Platt Spring Bed Company. (See Zier, Corban H., assignor.)
Leibovitz, Moritz, Lorain, Ohio. Combination clasp and lock. No. 1,422,214; July 11.
Leisse, Frederick J., St. Louis, Mo. Automobile tire. No. 1,422,723; July 11.
Lenhoff, John A., Hockessin, Del. Attachment for awnings. No. 1,422,772; July 11.
Leon, Frank C., et al. (See Facciuto, Luigi, Sr., assignor.)
Le Pontois, Anna, administratrix. (See Le Pontois, Leon J.)
Le Pontois, Leon J., deceased, Lakewood; A. Le Pontois, administratrix, assignor to The Teagle Company, Cleveland, Ohio. Electric generator. No. 1,422,584; July 11.
Levalley, Cristopher W. (See Fraser, D., Shafer, and Levalley.)
Levalley, Helen P., et al., executors. (See Fraser, D., Shafer, and Levalley.)
Levy & Merzbach. (See Levy, Isidor J., assignor.)
Levy, Isidor J., assignor to Levy & Merzbach, New York, N. Y. Combined purse and vanity-case frame. No. 1,422,724; July 11.
Lewellen, Darcy E., assignor to Lewellen Manufacturing Company, Columbus, Ind. Thrust bearing. No. 1,422,585; July 11.
Lewellen Manufacturing Company. (See Lewellen, Darcy E., assignor.)
Lewis, John V. (See Fowler, E., and Lewis.)
Liebowitz, Benjamin, New York, N. Y. Vehicle suspension. No. 1,422,586; July 11.
Liebowitz, Benjamin, New Rochelle, N. Y. Vehicle suspension. No. 1,422,587; July 11.
Light Publishing Company. (See Brelt, Martin M., assignor.)
Lindberg, Charles A., assignor to Sturgis Steel Go-Cart Company, Sturgis, Mich. Child's carriage. No. 1,422,277; July 11.
Link-Belt Company. (See Schott, Joseph F., assignor.)
Lisk Manufacturing Company, The. (See Keehn, Clarence C., assignor.)
Liva, Philipp, Brooklyn, N. Y. Wire-bending machine. No. 1,422,455; July 11.
Ljungstrom, Fredrik, Brevik Lidingon, assignor to Aktiebolaget Ljungstroms Angturbin, Stockholm, Sweden. Turbine-driven locomotive. No. 1,422,111; July 11.
Logan, Ivan B. (See Tonkin, Arthur S., assignor.)
Lord, Emory H., Washington, D. C. Measuring device. No. 1,422,112; July 11.
Lotz, Walter P., New Brunswick, N. J., assignor to International Motor Company, New York, N. Y. Boring machine. No. 1,422,456; July 11.
Low, Arthur B., Denver, Colo. Pressure gauge. No. 1,422,278; July 11.
Luetgert, Arnold C., and E. H. Melkiejohn, assignors of one-third to R. D. Brown, Seattle, Wash. Portable roadway. No. 1,422,280; July 11.
Lufkin Rule Company, The. (See Schleicher, John A., assignor.)
Lydick, John M., San Diego, Calif. Jackscrew. No. 1,422,279; July 11.
Maas, Fred W., et al. (See Boettcher, Otto J., assignor.)
McCarthy, William J., Rochelle Park, N. J. Vignetting tool. No. 1,422,773; July 11.
McClanahan, Thomas G., Seattle, Wash. Trolling lure. No. 1,422,457; July 11.
McClellan, John, assignor of one-half to D. B. Wiggins, Philadelphia, Pa. Combined spark timer and oil pump. No. 1,422,725; July 11.
McCullough, William C. (See White, O. M., and McCullough.)
McDonald, Elijah D., Los Angeles, Calif. Deep-well pump. No. 1,422,588; July 11.
McDowell, Samuel J. (See McDougal, T. G., and McDowell.)
McDougal, Taine G., and S. J. McDowell, assignors to Champion Ignition Company, Flint, Mich. Synthetic jewel bearing. No. 1,422,216; July 11.
McEwen, William, assignor of one-half to W. C. S. Hosking, Waiuku, Auckland, New Zealand. Pneumatic tire. No. 1,422,113; July 11.
McFarland, Clarence R., Marion, Ill. Undergarment. No. 1,422,281; July 11.
McGillivray, Harry, New York, N. Y. Safety device for elevators. No. 1,422,774; July 11.
McGlaudlin, Eugene G., Portland, Oreg. Heat-radiating device. No. 1,422,282; July 11.
McGovern, John W., Port Alice, British Columbia, Canada. Reversible fluid-pressure turbine. No. 1,422,458; July 11.
McKim, John F., San Jose, Calif. Hutch. No. 1,422,283; July 11.
McNab, Joseph W. (See Tobias, William L., assignor.)
McQuiston, John D., Sioux City, Iowa. Car-door lock. No. 1,422,589; July 11.
Macfarlane, James W., et al. (See Anderson, Albin E., assignor.)
MacInnes, Neil, Chicago, Ill. Automobile bumper. No. 1,422,103; July 11.
Mackenzie, James H., Sydney, New South Wales, Australia. Air-tightly sealing composition for metal containers, specially those for food. No. 1,422,114; July 11.
MacLaurin, Robert D., Toronto, Ontario, Canada. Singeing hogs. No. 1,422,217; July 11.
Mack, Rudolph A., Gallipolis, Ohio. Steering mechanism. No. 1,422,284; July 11.
Madsen, Thorvald A. (See Johnson, D. E., and Madsen.)
Mahar, George M., and P. M. M. Phelps, Fair Haven, Vt. Coffin. No. 1,422,726; July 11.
Maimin, Hyman, New York, N. Y. Motor drive for sewing machines. No. 1,422,218; July 11.
Majors, Walter L., St. Louis, Mo. Antiskid device. No. 1,422,285; July 11.
Majors, Walter L., St. Louis, Mo. Mimeograph attachment. No. 1,422,286; July 11.
Manhart, Anton, Vienna, Austria. Alloys of aluminium and producing the same. No. 1,422,591; July 11.
Manley Manufacturing Company, The. (See Manley, Robert E., assignor.)
Manley, Robert E., assignor to The Manley Manufacturing Company, York, Pa. Portable floor crane. No. 1,422,459; July 11.
Mansel, Paul, Siemensstadt, near Berlin, assignor to Siemens & Halske A. G., Berlin, Germany. Clock. No. 1,422,590; July 11.
Marchand, Edward J., Duluth, Minn. Fly exterminator. No. 1,422,287; July 11.
Marker, Van N., Chicago, Ill. Compensating starting switch. No. 1,422,592; July 11.
Marks, Paul J., Rochester, N. Y. Photographic shutter. No. 1,422,460; July 11.
Marks, Paul J., Rochester, N. Y. Iris diaphragm. No. 1,422,461; July 11.

Marlin Firearms Corporation, The. (See Swebilius, Carl G., assignor.)
Marietta Paint & Color Company, The. (See Murray, Alexander, assignor.)
Marsh, Howard E. (See Starr, E. B., and Marsh.)
Martin, Alfred V. P., Brooklyn, N. Y. Hair curler and waver. No. 1,422,593; July 11.
Martin, Rhetherford B., New York, N. Y. Composition for treating manufactured rubber. No. 1,422,115; July 11.
Martocci-Pisculli, Leon, New York, N. Y. Toy. No. 1,422,775; July 11.
Maschinenfabrik Augsburg-Nuernberg A. G. (See Becher, Theodor, assignor.)
Mathers, Samuel A., Chillicothe, Ohio. Railway truck. No. 1,422,116; July 11.
Mathews, Alexander. (See White, O. M., and McCullough, assignors.)
Matzen, Herman N., Cleveland Heights, Ohio. Pipe. No. 1,422,367; July 11.
Mauck, Victor, Norristown, Pa. Munition casing. No. 1,422,219; July 11.
Maxenchs, Hyacinth, New York, N. Y. Flexible metallic structure. No. 1,422,776; July 11.
Maxwell, Maxwell C., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Pin-tumbler lock. No. 1,422,594; July 11.
Maxwell, Maxwell C., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Cylinder lock. No. 1,422,595; July 11.
Mehlis, Ferdinand, Berlin-Buchholz, Germany. Emergency bearing for railway cars. No. 1,422,596; July 11.
Meiklejohn, Ernest H. (See Luetgert, A. C., and Meiklejohn.)
Meinhardt, Jacob A., Chicago, Ill. Mop frame and handle coupling. No. 1,422,368; July 11.
Melloy, James H., and W. Owen, assignors to Wm. Muir and Company, Limited, Manchester, England. Gear cutting, slotting, and like machines. No. 1,422,462; July 11.
Mercen, Arno, Berkeley, Calif. Edger. No. 1,422,463; July 11.
Mergenthaler Linotype Company. (See Rousseau, Joseph L., assignor.)
Mergott, J. E., Company, The. (See Fuller, Franz A., assignor.)
Merkle, Francis L., Portland, Me. Guard chain for pneumatic tires. No. 1,422,117; July 11.
Merritt, Frank W., and A. E. Watts, Duluth, Minn. Level-registering means. No. 1,422,118; July 11.
Meserole, Milton D., Milford, assignor to Hayes & Meserole Mfg. Co., New Haven, Conn. Barrette. No. 1,422,464; July 11.
Metcalfe, Robert F., Erie, Pa. Controlling device for boiler furnaces. No. 1,422,369; July 11.
Meteor Mixing Machine Co. (See Trust, Josephine and H., assignors.)
Metz, Herman A. (See Myers, Chester N., assignor.)
Meyer, August, Minneapolis, Minn., and P. R. Walsh, assignors, by mesne assignments, to Duplex Holding Company, St. Louis, Mo. Method of and apparatus for treating timber and the like. No. 1,422,119; July 11.
Meyer, Friedrich W., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis. Regulating and control apparatus and system. No. 1,422,120; July 11.
Millen, Rudolph A., Detroit, Mich. Ratchet wrench. No. 1,422,121; July 11.
Miller, Frederick B., Scottdale, Pa. Wheel. No. 1,422,597; July 11.
Miller & Pardee, Inc. (See Pardee, Harvey S., assignor.)
Mine & Smelter Supply Company, The. (See Pollard, G. T., and Johnson, assignors.)
Misenhelmer, Lindsay W., Great Falls, S. C. Frictional bushing coupling. No. 1,422,598; July 11.
Missouri Paper Products Company. (See Goodyear, Charles H., assignor.)
Mitchell, Harry C., Yonkers, N. Y. Ornamenting device and method. No. 1,422,599; July 11.
Mitton-Braley Aero-Plane Control Co. (See Mitton, R. E., and Braley, assignors.)
Mitton, Robert E., and W. M. Braley assignors to Mitton-Braley Aero-Plane Control Co., Salt Lake City, Utah. Controlling mechanism for flying machines. No. 1,422,288; July 11.
M-L Magneto Syndicate Limited, The. (See Watson, Ernest A., assignor.)
Moffatt, James R., assignor to Union Special Machine Company, Chicago, Ill. Sewing machine for applying button stay strips. No. 1,422,220; July 11.
Mohawk Carpet Mills Inc. (See Lea, Charles, assignor.)
Molins, Walter E., London, England. Apparatus for collecting and conveying cigarettes or the like. No. 1,422,600; July 11.
Monitor Controller Company. (See Whittingham, George H., assignor.)
Moody, Joseph F., Ranger, Tex. Gripping device. No. 1,422,289; July 11.
Moore, Lellie D., Newtonville, Mass. Bucket for handling loose materials. No. 1,422,601; July 11.
Moriarty, Daniel, Oakland, Calif. Tire casing. No. 1,422,290; July 11.
Morrell, Glenn A., assignor of one-half to C. W. Rodgers, Seattle, Wash. Fireplace damper. No. 1,422,465; July 11.
Morris, Ray, Niagara Falls, N. Y. Windmill. No. 1,422,602; July 11.
Morrison, James, assignor to The Trailmobile Company, Cincinnati, Ohio. Rolling kitchen. No. 1,422,603; July 11.
Morse, John M., Syracuse, N. Y. Muffler cut-out. No. 1,422,466; July 11.
Mower, Edward B., assignor to The Futurist Company, Chicago, Ill. Undergarment. No. 1,422,604; July 11.
Muir, Wm., and Company. (See Melloy, J. H., and Owen, assignors.)
Mulherin, James A., assignor of one-third to H. D. Delkeskamp, St. Louis, Mo. Bath spray. No. 1,422,291; July 11.
Murphy, Walter P. (See Murray, George E., assignor.)
Murray, Alexander, assignor to The Marietta Paint & Color Company, Marietta, Ohio. Stain composition. No. 1,422,292; July 11.
Murray, Charles F., Evanston, Ill. Automobile lock. No. 1,422,221; July 11.
Murray, George E., Battle Creek, Mich., assignor to W. P. Murphy, Chicago, Ill. Car-coupling release rigging. No. 1,422,293; July 11.
Myers, Chester N., Valley Falls, assignor to H. A. Metz, New York, N. Y. Complex arseno-stibino compounds and making the same. No. 1,422,294; July 11.
Napolitan, Francis J., Jersey City, N. J., assignor to American Abrasive Metals Company. Plate for use in lining burglar-proof vaults and similar purposes. No. 1,422,295; July 11.
Nasmith, John I. (See Buckham, G. T., and Nasmith.)
National Aniline & Chemical Company. (See Cunningham, Orin D., assignor.)
National Fireworks Manufacturing Company, The. (See Van Doren, John B., assignor.)
National Lock Company. (See Johnson, D. E., and Madsen, assignors.)
National Pneumatic Company. (See Forman, Paris R., assignor.)
Needham, William H., assignor to Boston Pressed Metal Co., Worcester, Mass. Press-feeding mechanism. No. 1,422,605; July 11.
Nelman, Edna A., Brooklyn, N. Y. Container. No. 1,422,606; July 11.
Nelson, John, Bridgeport, Conn. Doorknob lock. No. 1,422,467; July 11.
Nelson, John A., Charleston, S. C. Fuse. No. 1,422,122; July 11.
Newton, Richard T., New York, N. Y. Bumper bracket. No. 1,422,777; July 11.
Nicola, Peter, Danville, Pa. Artificial arm. No. 1,422,468; July 11.
Niles-Bement-Pond Company. (See Greenleaf, G. E., and Randolph, assignors.)
Niles-Bement-Pond Company. (See Sears, Willard T., assignor.)
Nonnenmann, Adolf, New York, N. Y. Pin. No. 1,422,607; July 11.
Nonneman, Ira W., assignor to The Borden Company, Warren, Ohio. Diestock. No. 1,422,222; July 11.
Nord, Carl V., Seattle, Wash. Lubricating device for automobiles. No. 1,422,608; July 11.
Norgren, Gustavus, Centerville, S. D. Corn-husking machine. No. 1,422,609; July 11.
Northwest Engineering Company. (See Burke, Paul, assignor.)
O'Brien, Joseph J., Springfield, Mass. Retaining clip. No. 1,422,610; July 11.
O'Connell, William, Cincinnati, Ohio. Two-in-one rubber tire. No. 1,422,123; July 11.
Oertli, Caspar. (See Oertli, Lucy and C., and Turnell.)
Oertli, Lucy, and C., Hamilton, Mont., and H. Turnell, Elm Creek, Nebr. Automatic haystacker. No. 1,422,611; July 11.
Ogden, John B., Lynchburg, Va. Record cabinet for talking machines. No. 1,422,612; July 11.
Ogden, John B., Lynchburg, Va. Convertible stand and table. No. 1,422,613; July 11.
Ogden, J. Edward. (See Tomkinson, Charles C., assignor.)
Oliver Whyte Co. (See Jordan, Thomas E., assignor.)
Olivier, Maurice G., assignor to Societe Francaise de Crins Artificiels, Paris, France. Producing molded articles of pure cellulose. No. 1,422,469; July 11.
Opitz, William H., Fort Wayne, Ind. Dispensing tank. No. 1,422,124; July 11.
Osborne, Harold S., New York, N. Y., assignor to American Telephone and Telegraph Company. Inductive-interference-suppression device. No. 1,422,470; July 11.
Ottolini, Cyrill, Calistoga, Calif. Fort disappearing gun. No. 1,422,296; July 11.
Outlook Company, The. (See Williams, John H., assignor.)
Owens, Richard L., Minneapolis, Minn. Grain-feeding spreader. No. 1,422,297; July 11.
Owens, Richard L., Minneapolis, Minn. Grain separator. No. 1,422,298; July 11.
Owens, Richard L., Minneapolis, Minn. Grain separator. No. 1,422,299; July 11.
Owen, Willie. (See Melloy, J. H., and Owen.)
Pacific Fire Extinguisher Company. (See Reid, Henry C., assignor.)
Packard Motor Car Company. (See Church, Harold D., assignor.)

Packard Motor Car Company. (See Dewey, Frank H., assignor.)
Packard Motor Car Company. (See Druar, Frank J., assignor.)
Packard Motor Car Company. (See Vincent, Jesse G., assignor.)
Page, Edwin L., Kingsley, Iowa. Core for making ventilated blocks. No. 1,422,370; July 11.
Page, Edwin L., Kingsley, Iowa. Ventilated corncrib-floor mold. No. 1,422,371; July 11.
Page, Frederick H., assignor to Handley Page Limited, London, England. Means for balancing and regulating the lift of aircraft. No. 1,422,614; July 11.
Page, Frederick H., assignor to Handley Page Limited, London, England. Means for balancing and regulating the lift of aircraft. No. 1,422,615; July 11.
Page, Frederick H., assignor to Handley Page Limited, London, England. Means for balancing and regulating the lift of aircraft. No. 1,422,616; July 11.
Palmer, Dennis J. (See Woods, J. D., and Palmer.)
Pape, Amand, Willow Springs, Ill. Apparatus for sealing boxes. No. 1,422,300; July 11.
Pardee, Harvey S., assignor to Miller & Pardee, Inc., Chicago, Ill. Locking cap for automobile radiators. No. 1,422,372; July 11.
Parker, Calvert, Keene, N. H. Banjo structure. No. 1,422,769; July 11.
Parker, Clark, deceased, Baulkham Hills, New South Wales, Australia; E. Parker, administratrix. Post for wire fencing. No. 1,422,301; July 11.
Parker, Ethel, administratrix. (See Parker, Clark.)
Parker, Howard, assignor to Brown Company, Berlin, N. H. Pipe wrench. No. 1,422,302; July 11.
Parsley, George T., Ashland, Oreg. Combined wrench. No. 1,422,471; July 11.
Pathe Exchange Inc. (See Chanler, Gaston L., assignor.)
Pearcy, Walter T., New Albany, Ind. Silencer. No. 1,422,373; July 11.
Peerless Rubber Manufacturing Company. (See Kent, William J., assignor.)
Pehrson, Alfred K., assignor to Pressed Steel Car Company, Pittsburgh, Pa. Release and take-up device for brakes. No. 1,422,125; July 11.
Penick & Ford, Ltd. (See Allen, Paul W., assignor.)
Pennsylvania Crusher Company. (See Hartman, William H., assignor.)
Penrod, William A., Dayton, Ohio. Cooker and boiler. No. 1,422,472; July 11.
Perony, Jean A., St.-Ouen, France, assignor to Societe d'Outillage Mecanique et d'Usinage d'Artillerie, St.-Ouen, France. Plate-bending press. No. 1,422,779; July 11.
Persichino, Michael. (See D'Andrea, Nicola, assignor.)
Petcher, Edward C., St. Louis, Mo. Atomizer. No. 1,422,778; July 11.
Petersen, Paul W., Chicago, Ill. Method and apparatus for handling combustibles. No. 1,422,126; July 11.
Petersen, Valdemar, St. Ansgar, Iowa. Wire-fence fastener. No. 1,422,127; July 11.
Peterson, S. D. (See Schumacher, H. J., and Rice, assignors.)
Peyton, Joseph I. (See Hitt, S. E., and Peyton.)
Phelps, Henry C., and J. C. Fox, Glendale, Calif. Anti-slap spring for piston rings. No. 1,422,780; July 11.
Phelps, Joseph, North Caldwell, N. J., assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting machine. No. 1,422,617; July 11.
Phelps, Philip M. M. (See Mahar, G. M., and Phelps.)
Phillips, Ellis J. G., assignor to Richards-Wilcox Manufacturing Company, Aurora, Ill. Means for securing overhead tracks in place. No. 1,422,473; July 11.
Phillips, Joan C., Wellesley Hills, Mass. Nursing-bottle holder. No. 1,422,223; July 11.
Pickering, Orlen B., Endicott, N. Y. Stamp. No. 1,422,474; July 11.
Pickston, William T. (See Brown, W. D. R., and Pickston.)
Pinnock-Bailey, Dr. Vivian. (See Hollis, William H., assignor.)
Piqué, Jean J. (See Hardy, W. B., and Piqué.)
Pneumatic Cushion Co. (See Gruss, Lucien R., assignor.)
Pomillo, Alessandro, New York, N. Y. Bassinet. No. 1,422,619; July 11.
Pollak, Fritz, Vienna, Austria. Distilling process. No. 1,422,475; July 11.
Pollard, Gurdon T., and O. H. Johnson, assignors to The Mine & Smelter Supply Company, Denver, Colo. Drum feeder. No. 1,422,618; July 11.
Poole, Arthur F., Kenilworth, Ill. Speed indicator for aeroplanes. No. 1,422,224; July 11.
Poser, Max, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Ophthalmic test-lens frame. No. 1,422,303; July 11.
Powell, Archibald D., Braintree, England. Lifting jack. No. 1,422,781; July 11.
Power, Dudley F., assignor of one-third to E. P. Babcock and one-third to F. Delano, Portland, Oreg. Dehydrator or drier. No. 1,422,620; July 11.
Powers, George B., Superior, Wis. Tree holder. No. 1,422,304; July 11.
Prellwitz, William, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Clearance valve for compressors. No. 1,422,476; July 11.
Pressed Steel Car Company. (See Pehrson, Alfred K., assignor.)
Prevost, Arthur A., Detroit, Mich. Wrench. No. 1,422,621; July 11.
Products Protection Corporation, The. (See Smith, Franklin S., assignor.)
Production Meter Company. (See Johnson, Austin C., assignor.)
Progress Manufacturing Company. (See Stahl, Gustav H., assignor.)
Pullman, George, New York, N. Y. Time recorder. No. 1,422,477; July 11.
Radium Chemical Company. (See Cameron, William H., assignor.)
Rager, Harvey W., Ponca, Nebr. Harness hook. No. 1,422,128; July 11.
Rambo, Joseph F., Pomona, Calif., assignor of one-half to R. A. Schmitt, San Diego, Calif. Conduit coupling. No. 1,422,374; July 11.
Randolph, Clifford F. (See Greenleaf, G. E., and Randolph.)
Rattan, Carrie S., San Francisco, Calif. Garment hanger. No. 1,422,782; July 11.
Redford, John E. (See Wahlert, H. A., and Redford.)
Reed, Forrest C. (See Hoffman, P., and Reed.)
Rees, Gordon, East New Annan, Nova Scotia, Canada. Handle for blacksmiths' vises. No. 1,422,478; July 11.
Reeves, Alex, Atlanta, Ga. Door check. No. 1,422,783; July 11.
Reid, Henry C., assignor to Pacific Fire Extinguisher Company, San Francisco, Calif. Tractor. No. 1,422,375; July 11.
Remington Typewriter Company. (See Phelps, Joseph, assignor.)
Remy Electric Company, The. (See Kennington, William O., assignor.) (Reissue.)
Reuse, Joseph C., Libertyville, Ill. Traction coupling. No. 1,422,129; July 11.
Reynolds, Robert W., Darlinghurst, near Sydney, New South Wales, Australia. Electrical heater resistance element. No. 1,422,130; July 11.
Rice, Frank. (See Schumacher, H. J., and Rice.)
Richards, George M., Philadelphia, Pa. Multistage unloader. No. 1,422,376; July 11.
Richards-Wilcox Manufacturing Company. (See Phillips, Ellis J. G., assignor.)
Richter, Johannes, Niederlossnitz, near Dresden, Germany. Ribbon attachment for stringed instruments. No. 1,422,784; July 11.
Riddell, William A., assignor to Eastman Kodak Company, Rochester, N. Y. Film-winding mechanism for cameras. No. 1,422,131; July 11.
Riddle, Robert D., Spartanburg, S. C. Undercasing for motor-vehicle engines. No. 1,422,622; July 11.
Ringe, John C., Bridgeport, Conn., assignor to The Singer Manufacturing Company. Strip guiding and controlling attachment for sewing machines. No. 1,422,808; July 11.
Roberts, Herbert L., assignor to Business Systems, Limited, Toronto, Ontario, Canada. Autographic register. No. 1,422,132; July 11.
Robider, William J., Westmount, Quebec, Canada. Grain car. No. 1,422,133; July 11.
Robinson, Neal M., Kansas City, Kans. Vehicle wheel. No. 1,422,479; July 11.
Robinson, Richard E., Kansas City, Mo. Automobile hood. No. 1,422,305; July 11.
Robnett, Curtiss, Columbia, Mo. Tractor cleat. No. 1,422,377; July 11.
Rodgers, Charles W. (See Morrell, Glenn A., assignor.)
Rodhe, Olof, assignor to Aktiebolaget Ingeniorsfirma Fritz Egnell, Stockholm, Sweden. Gas-analyzing apparatus. (Reissue.) No. 15,409; July 11.
Rodman, Thomas H., New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis. Motor controller. No. 1,422,134; July 11.
Rodriguez Serra, José E., Ponce, P. R. Film holder. No. 1,422,785; July 11.
Rogatz, William B., assignor to Farmers Standard Carbide Co., Plattsburg, N. Y. Manufacturing calcium carbide. No. 1,422,135; July 11.
Rogers, George L., assignor to Henry Disston & Sons, Incorporated, Philadelphia, Pa. Shears. No. 1,422,786; July 11.
Rope, Arthur E., Brooklyn, N. Y. Combination face brush. No. 1,422,787; July 11.
Rousseau, Joseph L., Brooklyn, N. Y., assignor to Mergenthaler Linotype Company. Matrix manufacture. No. 1,422,136; July 11.
Rousseau, Joseph L., Brooklyn, N. Y., assignor to Mergenthaler Linotype Company. Manufacturing matrices. No. 1,422,137; July 11.
Roy, Wilfrid J. (See Thompson, W., and Roy.)
Runnels, Walter S., Kalamazoo, Mich. Radiator cover. No. 1,422,306; July 11.
Runyan, Clarence, Aurora, Ind. Comb cleaner. No. 1,422,788; July 11.
Rutherford, John E., Toronto, Ontario, Canada. Vehicle license-number holder and illuminator. No. 1,422,480; July 11.
Ryan, Michael W., and M. Uttendorfer, Seattle, Wash. Radiometer. No. 1,422,378; July 11.

Ryder, Ely M. T., Yonkers, N. Y. Welded rail joint. No. 1,422,623; July 11.
Ryon, Eppa H., Waltham, Mass. Valve mechanism for gas engines. No. 1,422,138; July 11.
Sandman, August G., Baltimore, Md. Hatch cover for refrigerator cars. No. 1,422,139; July 11.
Salto, Salvatore, Milan, Italy. Projecting device for beams of light. No. 1,422,307; July 11.
Sauer, George A., assignor to Buckeye Iron & Brass Works, Dayton, Ohio. Oil press. No. 1,422,225; July 11.
Sawyer, Frederick L. (See Berger, Christian, assignor.)
Schenkel, Moritz, and J. Jüst, Charlottenburg, near Berlin, assignors to Siemens-Schuckert-Werke, G. m. b. H., Berlin, Germany. Electric vacuum apparatus. No. 1,422,481; July 11.
Schey, Max, Brooklyn, N. Y. Heating element. No. 1,422,379; July 11.
Schilling, Le Roy C. (See Haugh, T. M., Schilling, and Finch.)
Schleicher, John A., assignor to The Lufkin Rule Company, Saginaw, Mich. Combined friction and spanner wrench. No. 1,422,308; July 11.
Schlinglof, Frank C., assignor to The Corona Manufacturing Company, Kenton, Ohio. Poultry roost. No. 1,422,624; July 11.
Schloth, Arthur C. and H. E., Lynn, Mass. Toy. No. 1,422,789; July 11.
Schloth, Herman E. (See Schloth, Arthur C. and H. E.)
Schmitt, Robert A. (See Rambo, Joseph F., assignor.)
Schneider & Cie. (See Schneider, Eugène, assignor.)
Schneider, Eugène, assignor to Schneider & Cie., Paris, France. Tractor having four steering driving wheels. No. 1,422,380; July 11.
Schott, Joseph F., Philadelphia, Pa., assignor to Link-Belt Company, Chicago, Ill. Chain. No. 1,422,790; July 11.
Schriber, George F., Long Beach, Calif. Metal-sheathed pneumatic tire for vehicles. No. 1,422,791; July 11.
Schuette, August E., Red Bud, Ill., assignor to Central Manufacturing Company, St. Louis, Mo. Gearing. No. 1,422,792; July 11.
Schuette, Johann, Zeesen-Koenigs-Wusterhausen, near Berlin, Germany, assignor, by mesne assignments, to American Investigation Corporation, New York, N. Y. Device for inserting rivets. No. 1,422,381; July 11.
Schultz, Abraham J., Newark, N. J. Expansible attaching means for connecting tubular elements. No. 1,422,227; July 11.
Schultz, Abraham J., Newark, N. J., assignor to Colonial Stamping Company, Inc. Mounting naps or caps for posts, poles, or rods. No. 1,422,226; July 11.
Schultz, Adolf J., Kansas City, Mo. Batter pitcher. No. 1,422,382; July 11.
Schultz, Herman F. C. and F. W., Youngstown, Ohio. Fastening device. No. 1,422,482; July 11.
Schultz, Fred W. (See Schults, Herman F. C. and F. W.)
Schumacher, Earl E., East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Plastic composition. No. 1,422,483; July 11.
Schumacher, Henry J., and F. Rice, Meadville, assignor of one-third to S. D. Peterson, New Castle, Pa. Game device. No. 1,422,383; July 11.
Schurr, Charles H., and E. J. Lees, assignors to The Lees-Bradner Co., Cleveland, Ohio. Thread-milling machine. (Reissue.) No. 15,410; July 11.
Schwartz, Carl, New Rochelle, assignor to Vapor Car Heating Company, Inc., New York, N. Y. Electrical control apparatus. No. 1,422,625; July 11.
Schweinsberg, George W., and M. I. Doyle, Brooklyn, N. Y., assignors to U. S. Electrogalvanizing Company. Apparatus for cleaning articles. No. 1,422,309; July 11.
Schweitzer, Edmund O., Chicago, Ill. Means for controlling and measuring a current flowing in an alternating-current circuit. No. 1,422,484; July 11.
Sears, Willard T., Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y. Car-wheel-boring machine. No. 1,422,140; July 11.
Self Lay Block & Machine Company. (See Emery, Harvey L., assignor.)
Shaffer, Patrick H., assignor of one-half to W. L. Thomas, Richwood, W. Va. Logging hook. No. 1,422,228; July 11.
Shafer, Samuel, Jr. (See Fraser, D., Shafer, and Levalley.)
Shank, Lewis H., Paradise, Pa. Fruit-jar holder. No. 1,422,626; July 11.
Shannon, Ellwood M., Bala, assignor to The Baldwin Locomotive Works, Philadelphia, Pa. Equalizing gear for locomotives. No. 1,422,793; July 11.
Sharp, John, Oakmont, assignor to Aluminum Seal Company, New Kensington, Pa. Feeding mechanism. No. 1,422,229; July 11.
Shaw, James, Toronto, Ontario, Canada. Phonograph. No. 1,422,310; July 11.
Shaw, John C., Pretoria, Transvaal, South Africa. Chilling and freezing animal substances. No. 1,422,627; July 11.
Shaw, John C., Pretoria, Transvaal, South Africa. Apparatus or plant for chilling and freezing animal substances. No. 1,422,628; July 11.
Sheehan, Walter H., Steubenville, Ohio. Combined headlight and direction indicator. No. 1,422,629; July 11.
Shephard, Harry, Coventry, England. Power indicator for internal-combustion engines. No. 1,422,485; July 11.
Sherwood, Carlyle J., assignor to Coen Co., San Francisco, Calif. Automatic draft regulator. No. 1,422,311; July 11.
Sherwood, Ludlow S., Chicago, Ill. Saw-filing machine. No. 1,422,486; July 11.
Shuford, Stephen W., Woodlawn, N. C. Weighing mechanism. No. 1,422,141; July 11.
Siebert, Adolph G. (See Kropf, Walter R., assignor.)
Siemens & Halske A. G. (See Mansel, Paul, assignor.)
Siemens-Schuckert-Werke G. m. b. H. (See Schenkel, M., and Jüst, assignors.)
Singer Manufacturing Company, The. (See Becker, Rudolph.)
Singer Manufacturing Company, The. (See Ringe, John C., assignor.)
Small, Thomas W., Cleveland, Ohio. Telephone attachment. No. 1,422,487; July 11.
Smart, Joseph F., assignor to Landers, Frary & Clark, New Britain, Conn. Handle. No. 1,422,630; July 11.
Smith, Ernest R., San Francisco, Calif. Dental impression tray. No. 1,422,488; July 11.
Smith, Franklin H. (See Doty, L. E., and Smith.)
Smith, Franklin S., Philadelphia, Pa., assignor to The Products Protection Corporation, New York, N. Y. Electric condenser. No. 1,422,312; July 11.
Smith, Frederick A., Brasted, England. Ignition device for internal-combustion engines. No. 1,422,794; July 11.
Smith, George W., Chicago, Ill. Memorandum-pad stand and pad sheets. No. 1,422,489; July 11.
Smith, Harry N., assignor to Watertown Table Slide Company, Watertown, Wis. Extension-table slide. No. 1,422,142; July 11.
Smith, Hugh B., University Place, Nebr. Folding table. No. 1,422,313; July 11.
Snadecki, William J., Bridgeport, Conn., assignor to R. Crane, Washington, D. C. Internal-combustion engine. No. 1,422,143; July 11.
Snyder, Frank B., South Altoona, Pa. Auxiliary propelling means for motor vehicles. No. 1,422,795; July 11.
Societe Anonyme de Commentry, Fourchambault & Decazeyville. (See Girin, Pierre, assignor.)
Societe Anonyme Pour L'Exploitation Des Procedes Westinghouse Leblanc. (See Leblanc, Maurice C. A., assignor.)
Societe des Etablissements Malicet & Blin. (See Guillery, René, assignor.)
Societe d'Outillage Mecanique et d'Usinage d'Artillerie. (See Perony, Jean A., assignor.)
Societe Francaise de Crins Artificiels. (See Olivier, Maurice G., assignor.)
Soule, George C., and J. B. Woodbury, South Portland, Me. Making wire-rope clamp clips. No. 1,422,314; July 11.
South, Mahlon C., assignor of one-third to C. M. Garrison, Cincinnati, Ohio. Power propulsion device. No. 1,422,384; July 11.
Sowden, Albert B., Covington, Ky. Positive both-wheel-drive differential. No. 1,422,144; July 11.
Spencer, William H., assignor to I. P. Frink, Inc., New York, N. Y. Lighting-accessory suspension. No. 1,422,796; July 11.
Spery, Charles F., Chicago, Ill. Radiator for motor vehicles. No. 1,422,315; July 11.
Spiller, Gilbert E. H., Eaglehurst, Chagford, England. Guard for circular saws. No. 1,422,316; July 11.
Springfield Metallic Casket Company, The. (See Watts, Thomas A., assignor.)
Stader, Otto, Oconomowoc, Wis. Veterinary surgical instruments. No. 1,422,490; July 11.
Stafford, Alfred E., assignor to Draper Corporation, Hopedale, Mass. Filling-end clearer for filling-replenishing looms. No. 1,422,727; July 11.
Stafford, Ion A., Jamestown, N. Y. Desk-drawer lock. No. 1,422,631; July 11.
Stahl, Gustav H., Menomonie, Wis., assignor to Progress Manufacturing Company, Erie, Pa. Tool holder. No. 1,422,491; July 11.
Stalberg, Sven, Nahant, Mass., assignor to General Electric Company. Focusing mechanism for projectors. No. 1,422,385; July 11.
Standard Conveyor Company. (See Donaldson, William T., assignor.)
Standard Oil Company. (See Lebo, Robert B., assignor.)
Standard Parts Company, The. (See Butcher, Harry E., assignor.)
Standard Parts Company, The. (See Jobski, Otto H., assignor.)
Standard Parts Company, The. (See Zimmermann, Thomas, assignor.)
Standard Steel and Bearings Incorporated. (See Woodrow, Irvin F., assignor.)
Stangler, Bertha, administratrix. (See Stangler, Joseph C.)
Stangler, Joseph C., deceased, Chicago, Ill.: B. Stangler, administratrix. Electromagnetic measuring apparatus. No. 1,422,317; July 11.
Stankovich, Bozo, San Francisco, Calif. Sieve shaker. No. 1,422,230; July 11.
Stanley, James, New York, N. Y. Combined level, plumb, square, and measure. No. 1,422,231; July 11.
Stanley, Richard E., Sr., Pittsburgh, Pa. Means for making cast bowling pins. No. 1,422,232; July 11.

Stark, John B., assignor to Webster Electric Company, Racine, Wis. Armature for magneto machines. No. 1,422,145; July 11.
Starr, Edward B., and H. E. Marsh, Lompoc, Calif. Apparatus for sawing natural deposits. No. 1,422,386; July 11.
Stay-Rite Mfg. Co. (See Brooks, Lloyd B., assignor.)
Steadworthy, Henry. (See Cooper, F. W., and Steadworthy.)
Steenburg, Walter C. (See Bonson, Walter, assignor.)
Stendel, Roy, Magdalena, N. Mex. Guard for motor cycles. No. 1,422,632; July 11.
Stern, Louis J., Boston, Mass. Package for snap fasteners. No. 1,422,233; July 11.
Sterrett, Frank O., Rochester, Nev. Counterbalance for the crank shafts of internal-combustion engines. No. 1,422,633; July 11.
Stevens, Sidney, Millinocket, Me. Automatic switch for circuits of internal-combustion engines. No. 1,422,318; July 11.
Stevens, William H., Hollidaysburg, Pa. Tool handle. No. 1,422,387; July 11.
Stickel, Frederick, Chicago, Ill. Combined valve and plug. No. 1,422,234; July 11.
Stimpson, Edward S., assignor to Draper Corporation, Hopedale, Mass. Filling-end-withdrawing means for weft-replenishing looms. No. 1,422,728; July 11.
St. Joseph Iron Works. (See Eklund, John G., assignor.)
Stoll, Frank M., Denver, Colo. Folding camp chair. No. 1,422,319; July 11.
Stoll, Frank M., Denver, Colo. Portable folding bed. No. 1,422,320; July 11.
Stout, James M., Seattle, Wash. Maturity calendar. No. 1,422,235; July 11.
Stuart, Francis L., New York, N. Y. Conveyer. No. 1,422,492; July 11.
Stuart, Francis L., New York, N. Y. System of conveying and delivering material to carriers. No. 1,422,493; July 11.
Sturgis Steel Go-Cart Company. (See Lindberg, Charles A., assignor.)
Sullivan, Charles L., Chicago, Ill., and J. D. Fletcher, Evansville, Ind. Paving block. No. 1,422,193; July 11.
Sumbulian, Sarkis H., Fresno, Calif. Automobile fender. No. 1,422,388; July 11.
Summers, Leland L., Chicago, Ill. Retort. No. 1,422,634; July 11.
Sutherland, Enos E., Los Angeles, Calif. Collapsible crate. No. 1,422,797; July 11.
Swain, Hadwen, San Francisco, Calif. Automatic phonograph. No. 1,422,321; July 11.
Swain, Seth R., East Orange, N. J. Pulley. No. 1,422,389; July 11.
Swan, John, Jr., Marietta, Ohio. Underreamer. No. 1,422,236; July 11.
Swebilius, Carl G., assignor, by mesne assignments, to The Marlin Firearms Corporation, New Haven, Conn. Firearm. No. 1,422,237; July 11.
Swebilius, Carl G., assignor, by mesne assignments, to The Marlin Firearms Corporation, New Haven, Conn. Firearm. No. 1,422,238; July 11.
Swingle, Charles W., Chicago, Ill. Flash light. No. 1,422,239; July 11.
Symington, T. H., Company, The. (See Anderson, Gustaf A., assignor.)
Tackenberg, William, Cincinnati, Ohio. Building block. No. 1,422,146; July 11.
Tanberg, Arthur P., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del. Manufacturing diphenylamine. No. 1,422,404; July 11.
Taylor, Arthur O. S., Billings, Mont. Grinding mechanism. No. 1,422,635; July 11.
Taylor, Edward C., Springfield, assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Treating rubber articles. No. 1,422,147; July 11.
Taylor, Samuel, and F. Jarry, New Bedford, Mass. Tension device for spooling machines. No. 1,422,240; July 11.
Taylor, Samuel. (See Jarry, Frederick, assignor.)
Teagle Company, The. (See Le Pontois, Leon J., assignor.)
Texas Company, The. (See Hall, Frank W., assignor.)
Thiele, Alfred, Magdeburg, Germany, assignor to Firm of Emmy Thiele, Berlin, Germany. Repairing patch for pneumatic tires. No. 1,422,495; July 11.
Thiele, Firm of Emmy. (See Thiele, Alfred, assignor.)
Thomas, Walter, Nanaimo, British Columbia, Canada. Distilling carbonaceous material. No. 1,422,496; July 11.
Thomas, Wellington L. (See Shaffer, Patrick H., assignor.)
Thompson, Albert R., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif. Can-discharge device. No. 1,422,798; July 11.
Thompson, Frank E., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Pin-tumbler lock. No. 1,422,497; July 11.
Thompson, William, and W. J. Roy, Springfield, Mass., assignors to Consolidated Tool Works, Inc., New York, N. Y. Drive for drills and similar tools. No. 1,422,322; July 11.
Timm, Otto F., Wilson Creek, Wash. Bushing inserter or remover. No. 1,422,390; July 11.
Tisch, George C. L., Elizabeth, N. J. Combination plate and thread guide. No. 1,422,799; July 11.
Tobias, William L., assignor to J. W. McNab, Toronto, Ontario, Canada. Steering wheel. No. 1,422,323; July 11.
Tomlinson, Charles H., assignor, by mesne assignments, to The Tomlinson Coupler Company, Mansfield, Ohio. Electric multiple connection plug. No. 1,422,241; July 11.
Tomlinson Coupler Company, The. (See Tomlinson, Charles H., assignor.)
Tomkinson, Charles C., Plainfield, N. J., assignor to J. E. Ogden, Mountainville, Cornwall, N. Y. Concrete insert. No. 1,422,636; July 11.
Tonkin, Arthur S., Lyndhurst Road, Hastings, assignor of one-half to I. B. Logan, Napier, New Zealand. Paper fastener. No. 1,422,148; July 11.
Trailmobile Company, The. (See Morrison, James, assignor.)
Trimble, E. M., Manufacturing Company. (See Baxter, William C., assignor.)
Troeger, John F. B., assignor, by mesne assignments, to American Lux Products Corporation, New York, N. Y. Screen for motion pictures. No. 1,422,149; July 11.
Triumph Electric Company, The. (See Lebovici, Justin, assignor.)
Trullinger, Daniel N., and L. A. Granger, Fresno, Calif. Apparatus for forming concrete pipes. No. 1,422,150; July 11.
Trust, Henry. (See Trust, Josephine and H.)
Trust, Josephine and H., Park Ridge, N. J., assignors, by mesne assignments, to Meteor Mixing Machine Co., Inc. Ford machine. No. 1,422,391; July 11.
Tucker Brothers Manufacturing Company. (See Tucker, Jesse D., assignor.)
Tucker, Jesse D., assignor to Tucker Brothers Manufacturing Company, Sacramento, Calif. Spoke-tightening shim. No. 1,422,637; July 11.
Turnell, Henry. (See Oertli, Lucy and C., and Turnell.)
Ungar, Gustav A., Pelham Manor, N. Y. Flexible coupling. No. 1,422,638; July 11.
Union Carbide Company. (See Curme, George O., Jr., assignor.)
Union Special Machine Compahy. (See Chalman, John E., assignor.)
Union Special Machine Company. (See Moffatt, James E., assignor.)
United Shoe Machinery Corporation. (See Winkley, Erastus E., assignor.)
Unit Player Action Co., The. (See Hulder, Joseph P., assignor.)
U. S. Electrogalvanizing Company. (See Schweinsberg, G. W., and Doyle, assignors.)
Uttendorfer, Michael. (See Ryan, M. W., and Uttendorfer.)
Valls, Ricardo C., Barcelona, Spain. Method to render kapok and other fibers incombustible. No. 1,422,242; July 11.
Valois, Felix E., Haverhill, assignor to Hamel Shoe Machinery Company, Lynn, Mass. Stop motion for shoe-sewing machines. No. 1,422,639; July 11.
Valois, Felix E., Haverhill, assignor to Hamel Shoe Machinery Company, Lynn, Mass. Stop motion. No. 1,422,640; July 11.
Van Cott, Albert, and J. Evans, Salt Lake City, Utah. Sorting machine. No. 1,422,800; July 11.
Vander Horst, Henry L. (See Billingham, Milton C. J., assignor.)
Van Doren, John B., Rockland, assignor to The National Fireworks Manufacturing Company, West Hanover, Mass. Toy machine gun. No. 1,422,392; July 11.
Van Norden, Rudolph W., San Francisco, Calif. Electromagnetic power-transmission apparatus. No. 1,422,243; July 11.
Vapor Car Heating Company. (See Cooley, Roswell P., assignor.)
Vapor Car Heating Company. (See Schwartz, Carl, assignor.)
Verner, Eyvind M., et al. (See Anderson, Albin E., assignor.)
Vickers Limited. (See Buckham, G. T., and Nasmith, assignors.)
Vickers Limited. (See Dawson, A. T., and Buckham, assignors.)
Vigier, Marcel. (See Laurency, G. C., and Vigier.)
Vincent, Jesse G., assignor to Packard Motor Car Company, Detroit, Mich. Vibration damper for hydrocarbon motors. No. 1,422,324; July 11.
Vint, William J., Stockton, Calif. Camping trailer. No. 1,422,498; July 11.
Waddell, John M., Alexandria, La. Dimmer. No. 1,422,393; July 11.
Wagner, Rudolf, Hamburg, Germany. Suspended high-speed railway. No. 1,422,394; July 11.
Wahlert, Henry A., St. Louis, and J. E. Redford, Kinlock Park, assignors to The American Brake Company, St. Louis, Mo. Automatic slack adjuster. No. 1,422,499; July 11.
Waldorf Paper Products Company. (See Gamm, Charles C., assignor.)
Walker, Alan C. (See Bilger, W. A., and Walker.)
Walker Brothers (Wigan) Limited. (See Walker, Edwin R., assignor.)
Walker, Edwin R., assignor to Walker Brothers (Wigan) Limited, Wigan, England. Motor tip wagon. No. 1,422,500; July 11.
Walker, Henry B., Lancaster, Ohio. Chain attachment for elevator buckets. No. 1,422,151; July 11.

Walsh, Edward M., Monroe, Wash. Stamp receiver. No. 1,422,152; July 11.
Walsh, Philip R. (See Meyer, A., and Walsh.)
Walters, Charles A., Marion, Iowa. Drafting instrument. No. 1,422,641; July 11.
Walters, Elizabeth M., Hove, England. Rubber globe. No. 1,422,642; July 11.
Wappler Electric Co. (See Wappler, Reinhold H., assignor.)
Wappler, Reinhold H., Yonkers, N. Y., assignor to Wappler Electric Co., Inc. Multidisk electric machine. No. 1,422,396; July 11.
Wappler, Reinhold H., Yonkers, N. Y., assignor to Wappler Electric Company, Inc. Clamp mounting for electrodes. No. 1,422,306; July 11.
Ward, Edward K. and P. C., St. Paul, Minn. Street sweeper. No. 1,422,501; July 11.
Ward, Pier C. (See Ward, Edward K. and P. C.)
Wardell, Robert D., Detroit, Mich. Lighting unit. No. 1,422,244; July 11.
Wark, William J., Salem, Ohio. Sign and its support. No. 1,422,502; July 11.
Warminski, Piotr, Baltimore, Md. Aeroplane control. No. 1,422,503; July 11.
Warren, Herbert A., Woburn, Mass. Truss pad. No. 1,422,153; July 11.
Warriner Manufacturing Company. (See Elrod, Milton, assignor.)
Waterhouse, Harold D., Quincy, assignor to Bay State Pump Company, Boston, Mass. Piston. No. 1,422,729; July 11.
Watertown Table Slide Company. (See Smith, H. N., assignor.)
Watson, Ernest A., assignor to The M-L Magneto Syndicate Limited, Coventry, England. Dynamo-electric machine. No. 1,422,154; July 11.
Watson, James, Athens, Pa. Smoker's table. No. 1,422,397; July 11.
Watts, Alfred E. (See Merritt, F. W., and Watts.)
Watts, Thomas A., assignor to The Springfield Metallic Casket Company, Springfield, Ohio. Latch. No. 1,422,504; July 11.
Weaver, Floyd C., Washington, D. C. Grinding and lapping machine. No. 1,422,505; July 11.
Webster Electric Company. (See Stark, John R., assignor.)
Weiss, Morris L., Brooklyn, N. Y., assignor to Dovan Chemical Corporation, Wilmington, Del. Making diphenylguanidine. No. 1,422,506; July 11.
Wells, Harold D., Glens Falls, N. Y. Sulphur-burning apparatus. No. 1,422,801; July 11.
Wells, John, Cairo, Egypt. Gas producer. No. 1,422,643; July 11.
Wentz, Jere L., Passaic, N. J. Conveying belt. No. 1,422,398; July 11.
Wepplo, Isaac W., Chicago, Ill. Tube-closing machine. No. 1,422,644; July 11.
West, Timothy E., Oakland, Calif. Parcel-post and express chart. No. 1,422,245; July 11.
Western Electric Company. (See Eaves, Augustus J., assignor.)
Western Electric Company. (See Kelsay, Le Roy W., assignor.)
Western Electric Company. (See Schumacher, Earl E., assignor.)
Wetherholt, William C., Columbus, Ohio. Key-duplicating machine. No. 1,422,155; July 11.
Wever, Beulah L., Savannah, Ga. Cooking utensil. No. No. 1,422,156; July 11.
Wheeler, William I., Scottville, Ill. Power-transmission mechanism. No. 1,422,507; July 11.
Wheeler, William I., Scottville, Ill. Reversing mechanism. No. 1,422,508; July 11.
Wheeler, William I., Scottville, Ill. Power-transmission mechanism. No. 1,422,509; July 11.
Wheeler, William I., Scottville, Ill. Transmission mechanism. No. 1,422,510; July 11.
Wheelock, Arthur C., Oakland, assignor to American Automatic Lock and Lift Company, San Francisco, Calif. Sash locking and balancing mechanism. No. 1,422,399; July 11.
Whitaker-Glessner Company. (See Gibbons, Nathan A., assignor.)
Whitcomb, Frederick L., Clyde, Ohio. Can opener. No. 1,422,400; July 11.
White, Edward L., Brooklyn, N. Y. Spring heel. No. 1,422,511; July 11.
White, John W., Detroit, Mich. Differential driving mechanism for motor vehicles. No. 1,422,401; July 11.
White, John W., Jr., Oakland, Calif. Bronze worm-gear mounting. No. 1,422,512; July 11.
White, Okey M., and W. C. McCullough, assignors of one-third to A. Mathews, Muskogee, Okla. Wrench. No. 1,422,402; July 11.
White, William E., Chicago, Ill. Bar-spacing device. No. 1,422,157; July 11.
Whitten, Frank A., assignor to General Motors Corporation, Detroit, Mich. Muffler. No. 1,422,403; July 11.
Whittingham, George H., assignor to Monitor Controller Company, Baltimore, Md. Thermal cut-out device. No. 1,422,802; July 11.
Wiggins, Dallas B. (See McClellan, John, assignor.)
Williams, Earl J., Geary, Okla. Splicing tool. No. 1,422,803; July 11.
Williams, John H., East Cleveland, Ohio, assignor to The Outlook Company, Cleveland, Ohio. Means for connecting two elements. No. 1,422,158; July 11.
Williams, William A. (See Coxon, S., and Williams.)
Wilmort Manufacturing Company. (See Humphreys, William, assignor.)
Wilson, James O., Jersey City, N. J. Permutation lock. No. 1,422,645; July 11.
Wingers, Harry A. (See Blanton, John B., assignor.)
Winkley, Erastus E., Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J. Washer-placing apparatus. No. 1,422,159; July 11.
Winters, George D., Sanger, Calif. Antiskid device. No. 1,422,646; July 11.
Wisconsin Trust Company et al., executors. (See Fraser, D., Shafer, and Levalley.)
Wise, Wilbert G., Akron, Ohio. Furnace construction. No. 1,422,160; July 11.
Witte, Walter L., Escondido, Calif. Rope tightener. No. 1,422,804; July 11.
Wochna, Matthew J. (See Cullen, B. P., and Wochna.)
Woodbury, John B. (See Soule, G. C., and Woodbury.)
Wood, Evans, Tuttle, Idaho. Water tank. No. 1,422,325; July 11.
Wood, Montraville M., Berwyn, Ill. Portable truck. No. 1,422,730; July 11.
Woodrow, Irvin F., Philadelphia, Pa., assignor, by mesne assignments, to Standard Steel and Bearings Incorporated, Wilmington, Del. Gauge. No. 1,422,161; July 11.
Woods, John D., and D. J. Palmer, Steubenville, Ohio. Gig. No. 1,422,805; July 11.
Woodstock Typewriter Company. (See Hokanson, Otto A., assignor.)
Yale & Towne Manufacturing Company, The. (See Augenbraun, Peter F., assignor.)
Yale & Towne Manufacturing Company, The. (See Maxwell, Maxwell C., assignor.)
Yale & Towne Manufacturing Company, The. (See Thompson, Frank E., assignor.)
Yee, Jew Y. (See Guernsey, E. W., and Yee.)
Zahn, Oswald F., assignor to Zahn Self Righting Roller Bearing Company, Los Angeles, Calif. Roller bearing. No. 1,422,162; July 11.
Zahn Self Righting Roller Bearing Company. (See Zahn, Oswald F., assignor.)
Zepka, Ludwig R., Cleveland, Ohio. Theft signal for motor vehicles. No. 1,422,404; July 11.
Zller, Corban H., assignor of one-half to Leggett & Platt Spring Bed Company, Limited, Windsor, Ontario, Canada. Machine for assembling frame and spring members. No. 1,422,326; July 11.
Zimbelmann, Peter, Aurora, Ill. Door check. No. 1,422,163; July 11.
Zimmerman, Thomas, assignor to The Standard Parts Company, Cleveland, Ohio. Axle. No. 1,422,647; July 11.

ALPHABETICAL LIST OF PATENTEES OF DESIGNS.

American Fabrics Company, The. (See Page, Samuel H., assignor.)
Bassick Manufacturing Company, The. (See Fesler, Douglas F., assignor.)
Blanck & Company. (See Davis, Elizabeth A., assignor.)
Blanck & Company. (See Langenegger, John, assignor.)
Brock and Company. (See Ginder, Wallace G., assignor.)
Bunde & Upmeyer Co. (See Katke, Thomas C., assignor.)
Cabalka, Albina, Geddes, S. Dak. Dress fabric. No. 61,186; July 11.
Cheney Talking Machine Company. (See MacLachlan, Lachlan, assignor.)
Dahl, Thure, New York, N. Y., assignor to Lightolier Company. Plate for wall brackets for lighting fixtures. No. 61,188; July 11.
Dahl, Thure, New York, N. Y., assignor to Lightolier Company. Wall bracket for lighting fixtures. No. 61,187; July 11.

Saltrates, Limited, London, England. Bath salts. No. 160,723; July 11.
Samson, Edgar, doing business as Dyatome Laboratories, New York, N. Y. Preparation for coloring and tinting fabrics and the like. No. 160,837; July 11.
Sawyer, H. M., & Son, East Cambridge, Mass. Knitted coats, jackets, and vests for men, women, and children. No. 157,447; July 11.
Scherer, Burnell & Scherer, Inc., New York, N. Y. Laundry blue or bluing. No. 129,573; July 11.
Schmidt, Charles E., trading as Coulter Mfg. Co., Philadelphia, Pa. Shoe holders. Nos. 158,339–40; July 11.
Sexton, John, and Company, Chicago, Ill. Crushed fruits, fruit sirups, flavoring extracts, colors, etc. No. 153,112; July 11.
Sheboygan Coaster & Wagon Works, Sheboygan, Wis. Children's coaster wagons. No. 162,273; July 11.
Simplo Füllfeder-Gesellschaft Voss, Lausen & Dziambor. Fountain pens. No. 163,292; July 11.
Standard Refrigerator Company, Philadelphia, Pa. Refrigerators. No. 160,369; July 11.
Stanislawski, Joseph, Hammond, Ind. Healing oil for rheumatism, swelling, boils, etc. No. 158,999; July 11.
Stix, Baer & Fuller Dry Goods Co., St. Louis, Mo. Necklaces. No. 162,071; July 11.
Straus Mfg. Co., Erie, Pa. Pants. No. 150,937; July 11.
Swartz, Thomas J. (See Thomas Textile Company, assignor.)
System Machine Works, Stockton, Calif. Circulating pumps. No. 158,731; July 11.
Tel-Auto-Spark Company. (See Christopher, Arthur B.)
Thomas Textile Company, assignor to Thomas J. Swartz, New York, N. Y. Babies' diapers. No. 158,200; July 11.
Tire Inflator Co., Philadelphia, Pa. Tire-inflating devices. No. 158,777; July 11.
Triangle Manufacturing Co., Cedar Rapids, Iowa. Egg-preserving compounds. No. 157,960; July 11.
Tsagarakis, George, New York, N. Y. Beverages sold as soft drinks. No. 164,525; July 11.
United States Asbestos Company, Lancaster, Pa. Fabric, brake, and transmission lining. No. 162,653; July 11.
Vanity Brassiere Company Inc., New York, N. Y. Bandeaux and brassières. No. 156,557; July 11.

PUBLISHED FOR OPPOSITION.

[Act of Feb. 20, 1905, Sec. 6, as amended Mar. 2, 1907.]

Vienna Medical Company, Detroit, Mich. Cough lozenges and sirup and compound for treatment of coughs. No. 159,638; July 11.
Wampole, Henry S., Company, The, Baltimore, Md. Antiseptic solution. No. 158,964; July 11.
Western Cartridge Company, East Alton and Springfield, Ill. Shot shells. No. 164,681; July 11.
Westinghouse Electric & Mfg. Company, East Pittsburgh, Pa. Monthly magazines. No. 159,642; July 11.
White Bluffs Warehouse Co., White Bluffs, Wash. Fresh apples. No. 141,049; July 11.
Whiting, John L.-J. J. Adams Company, assignor to John L. Whiting-J. J. Adams Company, Boston, Mass. Brushes for painting, varnishing, etc. Nos. 139,438–46; July 11.
Whiting, John L.-J. J. Adams Company, assignor to John L. Whiting-J. J. Adams Company, Boston, Mass. Brushes for painting, varnishing, etc. Nos. 139,766–7; July 11.
Whiting, John L.-J. J. Adams Company, assignor to John L. Whiting-J. J. Adams Company, Boston, Mass. Brushes for painting, varnishing, etc. Nos. 139,768–76; July 11.
Whiting, John L.-J. J. Adams Company, assignor to John L. Whiting-J. J. Adams Company, Boston, Mass. Brushes for painting, varnishing, etc. Nos. 139,825–6; July 11.
Whiting, John L.-J. J. Adams Company, assignor to John L. Whiting-J. J. Adams Company, Boston, Mass. Brushes for painting, varnishing, etc. No. 139,828; July 11.
Whiting, John L.-J. J. Adams Company, assignor to John L. Whiting-J. J. Adams Company, Boston, Mass. Brushes for painting, varnishing, etc. No. 139,832; July 11.
Whiting, John L.-J. J. Adams Company, assignor to John L. Whiting-J. J. Adams Company, Boston, Mass. Brushes for painting, varnishing, etc. Nos. 139,834–5; July 11.
Whiting, John L.-J. J. Adams Company, assignor to John L. Whiting-J. J. Adams Company, Boston, Mass. Brushes for painting, varnishing, etc. Nos. 140,154–5; July 11.
Whiting, John L.-J. J. Adams Company, assignor to John L. Whiting-J. J. Adams Company, Boston, Mass. Brushes for painting, varnishing, etc. Nos. 140,228–31; July 11.
Whiting, John L.-J. J. Adams Company, assignor to John L. Whiting-J. J. Adams Company, Boston, Mass. Brushes for painting, varnishing, etc. No. 140,235; July 11.
Whiting, John L.-J. J. Adams Company, assignor to John L. Whiting-J. J. Adams Company, Boston, Mass. Brushes for painting, varnishing, etc. Nos. 140,421–2; July 11.
Whiting, John L.-J. J. Adams Company, assignor to John L. Whiting-J. J. Adams Company, Boston, Mass. Brushes for painting, varnishing, etc. Nos. 148,408–12; July 11.
Whiting, John L.-J. J. Adams Company, Boston, Mass. Brushes for painting, varnishing, etc. No. 157,506; July 11.
Wickercraft, The, Pasadena, Calif. Furniture made of reed, rattan, and fiber. No. 155,288; July 11.
Will & Baumer Candle Co. Inc., Syracuse, N. Y. Incense. No. 160,175; July 11.
Wingert, Martha S., Whittier, Calif. Dolls. No. 161,913; July 11.
Wright & Alexander Company, Rochester, N. Y. Metal inserts for anchoring piping and shafting, etc., to concrete construction. No. 133,015; July 11.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 11TH DAY OF JULY, 1922.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Adapter. F. T. Baird. No. 1,422,331; July 11.
Advertising device. R. A. Bingaman. No. 1,422,329; July 11.
Advertising wheel. O. W. Jones. No. 1,422,577; July 11.
Aerial tramway. F. C. Carstarphen. No. 1,422,255; July 11.
Aeroplane. O. W. Greene. No. 1,422,197; July 11.
Aeroplane control. P. Warminski. No. 1,422,503; July 11.
Aeroplanes, Speed indicator for. A. F. Poole. No. 1,422,224; July 11.
Air compressor. H. C. Aarup. No. 1,422,070; July 11.
Air-spring rigging. L. R. Gruss. No. 1,422,566; July 11.
Aircraft. F. W. Gore. No. 1,422,261; July 11.
Aircraft, Means for balancing and regulating the lift of. F. H. Page. Nos. 1,422,614–16; July 11.
Alcohols, Purifying higher secondary. R. B. Lebo. No. 1,422,583; July 11.
Alloy, Aluminum. F. C. Frary. (Reissue.) No. 15,407; July 11.
Alloy containing iron, nickel, chromium. P. Girin. No. 1,422,096; July 11.
Alloys of aluminium and producing same. A. Manhart. No. 1,422,591; July 11.
Aluminum chloride, Making. H. D. Gibbs. No. 1,422,560; July 11.
Aluminum chloride, Manufacture of. F. W. Hall. No. 1,422,568; July 11.
Amusement device. J. D. Froman. No. 1,422,688; July 11.
Amusement ride. J. Irsch. No. 1,422,764; July 11.
Animal trap. W. Dunn. No. 1,422,424; July 11.
Annealing malleable cast iron. C. T. Holcroft. No. 1,422,710; July 11.
Anticreeper. H. G. Gillmor. No. 1,422,260; July 11.
Antiskid device. W. L. Majors. No. 1,422,285; July 11.
Antiskid device. G. D. Winters. No. 1,422,646; July 11.
Arm, Artificial. P. Nicola. No. 1,422,468; July 11.
Arseno-stibino compounds and making the same, Complex. C. N. Myers. No. 1,422,294; July 11.
Articles, Apparatus for cleaning. G. W. Schweinsberg and M. I. Doyle. No. 1,422,309; July 11.
Ash receptacle. L. Aptowicz. No. 1,422,165; July 11.
Atomizer. E. C. Petcher. No. 1,422,778; July 11.
Autographic register. H. L. Roberts. No. 1,422,132; July 11.
Automatons, Motion device for. F. Gergellino. No. 1,422,436; July 11.
Automobile bodies to the chassis, Means for connecting. A. C. Desler. No. 1,422,086; July 11.
Automobile bumper. N. MacInnes. No. 1,422,103; July 11.
Automobile fender. S. H. Sumbullian. No. 1,422,388; July 11.
Automobile hood. R. E. Robinson. No. 1,422,305; July 11.
Automobile lock. C. F. Murray. No. 1,422,221; July 11.
Automobile lubricating device. C. V. Nord. No. 1,422,698; July 11.
Automobiles, Washbasin for. W. H. Hollis. No. 1,422,763; July 11.
Awnings, Attachment for. J. A. Lenhoff. No. 1,422,772; July 11.
Axle. T. Zimmerman. No. 1,422,647; July 11.
Bag frame. F. A. Fuller. No. 1,422,554; July 11.
Bag holder. R. W. and W. V. Beal. No. 1,422,524; July 11.
Bag holder. E. O. Bulman. No. 1,422,659; July 11.
Banana unloader. J. Brennan. No. 1,422,656; July 11.
Banjo structure. C. Parker. No. 1,422,769; July 11.
Bar: *See*—
Iron bar.
Bar-spacing device. W. E. White. No. 1,422,157; July 11.
Barrette. M. D. Meserole. No. 1,422,464; July 11.
Bassinet. A. Pomilio. No. 1,422,619; July 11.
Bathtubs, Sustaining means for infants'. C. C. Keeha. No. 1,422,718; July 11.
Battery grip. C. E. Johnson. No. 1,422,765; July 11.
Bearing. A Kingsbury. No. 1,422,448; July 11.
Bearing and making same. W. G. H. Brehmer. No. 1,422,655; July 11.
Bearing, Roller. O. F. Zaba. No. 1,422,162; July 11.
Bearing, Synthetic jewel. T. G. McDougal and S. J. McDowell. No. 1,422,216; July 11.
Bearings or other purposes, Manufacturing composite articles for. E. G. Dann. No. 1,422,677; July 11.
Bed attachment. F. Cortese. No. 1,422,744; July 11.
Bed-laster and clasp. C. F. Adams. No. 1,422,806; July 11.
Bed, Portable folding. F. M. Stoll. No. 1,422,320; July 11.
Beds, Elevating rack for. C. G. Alguire. No. 1,422,405; July 11.
Belt, Conveyer. J. N. Kenny. No. 1,422,208; July 11.
Belt conveyers, Troughing pulley for. F. I. L. Bylger. No. 1,422,662; July 11.
Belt, Conveying. J. L. Wentz. No. 1,422,399; July 11.
Belts, Fastening for driving. A. J. Forbes. No. 1,422,430; July 11.
Belting tool. A. G. Bava. No. 1,422,332; July 11.
Bench or floor dog. F. Jaskowiak. No. 1,422,272; July 11.
Binders, mowers, and other vehicles, Coupling for trains of. C. R. Davis. No. 1,422,186; July 11.
Block: *See*—
Building block. Paving block.
Blocks, Core for making ventilated. E. L. Page. No. 1,422,370; July 11.
Blotter. F. A. Fuller. No. 1,422,555; July 11.
Boat, Multiple-hull. F. G. Creed. No. 1,422,542; July 11.
Boot protector. J. N. Eltgroth. No. 1,422,683; July 11.
Boring machine. W. P. Lotz. No. 1,422,456; July 11.
Bottle carrier, Milk-. C. E. Hough. No. 1,422,574; July 11.
Bottle holder, Nursing-. J. C. Phillips. No. 1,422,223; July 11.
Bowling pins, Means for making cast. R. E. Stanley, Sr. No. 1,422,232; July 11.
Box: *See*—
Collapsible box. Fiber-board box.
Feed box.
Box machine. L. W. Darling. No. 1,422,544; July 11.
Box-pressing machine. M. E. Kondolf. No. 1,422,590; July 11.
Boxes, Apparatus for sealing. A Pape. No. 1,422,300; July 11.
Brace: *See*—
Corner brace. Truck brace.
Bracelet link. O. Fessler. No. 1,422,428; July 11.
Bracket: *See*—
Bumper bracket. Radiator bracket.
Brake mechanism. H. Detzer and S. G. Barnard. No. 1,422,423; July 11.
Brakes, Release and take-up device for. A. K. Pehrson. No. 1,422,125; July 11.
Breakers, Controller for automatic vacuum. W. A. Howland. No. 1,422,444; July 11.
Bridge, Lift. P. Joosting. No. 1,422,717; July 11.
Bronze worm-gear mounting. J. W. White, Jr. No. 1,422,512; July 11.
Brush. J. E. Chleso. No. 1,422,739; July 11.
Brush, Combination face. A. E. Rope. No. 1,422,787; July 11.
Brush, Phonograph record. E. J. Bakula. No. 1,422,166; July 11.
Bucket for handling loose materials. L. D. Moore. No. 1,422,601; July 11.
Buckets, Chain attachment for elevator. H. B. Walker. No. 1,422,151; July 11.
Building block. H. L. Emery. No. 1,422,258; July 11.
Building block. W. Tackenberg. No. 1,422,146; July 11.
Bumper. P. E. Demmer. No. 1,422,546; July 11.
Bumper bracket. R. T. Newton. No. 1,422,777; July 11.
Burner: *See*—
Hydrocarbon burner.
Burner-lifting means. J. S. Brennan. No. 1,422,079; July 11.
Bushing coupling, Frictional. L. W. Misenheimer. No. 1,422,308; July 11.
Bushing inserter or remover. O. F. Timm. No. 1,422,280; July 11.
Button stay strips, Sewing machine for applying. J. B. Moffatt. No. 1,422,220; July 11.
Calcium carbide, Manufacturing. W. B. Rogatz. No. 1,422,185; July 11.
Calendar, Maturity. J. M. Stout. No. 1,422,235; July 11.
Cameras, Film-winding mechanism for. W. A. Riddell. No. 1,422,131; July 11.
Camp chair, Folding. F. M. Stoll. No. 1,422,319; July 11.
Camping trailer. W. J. Vint. No. 1,422,496; July 11.
Can-body-ending machine. T. F. Fitzsimons. No. 1,422,192; July 11.

Can-discharge device. A. R. Thompson. No. 1,422,798; July 11.
Can opener. F. L. Whitcomb. No. 1,422,400; July 11
Cap. H. S. Gooding. No. 1,422,435; July 11.
Cap shaper. O. C. Leger. No. 1,422,366; July 11.
Car-coupling release rigging. G. E. Murray. No. 1,422,293; July 11.
Car-door lock. J. D. McQuiston. No. 1,422,589; July 11.
Car, Grain. W. J. Robider. No. 1,422,133; July 11.
Car-wheel-boring machine. W. T. Sears. No. 1,422,140; July 11.
Cars, Emergency bearing for railway. F. Mehlis. No. 1,422,596; July 11.
Cars, Hatch cover for refrigerator. A. G. Sandman. No. 1,422,139; July 11.
Carbonizing method. W. Bonsor. No. 1,422,530; July 11.
Carburetor. F. E. Aseltine. No. 1,422,329; July 11.
Carburetor for internal-combustion engines. C. Brown. No. 1,422,413; July 11.
Carriage, Child's. C. A. Lindberg. No. 1,422,277; July 11.
Carrier: *See*—
Bottle carrier. Tire carrier.
Carriers, System of conveying and delivering material to. F. L. Stuart. No. 1,422,493; July 11.
Chain. J. F. Schott. No. 1,422,790; July 11.
Chair: *See*—
Camp chair.
Chilling and freezing animal substances. J. C. Shaw. No. 1,422,627; July 11.
Chilling and freezing animal substances, Apparatus or plant for. J. C. Shaw. No. 1,422,628; July 11.
Chlorosulphonic acid. T. L. Briggs. No. 1,422,335; July 11.
Cigar and cigarette ash retainer. C. H. Kattenberg. No. 1,422,578; July 11.
Cigarette holder. T. Duncan. No. 1,422,347; July 11.
Cigarettes, Apparatus for collecting and conveying. W. E. Molins. No. 1,422,600; July 11.
Circuit connector. H. A. Douglas. No. 1,422,257; July 11.
Circuit protector, Interlock. J. Lebovici. No. 1,422,110; July 11.
Clasp and lock, Combination. M. Leibovitz. No. 1,422,214; July 11.
Cleaner: *See*—
Comb cleaner. Thread cleaner.
Suction cleaner.
Cleaners, Beater for suction. E. B. Hoff. No. 1,422,100; July 11.
Clip: *See*—
Retaining clip.
Clips, Making wire-rope clamp. G. C. Soule and J. B. Woodbury. No. 1,422,314; July 14.
Clock. P. Mansel. No. 1,422,590; July 11.
Coal, Coking of. S. R. Illingworth. No. 1,422,269; July 11.
Coal, Method of and means for distilling. A. W. Helmholtz. No. 1,422,706; July 11.
Coaster, Gliding. A. H. Hleatzman. No. 1,422,203; July 11.
Coating apparatus. C. I. Dayton. No. 1,422,545; July 11.
Coffin. G. M. Mahar and P. M. M. Phelps No. 1,422,726; July 11.
Coke-oven doors, Apron for. L. E. Doty and F. H. Smith. No. 1,422,756; July 11.
Collapsible box. N. A. Gibbons. No. 1,422,692; July 11.
Color print viewable by lights of different colors and making same. C. Berger. No. 1,422,527; July 11.
Comb cleaner. C. Runyan. No. 1,422,788; July 11.
Comestibles, Method and apparatus for handling. P. W. Petersen. No. 1,422,126; July 11.
Compensating starting switch. V. N. Marker. No. 1,422,592; July 11.
Concrete insert. C. C. Tomkinson. No. 1,422,636; July 11.
Concrete pipes, Apparatus for forming. D. N. Trullinger and L. A. Granger. No. 1,422,150; July 11.
Conduit coupling. J. F. Rambo. No. 1,422,374; July 11.
Connecting two elements, Means for. J. H. Williams. No. 1,422,158; July 11.
Container. E. A. Nelman. No. 1,422,606; July 11.
Containers, specially those for food, Air-tightly sealing composition for metal. J. H. Mackenzie. No. 1,422,114; July 11.
Conveyer. F. L. Stuart. No. 1,422,492; July 11.
Conveyers, Reciprocating pan. G. C. Illingworth. No. 1,422,270; July 11.
Conveying and delivering material, Apparatus for. D. Fraser, S. Shafer, Jr., and C. W. Levalley. No. 1,422,687; July 11.
Cooker and boiler. W. A. Penrod. No. 1,422,472; July 11.
Cooker, Electric steam-pressure. W. A. Duncan. No. 1,422,348; July 11.
Cooling and freezing of fish and the like, Apparatus for. W. B. Hardy and J. J. Pique. No. 1,422,570; July 11.
Corn-husking machine. G. Norgren. No. 1,422,609; July 11.
Corn planters, Combination rolling cutter and shoe furrow opener for. L. H. Langland. No. 1,422,454; July 11.
Cornerib-floor mold, Ventilated-. E. L. Page. No. 1,422,371; July 11.
Corner brace. W. R. Kropf. No. 1,422,770; July 11.
Cotter-pin puller. M. H. Harter. No. 1,422,201; July 11.
Coupling: *See*—
Conduit coupling. Selective coupling.
Draft coupling. Shaft coupling.
Flexible coupling. Traction coupling.
Coupling, Selective. L. H. Bullard. No. 1,422,536; July 11.
Crane, Portable floor. R. E. Manley. No. 1,422,459; July 11.
Crate, Collapsible. E. E. Sutherland. No. 1,422,797; July 11.
Current flowing in an alternating-current circuit, Means for controlling and measuring a. E. O. Schweitzer. No. 1,422,484; July 11.
Curtain, Combination back and side. K. Forbes. No. 1,422,431; July 11.
Cutlery, Polishing compound for finishing table. G. F. Hemming. No. 1,422,707; July 11.
Cutlery-polishing machine. C. H. Hemming. No. 1,422,358; July 11.
Cutter: *See*—
Potato cutter. Thread cutter.
Cycle, Water. G. C. Brown. No. 1,422,533; July 11.
Cylinder lock. M. C. Maxwell. No. 1,422,595; July 11.
Damper, Fireplace. G. A. Morrell. No. 1,422,465; July 11.
Davit, Ship's. T. J. Carr. No. 1,422,175; July 11.
Dehydrator or drier. D. P. Power. No. 1,422,620; July 11.
Deaydrators, Combustion and mixing chamber for. F. C. Chapman. No. 1,422,416; July 11.
Dental and surgical table, Knockdown. W. G. Holmes. No. 1,422,101; July 11.
Dental impression tray. E. R. Smith. No. 1,422,488; July 11.
Dental-plate anchorage. E. H. Lace. No. 1,422,452; July 11.
Desk-drawer lock. I. A. Stafford. No. 1,422,631; July 11.
Diestock. I. W. Nonneman. No. 1,422,222; July 11.
Dimmer. J. M. Waddell. No. 1,422,393; July 11.
Diphenylguanidine, Making. M. L. Weiss. No. 1,422,506; July 11.
Diphenylamine, Manufacturing. A. P. Tauberg. No. 1,422,494; July 11.
Disconnecting device. J. P. Arndt. No. 1,422,248; July 11.
Dispensing device. E. and G. Kent. No. 1,422,768; July 11.
Distilling carbonaceous material. W. Thomas. No. 1,422,496; July 11.
Distilling process. F. Pollak. No. 1,422,475; July 11.
Door check. A. Reeves. No. 1,422,783; July 11.
Door check. P. Zimbelmann. No. 1,422,163; July 11.
Door lock. A. Gablenz. No. 1,422,690; July 11.
Doorknob lock. J. Nelson. No. 1,422,467; July 11.
Draft coupling. E. Fowler and J. V. Lewis. No. 1,422,194; July 11.
Draft regulator, Automatic. C. J. Sherwood. No. 1,422,311; July 11.
Drafting instrument. C. A. Walters. No. 1,422,641; July 11.
Drill: *See*—
Rock drill.
Drill. A. L. Hawkesworth. Nos. 1,422,264–5; July 11.
Drills and similar tools, Drive for. W. Thompson and W. J. Roy. No. 1,422,322; July 11.
Drum feeder. G. T. Pollard and O. H. Johnson. No. 1,422,618; July 11.
Dynamo-electric machine. E. A. Watson. No. 1,422,154; July 11.
Edger. A. Mereen. No. 1,422,463; July 11.
Egg turner. W. H. Bihn. No. 1,422,250; July 11.
Electric condenser. F. S. Smith. No. 1,422,312; July 11.
Electric generator. L. J. Le Pontois. No. 1,422,584; July 11.
Electric machine, Multidisk. R. H. Wappler. No. 1,422,395; July 11.
Electric machines, Brush holder for. E. Dörffel. No. 1,422,188; July 11.
Electric vacuum apparatus. M. Schenkel and J. Jüst. No. 1,422,481; July 11.
Electrical apparatus, Connection for. C. D. Filkins. No. 1,422,429; July 11.
Electrical connector device. R. B. Benjamin. No. 1,422,170; July 11.
Electrical control apparatus. C. Schwartz. No. 1,422,625; July 11.
Electrical controlling device, Automatic. C. F. P. Carrier. No. 1,422,415; July 11.
Electrical heater resistance element. R. W. Reynolds. No. 1,422,130; July 11.
Electrical transformers for regulating or varying the voltage of the current supplied therefrom. F. E. Berry. No. 1,422,653; July 11.
Electrically-heated devices, Automatic means for controlling. A. F. Brown. No. 1,422,735; July 11.
Electrodes, Clamp mounting for. R. H. Wappler. No. 1,422,396; July 11.
Electromagnetic measuring apparatus. J. C. Stangler. No. 1,422,317; July 11.
Electromagnetic switch, Retarded. A. M. Haslev. No. 1,422,702; July 11.
Elevator: *See*—
Grain elevator.
Elevator or carrier, Parcel and package. J. Collins. No. 1,422,673; July 11.
Elevators and conveyers, Detector for. W. T. Donaldson. No. 1,422,091; July 11.
Elevators, Safety device for. H. McGillivray. No. 1,422,774; July 11.
Engine: *See*—
Internal-combustion engine.
Engine, Air-cooled internal-combustion. R. Kronenberg. No. 1,422,719; July 11.
Engine-starting device. J. Bijur. (Reissue.) No. 15,403; July 11.

Engines, Automatic switch for circuits of internal-combustion. S. Stevens. No. 1,422,318; July 11.
Engines, Counterbalance for the crank shafts of internal-combustion. F. O. Sterrett. No. 1,422,633; July 11.
Engines, Cooling device for internal-combustion. C. Grunwald. No. 1,422,565; July 11.
Engines, Cooling system for internal-combustion. W. H. Farr. No. 1,422,426; July 11.
Engines, Ignition device for internal-combustion. F. A. Smith. No. 1,422,794; July 11.
Engines, Power indicator for internal-combustion. H. Shephard. No. 1,422,485; July 11.
Engines, Undercasing for motor-vehicle. R. D. Riddle. No. 1,422,622; July 11.
Ethylene and other components from gaseous mixtures containing the same, Separating. G. O. Curme, Jr. No. 1,422,184; July 11.
Excavating and loading machine. E. Keast. No. 1,422,767; July 11.
Excavators, Saddle-block structure for. C. E. Gage. No. 1,422,259; July 11.
Extruding machine. J. E. Heller. No. 1,422,356; July 11.
Fare-recording apparatus. P. R. Forman. No. 1,422,686; July 11.
Fastening device. H. F. C. and F. W. Schultz. No. 1,422,482; July 11.
Feed box, Folding. M. Davis. No. 1,422,422; July 11.
Feeding mechanism. J. Sharp. No. 1,422,229; July 11.
Fender: *See*—
Automobile fender.
Fertilizing elements from manure, Extracting. C. E. Gardan. No. 1,422,434; July 11.
Fiber-board box. J. L. Christensen. No. 1,422,540; July 11.
Film holder. J. E. Rodriguez Serra. No. 1,422,785; July 11.

Tire-inflating devices. Tire Inflator Co. No. 158,777; July 11.
Tires, Pneumatic rubber vehicle. Ambassador Tire Corporation. No. 164,290; July 11.
Tires, Rubber or rubber and fabric. Racine Rubber Company. No. 158,951; July 11.
Toilet water, scalp rub, hair tonic, etc. C. T. Naumann. No. 160,717; July 11.
Tooth paste and mouth washes. G. L. Kitchen. No. 160,888; July 11.
Treatment of pyorrhea, etc. National Pyro-Zene Company. No. 160,960; July 11.
Vehicle tops and fittings therefor, Bow sockets for. Ashtabula Bow Socket Company. No. 146,286; July 11.
Wagons, Children's coaster. Sheboygan Coaster & Wagon Works. No. 162,273; July 11.
Washing fluid. R. Kravitz. No. 161,195; July 11.
Wine, Medicinal bitter. Picon & Cie. No. 158,251; July 11.

CLASSIFICATION OF PATENTS

ISSUED JULY 11, 1922.

NOTE.—First number—class, second number—subclass, third number—patent number.

1— 11: 1,422,061
50: 1,422,332
2— 83: 1,422,758
105: 1,422,366
113: 1,422,435
130: 1,422,441
144: 1,422,281

O

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 18TH DAY OF JULY, 1922.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Aikman, Burton S., assignor to National Brake & Electric Company, Milwaukee, Wis. Pump and pumping system. No. 1,423,291; July 18.

Air Reduction Company. (See Metzger, Floyd J., assignor.)

Alexay, Adalbert, Avenal, N. J., assignor to Simplex Paper Accessories Co. Inc., Brooklyn, N. Y. Dispensing device. No. 1,423,063; July 18.

Allen, Anson W. (See Ryding, H. C., and Allen.)

Allen, Frank R. (See Mitchell, William F., assignor.)

Allen, William R., and T. K. McRea, Glacier, Wash.; said McRea assignor to said Allen. Spar-tree protector and fastening device for high-lead blocks. No. 1,423,292; July 18.

Amend, Otto P., New York, N. Y. Carbureting liquid fuels. No. 1,423,064; July 18.

American Multigraph Company, The. (See Chisholm, Clifton, assignor.)

American Stove Company. (See Blackford, Atwell J., assignor.)

Ames, Fletcher, Berkeley, Calif. Tent and bed. No. 1,423,171; July 18.

Amsler, Alfred, Schaffhausen, Switzerland. Tonometer. No. 1,423,293; July 18.

Anderson, Adolph, West Allis, Wis. Card holder. No. 1,423,294; July 18.

Anderson, Adolph F., assignor to Apex Appliance Company, Chicago, Ill. Washing machine. No. 1,423,295; July 18.

Anderson, Charles J., and W. H. Van Dyke, Corning, N. Y. Combination lock. No. 1,423,384; July 18.

Anderson, Charles W., Brooklyn, N. Y. Power control for drive mechanism. No. 1,422,809; July 18.

Anderson, Charles W., Brooklyn, N. Y. Ratchet clutch for drive mechanism. No. 1,423,172; July 18.

Anderson, Gustave F., assignor to Paragon Can & Cap Company, Inc., Brooklyn, N. Y. Cap-feeding device for threading machines. No. 1,423,173; July 18.

Angus, John P., Tonawanda, N. Y. Automatic train-control device. No. 1,423,385; July 18.

Applegate, Edward B., and W. H. Yeomans, assignors to Imperial Furniture Company, Grand Rapids, Mich. Glue mixing and preserving apparatus. No. 1,422,811; July 18.

Appel, Walter D., Cleveland Heights, Ohio. Internal-combustion engine. No. 1,422,810; July 18.

Apex Appliance Company. (See Anderson, Adolph F., assignor.)

Armstrong, Percy A. E., Watervliet, N. Y. Bearing. No. 1,422,812; July 18.

Armstrong, Robert F., Kansas City, Mo. Artificial body member. No. 1,423,296; July 18.

Armstrong, William H., New Orleans, La. Poison-bottle cap. No. 1,423,174; July 18.

Arnold, Sherman L., Woodlawn, Pa. Bed bottom. No. 1,423,065; July 18.

Aronson, Louis V., Newark, N. J. Temperature indicator. No. 1,423,066; July 18.

Asbestos Shingle, Slate & Sheathing Company. (See Mattison, Richard V., assignor.)

Atlas Devices Company. (See Leavitt, F. S., and Staples, assignors.)

Atwood, Harry N., and G. B. Bains, 3d, Reading, Pa. Laminated composite wheel. No. 1,422,813; July 18.

Augustine, Addison E., Hackensack, N. J., assignor to Chester Machine Co., Inc., New York, N. Y. Drying blower for envelope-making machines. No. 1,423,297; July 18.

Austin, James D., and T. Roberts, Harrisburg, Ill. Sign carrier. No. 1,422,911; July 18.

Automatic Takeup Nut Company. (See Gumber, J., and Fearheiley, assignors.)

Automotive Parts Company. (See Schwitzer, Louis, assignor.)

Available Truck Company, The. (See Rath, Joseph J., assignor.)

Averill, Elias M., Sparta, Mich. Collapsible box. No. 1,422,912; July 18.

Aymard, Malcolm F. L. A., Colchester, England. Variable-speed gearing. No. 1,423,067; July 18.

Ayres, Elwood B., and T. H. Rhoads, assignors to Proctor & Schwartz, Incorporated, Philadelphia, Pa. Drier. No. 1,423,298; July 18.

Bains, George B., 3d. (See Atwood, H. N. and Bains.)

Bair, Joseph H., Philadelphia, Pa., assignor of eighteen-sixtieths to J. O. David, Philadelphia, Pa., fifteen-sixtieths to H. S. Knight, Chicago, Ill., and ten-sixtieths to L. H. Taylor Jr., Philadelphia, Pa. Fluid-power transmission apparatus. No. 1,423,386; July 18.

Baker, Ernest F., Manson, Iowa. Dispensing apparatus. No. 1,422,913; July 18.

Baker, Newton D., Secretary of War, trustee. (See Butler, John S., assignor.)

Baker, Newton D., Secretary of War, trustee. (See Josephs, Lyman C., Jr., assignor.)

Baker, William E., West Norwood, England. Ironing machine. No. 1,423,068; July 18.

Ballard, Herbert T., Norristown, Pa. Knitting machine. No. 1,423,175; July 18.

Bardt, Hans, assignor to Sociedad Hidro-Metalurgica, Santiago, Chile. Dissolving or recovering metals. No. 1,423,069; July 18.

Bardt, Hans, assignor to Sociedad Hidro-Metalurgica, Santiago, Chile. Precipitating metals from solutions. No. 1,423,070; July 18.

Bardt, Hans, assignor to Sociedad Hidro-Metalurgica, Santiago, Chile. Manufacturing electrodes. No. 1,423,071; July 18.

Barker, Perry W., Youngstown, Ohio. Automatic feeder for presses. No. 1,422,914; July 18.

Barry, John E. (See Le Merle, F. G., Ullman, and Barry.)

Bartelt, Walter C., Thiensville, Wis. Building block and wall construction. No. 1,422,814; July 18.

Bartholomäus, Rudolf, Berlin, Germany. Means for drilling polygonal holes. No. 1,423,072; July 18.

Basic Products Corporation. (See Popper, Isaac C., assignor.)

Bassett, Reuben T. (See Crossley, Albert D., assignor.)

Batchelder, Asa F., Schenectady, N. Y., assignor to General Electric Company. Resilient wheel. No. 1,423,299; July 18.

Beck Duplicator Company, The. (See Danheiser, T., and Fecher, assignors.)

Beck, George E., Cleveland, Ohio. Separator for storage-battery plates. No. 1,422,815; July 18.

Beeman, Walter E., Laporte, Ind. Demountable rim. No. 1,423,176; July 18.

Beers, Frederick, New Rochelle, and H. L. Powell, assignors to National Biscuit Company, New York, N. Y. Elevating device. No. 1,422,816; July 18.

Beers, Frederick, New Rochelle, and H. L. Powell, New York, N. Y., assignors to National Biscuit Company, New York, N. Y. Drier or oven. No. 1,422,817; July 18.

Behn, Adolph, and J. G. Schmitt, Brooklyn, N. Y. Internal-combustion motor. No. 1,423,073; July 18.

Benjamins, Israel, Brooklyn, N. Y. Rim and tire for automobile and other wheels. No. 1,422,818; July 18.

Benson, David, and G. K. Bruce, Des Moines, Iowa. Ventilated automobile driver's seat. No. 1,422,915; July 18.

Bensine Condensation Co. (See Boecler, Albert, assignor.)

Bergdoll, Louis J., now, by judicial change of name L. J. Bergson, Philadelphia, Pa. Phonographic sound box. No. 1,423,387; July 18.

Betcher, Gotfried, Portland, Oreg. Logging hook. No. 1,423,301; July 18.

Betts, William H., Portland, Oreg. Screen gasket. No. 1,422,916; July 18.

Bilton Machine Tool Company, The. (See Hoagland, Frank O., assignor.)

Birchbauer, Ferdinand, assignor of one-half to J. H. Fallin, Baltimore, Md. Internal-combustion engine. No. 1,423,477; July 18.

Bisby, Sunker Aq., New York, N. Y. Line-slug-casting machine. No. 1,423,388; July 18.

Bjorkman, Axel W., Brooklyn, N. Y. Soldering device. No. 1,422,917; July 18.

Blackford, Atwell J., Cleveland, Ohio, assignor to American Stove Company, St. Louis, Mo. Wickless oil burner. No. 1,423,302; July 18.

Blaicher, Ernest C., Irvington, N. J., assignor to Interstate Smelting and Refining Co., Inc., Newark, N. J. Finger ring. No. 1,422,819; July 18.

Blake, John H., Jr. (See Hewitt, E. R., and Blake.)

Blakeslee, George S., Chicago, Ill. Machine for washing boxes, cans, and other articles. No. 1,423,300; July 18.

Blakeman, William N., Jr., Mount Vernon, N. Y. Paint vehicle. No. 1,423,389; July 18.

Blakeman, William N., Jr., Mount Vernon, N. Y. Paint composition. No. 1,423,390; July 18.

Blakeman, William N., Jr., Mount Vernon, N. Y. Pigment composition for paints. No. 1,423,391; July 18.
Blakeman, William N., Jr., Mount Vernon, N. Y. Oil. No. 1,423,392; July 18.
Block, Alexander, New York, N. Y. Lock. No. 1,422,820; July 18.
Blything, John F. (See Glaser, Oscar L., assignor.)
Boardman, Charles S., and C. C. Conkling, deceased, Buffalo; L. C. Conkling, executrix, assignors to Lackawanna Steel Company, Lackawanna, N. Y. Sheet-piling wall construction. No. 1,422,821; July 18.
Boecler, Albert, Malmö, Sweden, assignor to Benzine Condensation Co., Inc. Machine for applying solutions of rubber or the like to fabrics. No. 1,422,822; July 18.
Bohmker, John C., Bradley, assignor to Sears, Roebuck and Company, Chicago, Ill. Disk bearing. No. 1,422,918; July 18.
Bolger, John E. (See Condy, Alice, assignor.)
Bonnelycke, Emil. (See Karr, Henry C., assignor.)
Bonsall, Charles D., Parnassus, Pa., assignor to W. P. Murphy, New York, N. Y. Reenforced car end-wall structure. No. 1,422,823; July 18.
Bose, Monte H., Indianapolis, Ind. Radiator-petcock attachment. No. 1,422,919; July 18.
Boston, Arvel A., New Martinsville, W. Va. Battery filler. No. 1,423,393; July 18.
Bosworth, George P., assignor, by mesne assignments, to Hemphill Company, Central Falls, R. I. Circular-stocking machine. No. 1,423,177; July 18.
Bowman, Jack J., Portland, Oreg. Angle bar and nut lock. No. 1,423,394; July 18.
Brabson, Tom, Brooklyn, N. Y. Valve. No. 1,423,178; July 18.
Braden, Charles H., assignor to National Airless Tire Company, Los Angeles, Calif. Airless tire. No. 1,423,074; July 18.
Bradley, Ralph A. (See McNally, J. F., and Bradley.)
Brand, George P., New York, N. Y. Tracking device for player pianos. No. 1,422,824; July 18.
Brandenburg, Francis C., Piqua, Ohio. Staggered tooth cutter for dressing abrasive elements. No. 1,423,075; July 18.
Branham, Hugh M., Brooklyn, N. Y. Depth gear for torpedoes. No. 1,423,179; July 18.
Breeding, Andrew J. (See Burke, P. W., and Breeding.)
Briggs & Stratton Company. (See Soreng, Edgar M., assignor.)
Brill, J. G., Company, The. (See Brooks, James A., assignor.)
Brobst, William E., Jr., Noblesville, Ind. Equalizer for vehicle suspension. No. 1,423,180; July 18.
Brooks, James A., assignor to The J. G. Brill Company, Philadelphia, Pa. Safety gate for cars. No. 1,423,303; July 18.
Brooks, Raymond, Benson Mines, N. Y. Theater seat. No. 1,422,825; July 18.
Broomell, Albert P., deceased, York, Pa.; J. L. Broomell, executrix. Oil-burning apparatus. No. 1,423,181; July 18.
Broomell, Janet L., executrix. (See Broomell, Albert P.)
Brown, Carlton E., Chicago, Ill. Bracket for printometers. No. 1,423,182; July 18.
Brown, Edward W., assignor of nine-tenths to The Brown Motor Company, Sparks, and one-tenth to R. P. Roope, Chandler, Okla. Motor. No. 1,423,395; July 18.
Brown, Frank O., St. Louis, Mo. Electrically-heated tongs. No. 1,422,826; July 18.
Brown Instrument Company, The. (See Brown, R. P., and Wagner, assignors.)
Brown Motor Company, The, et al. (See Brown, Edward W., assignor.)
Brown, Richard P., and F. Wagner, assignors to The Brown Instrument Company, Philadelphia, Pa. Multiple-recording instrument. No. 1,422,920; July 18.
Brown, William I., Syracuse, N. Y. Attachment for violins and analogous string instruments. No. 1,422,827; July 18.
Bruce, George, K. (See Benson, D., and Bruce.)
Brundage, Harry, San Francisco, Calif., assignor to G. W. Koerner, New York, N. Y. Paper file and binder. No 1,423,076; July 18.
Bryant Electric Company, The. (See Catlin, Hoyt, assignor.)
Buckham, George T. (See Dawson, A. T., and Buckham.)
Budd Wheel Company. (See Ledwinka, Joseph, assignor.)
Buller, Charles M., assignor to L. J. Mueller Furnace Company, Milwaukee, Wis. Pipeless furnace. No. 1,422,828; July 18.
Burdon, William M., assignor to Burdons Limited, Bellshill, Scotland. Apparatus for the liquid-fuel firing of steam boilers. No. 1,423,183; July 18.
Burdons Limited. (See Burdon, William M., assignor.)
Burke, Peter W., and A. J. Breeding, assignors of one-third to F. Rogers, Bremerton, Wash. Oiling device. No. 1,423,077; July 18.
Burner, William L. (See Cotton, J. H., and Burner.)
Burns, William D., Amenia, N. Y. Roller bearing. No. 1,423,304; July 18.
Burton, Charles S., Oak Park, Ill. Container for music rolls and the like. No. 1,422,829; July 18.
Bush Electric Company, The. (See Bush, Hazel B., assignor.)
Bush, Hazel B., Bedford, assignor to The Bush Electric Company, Cleveland, Ohio. Fuse emplacing and removing implement. No. 1,422,830; July 18.
Butler, John S., U. S. Army, assignor to N. D. Baker, Secretary of War, trustee. Luminous gun sight. No. 1,423,184; July 18.
Bylund, Eric, Winnipeg, Manitoba, Canada. Vehicle tire. No. 1,422,921; July 18.
Cable Company, The. (See Hagey, James C., assignor.)
Cady, Willis E., Chicago, Ill. Air-brake handle. No. 1,423,185; July 18.
Calandra, Vincent, Buffalo, N. Y. Budding implement. No. 1,423,491; July 18.
Callahan, Timothy F., Squantum, Mass. Liquid measuring and dispensing apparatus. No. 1,423,305; July 18.
Campbell, Bert L., Chicago, Ill. Automatic cut-out. No. 1,422,923; July 18.
Cameron, Burr S., Douglassville, Tex. Airplane landing director. No. 1,422,922; July 18.
Camp, William W., Denver, Colo. Vermin exterminator. No. 1,422,831; July 18.
Cantwell, Edward J., Kansas City, Mo. Hay stacker. No. 1,422,924; July 18.
Caplan, Harry, Detroit, Mich. Vehicle fender. No. 1,423,186; July 18.
Caplan, Harry, Detroit, Mich. Automobile fender. No. 1,423,187; July 18.
Cathcart, Oswald J., Newburgh, N. Y. Vanity case. No. 1,423,079; July 18.
Catlin, Hoyt, assignor to The Bryant Electric Company, Bridgeport, Conn. Electric switch. No. 1,423,306; July 18.
Caracristi, Virginius Z., Bronxville, N. Y., and A. F. Wallibillich, Newark, N. J. Valve cut-off and speed indicator for locomotives. No. 1,422,832; July 18.
Carbide & Carbon Chemicals Corporation. (See Curme, George O., Jr., assignor.)
Cardin, William O., assignor to J. W. Freeman, Joplin, Mo. Dehydrator. No. 1,423,188; July 18.
Carlson, Edward L., Denver, Colo. Music-roll cabinet. No. 1,423,078; July 18.
Carlson, John W., assignor to Chicago Novelty Mfg. Co., Chicago, Ill. Toy. No. 1,422,833; July 18.
Cary Manufacturing Co. (See Cary, Spencer C., assignor.)
Cary, Spencer C., assignor to Cary Manufacturing Co., Brooklyn, N. Y. Bundled wire. No. 1,423,478; July 18.
Carter, James D., Chicago, Ill. Proportional scaling instrument. No. 1,422,925; July 18.
Central States Bridge Company. (See Riley, Austin A., assignor.)
Chadwick, George C., Melbourne, Victoria, Australia. Unloading apparatus. No. 1,422,926; July 18.
Champlin, Herbert H. (See Davis, M. L., and Cook, assignors.)
Chausse, Wilfrid G., Detroit, Mich. Safety device for gas generating and heating apparatus. No. 1,423,080; July 18.
Cherry, Lester A., Kenmore, N. Y. Regulator for vapor-heating systems. No. 1,423,492; July 18.
Chester Machine Co. Inc. (See Augustine, Addison E., assignor.)
Chew, Manley, Midland, Ontario, Canada. Fiber board. No. 1,423,081; July 18.
Chew, Manley, Midland, Ontario, Canada. Apparatus for producing fiber board. No. 1,423,082; July 18.
Chew, Manley, Midland, Ontario, Canada. Producing fiber board. No. 1,423,083; July 18.
Chicago Novelty Mfg. Co. (See Carlson, John W., assignor.)
Chisholm, Clifton, assignor to The American Multigraph Company, Cleveland, Ohio. Impression mechanism for addressing machines. No. 1,423,189; July 18.
Chromy, George, deceased, Stewart, Minn., J. Chromy, administrator. Automatic train-stopping means. No. 1,423,396; July 18.
Chromy, Joseph, administrator. (See Chromy, George.)
Cilley, Vrl I. (See Freeman, W. F., and Cilley.)
Clark, John G., Holyoke, Mass. Computing device. No. 1,423,493; July 18.
Clavey, Gilbert A., Battersea Park, England. Machine for planing or machining propeller blades. No. 1,423,307; July 18.
Clements, George, assignor to Clements Mfg. Co., Chicago, Ill. Blower. No. 1,423,190; July 18.
Clements Mfg. Co. (See Clements, George, assignor.)
Clevenger, James L., Columbus, Ind. Leather-sole-softening machine. No. 1,422,927; July 18.
Codman, Russell, Jr. (See Rollins, William T., assignor.)
Colby, Frank W., Chicago, Ill., assignor to The Kansas City Spiral Pipe Company. Apparatus for manufacturing pipe. No 1,422,834; July 18.
Coleman, William O., Indianapolis, Ind. Lock. No. 1,423,397; July 18.
Colling, George M., Carrington, N. Dak. Combined tow and push bar. No. 1,422,928; July 18.
Collison, John G., J. W. Wright, H. M. Filbert, Dayton, Ohio, and W. Frank, Miamisburg, Ohio, assignors to The Stemco Engineering Company, Dayton, Ohio. Fluid gauge. No. 1,423,191; July 18.
Colt, Samuel S., Orange, N. J. Staging for buildings and other structures. No. 1,423,308; July 18.
Combustion Engineering Corporation. (See Van Brunt, John, assignor.)

Compression Tube & Tire Co. (See Lobel, Herman, assignor.)
Condy, Alice, Ashfield, near Sydney, assignor to J. E. Bolger, Sydney, New South Wales, Australia. Kitchen utensil for broiling and toasting food. No. 1,422,835; July 18.
Conkling, Cloud C. (See Boardman, C. S., and Conkling.)
Conkling, Lucile C., executrix. (See Boardman, C. S., and Conkling.)
Connell, Edward F. and J. F., Florence, Mass. Stop motion. No. 1,423,398; July 18.
Connell, John F. (See Connell, Edward F. and J. F.)
Converse, Clinton J., Bridgeport, Conn. Milling tool. No. 1,423,192; July 18.
Cooke, Richard T., Indianapolis, Ind. Power-transmission mechanism. No. 1,422,929; July 18.
Cook, Glen W. (See Davis, M. L., and Cook.)
Cooper, Augustus S., Santa Barbara, Calif. Carbon black and producing same. No. 1,423,193; July 18.
Cooper, James D., Toronto, Ontario, Canada. Railway switch. No. 1,422,836; July 18.
Corado, Charles E., Winnipeg, Manitoba, Canada. Hydrocarbon burner. No. 1,422,930; July 18.
Corbett, Claude M., Fort Arthur, Tex. Locking device. No. 1,423,194; July 18.
Corcoran, Thos. J., Lamp Company, The. (See Kuen, Eugene A., assignor.)
Corell, Martin. (See Krinselin, G., and Corell.)
Costanino, Alix, Providence, R. I. Rubber heel. No. 1,423,390; July 18.
Cotton, James H., and W. L. Burner, assignors to The Kilbourne & Jacobs Manufacturing Company, Columbus, Ohio. Truck coupling. No. 1,423,084; July 18.
Cox, Ora M., Manayka, and C. C. Rose, Clarksburg, W. Va. Sheet-glass-drawing machine. No. 1,423,195; July 18.
Craig Chemical Corporation. (See Craig, William E., assignor.) (Reissue.)
Craig, Louis B., Davenport, Iowa. Lunette bracket. No. 1,423,196; July 18.
Craig, William E., Joplin, Mo., assignor, by mesne assignments, to Craig Chemical Corporation, Cleveland, Ohio. Treatment for venereal diseases. (Reissue.) No. 15,411; July 18.
Cramer, Christopher E., Hackensack, N. J. Attachment for paper-making machines. No. 1,423,400; July 18.
Crandall, Irving B., Nahant, Mass., assignor to Western Electric Company, Incorporated, New York, N. Y. Connecting transmitters to vacuum-tube amplifiers. No. 1,422,837; July 18.
Crane, Herbert W., Chicago, Ill. Door-controlling device. No. 1,422,931; July 18.
Critchlow, Edward C., Orcutt, Calif. Pump plunger. No. 1,423,197; July 18.
Crossley, Albert D., assignor of one-half to R. T. Bassett, Hartford, Conn. Spare-tire carrier. No. 1,422,932; July 18.
Crossley, David, Trenton, N. J. Power press for tile, mosaic, and the like. No. 1,423,401; July 18.
Crossley, Kenneth L., and W. Le P. Webb, Manchester, England. Internal-combustion engine. No. 1,423,085; July 18.
Crossley, Kenneth L., and W. Le P. Webb, Manchester, England. Internal-combustion engine. No. 1,423,086; July 18.
Crossley, Kenneth L., and W. Le P. Webb, Manchester, England. Internal-combustion engine. No. 1,423,087; July 18.
Crossley, Kenneth L., and W. Le P. Webb, Manchester, England. Internal combustion oil engine. No. 1,423,088; July 18.
Cross, Roy, Kansas City, Mo., assignor to Gasoline Products Company, Inc., New York, N. Y. Treating petroleum oil. No. 1,423,500; July 18.
Curme, George O., Jr., Pittsburgh, Pa., assignor to Carbide & Carbon Chemicals Corporation. Chlorinating gaseous hydrocarbons and recovering products therefrom. No. 1,422,838; July 18.
Curtis, Egbert H., Spring Valley, N. Y. Electrical conduit system. No. 1,423,309; July 18.
Curtiss Aeroplane and Motor Corporation. (See Kirkham, Charles B., assignor.)
Curtiss, George E. (See Smith C. F., and Curtiss.)
Cushman, Allerton S., Washington, D. C. Producing color effects. No. 1,423,089; July 18.
Danheiser, Theodore, New York, and F. F. Fecher, Brooklyn, N. Y., assignors to The Beck Duplicator Company. Duplicator. No. 1,422,934; July 18.
Darling, Mary G., Washington, D. C. Protector. No. 1,423,402; July 18.
Davenport, Thomas L., Everett, Wash. Vacuum jet and system of operating the same. No. 1,423,198; July 18.
David, James O., et al. (See Blair, Joseph H., assignor.)
Davis, Alonzo E., Ashtabula, Ohio. Window-sash fastener. No. 1,423,310; July 18.
Davis, Melvin L., and G. W. Cook, assignors of one-third to H. H. Champlin, Enid, Okla. Pressure-controlled cut-off. No. 1,423,403; July 18.
Dawson, Arthur T., and G. T. Buckham, assignors to Vickers Limited, Westminster, London, England. High-angle ordnance. No. 1,423,404; July 18.
Dawson, Robert K., Guelph, Ontario, Canada. Chair base. No. 1,422,933; July 18.
Dayeh, Louis, Philadelphia, Pa. Combination toothbrush and dentifrice holder. No. 1,423,405; July 18.
Dayton Steel Racquet Company, The. (See Larned, William A., assignor.)
Dean, Murray F., St. Louis, Mo. Ventilating knob for cooking vessels. No. 1,422,935; July 18.
De Clamecy, Philippe, assignor to B. F. Sturtevant Company, Boston, Mass. Humidifying air. No. 1,422,839; July 18.
De Clamecy, Philippe, Boston, Mass., assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting machine. No. 1,423,311; July 18.
De Grasse, Consuélo, née Fould, Paris, France. Jointed lay figure, model, or doll. No. 1,422,840; July 18.
Delano, James K., New York, N. Y. Electric-motor vehicle. No. 1,423,090; July 18.
De Laval Separator Company, The. (See Hall, Selden H., assignor.)
De Laval Separator Company, The. (See Hopgood, Cyrus H., assignor.)
Delph, Asa G., and R. C. Hemphill, Kansas City, Mo. Lock. No. 1,422,936; July 18.
Derr, Thomas S., Brookline, Mass. Fluid-fuel burner. No. 1,423,312; July 18.
De Voe, Albert H., Westfield, N. J., assignor to The Singer Manufacturing Company. Seam for sewed articles. No. 1,423,479; July 18.
Dey, William H., Jersey City, N. J., assignor to United States Radium Corporation. Luminous article and making the same. No. 1,422,841; July 18.
Dedela, August, Vancouver Island, British Columbia, Canada. Fiber saver. No. 1,423,199; July 18.
De Zeng, Henry L., Moorestown, N. J. Optical instrument. No. 1,423,091; July 18.
De Zeng, Henry L., Moorestown, N. J. Optical instrument. No. 1,423,092; July 18.
Dixon, George B. (See Rivera, W. L., and Dixon.)
Donahue, George, Hyde Park, assignor, by mesne assignments, to Frederick L. Emery, Lexington, Mass. Car door. No. 1,423,200; July 18.
Donley, Bert N., Muscatine, Iowa. Detachable handle. No. 1,423,406; July 18.
Dorcheff, George, alias G. Theodore, Cincinnati, Ohio. Cabbage cutter. No. 1,422,937; July 18.
Dorsey, Frank M. (See Lenher, V., and Dorsey.)
Dorsey, Parmer, Wichita, Kans., assignor to Henderson-Willis Welding and Cutting Company, St. Louis, Mo. Gas generator. No. 1,422,938; July 18.
Dougall, Percy, Kidderminster, England. Internal-combustion engine. No. 1,423,407; July 18.
Dougall, Wilfrid, Montreal, Quebec, Canada. Reading ribbon in signaling machines. No. 1,422,842; July 18.
Douglas, Philip F., Minnedosa, Manitoba, Canada. Bobbin winder. No. 1,423,313; July 18.
Dover Manufacturing Company, The. (See Stransky, Emil, assignor.)
Down, Edith B., Watertown, N. Y. Attachment for beds. No. 1,422,939; July 18.
Duckman, Arthur M., London, England. Gas-fired pottery kiln. No. 1,423,408; July 18.
Dulaney, H. S. (See Spencer, Charles H., assignor.)
Dunham Company, The. (See Griswold, R. H., and Powell, assignors.)
Dunmire, Charles W., and S. C. Enck, Philadelphia, Pa. Washing machine. No. 1,422,940; July 18.
Ebbenga, Georg L., Sibley, Iowa. Water heater. No. 1,422,941; July 18.
Eberly, Sylvester, assignor to D. A. Yoder, Toledo, Ohio. Container-arranging apparatus. No. 1,422,942; July 18.
Eberly, Sylvester, assignor to D. A. Yoder, Toledo, Ohio. Can-righting machine. No. 1,422,943; July 18.
Eckroat, Frank P. (See Sevier, C. D., and Eckroat.)
Economy Shoe Machine Co. (See Terry, George O., assignor.)
Eddington, A. T. (See Pokorny, James T., assignor.)
Edmondson, Harvey S., Spokane, Wash. Calculator. No. 1,422,944; July 18.
Edwards, Karl B., London, England. Manufacture of arsenical compounds. No. 1,422,945; July 18.
Egersdörfer, Fritz, Charlottenburg, Germany. Rotary machine. No. 1,422,946; July 18.
Ehret, Cornelius D. (See McCaa, David G., assignor.)
Eller, Orlando S., Long Beach, Calif. Shoe-button remover. No. 1,422,947; July 18.
Ellis, Herbert R., Fredericksburg, Va. Card and sign or poster painter's workbench. No. 1,423,201; July 18.
Emery, Frederick L. (See Donahue, George, assignor.)
Enck, Schuyler C. (See Dunmire, C. W., and Enck.)
Ende, Edwin A. (See Norton, G. F., and Ende.)
Erni, Walter, Milwaukee, Wis. Driving mechanism for washing machines. No. 1,422,843; July 18.
Eubank, Nathan A., Nashville, Tenn. Tire-rim tool. No. 1,422,948; July 18.
Evans, John E., Chicago, Ill. Brick. No. 1,422,949; July 18.
Fairless, Victor H., Trenton, Tenn. Hose protector. No. 1,423,409; July 18.
Fallin, Joseph H. (See Birchbauer, Ferdinand, assignor.)
Fanning, John J. (See Grant, A. G., and Fanning.)
Farbwerke vorm. Meister Lucius & Brüning. (See Krinselin, G., and Corell, assignors.)
Fargo, Charles R., and P. O. Unger, assignors to Irving-Pitt Manufacturing Company, Kansas City, Mo. Loose-leaf binder and stand therefor. No. 1,422,950; July 18.
Farmer, Clyde C., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Automatic train-speed-control device. No. 1,422,844; July 18.

Fate, Daisy L., executrix. (See Fate, John L.)
Fate, John L., deceased; D. L. Fate, executrix, assignor, by mesne assignments, to C. R. Gleason, Chicago, Ill. Apparatus for sealing vacuum jackets. No. 1,423,093; July 18.
Faurot, Henry, Jr., assignor to Western Felt Works, Chicago, Ill. Window-mounting device. No. 1,422,951; July 18.
Fawver, William J., Patesville, Ky. Clock escapement. No. 1,423,410; July 18.
Fearheiley, Fred. F. (See Gumber, J., and Fearheiley.)
Fecher, Frederick F. (See Danheiser, T., and Fecher.)
Fellows, Perry E., Rochester, N. Y. Tightening device for antiskid chains. No. 1,423,202; July 18.
Ferguson, John L., Joliet, assignor to The Quaker Oats Company, Chicago, Ill. Carton-sealing machine. No. 1,423,094; July 18.
Ferguson, John L., Joliet, assignor to The Quaker Oats Company, Chicago, Ill. Conveyer. No. 1,423,095; July 18.
Ferguson, John L., Joliet, assignor to The Quaker Oats Company, Chicago, Ill. Transfer mechanism. No. 1,423,096; July 18.
Ferguson, John L., Joliet, assignor to The Quaker Oats Company, Chicago, Ill. Carton-handling apparatus. No. 1,423,097; July 18.
Ferguson, John L., Joliet, Ill. Device for operating on containers. No. 1,423,098; July 18.
Feuillette, Emile, assignor to La Societe des Etablissements E. Feuillette, Boulogne-sur-Seine, France. Tractor wheel. No. 1,422,952; July 18.
Finch, Stanley W., Washington, D. C. Liquid-level indicator. No. 1,423,411; July 18.
Fiechtl, Ferdinand, Cherryvale, Kans. Charging car. No. 1,423,314; July 18.
Filbert, Harry M. (See Collison, J. G., Wright, Filbert, and Frank.)
Fiske, David, Chicago, Ill. Fish stringer. No. 1,423,203; July 18.
Fitzsimmons, Norman J. (See Tiffany, Gerald W., assignor.)
Fonner, Howard L., Altoona, Pa. Shuttle attachment. No. 1,423,089; July 18.
Foster, Ernest H., Dongan Hills, assignor to Power Specialty Company, New York, N. Y. Superheater. No. 1,422,847; July 18.
Frank, Walter. (See Collison, J. G., Wright, Filbert, and Frank.)
Frank, William, assignor of one-half to W. Taylor, Vancouver, British Columbia, Canada. Railway-car water closet. No. 1,422,953; July 18.
Franks, George M., St. Paul, Minn. Display device. No. 1,422,845; July 18.
Fraser, Perry D., Ridgewood, N. J. Transfer reel. No. 1,422,964; July 18.
Fredrikson, Walter O., et al., trustees. (See McArthur, Robert C., assignor.)
Freeman, J. W. (See Cardin, William O., assignor.)
Freeman, Marshall J., East Orange, N. J. Spark intensifier. No. 1,423,204; July 18.
Freeman, William F., and Y. I. Cilley, Grand Rapids, Mich. Direction indicator. No. 1,422,965; July 18.
Fried. Krupp Aktiengesellschaft Germaniawerft. (See Techel, Hans, assignor.)
Fried. Krupp Aktiengesellschaft. (See Krüger, Paul, assignor.)
Fritts, James C., Scranton, Pa. Lock for sliding doors. No. 1,422,846; July 18.
Frost, Jesse M. (See Souders, H. V., and Frost.)
Fulton Iron Works Company. (See Hurter, Henry, assignor.)
Gaar, James M., Richmond, Ind. Vehicle spring. No. 1,422,966; July 18.
Gagarine, Prince E. (See Karycheff, V., and Gagarine.)
Gallagher, Robert B., and R. C. Young, Winnipeg, Manitoba, Canada. Bedspring attachment. No. 1,423,100; July 18.
Gams, Alfons, and E. Wybert, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Preparing optically active aromatic aminoalcohols. No. 1,423,101; July 18.
Garner, Herman H., Pomona, Calif. Air cleaner. No. 1,423,412; July 18.
Garvey, Edward S., Clayton, Mo. Ink and making the same. No. 1,422,957; July 18.
Gasoline Products Company. (See Cross, Roy, assignor.)
Gatchell, George S., Roselle Park, N. J., assignor to The Singer Manufacturing Company. Sewing machine. No. 1,423,205; July 18.
Geddes, John H., Waterbury, Conn. Phonograph record. No. 1,423,206; July 18.
Geis, Leopold H., Mount Arlington, N. J., assignor to New York Mackintosh Clothing Co., New York, N. Y. Rain cape. No. 1,423,315; July 18.
Gelin, Charles A., assignor to W. C. Lewis, Chicago, Ill. Journal packing. No. 1,423,207; July 18.
General Electric Company. (See Batchelder, Asa F., assignor.)
General Electric Company. (See Laise, Clemens A., assignor.)
General Electric Company. (See Lenher, V., and Dorsey, assignors.)
Gerken, Heinrich W., Wandshek, Germany. Gear for well pumps. No. 1,423,102; July 18.
Gerlinger, Carl F., Dallas, Oreg. Lumber carrier. No. 1,422,958; July 18.
Gerstner, Harry H., Dayton, Ohio. Talking-machine disk-record cabinet. No. 1,422,959; July 18.
Getsinger, William J., Los Angeles, Calif. Tie retainer. No. 1,423,208; July 18.
Gianque, Jules H., and C. Haesler, Le Locle, Switzerland. Friction clutch. No. 1,423,413; July 18.
Gibbs, Edward F-G., Washington, D. C. Advancing cutter-boring tool. No. 1,423,209; July 18.
Gibson, Edward T., Brooklyn, N. Y. Automobile intention-signaling device. No. 1,422,960; July 18.
Gillig, Chester H. and L., San Francisco, Calif. Automobile side curtain. No. 1,423,210; July 18.
Gillig, Leo. (See Gillig, Chester and L.)
Gill, Julius Q., Peoria, Ill. Cooling compound for hot journal boxes and producing the same. No. 1,423,105; July 18.
Giovagnoli, John, assignor of two-thirds to Roberts, Nash & Company, Inc., Flushing, N. Y. Mortar spreader. No. 1,423,316; July 18.
Glaeser, Walter, Brooklyn, assignor to Potash Extraction Corporation, New York, N. Y. Extraction of potassium compounds. No. 1,422,848; July 18.
Glaser, Oscar L., assignor of one-half to J. F. Blything, Oak Park, Ill. Safety razor. No. 1,423,414; July 18.
Glass, Harry, Jamaica, N. Y. Self-adjusting bearing. No. 1,422,961; July 18.
Glass, Matthew, Philadelphia, Pa. Holder. No. 1,423,415; July 18.
Glasser, Richard, San Francisco, Calif. Extensible ladder for fire escapes. No. 1,423,104; July 18.
Gleason, C. Roy. (See Fate, John L., assignor.)
Gleanam Embroidery Company. (See Hersog, Louis, assignor.)
Goddard, Paul B. (See Minshull, Robert, assignor.)
Godkevitch, Abraham H., New York, N. Y. Wooden shipping case. No. 1,423,317; July 18.
Gomes, Arthur E., Peoria, Ill. Mattress. No. 1,423,416; July 18.
Gorman, John F., Spokane, Wash. Display-rack. No. 1,423,417; July 18.
Goss, Charles E. (See Goss, George W. and C. E.)
Goss, George W. and C. E., Baltimore, Ohio. Wagon gate construction. No. 1,422,962; July 18.
Government of the United States represented by the Secretary of the Navy. (See Scheele, Walter T., assignor.)
Grainger, William H., Toronto, Ontario, Canada. Tie holder. No. 1,422,849; July 18.
Grant, Arthur G., and J. J. Fanning; said Fanning assignor to J. V. Grant, Yardley, Wash. Railway-switch lock. No. 1,422,963; July 18.
Grant, John V. (See Grant, A. G., and Fanning, assignors.)
Grasselli Chemical Company. (See Jordan, Heinrich, assignor.)
Greenbaum, Harry L., New York, N. Y. Device for use in coloring bulbs. No. 1,422,964; July 18.
Green Engineering Company. (See Strong, Arthur P., assignor.)
Green, Oliver, Michigan City, Ind. Signaling device for railways. No. 1,423,318; July 18.
Greenstreet, Jason H., Indianapolis, Ind. Tool for closing wire-bound boxes. No. 1,422,965; July 18.
Greenstreet, Jason H., Indianapolis, Ind. Package blank and package. No. 1,422,966; July 18.
Greif Brothers Cooperage Company, The. (See Raible, John R., assignor.)
Greitzer, Meyer, New York, N. Y. Lamp shade. No. 1,423,319; July 18.
Grikscheit, William, assignor of one-half to T. B. Mothersill, Windsor, Ontario, Canada. Drain plug. No. 1,423,418; July 18.
Griswold, Ray H., Cleveland, and E. J. Powell, Berea, Ohio, assignor to The Dunham Company. Tractor-track obliterator. No. 1,422,967; July 18.
Gruenberg, Walter A., and D. Miller, Detroit, Mich., assignors to The Miller Transmission Company, New York, N. Y. Milling machine. No. 1,422,850; July 18.
Gruetter, John R. (See Loew, C. H., and Gruetter.)
Gumber, Joseph, and F. F. Fearheiley, assignors to Automatic Takeup Nut Company, East Moline, Ill. Compensating device. No. 1,423,480; July 18.
Gushwa, Charles, Elkhart, Ind. Wire-fence tightener. No. 1,423,211; July 18.
Gustafson, Adolph P., assignor to M. Schuls Company, Chicago, Ill. Pneumatic action for player pianos and the like. No. 1,423,505; July 18.
Haas, Louis, assignor to the Société Chimique de la Grande Paraisse, Paris, France. Preparation of aromatic nitramines. No. 1,423,494; July 18.
Haas, Rupert, St. Louis, Mo. Utensil-handling device for bake ovens. No. 1,423,320; July 18.
Hacker, Henry T., Lovell, Wyo. Gate hinge. No. 1,423,321; July 18.
Haesler, Charles. (See Gianque, J. H., and Haesler.)
Haeseler, Charles H., Philadelphia, Pa. Condiment dispenser or container. No. 1,423,322; July 18.
Hafertepen, Edward B., Cincinnati, Ohio. Boot and shoe. No. 1,422,968; July 18.
Hagey, James C., assignor of one-half to The Cable Company, Chicago, Ill. Expression device for automatic musical instruments. No. 1,422,969; July 18.

Halasha, Charles, Milwaukee, Wis. Basket. No. 1,422,419; July 18.
Halfpenny, William E., Juniata, Pa. Tire. No. 1,422,851; July 18.
Hall, Akos J., Cleveland, Ohio. Stair landing or platform. No. 1,423,481; July 18.
Hall, Dean S., Marshfield, Vt. Comb frame for beehives. No. 1,423,212; July 18.
Hall, Selden H., Poughkeepsie, assignor to The De Laval Separator Company, New York, N. Y. Centrifugal machine. No. 1,422,852; July 18.
Hammontre, John H., Los Angeles, Calif. Derailer. No. 1,423,495; July 18.
Hancock, John, et al. (See Lemons, Joseph F., assignor.)
Haney, Lewis E., Los Angeles, Calif. Pump. No. 1,423,496; July 18.
Hanford, Orrin A., Pasadena, Calif. Portable hand tool for capping, sealing, and unsealing bottles. No. 1,422,970; July 18.
Hansen, Charles C., Forest Park, assignor to Refrigerating Specialties Company, Chicago, Ill. Controlling mechanism for refrigerating apparatus. No. 1,422,853; July 18.
Hansen, Svend, New York, N. Y. Bottle cap. No. 1,423,105; July 18.
Hansen, Svend, New York, N. Y. Bottle cap. No. 1,423,106; July 18.
Hanson, John, Worcester, Mass. Woodworking machine. No. 1,422,971; July 18.
Hantsch, Alfred P., New Brunswick, N. J. Plate envelope. No. 1,423,420; July 18.
Hapgood, Cyrus H., Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y. Centrifugal machine. No. 1,422,856; July 18.
Harding, Hiram R., assignor to The Harding Peeling Machine Company, Inc., Baltimore, Md. Machine for skinning and coring tomatoes. No. 1,423,421; July 18.
Harding Peeling Machine Company, The. (See Harding, Hiram R., assignor.)
Harkness, George K. (See Scruby, B., and Harkness.)
Harman, Irwin O., Hillsboro, Kans. Shoehorn. No. 1,423,422; July 18.
Harrington, Harry A., Cuyahoga Falls, Ohio. Electrical generating system. No. 1,423,107; July 18.
Hart, Max G., Elyria, Ohio. Double cushioned shoe heel or lift. No. 1,422,854; July 18.
Haskell, Samuel, Brooklyn, N. Y. Shimmy doll. No. 1,422,855; July 18.
Haynsworth, Julius D., Mansfield, Ohio, assignor to Westinghouse Electric Products Company. Electric oven. No. 1,422,857; July 18.
Hazard, George E., assignor to Kellogg Manufacturing Company, Rochester, N. Y. Valve construction. No. 1,423,223; July 18.
Heany, John A., New Haven, Conn. assignor, by mesne assignments, to Rockbestos Products Corporation. Clutch mechanism. No. 1,423,108; July 18.
Heath, Francis, assignor to The Huddersfield, England, Heath Wrapper Company, Littlemoor, Mirfield, England. Wrapping machine. No. 1,423,224; July 18.
Heath Wrapper Company. (See Heath, Francis, assignor.)
Heberling, John, Rochester, N. Y. Printing machine. No. 1,423,535; July 18.
Hester, Charles M., Butler, Pa. Oil-well packer. No. 1,423,213; July 18.
Heilman, Guy C., Philadelphia, Pa. Melting tank. No. 1,422,858; July 18.
Heilen, Jacob L., Kloften, Norway. Producing wheel. No. 1,423,109; July 18.
Hemphill Company. (See Bosworth, George P., assignor.)
Hemphill, Robert C. (See Delph, A. G., and Hemphill.)
Henderson-Willis Welding and Cutting Company. (See Dorsey, Parmer, assignor.)
Henry, William, Philadelphia, Pa. Dustproof oil ring. No. 1,422,972; July 18.
Herbst, Kaj T. (See Lundsgaard, C. J. S., and Herbst.)
Hertzberg, William, Brooklyn, N. Y. Index-card holder. No. 1,422,973; July 18.
Hersog, Louis, assignor to Gleanam Embroidery Company, Beacon, N. Y. Jacquard-card repeating and transposing machine. No. 1,423,110; July 18.
Hersog, Louis, assignor to Gleanam Embroidery Company, Beacon, N. Y. Jacquard-card repeating and transposing machine. No. 1,423,111; July 18.
Hewitt, Edward R., Midvale, and J. H. Blake, Jr., East Orange, N. J., assignors to International Motor Company, New York, N. Y. Body for farm trucks. No. 1,422,859; July 18.
Hicks, Charles F., Romeo, Mich. Tire liner. No. 1,423,423; July 18.
Higgins, Clifford B., assignor of one-half to H. A. Higgins, Detroit, Mich. Art and mechanism for drawing hollow cylindrical metal bodies. No. 1,422,974; July 18.
Higgins, Harry A. (See Higgins, Clifford B., assignor.)
Higgins, William H. C., Jr., Laporte, Ind. Supplying a combustible mixture to internal-combustion engines. No. 1,423,483; July 18.
Hill, Reuben, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y. Measuring machine for gauges. No. 1,423,214; July 18.
Hill, Wilford A., Waltham, assignor to B. O. & G. C. Wilson, Inc., Boston, Mass. Pill-counter and bottle-filling machine. No. 1,422,860; July 18.
Hirschberg, Leo, Newark, N. J. Cover for laundry tubs. No. 1,423,215; July 18.
Hoagland, Frank O., assignor to The Bilton Machine Tool Company, Bridgeport, Conn. Oil cup. No. 1,423,112; July 18.
Hocker, Carl D., East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Liquid coating composition. No. 1,422,861; July 18.
Hofmann, Emil G., Chicago, Ill. Toy sprinkler. No. 1,422,862; July 18.
Holle, Alexander A., Hyde Park, London, England. Screw propeller and the like. No. 1,423,113; July 18.
Holliday, James M., Hollister, Mo. Well bucket. No. 1,423,424; July 18.
Holt, Charles A., Cambridge, assignor to Union Industrial Company, Boston, Mass. Spinning ring. No. 1,423,216; July 18.
Holt, Harold E. S., Farnborough, England. Landing light or flare for attaching to aircraft. No. 1,423,226; July 18.
Holtsclaw, Sidney, Kansas City, Kans. Cigarette case. No. 1,422,975; July 18.
Hoof, Addison C., Chicago, Ill. Steel cushion wheel. No. 1,422,976; July 18.
Hook, C. Howard. (See Miller, Arnold W., assignor.)
Hoover Suction Sweeper Company, The. (See Spangler, James M., assignor.)
Hopkins, Matthew S., Reading, Pa. Compound of lime and sulphur stabilised with an aromatic compound. No. 1,422,977; July 18.
Horton, Theodore, Albany, N. Y. Gas meter. No. 1,423,217; July 18.
Hough, Samuel, Atco, assignor of one-fourth to R. P. Levick, Berlin, N. J., and one-fourth to C. J. Richter, Collingswood, N. J. Automatic filler for grease cups. No. 1,422,978; July 18.
House, Everett J., Cleveland, Ohio. Savings and insurance account book. No. 1,423,114; July 18.
Housenman, Christian P., York, Pa. Piston. No. 1,423,425; July 18.
Howath, George O., Morattico, Va. Transmission gear for automobiles. No. 1,423,426; July 18.
Hultberg, Oscar, Seattle, Wash. Wave motor. No. 1,423,115; July 18.
Humphreys, William J. (See Phelps, Lucius J., assignor.)
Huntoon, Charles F., Chicago, Ill. Bake beam. No. 1,422,863; July 18.
Huntress, Harry W., Turlock, Calif. Bank-window shield. No. 1,423,327; July 18.
Hurst, William A., Battle Ground, Ind. Belt buckle. No. 1,423,218; July 18.
Hurter, Henry, assignor to Fulton Iron Works Company, St. Louis, Mo. Cane mill. No. 1,422,979; July 18.
Hutcheson, Earl H., Augusta, Ga. Windshield awning. No. 1,423,116; July 18.
Hutchinson, David M., St. Louis, Mo. Spark plug. No. 1,423,219; July 18.
Hutchinson, Frank L., assignor to Sterling Engineering Co., Milwaukee, Wis. Valve mechanism. No. 1,422,980; July 18.
Hutton, Edward S., Lapel, Ind. Means for controlling discharge from glass tanks. No. 1,423,220; July 18.
Hyatt, Frank S., Brooklyn, N. Y. Tube compressor. No. 1,422,864; July 18.
Hyatt, Frank S., Brooklyn, N. Y. Vanity box. No. 1,422,981; July 18.
Ilex Optical Company. (See Klein, Rudolph, assignor.)
Imperial Furniture Company. (See Applegate, E. B., and Yeomans, assignors.)
Infantino, Benjamin P., New York, N. Y. Tile. No. 1,423,117; July 18.
Ingersoll-Rand Company. (See Lundell, Robert A., assignor.)
International Harvester Company. (See Johnston, E. A., and Mott, assignors.)
International Harvester Company. (See Pearson, Charles, assignor.)
International Motor Company. (See Hewitt, E. R., and Blake, assignors.)
International Motor Company. (See Masury, A. F., and Jessops, assignors.)

Invisible Process Co., The. (See Morse, Charles F., assignor.)
Irving-Pitt Manufacturing Company. (See Fargo, C. R., and Unger, assignors.)
Irving-Pitt Manufacturing Company. (See Pitt, F. D., and Newman, assignors.)
Irving-Pitt Manufacturing Company. (See Pitt, Frederick D., assignor.)
Irving-Pitt Manufacturiag Company. (See Pitt, William P., assignor.)
Isley, Robert G., Edinburg, Ind. Cultivator. No. 1,422,982; July 18.
Jansen, Andries W., Geldrop, Netherlands. Apparatus for weaving bicycle and auto canvas. No. 1,423,427; July 18.
Jaques, Emily U., Visalia, Calif. Amusement device. No. 1,423,428; July 18.
Jeffers, Carl H., Kent, Ohio. Locomotive stoker. No. 1,423,221; July 18.
Jeffrey Manufacturing Company, The. (See Levin, Nils D., assignor.)

Jobson, Francis S., Mentone, Ala. Burglar gun. No. 1,422,865; July 18.
Johns, Chilion B., Edensburg, Pa. Sand-pipe heater. No. 1,423,429; July 18.
Johnson, Alvin L., Worcester, Mass., assignor to Two Part Rim Co. Inc. Cutting over metal rims. No. 1,423,222; July 18.
Johnson, Ernest N., Winnipeg, Manitoba, Canada. Tie plate for rails. No. 1,422,983; July 18.
Johnson, Harold R., Cranston, R. I. Pencil. No. 1,422,984; July 18.
Johnson, Joseph A., Blue Earth, Minn. Hay-rack lift. No. 1,423,328; July 18.
Johnston, Edward A., Chicago, and C. W. Mott, Berwyn, Ill., assignors, by mesne assignments, to International Harvester Company. Power cultivator. No. 1,422,985; July 18.
Jones, Arthur W. (See Oakford, Frederic, assignor.)
Jones, Laurence E., Wichita Falls, Tex. Counter. No. 1,423,430; July 18.
Jordan, Heinrich, Leverkusen, near Cologne, Germany, assignor, by mesne assignments, to The Grasselli Chemical Company, Cleveland, Ohio. Cotton dyes. No. 1,422,866; July 18.
Josephs, Lyman C., Jr., U. S. Army, assignor to N. D. Baker, Secretary of War, trustee. Electric-arc mechanism for searchlights. No. 1,423,497; July 18.
Josephs, Lyman C., Jr. (See Masury, A. F., and Josephs.)
Judy, Robert, Gifford, Ill. Watering trough. No. 1,422,986; July 18.
Kahn Tailoring Company. (See Meissel, Henry A., assignor.)
Kampfe, Otto, Bellmore, assignor of one-half to H. C. Walker, New York, N. Y. Bottle cap. No. 1,423,431; July 18.
Kansas City Spiral Pipe Company, The. (See Colby, Frank W., assignor.)
Karr, Henry C., assignor of one-fifth to E. Bonnelycke, Washington, D. C. Shipping package for watches. No. 1,423,329; July 18.
Karycheff, Vladimir, and P. E. Gagarine, Paris, France. Apparatus for feeding fuel to furnaces. No. 1,422,867; July 18.
Kasch, Frederick C., and G. F. Neff, Akron, Ohio. Mounting for draft regulators. No. 1,422,868; July 18.
Kasley, Alexander T., Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Co. Pressure generator. No. 1,423,330; July 18.
Keith, George, and W. A. Whatmough, London, England. Means for controlling the supply of combustible mixture to internal-combustion engines. No. 1,422,987; July 18.
Keller, Karl, assignor to J. H. White Manufacturing Company, Brooklyn, N. Y. Lighting fixture. No. 1,423,331; July 18.
Kellogg Manufacturing Company. (See Hazard, George E., assignor.)
Kelly-Springfield Tire Company. (See McClenathen, Robert, assignor.)
Kendechy, Andrew, Cleveland, Ohio. Auto theft protection. No. 1,423,432; July 18.
Kennan, Thomas, Birmingham, Ala. Sealing of cracks in the lining of blast furnaces and the like. No. 1,423,332; July 18.
Kenny, Albert. (See Ostberg, A. J., and Kenny.)
Ketchem, Adolph A., Chicago, Ill. Lamp. No. 1,423,433; July 18.
Kienzl, Raymund, Cleveland, Ohio. Cutting tool. No. 1,422,988; July 18.
Kilbourne & Jacobs Manufacturing Company, The. (See Cotton, J. H., and Burner, assignors.)
Kimball, Robert E., assignor to The Tickometer Company, Cleveland, Ohio. Register-operating mechanism. No. 1,423,333; July 18.
King, Horace W., Ann Arbor, Mich. Depth-indicating device. No. 1,423,118; July 18.
King, Horace W., Ann Arbor, Mich. Depth-indicating device. No. 1,423,223; July 18.
King, James F., Worcester, Mass. Holder for electric lamps and the like. No. 1,423,119; July 18.
Kirk, John L., Waynesboro, Pa. Pocket. No. 1,423,434; July 18.
Kirkham, Charles B., Buffalo, N. Y., assignor to Curtiss Aeroplane and Motor Corporation. Magneto gearing. No. 1,423,334; July 18.
Klein, Rudolph, assignor to Ilex Optical Company, Rochester, N. Y. Iris diaphragm. No. 1,423,224; July 18.
Klinkhammer, Peter, Los Angeles, Calif. Necktie holder. No. 1,423,498; July 18.
Knick, Glenn R., Troy, Ohio. Record turner for phonographs. No. 1,422,989; July 18.
Knight, Hervey S., et al. (See Bair, Joseph H., assignor.)
Knight, William E., Delaware, Ohio. Dental mirror. No. 1,423,225; July 18.
Koerner, George W. (See Brundage, Harry, assignor.)
Kohler, Conrad, Zurich, Switzerland. Steam boiler with forced-draft furnace. No. 1,423,335; July 18.
Korittke, Gustav, Long Island City, N. Y. Sanitary container. No. 1,423,336; July 18.
Koski, Matt W., Cosmopolis, Wash. Recording speedometer. No. 1,422,990; July 18.
Kothe, Charles A., Galion, Ohio. Low-water alarm. No. 1,422,870; July 18.
Koukos, John. (See Vasiades, G., and Koukos.)
Kränzelin, Georg, Sindlingen, near Hochst-on-Main, and M. Corell, Hochst-on-Main, assignors to Farbwerke vorm. Meister Lucius & Brüning, Hochst-on-Main, Germany. Esters of dioxydiethyl sulphide and making same. No. 1,422,869; July 18.
Krieger, A. Edward, et al, trustees. (See McArthur, Robert C., assignor.)
Krüger, Paul, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Locking mechanism for the doors of self-discharging receptacles. No. 1,423,120; July 18.
Krüger, Paul, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Dumping car. No. 1,423,121; July 18.
Kruse, Louis W., San Jose, Calif. Coupling. No. 1,422,991; July 18.
Kudner, Joseph, New York, N. Y. Display stand. No. 1,423,226; July 18.
Kuen, Eugene A., assignor to The Thos. J. Corcoran Lamp Company, Cincinnati, Ohio. Electric connector. No. 1,422,992; July 18.
Kyriazopoulos, James, Lowell, Mass. Confetti bomb. No. 1,423,122; July 18.
Labus, Otto A., Wisconsin Rapids, Wis. Automatic water-cooling system. No. 1,423,337; July 18.
Lackawanna Steel Company. (See Boardman, C. S. and Conkling, assignors.)
Laise, Clemens A., Weehawken, N. J., assignor, by mesne assignments, to General Electric Company, Schenectady, N. Y. Alloy and producing same. No. 1,423,338; July 18.
Lambert, John W., Anderson, Ind. Tractor. No. 1,423,227; July 18.
Lambremont, Charles O., Plaquemine, La. Combination tire and rim. No. 1,423,435; July 18.
Landers, Frary, and Clark. (See Smith, C. F., and Curtiss, assignors.)
Larned, William A., Summit, N. J., assignor to The Dayton Steel Racquet Company, Dayton, Ohio. Elastic metal stringing, and making the same. No. 1,422,993; July 18.
Larsen, Lee, Tampico, Mexico. Combined water jet and suction apparatus and means for operating the same. No. 1,423,436; July 18.
Lasker, William W., Brooklyn, assignor to Powers Accounting Machine Company, New York, N. Y. Carriage-operating mechanism. No. 1,423,437; July 18.
Lasker, William W., Brooklyn, assignor to Powers Accounting Machine Company, New York, N. Y. Type carrier. No. 1,423,438; July 18.
Lasker, William W., Brooklyn, assignor to Powers Accounting Machine Company, New York, N. Y. Sector control for tabulating machines. No. 1,423,439; July 18.
La Societe des Etablissements E. Feuillette. (See Feuillette, Emile, assignor.)
Leach, Philip A., East Brimfield, Mass. Forge clamp. No. 1,423,123; July 18.
Leachman, Edward C., assignor to Pearl Pictorial (Foreign & Colonial) Limited, London, England. Electric-lamp switch. No. 1,423,228; July 18.
Leavitt, Frank S., Melrose, and E. A. Staples, Dorchester, Mass., assignor to Atlas Devices Company, Inc. Identifying means for pneumatic-despatch-tube carriers. No. 1,423,440; July 18.
Ledell, Carl A., Connersville, Ind. Screw gauge. No. 1,423,339; July 18.
Ledwinka, Joseph, assignor, by mesne assignments, to Budd Wheel Company, Philadelphia, Pa. Pressed-steel wheel. No. 1,423,229; July 18.
Lees, Thomas W., Halifax, England. Valve. No. 1,423,340; July 12.
Leger, Oswald C., Los Angeles, Calif. Winding mechanism for spring motors. No. 1,423,230; July 18.
Lemaitre, Lucien, Paris, France. Bolt for spring rings and manufacturing the same. No. 1,423,441; July 18.
Le Merle, Francis G., M. J. Ullman, and J. E. Barry, Washington, D. C. Gasoline electric automobile. No. 1,423,124; July 18.
Lemons, Joseph F., Adams, assignor of one-fourth to W. B. Winters, Adams, and one-fourth to J. Hancock, Springfield, Tenn. Dust gun. No. 1,423,125; July 18.
Lenher, Victor, Madison, Wis., and F. M. Dorsey, Cleveland, Ohio; said Dorsey assignor of his right to General Electric Company. Purifying carbon. No. 1,423,231; July 18.
Levick, Reuben P., et al. (See Hough, Samuel, assignor.)
Levin, Nils D., assignor to The Jeffrey Manufacturing Company, Columbus, Ohio. Electric controller. No. 1,423,126; July 18.
Levy, Edward, London, England. Scissors. No. 1,423,127; July 18.
Lewis, W. Cary. (See Gelin, Charles A., assignor.)
Liedtke, Hugo F., assignor to Pangborn Corporation, Hagerstown, Md. Sand-blast apparatus. No. 1,423,128; July 18.
Lieser, Leo F., Sidney, Oowa. Attachment for carburetors. No. 1,422,871; July 18.
Ligon, Arthur L., Killeen, Tex. Demountable headstock for lathes. No. 1,422,994; July 18.
Link, Vincent, Detroit, Mich., assignor to The Studebaker Corporation. Unit assemblage of motor adjuncts. No. 1,422,995; July 18.
Linotype and Machinery Limited. (See Stern, Carl L., assignor.)
Lippincott, George A., Philadelphia, Pa. Striker plate for golf clubs. No. 1,423,341; July 18.

Lloyd, Edwin C. J., Jeannette, Pa. Box and attachment therefor. No. 1,423,442; July 18.
Lobel, Herman, assignor to Compression Tube & Tire Co., Los Angeles, Calif. Tire. No. 1,423,232; July 18.
Locomotive Stoker Company. (See Osborne, Lonnie E., assignor.)
Loew, Charles H., and J. R. Gruetter, assignors to The Loew Manufacturing Company, Cleveland, Ohio. Label separator and remover for bottle washing apparatus. No. 1,423,342; July 18.
Loew Manufacturing Company, The. (See Loew, C. H., and Gruetter, assignors.)
Loman, John, Bristol, Conn. Watch-chain fastener. No. 1,422,872; July 18.
Long, Stevens P., Birmingham, Ala. Resilient tire. No. 1,422,996; July 18.
Loomis, Rockwell A., Guatemala, Guatemala. Carriage-shifting mechanism for typewriters. No. 1,423,443; July 18.
Ludlum, James G., Bridgeport, Conn. Display roll for flat metal tableware. No. 1,423,483; July 18.
Lundell, Robert A., New York, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J. Piston and connecting rod construction. No. 1,423,343; July 18.
Lundell, Robert A., New York, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J. Piston and connecting rod construction. No. 1,423,344; July 18.
Lundsgaard, Christen J. S., Vejen, and K. T. Herbst, Brabrand, Denmark. Explosive material. No. 1,423,233; July 18.
Lynch, John T., Rochester, N. Y. Truck. No. 1,423,234; July 18.
Lynch, Warren O., Berkeley, Calif. Stiffener for folding books. No. 1,423,129; July 18.
McArthur, Robert C., et al., trustees. (See McArthur, Robert C., assignor.)
McArthur, Robert C., Sand Springs, Okla., assignor to W. O. Fredrikson, A. E. Krieger, and R. C. McArthur, trustees, Salamanca, N. Y. Brake rod adjuster. No. 1,423,235; July 18.
McCaa, David G., Palo Alto, Calif., assignor of one-half to Cornelius D. Ehret, Philadelphia, Pa. Signaling method and apparatus. No. 1,423,345; July 18.
McCarty, Homer B., assignor to O-K Elevator Safety Lock Company, Ogden, Utah. Door lock. No. 1,423,484; July 18.
McClain, John B., assignor of one-fifth to R. Meier, Brooklyn, N. Y. Melting pot. No. 1,423,501; July 18.
McClenathen, Robert, assignor to Kelly-Springfield Tire Company, Akron, Ohio. Molding machine. No. 1,423,349; July 18.
McClure, Silas. (See Palmer, Stanley W., assignor.)
McCombs, Charles C., Stephenville, Tex. Check protector. No. 1,423,236; July 18.
McCoy, William C., Wilkinsburg, Pa. Ore concentrator. No. 1,423,130; July 18.
McDonald, William B., Lawrence, Kans. Adjustable hinge. No. 1,423,350; July 18.
McGahan, Frederick L., deceased, Los Angeles, Calif.; V. K. Walker, administrator, assignor to The Purposed Mind Development Security Association of the World. Fire box. No. 1,423,346; July 18.
McGahan, Frederick L., deceased, Los Angeles, Calif.; V. K. Walker, administrator, assignor to The Purposed Mind Development Security Association of the World. Fire box. No. 1,423,347; July 18.
McGahan, Frederick L., deceased., Los Angeles, Calif.; V. K. Walker, administrator, assignor to The Purposed Mind Development Security Association of the World. Fan. No. 1,423,348; July 18.
McGirr, Theodore G., Springfield, Mass. Machine for applying hoods to articles. No. 1,423,237; July 18.
McGregor, Alexander G., Warren, Ariz. Apparatus for handling comminuted material. No. 1,422,997; July 18.
McKibbon, Joe S., Los Angeles, Calif. Wrench. No. 1,423,499; July 18.
McLellan, William, et al. (See Michie, A. C., and Weeks, assignors.)
McNally, John F., and R. A. Bradley, Emporia, Kans. Clutch pulley. No. 1,422,873; July 18.
McNamara, Charles D., Fair Play, Colo. Aeroplane. No. 1,423,131; July 18.
McNaughton, John, New York, N. Y. Mop. No. 1,423,444; July 18.
McNiff, John T., assignor to R. F. McNiff, Waterbury, Conn. Business hours placard. No. 1,423,485; July 18.
McNiff, Raymond F. (See McNiff, John T., assignor.)
McRea, Thomas K. (See Allen, W. R., and McRea.)
Mack, Herman, Hamm, Germany. Extracting coal in mines. No. 1,422,874; July 18.
Madigan, Thomas J., Brooklyn, assignor of one-fourth to J. O. Schwank, New York, N. Y. Sprinkler head. No. 1,422,875; July 18.
Magaldi, E., Naples, Italy. Shoe. No. 1,423,445; July 18.
Magrath, Henry J., London, England. Treatment of water for softening, sterilising, and like purposes. No. 1,423,132; July 18.
Maltby, Frank D., Battle Creek, Mich. Priming and decarbonizing device for internal-combustion engines. No. 1,422,998; July 18.
Manning, Bowman & Company. (See Warner, Maurice L., assignor.)
Marlin Rockwell Corporation. (See Rockwell, Albert F., assignor.)
Martin, Frank H., Carterville, Ill. Automatic railway-switch throw and lock. No. 1,423,351; July 18.
Mason, Max, New London, Conn., assignor to Submarine Signal Company, Portland, Me. Determination of wave-energy direction. No. 1,422,876; July 18.
Masury, Alfred F., New York, N. Y., and L. C. Josephs, Jr., Allentown, Pa., assignors to International Motor Company, New York, N. Y. Leading truck for railway motor cars. No. 1,423,238; July 18.
Mathers, Alexander S., Los Angeles, Calif. Tie device. No. 1,423,133; July 18.
Matheus, Karl, Chicago, Ill. Belt and the like. No. 1,422,999; July 18.
Mattison, Richard V., Ambler, Pa., assignor to Asbestos, Shingle, Slate & Sheathing Company. Asbestos-cement product and forming the same. No. 1,423,000; July 18.
Maxfield, Joseph P., Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Acoustical aid for deaf persons. No. 1,422,877; July 18.
Maxwell, Elmer T., Wheeling, W. Va. Paper dish. No. 1,423,001; July 18.
Meconi, Alberto, Munich, Germany, assignor to T. Meconi, Cumberland, Md. Window cleaner. No. 1,423,239; July 18.
Meconi, Tacope. (See Meconi, Alberto, assignor.)
Meier, Richard. (See McClain, John B., assignor.)
Meisel, Charles A., Dorchester, assignor to Meisel Press Manufacturing Company, Boston, Mass. Securing means for printing plates. No. 1,423,486; July 18.
Meisel Press Manufacturing Company. (See Meisel, Charles A., assignor.)
Meissel, Henry A., assignor to Kahn Tailoring Company, Indianapolis, Ind. Spool holder for sewing machines. No. 1,423,487; July 18.
Melidona, Antonio, Niagara Falls, N. Y. Automobile frame. No. 1,423,240; July 18.
Mercier, Henri, Paris, France. Stabilizing means for suspended vehicles. No. 1,423,002; July 18.
Mers, Charles H., et al. (See Michie, A. C., and Weeks, assignors.)
Metz, Hermann, A. (See Schirmacher, Karl, assignor.)
Metzger, Floyd J., assignor to Air Reduction Company, New York, N. Y. Retort. No. 1,422,878; July 18.
Meurer Steel Barrel Company. (See Reynolds, Henry S., assignor.) (Reissue.)
Meyer, Siegfried, New York, N. Y. Ash tray and receptacle. No. 1,422,879; July 18.
Michaelsen, William H., Mount Vernon, N. Y. Mechanical connector. No. 1,422,880; July 18.
Michie, Arthur C., Newcastle-upon-Tyne, and E. G. Weeks, Northumberland, assignors to C. H. Mers and W. McLellan, Westminster, London, England. Low-temperature distillation. No. 1,423,134; July 18.
Milholen, Charles F., Kannapolis, N. C. Ash pan. No. 1,423,352; July 18.
Miller, Arnold W., assignor to C. H. Hook, Pittsburgh, Pa. Relief valve. No. 1,423,135; July 18.
Miller, Dorr. (See Gruenberg, W. A., and Miller.)
Miller Transmission Company, The. (See Gruenberg, W. A., and Miller, assignors.)
Minnick, Warren R., Reading, Pa. Display panel. No. 1,423,003; July 18.
Minshull, Robert, Waterloo, Wis., assignor of one-half to P. B. Goddard, Wilmette, Ill. Stable appliance. No. 1,423,241; July 18.
Minton, Ogden, Greenwich, Conn. Apparatus for maintaining and removing liquid seal for vacuum apparatus. No. 1,423,242; July 18.
Mitchell, William F., Clifton, N. J., assignor of one-half to F. R. Allen, Passaic, N. J. Grease cellar. No. 1,423,502; July 18.
Moffatt, James R., assignor to Union Special Machine Company, Chicago, Ill. Sewing-machine frame. No. 1,423,243; July 18.
Moody, John R., Los Angeles, Calif. Hinge. No. 1,423,004; July 18.
Moore, Edward Y., Cleveland, Ohio. Chain shackle and making the same. No. 1,423,244; July 18.
Moore, John R., Chicago, Ill. Tool holder. No. 1,423,245; July 18.
Moore, John T., Atlanta, Ga. Railway switch. No. 1,423,005; July 18.
Morgan, Harry B., St. Louis, Mo. Shock absorber. No. 1,423,006; July 18.
Morner, Dora, Stevens Point, Wis. Sanitary belt. No. 1,423,353; July 18.
Morse, Charles F., assignor to The Invisible Process Co., Cleveland, Ohio. Invisible ink. No. 1,423,246; July 18.
Morton, Samuel S., Harrisburg, Pa. Intermittent-grip device. No. 1,423,007; July 18.
Morton, Samuel S., Harrisburg, Pa. Transmission mechanism. No. 1,423,008; July 18.
Mothersill, Thomas B. (See Grikscheit, William, assignor.)
Mott, Carl W. (See Johnston, E. A., and Mott.)
Muckenbirn, Charles H., Detroit, Mich. Mechanical batter. No. 1,423,009; July 18.
Mueller, L. J., Furnace Company. (See Buller, Charles M., assignor.)
Mueller, Moritz L., Seattle, Wash., assignor to Northwest Blower Kiln Co. Drying kiln. No. 1,423,136; July 18.
Mumford, John, Chillicothe, Ohio. Wrench. No. 1,423,247; July 18.
Murphy, Walter P. (See Bonsall, Charles D., assignor.)

Murphy, Walter P., New York, N. Y. Corrugated-sheet-metal car end. No. 1,422,881; July 18.
Murray, Milton, Williams Wharf, Va. Make-and-break ignition device. No. 1,423,137; July 18.
National Airless Tire Company. (See Braden, Charles H., assignor.)
National Biscuit Company. (See Beers, F., and Powell, assignors.)
National Brake & Electric Company. (See Aikman, Burton S., assignor.)
Needy, William H. H., Hagerstown, Md. Balance staff for timepieces. No. 1,423,446; July 18.
Neff, George F. (See Kasch, F. C., and Neff.)
Neviczky, Eleanor H., McKeesport, Pa. Safety gas valve. No. 1,423,010; July 18.
New York Mackintosh Clothing Co. (See Geis, Leopold H., assignor.)
Newman, Charles L., Berkeley, Calif. Parachute. No. 1,423,248; July 18.
Newman, George W. (See Pitt, F. D., and Newman.)
Nicholas Power Company. (See Power, Nicholas, assignor.)
Nichols, George T., assignor of one-tenth to J. P. Walling, Gainesville, Tex. Automobile wheel rim. No. 1,423,354; July 18.
Nichols, Harold W., Maplewood, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, Radio transmission. No. 1,422,882; July 18.
Nilell, Magnus, Stockholm, Sweden. Photographic-roll-film spool. No. 1,423,355; July 18.
Niles-Bement-Pond Company. (See Sears, Willard T., assignor.)
Nipper, William R., Grants Pass, Oreg. Fruit-jar cover. No. 1,422,883; July 18.
Noble, Eldridge H., deceased, Waukegan, Ill., W. J. Smith, administrator. Oil can. No. 1,423,503; July 18.
Noé, Samuel B., Ocean Grove, N. J. Maximum-pressure inflating valve and gauge. No. 1,423,447; July 18.
Northwest Blower Kiln Co. (See Mueller, Moritz L., assignor.)
Norton, George F., and E. A. Ende, Mayville, Wis. Corn-snapping mechanism for silo fillers. No. 1,423,138; July 18.
O-K Elevator Safety Lock Company. (See McCarty, Homer B., assignor.)
Oakford, Frederic, Philadelphia, assignor of one-half to A. W. Jones, Germantown, Philadelphia, Pa. Humidor. No. 1,423,356; July 18.
O'Brien, James H., Manchester, N. H. Fire shutter for moving-picture machines. No. 1,423,139; July 18.
O'Connor, James A., Bridgeport, Conn. Fountain pen. No. 1,423,448; July 18.
Olesberg, Oluf E., Bawlf, Alberta, Canada. Brush and chopping ax. No. 1,423,140; July 18.
Olivetti, Camillo, Ivrea, Italy. Magneto electric machine. No. 1,423,141; July 18.
O'Neill, Frank, Jr., Philadelphia, Pa. Fibrous-plant-decorticating machine. No. 1,423,357; July 18.
Ophelm, Torgils S., Everett, Wash. Automobile direction signal. No. 1,423,249; July 18.
Osborne, Lonnie E., Pittsburgh, Pa., assignor to Locomotive Stoker Company. Lubricator. No. 1,423,011; July 18.
Oshkosh, Roy, assignor of one-fourth to S. W. Randolph, Manitowoc, Wis. Sectional radiator. No. 1,423,449; July 18.
Ostberg, Anders J., and A. Kenny, Richmond, near Melbourne, Victoria, assignor to The Standard Rubber Works Proprietary, Limited, Melbourne, Victoria, Australia. Manufacture of sponge rubber. No. 1,422,884; July 18.
Otterstedt, Hans C., Svalof, Sweden. Production of oat groats and the like. No. 1,423,450; July 18.
Ottinger, Leon, New York, N. Y. Fastening device. (Reissue.) No. 15,412; July 18.
Ottolenghi-Wedekind, Herta, Genova, Italy. Manufacturing design cards. No. 1,422,885; July 18.
Owens, Percy R., Mount Kisco, N. Y. Temperature-controlling system. No. 1,422,886; July 18.
Owens, Ralph H., Lincoln, Nebr. Wrench. No. 1,423,142; July 18.
Pagé, Victor W., New York, N. Y. Spring suspension. No. 1,423,451; July 18.
Palmer, Stanley W., assignor to S. McClure, Beaver Dam, Wis. Hinge for stoves and ranges. No. 1,423,012; July 18.
Pangborn Corporation. (See Liedtke, Hugo F., assignor.)
Paragon Can & Cap Company Inc. (See Anderson, Gustave F., assignor.)
Parkinson, Harold, Wilmington, Del. String holding and cutting adjustment for rivet-setting machines. No. 1,423,250; July 18.
Patterson, Marcus, Brooklyn, N. Y. Strip for floor coverings and the like. No. 1,423,143; July 18.
Paul, Raymond W., Pike Road, N. C. Back band. No. 1,423,144; July 18.
Payne, William F., Stratford, Ontario, Canada. Furnace. No. 1,423,145; July 18.
Pearl Pictorial (Foreign & Colonial) Limited. (See Leachman, Edward C., assignor.)
Pearson, Charles, Chicago, Ill., assignor to International Harvester Company. Automatic mower pitman. No. 1,423,013; July 18.
Peckham, John W., Parkston, S. Dak. Stereotype-casting frame. No. 1,423,146; July 18.
Pedersen, John D., Jackson, Wyo. Firearm. No. 1,423,358; July 18.
Pembor, Thomas J. (See Watt, Frederick, assignor.)
Penn-Greg Mfg. Co. (See Pennig, Bernard T., assignor.)
Pennig, Bernard T., assignor to Penn-Greg Mfg. Co., St. Paul, Minn. Mail box in house walls. No. 1,423,351; July 18.
Perry, George R., Washington, D. C. Key holder. No. 1,423,147; July 18.
Perry, Raymond A., Oakland, Calif. Dirigible headlight for vehicles. No. 1,423,148; July 18.
Peruzzi, Mario, Wilkes-Barre, Pa. Nut-salting machine. No. 1,423,014; July 18.
Pfister, Charles C., Pawnee Rock, Kans. Extension feeder and thrasher. No. 1,423,149; July 18.
Phelps, Lucius J., Los Angeles, assignor of one-half to W. J. Humphreys, San Gabriel, Calif. Homogenizer. No. 1,423,488; July 18.
Phillips, Raymond H., Trenton, N. J. Mat. No. 1,422,887; July 18.
Pitt, Frederick D., and G. W. Newman, assignors to Irving-Pitt Manufacturing Company, Kansas City, Mo. Temporary binder. No. 1,423,015; July 18.
Pitt, Frederick D., assignor to Irving-Pitt Manufacturing Company, Kansas City, Mo. Book-cover-attaching means. No. 1,423,017; July 18.
Pitt, William P., assignor to Irving-Pitt Manufacturing Company, Kansas City, Mo. Binder. No. 1,423,016; July 18.
Pitt, William P., assignor to Irving-Pitt Manufacturing Company, Kansas City, Mo. Cover-attaching means for books. No. 1,423,018; July 18.
Plaisted, Harold M. (See Williams, Milton F., assignor.)
Platt, James R., Hartford, Ark. Mechanic's rule and pencil holder. No. 1,423,359; July 18.
Pogue, Webster V., Mount Vernon, N. Y. Compass scale. No. 1,423,019; July 18.
Pokorny, James T., Cedar Bayou, assignor of one-half to A. T. Eddingston, Port Arthur, Tex. Molding machine. No. 1,423,020; July 18.
Pole and Tube Works, Inc., The. (See Schwarz, G. H., and Vintscher, assignors.)
Pomeroy, Ralph E. H., Canton, Ohio. Treating pulverized fuel. No. 1,423,150; July 18.
Popper, Isaac C., assignor to Basic Products Corporation, New York, N. Y. Collapsible field stove. No. 1,423,252; July 18.
Post, Truman W., New York, N. Y., assignor to Willys Corporation, Toledo, Ohio. Headlight. No. 1,423,253; July 18.
Potash Extraction Corporation. (See Glaeser, Walter, assignor.)
Powell, Earl J. (See Griswold, R. H., and Powell.)
Powell, Howard L. (See Beers, F., and Powell.)
Power, Nicholas, Brooklyn, assignor to Nicholas Power Company, New York, N. Y. Motion-picture machine. No. 1,423,452; July 18.
Power Specialty Company. (See Foster, Ernest H., assignor.)
Powers Accounting Machine Company. (See Lasker, William W., assignor.)
Pratt & Whitney Company. (See Hill, Reuben, assignor.)
Preston, Carleton B., Providence, R. I. Attachment for phonographs. No. 1,423,360; July 18.
Prestwich, Ernest. (See Prestwich, Wright and E.)
Prestwich, Wright and E., Lawrence, Mass. Removable handle mechanism for brushes or brooms. No. 1,423,151; July 18.
Proctor & Schwartz, Incorporated. (See Ayres, E. B., and Rhoads, assignors.)
Pupiett, Thomas J., Manchester, England. Internal-combustion turbine. No. 1,423,453; July 18.
Purposed Mind Development Security Association of the World, The. (See McGahan, Frederick L., assignor.)
Quaker Oats Company, The. (See Ferguson, John L., assignor.)
Raible, John R., assignor to The Greif Brothers Cooperage Company, Cleveland, Ohio. Barrel. No. 1,423,254; July 18.
Randolph, Samuel W. (See Oshkosh, Roy, assignor.)
Rath, Joseph J., assignor to The Available Truck Company, Chicago, Ill. Leaf-spring connection. No. 1,423,255; July 18.
Reeves, Leslie C., Pitman, and M. A. Webb, Jr., Camden, N. J. Exercising device. No. 1,422,888; July 18.
Refrigerating Specialties Company. (See Hanson, Charles C., assignor.)
Reiser, Reynold J., Kenosha, Wis. Transmission mechanism. No. 1,423,454; July 18.
Remington Typewriter Company. (See de Clamecy, Philippe, assignor.)
Remus, Stefano, Genoa, Italy. Sparking plug for internal-combustion engines. No. 1,423,152; July 18.
Reynolds, Henry S., Brooklyn, assignor to Meurer Steel Barrel Company, Inc., New York, N. Y. Spout for metallic receptacles. (Reissue.) No. 15,413; July 18.
Reynolds, Morley P., assignor to The W. S. Tyler Company, Cleveland, Ohio. Screening apparatus. No. 1,423,021; July 18.
Rhoads, Thomas H. (See Ayres, E. B., and Rhoads.)
Rice, Arthur L., deceased, Adams, N. Y.; C. S. Rice, executrix. Water paint. No. 1,423,256; July 18.

C

CLASSIFICATION OF PATENTS

ISSUED JULY 25, 1922.

NOTE.—First number=class, second number=subclass, third number=patent number.

1— 15: 1,423,778
2— 9: 1,423,546
54: 1,424,013
102: 1,423,543
106: 1,423,329
122: 1,423,668
4— 5: 1,423,634
1,423,888
35: 1,424,022
5— 13: 1,423,954

Concrete building structure. J. Partee. No. 1,423,779; July 25.
Concrete products such as blocks, panels, and structures, Molding of. J. Woolcock. No. 1,423,983; July 25.
Cone-winding machines, Attachment for. A. A. Johnson. No. 1,424,100; July 25.
Confectionery, Dispensing and display holder for. H. D. Foss. No. 1,423,845; July 25.
Connecting rod. F. A. Dreher. No. 1,423,788; July 25.
Connector switch. G. A. Yanochowski. No. 1,423,897; July 25.
Containers, Apparatus for sealing. N. P. Bach. No. 1,423,591; July 25.
Control system. C. P. Connely. No. 1,424,003; July 25.
Convertible chair. H. C. Bunnell. No. 1,423,995; July 25.
Cooking utensil. W. J. Murphy. No. 1,423,961; July 25.
Cop or bobbin holder. E. Adell and C. A. Brink. No. 1,423,824; July 25.
Corn planter. P. I. Garner. No. 1,423,932; July 25.
Cotton gins, Breast-actuating mechanism for. J. R. Hubbard. No. 1,424,021; July 25.
Coupling: *See*—
Car coupling. Tractor coupling.
Crank cases, Oil-level-indicating attachment for. A. F. Gillet. No. 1,423,558; July 25.
Crate, Folding. A. H. Blakemore. No. 1,423,596; July 25.
Crate, Folding. J. W. Lucabaugh. No. 1,423,863; July 25.
Crib. A. Isen. No. 1,423,663; July 25.
Current motor. E. S. Hicks. No. 1,423,717; July 25.
Curtain-window light. J. B. Schaaf. No. 1,423,685; July 25.
Cut-out device, Pneumatic. C. C. Farmer. No. 1,424,007; July 25.
Cutter: *See*—
Vegetable cutter.
Cutting apparatus. N. M. Johnson. No. 1,424,133; July 25.
Cutting machine. P. S. Mitts and W. J. Winston. No. 1,423,867; July 25.
Cutting tool, Circle-. M. A. Butterfield. No. 1,423,828; July 25.
Danger signal. W. F. Moran. No. 1,423,727; July 25.
Davit, Automatically-braked. A. P. Schat. No. 1,423,739; July 25.
Desk and chair. O. G. Henderson. No. 1,423,661; July 25.
Dicyandiamide, Making. H. C. Hetherington and J. M. Braham. No. 1,423,799; July 25.
Diestock. J. Konigsberg. No. 1,423,945; July 25.
Differential mechanism. G. C. Jett. No. 1,423,941; July 25.
Direction indicator. J. W. Wheeler, jr. No. 1,423,588; July 25.
Dishpan. E. G. Taylor. No. 1,423,548; July 25.
Disk wheel, Metal. J. A. Charter. No. 1,423,598; July 25.
Display rack. G. A. Taylor. No. 1,423,585; July 25.
Distillation of material carrying a percentage of volatile matter. G. M. Johns. No. 1,423,527; July 25.
Diving apparatus. J. C. Eckert, jr. No. 1,423,923; July 25.
Door buffer. J. Galamb. No. 1,423,521; July 25.
Door lock and applying the same. W. Anderson. No. 1,423,825; July 25.
Door lock, Sliding-. F. Andrusyszyn. No. 1,423,509; July 25.
Double-gear jack, Quick-action. A. W. Marr. No. 1,423,671; July 25.
Dress guard. A. H. De Voe. No. 1,423,602; July 25.
Drill. A. L. Hawkesworth. No. 1,423,849; July 25.
Drilling device. W. S. McBride. No. 1,424,109; July 25.
Drills, etc., Connecting rod for. H. J. Kimman. No. 1,423,614; July 25.
Drills, Detachable bit for. H. H. Des Roches. No. 1,423,713; July 25.
Drying apparatus. R. B. Hibbard, D. J. Watrous, and J. G. Bassette. No. 1,423,800; July 25.
Drying process and apparatus. C. Field. No. 1,423,928; July 25.
Dust cap. A. B. Catterall. No. 1,423,515; July 25.
Ear trumpet for truck drivers. E. W. Hofstatter. No. 1,423,802; July 25.
Electrical apparatus. L. A. Haworth. No. 1,424,016; July 25.
Electrical oscillation generator. L. F. Fuller. No. 1,424,141; July 25.
Electrical plants, Device for automatically controlling the output of. M. Doloukhanoff. No. 1,423,839; July 25.
Electric contact wires, Means for the suspension of. M. Semenza. No. 1,423,582; July 25.
Electric controlling apparatus. F. H. Bullinger. No. 1,423,907; July 25.
Electric fixture. F. L. Butler. No. 1,423,646; July 25.
Electric fixtures, Switch-supporting attachment for. F. L. Butler. No. 1,423,645; July 25.
Electric-lighting fixture. P. L. Haislip. No. 1,424,095; July 25.
Electric-lighting fixtures, Stem for. E. Rockoff. No. 1,423,683; July 25.
Electric machine, Dynamo-. A. H. Mittag. No. 1,423,958; July 25.
Electric machines, Arc barrier for dynamo-. J. L. Burnham. No. 1,423,996; July 25.
Electrolyzing solutions, Apparatus for. K. E. Stuart. No. 1,423,584; July 25.
Electroplating process. N. V. Park. No. 1,423,815; July 25.
Electrotinning. L. Schulte. No. 1,423,686; July 25.
Elevator and mine shafts, Automatic gate mechanism for. C. Drum. No. 1,423,919; July 25.
Engine: *See*—
Internal-combustion engine. Internal-combustion and hot-air engine.
Engine governor. J. B. Replogle. No. 1,424,140; July 25.
Engines, Fuel-supply apparatus for internal-combustion. W. C. Carter. No. 1,423,915; July 25.

Engines, Ignition apparatus for internal-combustion. N. Winblad. No. 1,424,056; July 25.
Engines, Magneto ignition system for internal-combustion. J. L. Milton. No. 1,423,672; July 25.
Engines, Spark-testing device for gasoline. W. P. Mott. No. 1,423,622; July 25.
Envelope. H. J. Eickoff. No. 1,423,653; July 25.
Envelope. B. A. Larsen. No. 1,424,024; July 25.
Envelope-feeding mechanism. C. Chisholm. (Reissue.) No. 15,419; July 25.
Equalizer, Four-horse. J. Robson. No. 1,423,682; July 25.
Excavator. J. A. Gilman. No. 1,424,093; July 25.
Extractor. D. H. Benjamin and A. R. Curtis. No. 1,423,827; July 25.
Fabric-cutting apparatus. J. F. Hennessy. No. 1,423,798; July 25.
Fan wheel. R. W. Oswald. No. 1,423,964; July 25.
Fastener-setting machine. W. Shaw. No. 1,423,626; July 25.
Fastening means and applying same. M. Craighead. No. 1,423,833; July 25.
Feed roller. P. H. Vaughn. No. 1,423,783; July 25.
Feeder, Poultry. C. E. Canell. No. 1,424,079; July 25.
Feeder, Stock. A. J. Davis. No. 1,423,915; July 25.
Feeding device. F. S. Thurston. No. 1,423,698; July 25.
Fence post. W. P. Heckler. No. 1,423,934; July 25.
Fender: *See*—
Bumper-bar fender.
Fertilizer distributor. D. C. Daniel. No. 1,423,649; July 25.
File, Storage. S. C. Huffman. No. 1,423,936; July 25.
Filing tray or drawer. C. C. Carpenter. No. 1,424,080; July 25.
Flame and cutting tools, Plate for resisting. R. S. Edmondson. No. 1,423,832; July 25.
Flower receptacle. J. Brettschneider. No. 1,423,906; July 25.
Fluid gauge, Visible. M. W. Joy. No. 1,424,104; July 25.
Fluid-pressure brake. E. M. Richards. No. 1,424,033; July 25.
Fluids, Means for controlling the flow of. C. H. Cochrane. No. 1,423,831; July 25.
Flushing apparatus. L. Solheid. No. 1,423,634; July 25.
Flushing mechanism. O. H. Theleen. No. 1,423,888; July 25.
Flying machine. T. Vuia. No. 1,423,636; July 25.
Folding chair. H. E. Barrows. No. 1,423,594; July 25.
Folding chair. P. H. Peters. No. 1,424,031; July 25.
Frequency changer. A. H. Mittag. No. 1,423,959; July 25.
Frequency regulator. L. Espenschied. No. 1,423,518; July 25.
Fuel, Means for continuous predrying of. O. Nordström. and A. Mörck. No. 1,423,728; July 25.
Furnaces, Liquid-cooled conduit for. H. A. Poppenhusen. No. 1,423,540; July 25.
Fuse, Impact. S. G. Malby. No. 1,424,112; July 25.
Garbage and refuse of towns, Apparatus for working. G. Beccari. (Reissue.) No. 15,417; July 25.
Garden tool. A. Miller. No. 1,423,865; July 25.
Garment fastener. B. J. Mulvey. No. 1,423,813; July 25.
Garment fastener. W. Zimmerman. No. 1,423,590; July 25.
Garment-supporting device. E. Bowler. No. 1,423,749; July 25.
Garments, Slide for the straps of. C. E. Anderson. No. 1,423,639; July 25.
Gas, Apparatus for and process of purifying. A. L. Stevens. No. 1,423,696; July 25.
Gasoline and the like, Producing. J. C. Clancy. No. 1,423,709; July 25.
Gasoline purifier. W. J. Sedelbauer. No. 1,423,970; July 25.
Gas producer and process. E. M. Braxton. No. 1,424,077; July 25.
Gauge: *See*—
Bore gauge. Ring gauge.
Heel gauge. Tank gauge.
Lamp gauge. Visible fluid gauge.
Pressure draft gauge.
Gear housing. J. A. Neathammer. No. 1,423,675; July 25.
Generator: *See*—
Electrical oscillation generator. Ozone generator.
Glove and making same. G. P. Bosworth. No. 1,424,072; July 25.
Glove, Reversible. J. L. Speer. No. 1,423,546; July 25.
Gluer, Ton. L. E. La Bombard and M. H. Sidebotham. No. 1,423,567; July 25.
Gocarts and invalid chairs, Robe for children's. E. R. C. Buchard. No. 1,423,908; July 25.
Grain and a product for effecting the same, Cooking. H. M. Greene. No. 1,424,132; July 25.
Grain-carrier. O. B. Hall. No. 1,423,609; July 25.
Gun retracting mechanism. B. P. Joyce. No. 1,424,106; July 25.
Gyratory motion, Driving mechanism for producing. B. Neal and G. H. Hebebrand. No. 1,423,871; July 25.
Hair clipper, Electric. L. David. No. 1,423,756; July 25.
Hairpin. T. Gregory. No. 1,423,606; July 25.
Hair slide. O. E. Buley. No. 1,423,644; July 25.
Handle. E. A. Weibel. No. 1,424,052; July 25.
Hanger: *See*—
Clothes hanger.
Heat economiser, Waste-. J. E. Bell. No. 1,423,826; July 25.
Heat exchanger or condenser. P. St. Clair, jr. No. 1,423,695; July 25.
Heater unit. H. A. Silverman. No. 1,423,742; July 25.
Heating device, Electric. W. F. Lebzelter. No. 1,423,606; July 25.
Heating devices, Fuel feed for. F. S. Seymour. No. 1,424,041; July 25.
Heating drum. C. A. De Jaco. No. 1,423,651; July 25.
Heel-breasting machine. R. C. Simmons. No. 1,423,743; July 25.
Heel fastener. L. Cerf. No. 1,423,787; July 25.
Heel gauge. J. S. Lansill. No. 1,423,859; July 25.
Heel-log-cutting machine. J. E. Mitchell and D. Parks. No. 1,423,621; July 25.
Hinge. J. R. Moody. No. 1,423,812; July 25.
Hinge and stop for desk lids, Combined. C. A. Brown. No. 1,423,513; July 25.
Hinge check. G. Vuille. No. 1,423,784; July 25.
Hoisting apparatus. C. E. Smith. No. 1,423,971; July 25.
Hoist, Mechanical. F. E. Ackerman. No. 1,423,638; July 25.
Hoists, Limit switch for electric-driven. R. E. Rice. No. 1,423,624; July 25.
Hook: *See*—
Cant hook.
Hose, Flexible metal. E. Witzenmann. No. 1,424,057; July 25.
Husker. G. W. Zeier. No. 1,424,060; July 25.
Husking mitten. M. Sautter. No. 1,423,543; July 25.
Hydrocarbon containers, Attachment for. J. Bingman. No. 1,424,068; July 25.
Hydrometer. J. O. Luthy. No. 1,424,108; July 25.
Ice conveyer. L. F. Pixley. No. 1,423,732; July 25.
Identification and coding system. J. F. Gelmaw. No. 1,423,763; July 25.
Indicator: *See*—
Automobile direction indicator. Direction indicator.
Internal-combustion and hot-air engine. A. Bagnulo. No. 1,423,705; July 25.
Internal-combustion engine. N. Isachson. No. 1,423,718; July 25.
Internal-combustion engine. A. E. Nicholls. No. 1,423,677; July 25.
Internal-combustion engine. F. L. H. Pfeil. No. 1,423,680; July 25.
Internal-combustion engine, Two-cycle. A. G. L. and H. C. W. Neighbour. No. 1,423,578; July 25.
Jack: *See*—
Double-gear jack. Power jack.
Joint: *See*—
Universal joint.
Journal lubricator. J. J. Hennessy. Nos. 1,423,850–1; July 25.
Key case. W. R. Buxton. No. 1,423,909; July 25.
Key holder. W. G. Staples. No. 1,424,121; July 25.
Knickers. P. Leiken. No. 1,423,668; July 25.
Knitting machines, Automatic tension-controlling means for. J. Lawson. No. 1,424,025; July 25.
Ladder construction, Rope. R. D. Nileon. No. 1,424,115; July 25.
Ladder platform and roof jack. C. J. and U. J. Mohr. No. 1,423,725; July 25.
Lamp and similar article, Tipless incandescent. L. E. Mitchell and A. J. White. No. 1,423,956; July 25.
Lamp gauge. R. Beman. No. 1,424,067; July 25.
Lantern, Portable electric. A. D. Cardwell. No. 1,423,911; July 25.
Last. J. C. Schelter. No. 1,423,740; July 25.
Latch, Window. J. Szaby. No. 1,424,048; July 25.
Let-off mechanism, Friction band for. C. H. Slinger. No. 1,423,780; July 25.
Letter sheet. H. B. Campbell. No. 1,423,910; July 25.
Light: *See*—
Curtain-window light. Automobile tail light.
Lime-sulphur composition, Making dry soluble. E. H. French. No. 1,423,605; July 25.
Line holder. H. Monahan. No. 1,423,866; July 25.
Lingerie clasp. H. R. Johnson. No. 1,424,103; July 25.
Liquids, Foam covering for preventing the evaporation of stored. J. M. Jennings. Nos. 1,423,720–1; July 25.
Liquids, Stable foam for preventing the evaporation of stored. J. M. Jennings. No. 1,423,719; July 25.
Loader device. L. D. Potter and T. C. Nolan. No. 1,423,878; July 25.
Loading and unloading apparatus. C. B. Hastings. No. 1,423,765; July 25.
Lock: *See*—
Automobile lock. Door lock.
Car-door lock. Meter lock.
Chain lock. Window lock.
Lock. A. J. Fallon. No. 1,423,656; July 25.
Lock. B. Morgenthau. No. 1,424,136; July 25.
Lock. E. B. Stone. No. 1,424,040; July 25.
Lock. A. Boge. No. 1,423,553; July 25.
Lock and alarm, Combined. A. S. Cummings. No. 1,423,554; July 25.
Locomotive-engineers' seat. O. Johnson. No. 1,423,855; July 25.
Locomotives, Steam drifter mechanism for. F. B. Searle. No. 1,423,688; July 25.
Locomotives, Tool for facilitating the adjustment of the driving shoes of. C. Guggenbuehler. No. 1,423,795; July 25.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 25TH DAY OF JULY, 1922.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Account register, Credit-. H. A. Martin. No. 1,423,953; July 25.
Acids, Production of dicarboxylic. A. G. Williams. No. 1,423,980; July 25.
Acids, Treating sludge. I. Hechenbleikner and T. C. Oliver. Nos. 1,423,766–7; July 25.
Adjustable wrench. W. A. Martin. No. 1,423,723; July 25.
Aeroplane. G. L. Banks. No. 1,424,130; July 25.
Aeroplane. J. Hayes. Nos. 1,423,610–11; July 25.
Aeroplane. E. Wilder. No. 1,424,055; July 25.
Aeroplane fuselage and building same. E. G. Bahl. No. 1,424,066; July 25.
Aeroplanes, Attachment for. A. F. Erickson. No. 1,423,789; July 25.
Aeroplanes, Steering wheel for. W. C. Hurst. No. 1,424,143; July 25.
Air, Sterilizing. A. Wolff. No. 1,423,704; July 25.
Airplane. G. B. Post. No. 1,423,681; July 25.
Airplanes, Dual control for. B. D. Thomas. No. 1,424,049; July 25.
Airships, System or method of feeding combustion engines for. A. Boerner. No. 1,423,987; July 25.
Alarm systems, Detector for. F. E. Crawford. No. 1,423,601; July 25.
Ammonia-soda process, Conducting the. E. E. Arnold and P. St. Clair, jr. No. 1,423,510; July 25.
Animal trap. J. A. Hedberg. No. 1,423,715; July 25.
Antiskid device. T. J. O'Neil. No. 1,423,963; July 25.
Arsenical compounds, Manufacture of. K. B. Edwards. No. 1,424,006; July 25.
Ash receptacle. R. Ozabal. No. 1,423,538; July 25.
Atomizer. H. C. Brehmer. No. 1,423,989; July 25.
Automobile accessory. G. D. Orr. No. 1,423,730; July 25.
Automobile buffer. G. A. Lyon. Nos. 1,423,571–2; July 25.
Automobile bumper. W. E. Williams. No. 1,423,894; July 25.
Automobile bumper-attaching hanger. W. G. Pancoast and W. J. Grotenhuis. No. 1,423,874; July 25.
Automobile direction indicator. J. B. Blair. No. 1,424,070; July 25.
Automobile hoods, Fastening device for. F. Mathews. No. 1,423,773; July 25.
Automobile lock. S. G. Miller. No. 1,423,955; July 25.
Automobile lock. J. Sokolov. No. 1,423,691; July 25.
Automobile radiator shutters, Supporting and actuating means for. A. P. Wolfe. No. 1,423,982; July 25.
Automobile tail light. A. O. Svedahl. No. 1,424,047; July 25.
Automobile theft signal. H. M. Lake and O. C. Betry. No. 1,424,106; July 25.
Automobile top closures, Securing means for. H. E. Adams. No. 1,424,061; July 25.
Automobile top, One-man. J. Davis. No. 1,423,916; July 25.
Automobiles, Truck attachment for. D. J. Fuhrer. No. 1,423,931; July 25.
Bag: *See*—
Golf bag.
Bag, Golf. J. S. White. No. 1,423,891; July 25.
Bag holder. C. R Hellstrom. No. 1,424,017; July 25.
Bag holder. B. F. Miller. No. 1,424,026; July 25.
Ball. I. De Gowin. No. 1,423,837; July 25.
Ball-winding machine. E. G. Loomis. No. 1,423,807; July 25.
Balls, Method and apparatus for covering. I. De Gowin. No. 1,423,838; July 25.
Basket handle and lid fastener. G. R. Fowler. No. 1,424,009; July 25.
Battery cover. B. Kunkel. No. 1,424,144; July 25.
Bearing, Antifriction ball or roller. K. O. Leon. No. 1,423,950; July 25.
Bearing, Ball. L. Langhaar. No. 1,423,666; July 25.
Bearing, Water-cooled. J. Herman. No. 1,424,097; July 25.
Bed-bottom fabric. E. Drefs. No. 1,423,918; July 25.
Bed corner. A. Izen. Nos. 1,423,664–5; July 25.
Bed-rail fastener. A. S. Putnam. No. 1,423,623; July 25.
Beds, Drawer attachment for. C. Kontorowitz. No. 1,423,804; July 25.
Beds, Rail-fastening device for. J. Findura. No. 1,424,089; July 25.
Bee escape. H. D. Rogers. No. 1,423,883; July 25.
Belt. M. J. Maakestad. No. 1,424,110; July 25.
Belt conveyer, Self-training. M. A. Kendall. No. 1,423,528; July 25.
Bib, Creeper. M. F. Hale. No. 1,424,013; July 25.
Bill fold. C. L'Enfant. No. 1,423,669; July 25.
Bin-filling shut-off. M. L. and A. L. Bremer. No. 1,423,990; July 25.
Binders, Grain holder for. L. H. Stowell. No. 1,424,122; July 25.
Blank-handling mechanism. R. C. Simmons. No. 1,423,630; July 25.
Block: *See*—
Traveling block.
Boat. J. Solack. No. 1,424,044; July 25.
Boiler: *See*—
Steam boiler.
Bone resector. F. E. Miller. No. 1,423,866; July 25.
Bore gauge. H. M. Rockwell. No. 1,423,542; July 25.
Bottle, Milk. J. G. Hall. No. 1,423,560; July 25.
